GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

ANSWERS TO CORRESPONDENTS.

TWENTY-EIGHT PAGES.

THE FOREST AND STREAM is to-day enlarged to a twenty-eight page paper.

This is a concession to the increasing and urgent demand for more space in the several departments; and at the same time a fitting recognition of the cordial and substantial support accorded by an appreciative constituency.

It is not the first, nor is there a probability that it will be the last, enlargement in the size of the paper. It is the well-matured policy of the FOREST AND STREAM, as the exponent in this country of the interests embraced in its scope, to keep pace with the steady expansion of those interests. American sportsmanship of the best type is making rapid advance. The public has a more wholesome appreciation of the value and dignity of health-giving field recreation than ever before. That this journal, representing as it does the varied phases of these manly field pursuits, should have a correlative growth is a natural and necessary sequence. There is no better indication of the substantial place held by the rod and gun in popular esteem, nor a more reassuring promise for their future, than is afforded by the publication of a paper of the size and character of the FOREST AND STREAM.

With these increased facilities at our command, we shall lay before our readers every week a generous supply of the very best field literature of the day. The extent, variety and excellence of the correspondence of this journal is unsurpassed by that of any other publication in the world.

We most heartily and emphatically acknowledge the kind offices of hosts of friends throughout the country, who have ever manifested such a generous interest in the success of the FOREST AND STREAM, and who have themselves so materially contributed to its attainment of that success. It shall be our ambition to maintain the excellence of the paper, to make it worthy of a continuation of these favors, and to win for it the continued endorsement of the public.

THE ARTISTIC ANGLER vs. THE BARE-FOOT BOY.

WE print to-day two communications on this subject; one from the veteran fly-fisherman, Mr. W. Holberton, and the other from our correspondent, J. R., Jr. These two articles present diametrically opposite views on the subject, the former represents the artistic angler; the latter gives the reasoning of the man who believes in getting a fish in any manner, so long only as you haul it in.

Now why is it that in this country—and this country only, so far as we know—the practice of fly-fishing and the use of fine tackle should be rated a sort of huge joke by those who cannot appreciate them? Is it not because the masses are not educated to that point where they may comprehend these refinements of the art?

It is not so in Great Britain. There, as Mr. Holberton says, the common people along the streams are anxious to secure fine tackle, well aware that it is the most killing of all tackle. But in some of the rural parts of America a fine fishing tackle appears to be held as synonymous with the outfit of a "duffer;" and the use of such implements by an angler is accepted as *prima facie* evidence that he must be a greenhorn, unskillful and unsuccessful in his sport. On the other hand, the employment of primitive tackle is associated in the minds of your rural reasoner with a big string of fish at the close of the day—the length of the string and the size of the fish being in inverse proportion to the diminutiveness and raggedness of the small boy who wields the pole.

Now we venture to assert our belief that these common tenets of the rural angler's belief arise from a total misconception of the facts and principles involved, and from a wrong association of ideas in the mind of the rustic reasoner. We will try to explain what we mean.

A certain country angler has a large local reputation. He uses tackle of the coarsest description. He cuts his "pole" in the woods. He is a successful fisherman; that is, he captures many fish. But his success is most certainly not due to his primitive tackle. He catches lots of fish because he knows every foot of the stream and just where the fish are to be caught. He loses no time in trying stretches of water where there are no fish. As a matter of course he comes home with a good "mess of trout." And just here we may say that this man has not the first conception of what sport is. His only thought is fish. If he has taken twenty trout in a day more than another man he deludes himself with the belief that he has had more sport, and that it is something to brag of. It matters not how the fish are taken. If another man came up with a net and forty pounds of fish more than he has, our genius of the pole would "knock under" to him as the superior fisherman.

The bait fisher, with his coarse tackle, may, at times, say in the middle of the day, take more fish than his companion with the fly, but in the long run, day in and day out, granting to each man an equal knowledge of the waters fished, the angler with fly and delicate tackle will excel the other both in amount of sport had and in weight of creel.

The ragged country boy with a bean pole cannot begin to compete with the man who has light tackle, if the latter be an angler and know how to use his tools. And yet an abominable fiction to the contrary has been going the rounds of the press for the past century, its corrupt doctrines perverting the minds of our angling youth. Stories without end of the urchin's string of fish bought by the "dandy" are rife in the rural press, but are not true in one case in ten. There may have been duffers who have thought that all that was necessary to make them anglers was to buy a great assortment of fancy tackle; but such men do not fish often. A trial once or twice convinces them of their error, and they lay their rods aside for the last novel, or for some other plaything.

As well may the wretch who baits quail in a furrow and rests his gun over a rail fence and blows twenty birds into eternity at a single blast, boast of his superior skill over the wing-shot, as the man who has slaughtered a creel full of trout with a worm, and thereby pandered to the baser appetites of the fish, crow over a fly-fisher, who may not, on that particular morning, have equalled him in numbers or in weight. Between the two there is no comparison. As for the barefooted boy, we don't believe in him.

The fly-fisher can fish over more water than the bait-fisher, and can thereby take more fish; and he has a higher kind of sport that the latter knows nothing of. The fly-fisher can take more either of trout or salmon, in a day than the bait-fisher if he knows the ground equally well; and assertions to the contrary would not be listened to by the most ignorant poacher in England, Ireland or Scotland, for he knows that the fly and fine tackle are the best equipment for taking fish.

Does any man mean to say that the boy with the disreputable trousers and the bean-pole would not take as many fish if he had finer tackle, say a fine hook on a fine gut leader and a fine line nearly invisible to the fish? If so, he is severely mistaken. No, friend of the boy with the letter in the post-office, your *protégé* would be a better angler for a little familiarity with fine tackle. He would take more fish and would learn to enjoy their capture as an evidence of his skill, for this constitutes the chief pleasure of angling, just as does the bag in shooting. So much for the tackle; and as for the fragmentary habiliments—there is no connection between the trout and the trousers. Clothes do not make the man, nor the lack of them the fisherman.

We not only take the ground that the angler can secure more fish with the fly, but that he has more pleasure than the bait fisher, and this position we are willing to maintain. No, friend in the rural districts, do not allow yourself to be too severely prejudiced against the gentleman who comes with fine rod, reel and line, and perhaps knee-breeches, to whip your streams; he may be able to teach you much that you have never known; at least, if he cannot, you will not often find him a boor. Much of this false feeling comes from a prejudice, often entertained by people in country and city alike, that whoever differs from themselves, either in manners, dress or equipments, must of necessity be an inferior, and a proper object of ridicule and sneers. Sometimes such persons make a mistake. The heavy lout who, in Fourteenth street, the other day, forced a fight with a dandy—the latter proving to be a graduate with honors from a noted sparring academy—found that he had picked up a very "hot potato;" and his fingers were well burned before he was through with it.

EASTERN FIELD TRIALS.

THE prospect for a brilliant meeting of the Eastern Field Trials Club at High Point, N. C., next November, looks very flattering. There is much enthusiasm among the members of the club, and they will spare no effort to make the coming event all that such a meeting should be. As may be seen by referring to the list of entries for the Derby, published in FOREST AND STREAM July 13, the running of this important stake will undoubtedly prove very interesting, both from the number and quality of the dogs that will compete, and in witnessing the display of their powers as they strive for the honor of victory.

Glancing over the list we find that the sire or dam of nearly every animal entered is a prize winner, either upon the bench or in the field, and in many cases both parents have achieved the honor. There are also quite a number of them who can proudly boast among their ancestors winners both on the bench and in the field, winners whose names are household words throughout the canine world. That the struggle for supremacy will be gallantly contested, and that every effort will be put forth to secure the honors of victory, we may rest assured; for not only will the winner receive a goodly purse, but the achievement will bring to the name an honor and fame that will far outweigh the gold.

The gentlemen who have entered for this event are animated by an active interest in the club, and a strong desire to see the present meeting in all respects successful, and also by a generous rivalry as to the merits and performances of their favorites. The enthusiasm and earnestness which we note as existing among the members of the association form the best guarantee of its success as an organization, as well as a measure of its usefulness to breeders and dog lovers at large. Where all are so interested it would perhaps be invidious to mention individual names, and to most of our readers it is unnecessary.

The first event upon the card is the Members' Stake. This should be the most important event of the meeting, at least to the members of the association, and everyone who can possibly attend should enter and run his dog. There is nothing more conducive to the success of such an association than the hearty and active co-operation of its individual members in support of the objects for which it was formed. We hope to see a large number of starters in this stake, and trust that every member who has a good dog will come forward and conclusively show that he deems the honors of victory worth striving for. The Free for All Stake will undoubtedly fill well, as many owners have already signified their intention to enter, and we have no doubt that the meeting will be far ahead of anything of the kind that we have yet seen. The great improvement of the dogs that are run,

which has been noted from year to year, will undoubtedly continue, and we shall this year probably be called upon to chronicle some of the best work that has yet been recorded. This is one of the chief objects for which the Trials were instituted, and that they have in a great measure accomplished this, a glance at our report of the different meetings will show. Never in the history of field sports were they more popular than now. Much of this is the direct result of our public trials, and we trust that from year to year they will exert an ever widening influence and develop and foster an ever increasing love for the healthful and invigorating sports of the field. Not the least among the benefits derived from the trials has been the manifest improvement in the manner in which the competitors handle their dogs. The measure of this benefit cannot be estimated, as not alone do those who participate in the trials profit by the improvement, but every sportsman who attends returns home with broader views and increased knowledge of the possibilities for enjoyment of his favorite sport, and by putting to practical use the advanced ideas there obtained, he adds much to the pleasure of his outings, and by the influence of his example upon the friends who accompany him, the good good work is continued and the best and noblest purpose of the founders of our field trials is surely accomplishing its mission by elevating and popularizing the sports of the field.

ADIRONDACK SURVEY NOTES.

III.—FISHING TACKLE.

GOING down the Fulton chain of lakes the party proceeded as before, Mr. Colvin leading in a boat rowed by "Jack" Sheppard, and the others following. At one point I happened to use a Chippewa word meaning to go on, saying "we must pucachee," a very common expression and rather a pet word of mine, and thought to be all that remained of former linguistic acquirements in that line; therefore it was a surprise to have a whole sentence in that tongue shot at me by Sheppard. This was a little staggering, but we managed to jabber so as to give Messrs. Mosscrop and Baker an idea that they formed the topic of conversation and that there were unknown terrors in store for them. This proved only ammunition wasted, for they didn't seem to scare a bit, perhaps the sign in the moon was not right. Later conversation with Sheppard developed the fact that we had hunted the same ground in Northern Minnesota and afterwards had served in the same army corps; and he was henceforward assigned to take care of me, Mr. Colvin giving us *carte blanche* to make forays into such waters as we pleased and to capture the fishes contained in them. Under this arrangement we have visited the Fulton chain by going back to Blue Mountain Lake, forayed into Forked, Long, Raquette, Big Moose and Little Moose lakes with the numerous "ponds" which lie about them; and have taken fishes of all kinds and sizes.

While the party was all together and camped in tents on Fourth Lake, on an island near the camp of Fred. Hess, it became necessary to administer a great amount of punishment to our two young assistants, Messrs. Mosscrop and Baker. I had explained to them in a fatherly way that a fishing rod was not a "pole," hoping thereby to start them right in the nomenclature of angling; but they persisted in their erroneous ways, evidently with malice prepense, and for the purpose of casting ridicule upon the angling fraternity. They had retired in a small tent, and were conversing in a low tone, when one said to the other, "Ask Mr. —— if you can borrow his split-bamboo pole to-morrow, just to see what he will say." The question was loudly asked, with deliberate emphasis on the obnoxious word; and in a moment after a veritable sapling was introduced into the tent and the dust was threshed out of the blankets which covered them. They begged hard, and shouted, "*Rod*, I meant *rod*," and upon promise of reform they were let off. It is sad to chronicle the fact that this treatment had to be several times repeated before the lesson was firmly fixed. In all other respects these young gentlemen were apt scholars.

Two rods, a stiff bait-rod of split-bamboo for trolling, and a fly rod of ironwood or hornbeam; two reels with water proof silk lines, flies, bait-hooks from the smallest minnow-hook up to those fit to take a "laker," trolling line, spoons of several patterns, swivels, gangs, sinkers, split-shot, landing net, and a twenty-foot minnow seine comprised my appliances for taking specimens of all the fishes to be found in this region. The ironwood rod was new to me and with the exception of being a trifle heavy it worked well; the action was very fair, and it was quick to strike; its weight, however, would be an objection to some men. I found that it was a good developer of muscle, and why has not Dr. Henshall, and other advocates of heavy rods, thought of this. By the way, I have lost ten pounds of flesh in the woods in three weeks, and the loss has been a great gain. When I went in I was fat and my flesh too soft, and a pack of seventy-five pounds on my back over the carries took the fluids out in copious floods, but left the muscle down to fighting weight, and the heavy rod has increased the muscles of both arms, for I hold it to be a great accomplishment to cast with both hands.

The reels both came to grief. One was of a new pattern and became loose on the plate so that it was a nuisance, and I want no more of it. The other had a click on the outside covered by a cap, and this flew off while handling a good-sized trout, which was lost in consequence. The click served as a drag and after this the line would overrun on the reel, if not closely watched, but it had to do its work, for there was no alternative. How often has the proper position of the reel on the rod been argued? The advocates of placing it on top of the rod are as firmly convinced that it is right as those who believe it should be on the under side. Perhaps both are right; and it may be that the proper place for it is where a man can handle it to the best advantage; but if a rod were placed in my hand with the reel in any other position but the accustomed one, I would be the veriest duffer you ever saw when a fish struck. For my use a reel must be on the under side, and the crank must be so placed that it comes to my right hand as I hold the rod in my left. This would be on top of the rod for a man who held his rod with his right hand and reeled his fish with his left, a thing which I doubt my ability to do, only that his line would be on the reel the wrong way. I fish with both hands alike, and if a fish strikes when the rod is in the right hand it must be shifted before any reeling can be done. This is force of habit merely, and I hold that the easiest way for any man to do a thing is the way he learned at first, no matter how awkward it may seem to others to adopt his plan.

In the matter of flies I would say: If I can not have but one fly let it be a red ibis. In all casts this fly has its place as the stretcher. The droppers may be changed if the trout don't rise, but it takes a long time between bites to rouse a suspicion that any other fly would be more acceptible than this scarlet one. Flies may come, and flies may go, but the scarlet ibis, Mr. Boffin, goes on forever. In the language of Patrick Henry I may say: I know not what course others may take, but as for me give me a scarlet ibis or there will be no trout for dinner. I find my books full of flies which are never used, for the reason that a few favorites such as the palmers (commonly, but erroneously called hackles) the queen of the water, the professor, and half a dozen others whose names seem to be badly mixed by the different makers, are always first chosen.

The nomenclature of artificial flies is a thing which, in its present state, it would be base flattery to call a science; perhaps inquiry at the insane asylums might show how much the study of the different names attached to these monstrosities has contributed to the mental afflictions of mankind. Having abandoned the hope of acquiring this branch of the subject when the suspicion dawned that it was purposely muddled by the fly makers and rival dealers, there is a feeling of security that my reason will not totter from this cause, but there are some fellows who are in a bad way. Determined to master the subject, they have thrown aside all former knowledge and applied themselves anew to Holberton's "Standard." Why should I renew my exertions to save them? There must be mental wrecks or the keepers of the asylums would be out of work, and thus kindness to one man is cruelty to another.

The fishing in these lakes suits my constitution, which is eminently adapted to fishing from a boat. Even the inlets cannot well be waded. There are anglers who love to get into cold water up to their knees, or higher, and wade along a stream and have fun sitting down on a particularly slippery stone at intervals not of their own choosing. The old Spanish proverb of a dry cellar and a wholesome house comes in here, and if any gentleman prefers a damp basement no one should object. Another reason for preferring a boat is that while wading a slippery stream is good exercise and makes one enjoy his rest afterward, fishing from a boat enables you to enjoy your rest while you are fishing. A friend says: "It never tires my feet to sit down." Do you think boat fishing lazy? Well, perhaps it is, we won't argue that, comfort and laziness mean the same thing to some, while others regard them as different things; they are evidently related.

F. M.

GREENWOOD LAKE.—We were on this lake last week and took some small black bass with the fly, and heard of a few good strings and some three-pound fish, although none of the latter size fell to our rod. The lake is a pleasant ride of forty-eight miles from the city, and a small steamer takes visitors to any portion of it. We had the pleasure of attending an informal reception and hop at the club house of the Greenwood Lake Association, and met many veteran anglers there, some of them expert salmon fishers, who find in the proximate bass a substitute for the distant salmon. A feature of the lake is the encampment at Warwick Woodlands, where the angler can find a comfortable and airy tent with board floor, bedstead, etc., at the water's edge, and take his meals in the dining room, all at reasonable rates. A camp meeting and revival is near at hand. We will go again.

AN INCORRECT CORRECTOR CORRECTLY CORRECTED.—We could wish that by some reflex action the Sag Harbor (Long Island) *Corrector* might react upon itself, for it needs correction on a point upon which it has been trying to correct others. In its issue of July 22 it states that there is some disagreement by the Long Island press as to the dates of the open woodcock season, and it proceeds to state as the law in force the clause relating to woodcock in the Newman bill, which was not passed at Albany. The woodcock season on Long Island opened August 1st. Our Sag Harbor E. C. means well, but it has made a mistake. We would recommend it, when discoursing on the game laws, to come to headquarters for its information. *Verb. sap.*

TEMPERATURE FOR TROUT.—At Fulton Market Mr. Blackford has usually kept one or two tanks of live trout through the month of May, and sometimes into June. This year he has a large glass tank with a large flow of water from the city mains coming in at the bottom and going out at the top. We were surprised to see the trout alive on July 1, and learned that the water had been cooler. At our suggestion Mr. Blackford left a dozen of the fish in the tank and placed a thermometer in it to see what they would stand. On the 17th the mercury showed 72 and the trout were uneasy and breathing quickly. Several died on the 19th, when one more degree was reached, and a week later the last fish succumbed at 74 degrees. July 24 is probably as late as brook trout have ever been kept alive in the water of New York city without ice. We noticed much fungus on many of the fish as the temperature rose. May not temperature be at the bottom of the "salmon disease" in England?

THOUGH MAJOR VERITY is a veteran officer in the Horse Marines, his tales are not wholly intended for the Marines

The Sportsman Tourist.

THE WARWICK WOODLANDS.

BY HARRISON W. NANNY.

YEARS before "*Infelicissimus*" was graven upon a tomb stone, in the noonday of a joyous life, that prince of sportsmen, that American Xenophon, who, though his achievements were perhaps less heroic, yet wielded the pen with all the grace of the Xenophon of Athens, paid a glowing tribute to the vale which had been the scene of much which was fair and beautiful in his life, and whose recollections thronged him in all their splendor to the hour when that life went out in sorrow and darkness.

It was a spot then as now, "fair as the garden of the Lord," though no wizard hand had smitten it into immortality. Since then the years have come and gone—years bringing peace and years fraught with war, years of harvests and of golden fields, but the Warwick Woodlands and the vale of Warwick, forest-crowned and wood-embowered as of old, breathe out the same inspiration as that which quickened the heart throbs and fired the genius of Frank Forester.

The mountains sentinel the vale as of yore, time-worn Sugar Loaf yet lifts its hoary head and bars the northern entrance, while to the westward, across the drowned lands, the Shawangunks still keep watch and ward. The range to the south yet holds the mountain tarn, but the great trout, in whose capture Squire Vandergriff, of Vernon, made himself famous, have become extinct, victims to a new race—the black bass—which like their human compeers, the Aryans, have swallowed everything in their course to empire. The sportsman may indeed dream the olden dream, but the day of overflowing game bags has departed; the runs and coverts, still alder-grown, no longer throng with ruffed grouse and woodcock, while the streams once abounding in brook trout are of less attraction to the angler. Even the unrivaled butter of the days gone by is seldom seen. The cattle upon the hundred hills are indeed as fruitful as in the days when Frank Forester's feet pressed the greensward, but the olden housewives who turned the golden rolls upon the "pats" are, alas, no more. The churning machine, that attachment to the rear of every farmhouse, whose early clank roused from their slumbers of the morning the tardy inmates, has been cast away, and to-day is almost as much of a curiosity as the great-grandmother's spinning wheel in the garret, or the great-grandfather's flax crackler behind the old barn. The pastures are as teeming as ever, the same farmhouses—most of them, at least the veritable ones—which half a century ago gladdened the sight of the passer-by, peep out from beneath a canopy of leaves, but in the cellars the long benches filled with pans of golden cream ready for the morrow's churning are no longer to be seen; the great churns standing under the "sweeps," and the rows of pails packed with that far-famed product of Orange county, rivaling in its hue the buttercups in her meadows, have vanished forever. In the dairy yard, where once the daughters of the house milked the patient cows and carried the warm, foaming pails of milk to the cellar to be strained, one finds two or three brawny men who, in the years gone by, at this hour of the day, would have been swinging their scythes in unison in yonder meadow, and making the morning ring with the music of their whetting, in the same meadow where now a Buckeye or Champion mower is doing with a deal of clatter the work of half a dozen. The farmers of those days and their helpmeets are most of them sleeping side by side in the old village burying ground, or perchance in the new cemetery, heedless of the march of progress. And who and what, do you wonder, has taken their places with its toil and dignity of labor?

Throughout the valley, here and there, stand plain, unpainted, unpicturesque buildings with a platform in front which is worn and torn with the bumping and friction of wheels of farm wagons and furrowed and creased by the rolling of milk cans and greased with their overslopping of pure Orange county milk. What the churn was to the farmer in this valley in the days of Forester, this pagoda is to his descendant. Here his main product is absorbed and here he seeks his monthly revenue. Here daily comes the milk wagon, driven by a small boy or the laziest of the family, with four or five cans of milk which are received upon the platform, gauged, emptied and the cans returned to the wagon with a possible suggestion to the driver that less water is desirable. Here is made the Orange county butter of to-day; here and at the railroad stations is received the milk which is seldom churned at the farm. Down the valley from the village of Warwick to near that neat hamlet of Vernon stretches away an embankment with its iron track—one of the highways of the nation—upon which, as if in mockery of that prayer of Forester, "May the lines of no hideous utilitarian railroad ever deface the velvet of your green pastures, the fiendish howl of that veriest car of Juggernaut—the thrice accursed locomotive—never awake the echoes of your breezy hills," is heard the thunder of iron wheels, while the whistle of the engine echoes from crag to crag along those mountain sides and across the meadows and through the shades which he loved. In one respect, however, fate wove his fancy into history yet to be. The

senatorial and gubernatorial aspirations of the vale of Warwick:

"Thou hast it now, King, Cawdor, Glamis, all."

Seward has indeed, long years ago, been a Governor and Senator of the Empire State, and he and the weird prophet who foretold the day, but perished before all had been fulfilled, have alike passed into the silent land from which, though the eternal gates were opened to them, they would not return. Alas poor Forester! What of all the "dreams cherished amid the lovely landscape," save this, came to fruition? Was his life work perfected? Though at every entrance to the Eden of his day-dreams the angel with the flaming sword barred his pathway, though with his own human hands he lifted the mysterious curtain to enter unsummoned into the greater mystery beyond—who can answer?

It is perhaps enough for us that he has made the Vale of Warwick, if not celebrated in song like another Avoca, yet in the poetry of the wildwood, fairer to the sportsman than all the valleys of Ionian hills or—which is perhaps worth more than all the rest—that he raised poor Tom Draw up to share with him his own fame, that he decreed for him an apotheosis as immortal as a Cæsar's. It may have been, after all, with feelings somewhat akin to envy, that the author of the "Warwick Woodlands" saw Tom Draw become "well known from Maine to Mexico," and rank beside himself as a sportsman. Never was a fairer or more beautiful tribute paid to friendship, never was human attachment and appreciation more openly professed, than that of the scholarly writer for his less cultivated boon companion. Perhaps, in speaking to the literary and sporting world through the pages of a prominent magazine, he set the ideal above the actual in his efforts to please, indifferent at heart to the humble inn-keeper of Warwick. However it may have been, every sportsman, every man who boasts himself of a friend, cannot but regret that that last tribute of Frank Forester to Tom Draw, after the manly heart was stilled—that tribute in which he so bewails his lost friend—should have been given to the world, the result of a literary engagement, written by request for a compensation demanded and agreed upon between publisher and author.

From the entrance of the Vale of Warwick, looking southward, one with fifty years at his back may note wondrous changes. The forest on the left has been pressed sternly backward, the needs of the human below have denuded the upper crests of the hills of their timber. Dwellings gleaming through the foliage and hillowy grain fields occupy the places where, in the days of Forester, the ruffed grouse drummed in the thickets, and in front, where the solitary white spire of the old Baptist church alone marked the site of the pretty village concealed amid the willows and locusts, more modern spires now arise, and the inevitable brick buildings looming out in dull red against the landscape and stretching across the creek—the Wawayanda—tell that the hamlet in these years has quadrupled its size.

The waters alone go "unvexed to the sea." "Unromantic Wickham's Pond," now Clark's Lake, long famous for its pickerel, teems with the gamy black bass, almost rivaling for sport "the dim wood waters of the pure Truxedo," whither the genial proprietor of the former, that friend of anglers, so often resorts for new conquests, unmindful of the triumphs possible in his own pretty lake.

A little more than a stone's throw from the ancient hostelrie where "honest, whole-hearted, kind Tom Draw" presided at the jovial board, another Tom D., an angler like the first, dispenses hospitality to man and beast, and cheers the souls of luckless sportsmen with the comforts of his famous inn. Here mine host extends the hearty hand of welcome to enthusiastic anglers, and is always ready to pilot one to Greenwood and join in the sport in lucky spots known but to himself.

Southward from the village and on either side of the Wawayanda, across luxuriant meadows—rare hunting grounds in the good old days—the Forester Game Club has its preserves, the first attempt in the vale to prevent the wholesale destruction of game and to provide for sport in coming years. It was fitting indeed that its christening should be in honor of him whose spirit still lives and moves along the wooded upland, on the flowery slopes and in the quiet runs and swales; everywhere from that nameless rill on the north to the waters of the Papakating. Still southward, the meadows, once so wild and marshy, have been drained, and now produce burdens of choicest hay, the land then woody now teems with golden corn. While Forester has been sleeping the years of his manhood away, the axe and the plow have not lain in rust. Through the valley which we have traversed, until far away to the north, the cone of Sugar Loaf seems but a hillock, the years have wrought changes in customs, lives and sports. Yet think not that the sportsmen, of whom the vale contains not a few, fret away their lives.

To the eastward lie the Warwick Woodlands, in all their olden freshness and glamour; here at least nature has held the mastery over man. An ocean of forest with glens which have never yet rung with the sound of the woodman's axe, stretches away from Point Peter southward, away to the Hogback, and on and on until the forest takes other names, and that of the Woodlands is unknown; still on to the southward, until it passes beyond the limit of the vision, a dusky line on the horizon.

Below Point Peter, on the left, lies one of that series of tarns which extend from Schooley's Mountain, far southward in New Jersey, to the Highlands of the Hudson, the track of the glacier which in years gone by, beyond the limits of human reckoning, wrought annihilation to the men of the river drift—in other lands if not in this. This is Long Pond of old, Greenwood Lake of to-day, as fair, as beautiful in the dawn of the morning, as when from this summit Frank Forester looked down upon it in the days which saw him and Tom Draw among the living, and what is of far more interest to these pages, a spot where devotees of the rod and reel find sport rivaled by perhaps no spot nearer than the Thousand Islands, or may be the Delaware. Here, as well as in the vale, the years have left their traces. The long brown building at the head of the lake, known once as "Felter's," has become the Windermere; across the eastern arm that popular resort of old, known as "Huzen's," is now the Waterstone Cottage, while midway and on the western shore of the lake, the Lake Side House of to-day, in a transformed state, is all that remains of another "Angler's Home" of the olden time. The "lower end" was a sort of *aqua incognita* to dwellers on the New York side of the line; the grand fishing ground was at the upper end. Here great rafts constructed of logs were anchored, each with an aperture in the center in which could be set the car for the keeping of the minnows for bait or for holding the captured fish. These rafts were for the use of the pickerel fishermen, and were the scenes of many an hour of exciting sport, and of wilder fun "between bites." One incident connected with them is worthy to be recorded.

An enthusiastic party came in about sunrise one morning bent on a day's sport with the pickerel. They were duly placed upon one of the rafts and the sport which they had that day, though not uncommon at the lake, was such as to make the neophyte an angler forever. The members of the party all, save one, strung their fish and hung them over the edge of the raft, and hours before night the long-faced beauties which were tethered around were a sight which caused the glow of the afternoon sun upon the golden and embrowned autumnal foliage on the eastern mountain slope to pass unnoticed. The member who did not string his fish placed them one by one as caught into the car. His luck had surpassed all the rest; four, five and six-pounders had be taken from the water and dropped into the car.

The hour of departure came, and the party prepared for their journey homeward. The strings of fish were drawn in preparatory to their being packed, and "he, the chieftain of them all," began his arrangements for taking the fish from the car. The first dip of the net failed to bring up a single fish; a second dip was made, with the same result; a third and deeper one made evident the fact that some one had blundered, that there was no car in the opening in the raft, and that our fisherman, through the live long day, had been restoring his fish as fast as taken to their native element. Let every angler who reads these lines sketch for himself the expression upon that honest fisherman's face.

"I looked up at Nye, and he gazed upon me."

It cannot be caricatured.

In the spring time "Long Pond suckers" were a harvest for resident fishermen, and a luxury to the dwellers over the mountain. It was perch and pickerel, however, for which the lake was famed. To the latter have since been added black bass—both varieties—and salmon trout, and the fishing for the former has long been fine. Anglers now throng the lake by wholesale, attracted by the sport and the excellent accommodations afforded to those having families, by the half dozen hotels within easy reach.

On the western shore the club house of the Greenwood Lake Association, the Encampment Hotel and the Hall of Christian Philosophy offer new attractions to the sportsman, tourist and scholar. Though the members of the former are unknown to us by name, save one—W. O. McDowell, Esq., to whom the credit is due for the plan of the proposed Forester memorial monument—we are assured that the honor of the ancient order of gentlemen is safe in their keeping, and that the gentle craft will never be reproached for act of theirs. The gentleman above-named is, we believe, the founder of the club.

Teachman's cabin has become classic, and the halo of that night—the last of that "first week in the Woodlands," with its roystering and carouse, with Tom asleep "flat on his back like a stranded porpoise, with his mouth wide open, through which he was puffing and breathing like a broken-winded cab horse—his immense rotundity protected only from the cold by an exceeding scanty shirt of most ancient cotton," that "flash! slush! of a pailful of ice-cold water slap in the chaps, neck, breast and stomach of the sound sleeper," will hang around many a group of merry sportsmen, and the tale be told again and again to ears that never weary in hearing that rude exploit of Frank Forester and Harry Archer. Since then other nights have been made memorable at Greenwood Lake, and not the least of these the one on which the genial president of the —— —— Railroad attempted the role of physician to assuage the pains of his host, brought on by the partaking of too much cheese and too little applejack, or vice versa, or too much of each.

Miles away to the west, along that road fragrant with the memories of the morning ride to John Riker's tavern, we come to the "drowned lands," now to a great extent cleared and drained, stretching away from "Checkunk on the north far away into the Jerseys, as far as the eye can reach, a sea of coarse grass interspersed here and there with patches of swamp and thickets, with now and then a group of pines and cedars, venerable when he who made them famed was sporting away the hours of a happy boyhood among the green pastures of his native Wharfdale." One hundred and twenty-five woodcock bagged on these grounds of a day seems somewhat mythical to the modern sportsman, but grand shooting is still had upon these meadows in favorable seasons. The twenty thousand odd acres of the drowned lands with the great cedar swamp in its northerly portion will, with proper protection, be a favorite resort of the sportsman for years to come.

The Warwick Woodlands of fifty years ago, and the coveys of quail, woodcock and partridge were no myth. From the spot where on that second morning "Tom Draw pulled down a set of bars to the left and strode out manfully into the stubble" with Frank, and Harry, and Tim, up the valley, at the "Squire's Swamp Hole," "Seer's (properly Sayer's) Swamp," "Hell Hole," the white oak of Bill Wisner—the latter now a hale octogenarian—the sortsmen of those days could revel in game, and now in favorable seasons, along that historic track, enough may be found to suggest the good old days. The swamp holes are perhaps more drained, the ground less marshy, and the swamps proper a trifle less wooded, but the crack of Greeners and Scotts, in the season, breaking the stillness of the morning, tells that the past is being lived over again.

The group which on that autumn morning fifty years ago stood upon the white porch of Tom Draw's tavern and looked southward upon the orchards, the golden hillsides, and upon the mountain glens in front, have become as classic almost as the Laocoon, and in literature as immortal as the chieftains who joined in the quest of the Argo—those who winged their way with "pine cut down in the forests of Pelion" to the Colchian land.

All of human agony that the chisels of the great triad could wring from marble, all that the pen of Sophocles, dark with fate, could depict, commemorates but a tale of sin and retribution. Halcyon days they were, too, in that age of myths, garbed now in poetry and shrouded in a light that was never seen on land or sea. But halcyon days have ever been possible, whose record contained naught of woe, suffering or baffled hopes, whose picture is

As fair as Eden before the fall,
Ere the trail of the serpent was o'er it all.

Such days, such pictures, Frank Forester drew in colors which will never fade. The garden—the Warwick Woodlands—whose fruit could be gathered by no vulgar hands, have opened their treasures under the spell of a master's touch, and stand to-day famed in literature. Eastward from the vale of Warwick, and on a crest of the range overlooking the Woodlands and a panorama which will be stretched out in beauty forever, appreciative sportsmen have designed the erection of a memorial which shall keep alive the memory of Forester. What spot could be chosen more fitting than the one which overlooks the scenes of his "pleasant sports by day, of jovial boards at night, of dear, unforgotten friendships," the latter to him now, alas, as though they had never existed, unless indeed they be renewed somewhere beyond the ken of the mortal.

It was a saying of the great Lamartine, "What can man do for the man who is no more? Nothing but write a cold epitaph. Marble keeps the memory longer than the heart, that is the reason why a name and a word are graven on a sepulchre." Though the days when Frank Forester roamed these glades and angled in these streams are yet within the memory of living men, though there are hands still flesh which once grasped his own, and eyes which saw him and see him still though the sods of a grave lie between, the day is at hand when his memory, save in the world of letters, must perish unless kept in granite or in marble.

Let, then, the base of the memorial support the standing figure of the poet, artist, sportsman, with head bared and face turned toward the Vale of Warwick. Crouching beside him, with his Queen Anne's Tower musket, and with hand shading his eyes—so soon to be dimmed—peering toward his old home below, let Tom Draw have his place and share the glory of the other, and let the world talk of them while they sleep.

Earthly immortality is nought to them now. Never dreamed of, perhaps, by one, unless in that highest aspiration of the lowly, to have his name written on a tombstone. True, the desire to live on somehow beyond the days of the flesh, is as strong as life or death itself. We can read it in everything of human longing, from the unselfish wish of Herodotus "that the deeds of men may not be effaced by time," from brazen pillars, set to mark the limits of conquest, down through the centuries to the gentle poet whose lament was, that his name was "writ in water."

But these aspirations are not of the humble; theirs is, at most, that their names shall be inscribed somewhere where it must sometime be read, though by someone who must needs ask who and what the sleeper was. It is another touch of that nature which makes the whole world kin.

And if it be that in the after time, two stone faces, eternal in their repose, shall look across the vale, catching the glow of summer sunsets and facing winter storms, in noonday and in darkness—emblematic of that fitful fever of theirs which we call life—the tribute due from the living will have been paid, and the Warwick Woodlands and the Vale of Warwick, guarded by these sentinels of her past, will take on fresh lustre and live anew in song and legend, as undying and imperishable as those peaks above—God's eternal monuments over the graves, though leagues apart, of Frank Forester and Tom Draw.

CAMPS OF THE KINGFISHERS.

IN EIGHT PARTS—PART VIII.

THE next morning the Veteran and I were early up lake looking for a sunken reef or "submerged island" that Johnson had told about, and around which he had taken some very fine bass. We found it after a diligent search, about forty rods or so straight up the lake from Long Point, and after trolling slowly around it three or four times, and taking three small-mouths of over three pounds each, we pulled across to Deep Water Point, where a party of four young Cincinnati lads—schoolboys out on their vacation—had made their camp early in the previous week.

While we stopped a few minutes, Dan struck and landed, right under their noses, a bass that weighed on their scale three and three-quarter pounds, which surprised them greatly, as they had taken nothing near their camp but a few dozen sunfish. Some of them had been down to see us occasionally the previous week, and we had given them what fish they wanted, for their luck had been so poor, that they had taken barely enough to eat, but they were young and hopeful, and eager to learn how it was all done.

They were well-behaved boys, too, and old Dan commended them for their good sense in spending their vacation in the woods rather than in some less health-giving and less sensible pastime. Two of them went down to our camp a day or two after and took an inventory of all our camp equipments, not omitting the curry-comb, with a view of providing themselves with a similar outfit for the next year. Sensible boys! Spend your vacations in the woods instead of beer-shops, billiard-rooms and worse places, and your parents need have little uneasiness about your future.

The Veteran left a pair of the largest bass with them—all they would accept—and we pulled around below Buzzard Roost to look for a mate to his big bass that he and the Mossback succeeded in losing a day or two before, so firmly does your old angler believe that where there is one big bass, there are two. Just around the point I struck and captured a very game five-pounder, and I was having a quiet chuckle to myself over old Dan, but it did not last long, for as we turned a point to follow around the sweep of a small bay he suddenly said, "Hold on Hickory, there's trouble on the old man's mind," and as he looked up, I stopped the boat and reeled quickly up to take a hand—with the oars—in the tussle that was coming.

When he struck him I knew by the action of the rod that there would be a chance for the old fishhawk to show his mettle, and that it would call into play all the cunning of that one "dipper" of his to obtain the mastery over such a powerful fish as this one by his first great rush had shown himself to be, and I backed the boat rapidly up on the line to get within good working distance of him. Out into the lake with a tremendous pull that nearly lifted Dan from his seat (he weighs only ninety pounds) the fish turned and came back, with Dan whirling the reel handle for dear life to take up the slack of the line as fast as the fish came on. He attempted to pass under the boat, but a couple of lusty strokes of the oars fooled him, and he went by with a rush for the lily stems and bulrushes, some fifteen yards inshore. Whirling the boat around to give Dan his favorite position, a strong pull headed the bass down shore, just as he was about to vanish in the rushes, with a "Good-bye, old pelicans; some other time." This failure to get among the rushes and lily pads must have broken his heart, for the fight, although desperate, lasted but a few minutes after he was turned down shore, and when he was led alongside, rolling from side to side, "clean bushed," it was small trouble to take a quick, firm grip on his lower jaw with thumb and forefinger and lift him into the boat. He never left the water once while negotiations were pending, and we both had handled smaller fish that made longer fight. But what a

magnificent fellow he was; near twenty-four inches long, we judged, and only for such ungrateful contrivances as pocket scales he would certainly have been a ten-pounder, or more. As it was, when hung on to one of these sticklers for truth, at camp in the evening, he pulled the slide out to the full seven-pound mark, and we could coax not another half ounce out of him. He was a small mouth, and was the largest one of either branch of the family taken in this chain of lakes during the season. Dan took a firm hold on the old fellow's jaw, raised him up, leaned over and gave him a hearty kiss, and as he laid him down said quietly as he looked at me, "The boss." The two words covered the whole ground. They served old Dan as a sort of balance to the big maskalonge, and a safety valve through which to blow off the accumulating "where-are-you-now?" feeling that was nigh bursting him, and he looked on me with a feel-sorry-for-you expression for the rest of the day.

Down to the springs again and through the pockets, down to the outlet and back up between the two upper islands, taking a bass or pickerel here and there 'till the afternoon was well worn away. It had clouded up during the afternoon, and a black cloud looming up in the northwest warned us that we were about to have another cap-full of wind from Lake Michigan, which moved us to head the boat for Lewis Island as the nearest place of shelter, but before we were half way to it, the blast came sweeping down over the tree-tops and into the lake with a roar that told us it was not to be trifled with. Two hundred yards from the head of the island it struck us on the starboard quarter, and although we were going at a pace that strained every sinew, it was only by the utmost effort that the boat was prevented from swinging around broadside to the wind, in which case we would most likely have taken an involuntary bath.

With the sweat oozing from every pore and streaming down my face we shot around under the lee of the island, and pulling with easy stroke down to the landing, went ashore and waited until it was over, a matter of little more than half an hour.

These puffs of wind are not very frequent nor numerous, nor of much duration, but while they do pay their respects, they are as fierce as a man after snakes, and had better be avoided if possible. As remarked before, when you hear a roar, dip deep your oar, and pull quick for shore. We worked back to camp before sundown, and found all the boys in after a good day's sport, counting out the blow.

Brother R. and I were up long before daybreak getting ready for our trip to Cedar River after trout. When Frank went to the little stream to get a fish for breakfast, he took the first one he laid hold of in the darkness, and as ill luck would have it, chanced on Dan's seven-pounder, and served him up in blissful ignorance of the storm that was to follow. When Brother R. and I returned in the evening, the tail end of the hurricane was not quite in sight, and Dan was still charging around as if he had a hornet in the seat of his pants, while poor Frank, a picture of despair at his mistake, was sulking around on the borders of the camp looking as woeful and broken up as though the school ma'am had "gone back" on him. Dan thought it was a set up job on him, but after explanations and apologies were piled on him until he could barely see out, he was at length pacified and peace reigned once more in "Camp William Windeler"—named after old Knots.

Brother R. and I were at the burnt clearing shortly after sunrise, and before noon had fished the stream as far up as the end of Johnson's trail, where he began to get a taste of the real difficulties of trout fishing in Cedar River. An eighth of a mile beyond this he had gone a few yards in advance, and stopped to drop his clam into a good-looking piece of water, across which lay a large, rather flat log, nearly submerged, and under which the swift running stream had scooped a hole five or six feet deep. As I came abreast of him, I saw that his rod bent nearly double, and an instant later a magnificent trout that appeared to be fully sixteen inches long flopped up on the log, shook the hook out as though accustomed to it, and as he rolled back into the water, gave his tail a quick flip and vanished under the log like a flash of light. Brother R. was too dumbfounded to utter a word; and as he adjusted his piece of clam on the hook in silence and stepped out on the old cedar trunk, I passed up stream and dropped my bait into a narrow space between two sunken logs that promised a trout.

A minute later I heard a great splash and a "*whoof*," and peering through the bushes down stream, I caught a sight that started me into a smile that might have been heard a mile. There was Brother R., with one leg and arm thrown partly on top of the log, making frantic efforts to lift himself from the water, his hat gone and his rod resting with the butt on the log, while the tip, line and bait were hopelessly entangled in the limbs and bushes overhead.

A violent splurge or two landed him on top of the log, when, getting carefully to his feet, he jerked out between quick gasps for breath, "Ah—*rough*—whoope*e*, but that water's cold! I'll be dog-goned, Hickory, if I don't believe I fell in on both sides of that log." The fact was, as related by him when he got his bearings, he had fallen in on the upper side, and the swift current had carried him under the log, and he had grabbed a limb as he came up on the lower side, and was doing his level best to get out of the freezing water when I first heard him after the splash. We looked the log over when we recovered the rod—leaving hook, sinker and a yard of line in the limbs above—and found a small patch of wet, slippery moss near the upper edge of it, with a furrow plowed in it by his boot heel—the performance began right there. I laughed some more.

"Oh, it's all right; laugh away, I'm going to laugh m-yself, when I get my b-reath. Whoopee, but that w-ate's cold," and as he walked out and got on firm ground, "Hickory, I believe you get all the suckers to come up here trout-fishing just to see them fall in; last year it was Jim, now it's I," and he broke into a laugh, long and loud in which the writer joined, that made the old woods ring. Back from the stream a few yards we found where a tree had been felled, making a space in the foliage through which the sun reached the ground, and to this open spot we repaired while he stripped to the skin and laid his underclothes and woolen shirt on the hot log to dry. He said he didn't care anything about his breeches.

Then began a circus before an audience of one that may never be witnessed again; the mosquitoes furnished the music with a full orchestra and Brother R. for twenty minutes did the ground and lofty tumbling, vaulting, contortions, etc. He was ringmaster, clown, acrobat and trick pony, a whole show and a minstrel performance, and the audience laughed and roared till its sides were ready to split. "Good gracious! where do they all come from?" and grabbing up his half dried garments he got inside of them, urged to remarkable celerity by a *fortissimo* crash by the orchestra. "Let's go back! Cedar River is a fraud, and trout-fishing a delusion; bass-fishing is good enough for me, and camp beats this place all to smash, come on."

We got back into the trail and fished back to the lower end of the clearing, and once in the road were soon back to Bellaire.

Here we met Messrs. Hess and Pike, who had broken camp and were going after trout next day over the same water we had just left. We said good-bye with regret, for they had been pleasant company for us and their going would take two welcome brothers from our camp. "Old Bill Hess," one of nature's noblemen, and pleasant, kind-hearted little Charley Pike, may we meet you again under the shade of the cedars at "lower camp."

That evening sitting around the camp fire talking about our friends who had just left us, we noticed that Dan was unusually thoughtful and pensive, and as a streak of this kind sometimes led to an attack of "doggerel," we were not much surprised when he straightened up and sent forth the following "techin'" refrain.

"Little busy Charley Pike,
And genial, hearty, bluff Bill Hess;
We rarely ever meet their like,
So, may their shadders ne'er grow less."

Dan has been guilty of worse doggerel than the above, but not much. Retribution overtook him in the shape of a fit of the gripes, and he was only relieved by a timely and adult dose of Jamaica ginger, and put to bed.

Next day was to be our last day to fish and we made the most of it. At three o'clock Thursday morning we were awakened by the patter of rain on the tents, and by breakfast time it had settled into a steady rain that threatened to last all day. We packed and put in shape everything but the tents and fly, and waited for the rain to stop, but as there were no signs of it Dan and I finally took a boat and went across below the point for a last farewell cast. We came back in an hour with five bass, the largest one weighing 5¼ lbs., the fourth one we had taken of this same weight. At noon Wadsworth came down with the "Firefly" to move us to Central Lake, where we were to take wagon next morning to Russell's landing and catch the "Queen" going up to the Lewis House, near the head of Torch Lake.

When the rain eased up, towards the middle of the afternoon, we struck tents and were soon steaming up the lake, taking with us many pleasant memories of lower camp.

Speaking of the fish in this lake, Wadsworth mentioned a movement of the common lake herring up stream that took place, he had come to notice, regularly on the 10th of November for the last dozen years or more.

On that particular day—never being a day early or late—thousands on thousands of them make their way up to the little river connecting Central and Cedar lakes to the water above and are not seen again until the 10th of November of the next year, nor have they ever been seen, he said, in any of the other rivers.

While making their annual move the water in the river is so packed with them during nearly the whole day that they may be scooped up with dip-nets, baskets, or almost anything that will hold a fish. None have ever been taken in Central Lake, nor have any dead ones been found floating in the water or washed up on the shores. I was curious to learn if they came up from Torch Lake or the bay, and requested Wadsworth to notice if they made their yearly ascension of the river the coming November. If they did it would prove that their range did not extend below Central Lake, as the dam at Bellaire—built in the spring—was certainly an insurmountable barrier to any species of fish coming up from below. He wrote me after the 10th of November: "The fish began going up the river promptly on time, the 10th, which proves conclusively that they don't come from Torch Lake or the bay, as it is impossible for them to get over the dam at Bellaire." It is hard to understand why this movement should take place on the 10th of November of each year; they have never been known to miss the exact date in a single instance. Can any one of the readers of FOREST AND STREAM explain it?

We stopped over night with friend Smith at his pleasant, well-kept little hostelry, and bidding adieu to our friends at Central next morning, had a pleasant drive of four miles through stately, silent woods to Russell's landing on Torch Lake. Half way over to Russell's we stopped and took a drink from a glorious spring, coming out of the hillside, the last spring water we got in Michigan. (This is only a matter of information for Jim.)

When the "Queen of the Lakes" came along, we went aboard and were made to feel at home at once by the jolly, rubicund phiz of Captain Johnson, who shook us cordially by the hand; although we had never before came "athwart his hawse." At Brownstown (Torch Lake P. O.) we stopped awhile with Brother Frank Lewis, of the well-known Lewis House. Frank is a veteran angler and a famous relater of the toughest kind of tough fish stories, and in every known instance where a disciple of the rod has tackled him on a fish story, the disciple has come out of the contest "clean bushed." He dished up a good square meal and entertained us, and then hurried us across the narrow neck of land separating Torch Lake from the bay, in time to catch the down steamer for Traverse City. The passage was made over a wooden tramway on a flat car, drawn by a sleepy old horse, driven by mine host himself. Frank said "he was a restful kind of a hoss—in fact he could stand more rest than two ordinary hosses, and when he come down grade in the road, he had to 'push on the lines' to keep the critter from being run over."

At the landing we looked on at a crew loading a schooner with lumber, hunted curious stones and pebbles along the beach, and waited for the steamer.

The ride down the bay was a continual delight to us, and we were sorry when the boat touched the pier at Traverse City. Grand Traverse Bay has been so often described by letter-writers that I, a plain follower of the gentle Walton, will not attempt a portrayal of its loveliness, knowing that the effort would result in failure; its beauties can only be appreciated by being seen.

At eleven o'clock we were on our way home, sleepy and tired. Our baggage, "traps and calamities" were carried free without question, and the "knots and gnarls" of the long, tedious ride were smoothed down, and the way made pleasant by the courteous and civil treatment received at the hands of officers and employes of the road.

To Mr. A. B. Leet, General Passenger Agent of the Grand Rapids & Indiana Railroad, and Uncle Billy Parry, Manager of the Richmond & Fort Wayne division, the writer is indebted for courtesies that are yet remembered; and if the good wishes of the "Kingfishers" would avail in extending the span of life of the men of the line with whom we came in contact, their days would be long in the land.

I will say to anglers, as a final turn to the reel, and in good faith, take the "Fishing Line" and go to the Michigan North Woods for health, recreation, and above all, sport with the rod.

Brother R. and old Dan left me at Fort Wayne, with the understanding that our next camp would be near the head of Six Mile Lake, within easy reach of the Jordan River, that in case Brother R.'s "trout tooth" cuts up any unseemly shines a remedy may be found near at hand.

And now, if the readers of FOREST AND STREAM, or any number of them, have beguiled a weary hour, or peradventure found a scrap of comfort or a hint that will be of benefit to them in their perusal, the mission of these "fish lines" will have been accomplished, and if any vagrant brother of the rod happens to meander around into the vicinity of our next camp, he will find the door wide open, a five pound bass waiting his turn at the frying pan, and some one of us hanging 'round to welcome him to the "Camp of the Kingfishers."

KINGFISHER.

CINCINNATI, Ohio.

Editor Forest and Stream—Permit me, on the part of a large number of "spirited" sportsmen (especially anglers), to enter my protest against your arbitrary rule of excluding from the columns of your interesting journal all references to the use of beverages of an exhilarating nature, in narratives of hunting or fishing adventure. Your rule may be a good one, but I fail to see why you should discriminate against whisky, gin, etc., when no objection is made to the mention of those far more dangerous beverages, water, buttermilk, etc. Take for instance the flatulent and fabulous yarn of Mr. "Kingfisher," running through your six or seven last numbers. Not satisfied with diluting his "amphibious" story with a quantitudinous quantity of imaginary episodes, he must needs, every few lines, call attention to the fact that he drinks *water!* First he drinks at a "cold stream," then at a "babbling brook," then at a vast number of "clear, cold springs" of various sizes, shapes and depths, always water! water! water! until the damnable iteration causes a dropsical sensation in the reader. If Mr. "Kingfisher" drinks nothing but water, let him explain how it happened that one of my quart bottles of "Old Crow" was found empty on my arrival at camp two days after his advent. The excuse that the cork flew out and the contents accidentally escaped by reason of the bottle being upset, will not go down with any intelligent angler—it "lacks the requisite rotundity." To be consistent, Mr. Editor, you should, in future, exclude from your columns all allusions to the drinking of water. THE SCRIBE.

P. S. In future I shall have the corks of my bottles wired down.

OUTFIT FOR THE ADIRONDACKS.

I SUPPOSE that at least a dozen times every summer I am asked to tell what is necesary for an outfit to go into the Adirondacks. Some come with very crude notions of what sort of a place the Adirondacks are. They infer that there are lakes and streams, with considerable woods, but think there are no difficulties in driving anywhere on horseback, or even in a buckboard wagon; but when they are told it is almost an unbroken forest in its natural state that covers an area about one hundred miles square, that there are no roads or paths through these woods, and the only method of travel is by the light boats, which are so small that the guides pick them up and carry them on their shoulders from one lake to another, they look as though they thought you were "filling them up" with nonsense.

To those who know the Adirondacks it does not appear like a stretch of the imagination to say that looking from the top of Blue Mountain on the eastern side, or from Bald Mountain on the western side, the utmost stretch of vision, even when aided with a powerful glass, fails to reveal anything but an immense, endless panorama of primitive forest and densely wooded mountains and hills, with a sprinkling of lakes and streams.

In answer to these queries as to outfit I will give briefly what my experience in the woods has taught me to be necessary and useful. It may save some of the inquiring ones a good deal of trouble.

I.—CLOTHING.

A good stout suit of woolen clothing, such as we wear in winter, an extra pair of pants, a soft felt hat, two changes of underclothing, three pairs of woolen stockings, a pair of stout boots, not coarse and clumsy, but good substantial articles, a pair of shoes, a rubber coat, large size, and a pair of rubber leggings, a blue flannel overshirt, or any color you choose, but blue is best, pocket handkerchiefs and, I may add here, for want of a better place to put them, comb and brush, tooth-brush, towels, soap, needles, thread, buttons, pins and a pair of slippers (most comforting when footsore and tired), a pair of wading shoes if you wade the streams for trout.

II.—FISHING TACKLE.

A bait rod, a fly rod, a trolling rod and reels for each. For bait rod, a small reel holding thirty to forty yards of line. For fly rod, about same length of line. Both of these should be oiled silk lines, the former a little heavier than the latter. For trolling rod, a braided linen line, one hundred yards long. This latter rod and line may be dispensed with if you use a hand line for trolling. This should be a braided cotton line, 250 feet long, about this (○) size, two or three trolling baits (revolving), and of small size—the best I have had for some years have had the spinning part gold-plated on both sides—two or three gangs, of eleven hooks each, not very large, say five and one-half to six inches long, an assortme at of hooks (Limerick and Sproat), snelled on double gut, an assortment of fly hooks—*don't get them too large.* It is so hard to make people believe that fish of any size can be caught with a very small fly hook.

In making up this assortment there will be a great difference of opinion, but I never saw a fisherman's fly book without finding in it a great variety of flies that he never used. Here is my list: Hackles (red, black, brown and gray), coachman, grizzly king, Seth Green, professor (jungle, cock, red ibis, split-wing ibis (a new fly and a good one). These are all good flies, and there are others which may be added or left behind. If you cannot catch trout with these, you may as well give up fly-fishing. A few very small hooks and fine line to catch minnows for bait; gut leaders, six or nine feet long; a landing net. For buoy fishing, a heavy braided cotton line, eighty feet long, about this ○ size, and two or three lake hooks, large size, but not very thick in the wire. Lead sinkers of various sizes; as

small as you can get for your bait, rod and minnow line; swivel sinkers, two or three sizes, for trolling lines; heavy pipe sinkers for buoy lines. It is well to have one or two extra lines, for accidents will happen, and sometimes one will break a line off close to the reel, and then you will feel lost if you have no other to fall back on.

III.—GUNS.

The only game to be had is deer, and once in a great while a bear. A rifle is the best gun to use for either, but it wants a man behind it that is able to plant his bullet just where it is wanted. Many use a heavy shotgun with buckshot; and where a man is not a first-class off-hand shot, this is probably the best, for the reason that you have, say nine buckshot that will scatter, and there is much more chance for winging your game. But for pretty shooting and clean work, a rifle is best, first, last and always.

IV.—A FEW EXTRAS.

Boot grease (Miller's leather preservative is the best); matches; some good brandy (for medical use only); tobacco and pipe, and a bottle of oil and tar for outward application for black flies and punkies. My mixture is one-fourth oil of tar and three-fourths sweet oil. A small quantity of oil of pennyroyal is good to add to this. For those who intend camping out I will add a few items: A heavy army blanket; a rubber blanket 40 by 72 inches; a muslin pillow-case, to fill with balsam sprigs for a pillow; about half a dozen small muslin bags to put sugar, tea, coffee, flour and other things in. These had better have loops sewed on them, so that they can be hung up in camp. A piece of netting is very useful to keep mosquitoes off during the night. Those only who have been tormented all night long will appreciate this hint. I have been there, and would have given the price of a good dinner for this article for one night. Any man of ordinary ingenuity can rig it up so as to keep himself on one side and the mosquitoes on the other, and that's all that is wanted.

Medicines are not often wanted in the woods, but it is well to have a few simple things that you know how to use, such as seidlitz powders, spirits of camphor, extract of Jamaica ginger, and a piece of Turkey rhubarb; they may be useful, and don't take much room.

Following these hints, with good weather, good company, an easy conscience, and temperance in living, you have my best wishes for a jolly good time. J. R., JR.

JULY 27, 1882.

A SUMMER'S RAMBLING IN COLORADO.

[Concluded from Vol. XVIII., Page 506.]

FROM Denver we decided to go to Estes Park, by the way of Boulder and Sunshine. On the second day out we drove into Boulder. The town lies at the mouth of Boulder Cañon in the foot-hills and is on the direct line of railroad from Denver to Cheyenne. There is some beautiful scenery near Boulder, and a trip through the cañon is one never to be forgotten. Our road gradually climbed the foot-hills into the range. As we went up we were treated to one of the most charming views eye ever beheld. There right beneath our feet lay the great plains. The eye seemed able to take in hundreds of miles of boundless waste, which had the semblance of an ocean. Boulder Valley and the Platte lay beneath us, the river stretching far away into the distance. The distance that a person can see in the clear atmosphere of the plains is almost incredible. The climb to Sunshine is very severe, and we had to walk most of the way to relieve our mules. When about half way up it began to rain, and when we arrived at Sunshine we found it anything but well named. However, some kind friends took us in and cared for us, and as they proposed going over to Allen's Park persuaded us to go over with them next morning. Arrived there we made camp in a cluster of pines. One of the party felled a huge pine tree, the springy boughs of which were converted into beds.

Allen's Park is a small valley situated at the foot of Long's Peak, one of the highest mountains in the Rocky range, lifting its head 14,271 feet above sea level. It is one of the hardest mountains to climb of those that are accessible, and persons who go up once do not care to repeat the experiment. A few ladies have ventured, one among the number being Anna Dickinson. Long's Peak is one of the snowy range and from our camp we could look upon everlasting snow. Through the middle of the valley flowed the St. Vrain River, a fine stream of ice cold water, and fairly alive with trout. I entered Allen's Park a scoffer at trout fishing; I left it a devoted disciple. There is no game in the park during summer, except by chance, but in the fall the snow drives the game down from the range into the park.

The next day after our arrival we all went fishing. The St. Vrain is a turbulent stream in the park and a very rough stream to fish, being heavily timbered on both sides, and full of boulders and rocks, besides being very rapid in its descent. I started out with the rest and winding my way to the river side made a cast. My fly had hardly touched the water when I saw a flash, felt a twinge and the next moment was hunting for the trout in the grass twenty feet away where I had thrown it. I made up in ardor then what I lacked in science; and from eddy to eddy I went casting my fly in every likely place, tumbling over logs in my haste, barking my shins on rocks, slipping into holes, and sitting down suddenly on slippery rocks. Did I mind it? no. Did I feel the bruises? no. The spell was on me, I was possessed. I kept on until the shadows cast by the mountains warned me it was time to turn back. Then I began to feel tired. Then I realized that a flour sack full of trout was heavy. I had improvised a fishing basket out of a flour sack, not having anything else handy. At last my weary limbs brought me into camp and after a hearty supper of fried trout, what content it was to lie on the blankets, watching the camp fire, and talk of the "big one" we had lost and plan how we would visit a certain hole the next day and catch some of the fine ones we had seen.

We spent more than a week in Allen's Park, employing ourselves chiefly in fishing. It would be simply repetition to mention each day's sport, but I must recite one more experience I had, this time going up the stream instead of down. We started about nine o'clock one morning for some falls, situated about three miles from where we camped. I soon fell behind the party and became deeply absorbed in my occupation, and as I was having fine luck did not notice the lapse of time, and noon came but I still kept slowly on. It began to rain and I sought shelter under the friendly branches of a thick pine, whose boughs extended over a deep hole, in which were numerous trout, so I was not losing time. How long I stood there I cannot say, but presently I heard voices and I saw some of the party returning down stream. I hailed them and learned that I had a good mile before me yet to the falls. They advised me to return to camp, but rain or no rain, I was going to the falls. Tearing myself away from the seductive spot, I plunged into the woods, and after a tedious and very wet walk, found myself at the falls. They were nothing stupendous, but are pretty, and it is the spot to catch the heart of an angler. The river where it goes over the rocks is probably twenty-five to thirty-five feet wide and falls in an unbroken sheet about eight feet. At the foot of the fall is a large pool, which at the lower end was partly dammed by the trunk of a pine which had fallen across the stream, making a small lake or pond of the pool, just the place for trout, and large ones too, as the little fellows could not get up so high. My first move was to start a fire to dry my wet clothes, and I soon had a fine one crackling and spattering. I then tried the fish. Standing with my back to the fire I could throw my fly out into the boiling water where it came over the fall and went under and then down with the current. It would only get to a certain point opposite me when away would go the line and the next instant a speckled beauty would lie quivering on the shore. I did not have the luck to hook anything very "big," but I made a large addition to my already heavy bag before turning reluctantly away. I tried the other side of the pool under the shadow of a huge rock, where in the clear water I could see numberless trout swimming, but though I tried them with live grasshopper as well as fly they would not rise, and I could tickle their nose with the bait, but it was of no use. I reached camp that night about dark, a very tired individual.

The days passed only too quickly, and we concluded to go on over the range into Estes Park. One morning we broke camp, and our friends went one way and we the other. The road from Allen's Park into Estes is fair, and takes one quite near the foot of Long's Peak, giving a fine view of its different sides. The point called the "Keyhole" can be plainly seen; that is where the real trouble of the ascent begins. It is not a long drive into Estes, and before noon we were on top of the divide and had begun the descent. Here a lovely view was spread before us. Estes Park is called the most beautiful park of Colorado, and it is very handsome. It is full of little valleys and high rocks, hills and dales. The park is a great summer resort, and there is a fine hotel in it, besides many ranches and cottages. A good deal of the park, including the hotel, is owned by a company of Englishmen, at the head of which is the Earl of Dunraven. They have some of their land fenced in, and do not allow trespassers. This is greatly in contrast to the American settlers. They do not put signs up warning strangers off, but allow you all the liberty you want. Such is the difference.

There is fine fishing in the park, there being two or three good streams. We tried the Big Thompson first, and had good luck, but the trout averaged smaller than in the St. Vrain, as the stream is fished more. We went up to the head of another stream, away up near the foot of the snowy range, and though it was in August, were treated to a fine snow storm. Al had been in the park several times, and said he never knew it to fail of at least one storm a day up in that canyon. In the fall of the year deer and sheep come down from the range into the park, but we were too early for them. A person can go over the range, however, with pack animals into North Park, and in about two days' travel can find deer, sheep, bison and elk. There is a hunter who lives in the park, who will for a consideration agree to give one a chance to shoot at any animal named, excepting the bison; they are not plenty. You get the shot; it is your business to kill, for his contract ends when he has given you the chance. As there are a good many wealthy people who visit the park, this hunter drives some good bargains in this manner. There are many pleasant places to visit in the park, and objects of interest; one in particular is Black Canyon, a place where the sun never shines. You can see it from a long distance and from most any high point in the park; and it stands out like a black shadow in the landscape. We stayed long enough in Estes to catch plenty of trout and see most of the park.

From Estes Park we went to Longmont down the valleys of the St. Vrain and the Boulder. This is one of the finest farming sections of Colorado, and the system of irrigation is well perfected. The farms look well and have more of the general appearance of Eastern farms. During the season daily stages run from Longmont into Estes Park. From Longmont we drove into Denver on the second day. All were pleased with our trip.

Now a few words to any who may wish to take a trip of this kind. For a trip in the mountains there are two outfits—a wagon (or two if necessary) and teams, or saddle horses and pack animals. Most any part of Colorado can be visited with a wagon, and that is the finest way to travel. But if any one wants large game they must go further away from civilization, and then the pack animals and pony is the thing. So let the sportsman determine what he wants and then decide. If it is preferred, outfits can be hired in Denver with a driver, who is also generally a fair cook (mountain); but it is cheaper to buy the team and do your own work. I would advise a party to be made up of two or four, never an odd number. Four is the best number for a party, as then the duties of camp life can be performed without being a burden on any. The wagon best suited to a trip for pleasure is the "Sudebaker excursion"—it is light, but strong enough to stand hard knocks and carry all the load necessary. Mules or horses—that is a matter of taste. I should advise a team of mules, providing you get a good one. Take a tent, for though you do not always want to pitch it, it is very nice to have. A 10x12 with two-foot wall is large enough if a wall tent, and they are the best, though a little more trouble to set up than the A tent. Also, don't fail to take a camp stove. They can be had in two sizes, with two and four holes. The latter is the best. The stove used in the West is made of sheet iron and is very light. I see an advertisement in the FOREST AND STREAM of a very fair looking camp stove, which might prove a better thing than the old style. A camp fire to cook by is good, but a stove is better. You will want two pair of heavy blankets and a rubber blanket. Buy them East—you cannot get a fair blanket West as cheap.

The best clothes for general wear are a canvas suit, heavy and lined with blanket. When it is cold the coat is comfortable and when it is warm you don't want it; so get it lined by all means. Take two or three woolen shirts, blue or any other color. Blue is the color most affected, as it is the best looking; but other shirts will wear better; heavy underclothes should be worn. Also wear heavy boots or shoes, with the soles covered with hob-nails; saves the leather and prevents slipping on the rocks. All the clothes anyone needs may be put in a valise twenty inches long. Now for outside garments. Take an officer's heavy rubber coat. The light coats are nice but don't wear. An over coat is not really necessary, if the lined canvas suit is worn; but if carried it makes a good pillow or extra covering at night.

Now for sporting implements. A good jointed rod not over twelve feet long; such a rod as is called a "general rod," strong and serviceable. (I speak now to those who are not experts at angling, to say that are, of course, know better than I what they need.) A good line, linen or silk, twenty-five yards long; also a reel. This can suit your fancy or purse. As for flies; I have found a small hook the best, a No. 7 being large enough for general use. The brown hackle is the most killing fly at all times, though all the hackles are good; also the gnats, black and white. On a dark day the white gnat is a fine fly. The coachman is also good on a dark day or in the evening. Gaudy flies as a rule do not work well, with one exception, and I cannot call the name to mind, but the body is of yellow, wound with a small gilt band, the wings of brown. The fly has the appearance in the water of a yellow jacket bee, of which there are large numbers in the mountains, and which the trout feed on—as I found by cutting them open; a good plan, as it often will give you an idea of the kind of food they are after, so you can guide yourself accordingly. Take a good stock of flies, as they are more expensive West, and a person will lose a good number in a week's fishing. Also carry some gut leaders five or six feet long. By all means provide yourself with a pair of fishing pants, as many streams can only be properly fished by wading, and wet feet in mountains, or anywhere else for that matter, are not conducive to health.

For a hunting outfit, if it is your intention to keep within certain distances of civilization and only to stay in the mountains during the summer season, a good shotgun is the best thing you can take, for the chances are ninety-nine out of one hundred, that you will not see anything to shoot at with a rifle. But a shotgun will get you many a bird and rabbit to help the bacon out. If it is the intention of the party to stay in the mountains until fall, or to go where large game can be found, then take a rifle. What kind? ah, there you ask a leading question. Each section of the country seems to run to a particular arm and there nothing else is good—that is to judge from the opinions expressed. On the plains where buffalo and antelope are hunted, the best gun and the one that will always sell, is the Sharp's rifle. A good heavy gun, shooting a large charge of powder, and I personally have yet to see a better gun for general work than the Sharps. The company have ceased the manufacture, but one may perhaps be secured of dealers yet. In the mountains of Utah and Idaho, and among prospectors generally, the Winchester takes the lead, on account of lightness and rapidity of fire. It is a good gun; but for a magazine rifle the Kennedy has some points that it schampions claim are superior. The Ballard is a fine gun, but I did not find many in use in the localities I visited; while the Remington is used more for target practice East than for game in the far West. I mention all these guns, it is sometimes a good thing to know what will sell when one is through with it. As a general thing a good rule is, that a light gun will sell in the mountains better than a very heavy one, but where buffalo and antelope are hunted exclusively a heavy gun sells best. However, a person cannot find buffalo in any great numbers except north of the Northern Pacific, and we have not been considering that country.

To sum it up as regards firearms, if the party numbers more than one let one take a shotgun, the other a rifle, and then come what will, they are prepared.

The next question may be, What does a trip in the mountains cost? That is a question more easy to ask than to answer, as people have such different ideas in regard to what is necessary; but I will try and give some idea of the cost to a person who is not too "high toned," and is possessed of a desire for sport; that is strong enough to put up with some inconvenience. First, for we will consider each item, there are clothes, blankets, fishing tackle and guns (shot and rifle), say $175; then there is the team and wagon, etc., about $300; supplies for three or four months, including feed for the team, $100. Divided among four (if party is that number) this would be $113 each. To this must be added railroad fare to Denver, or any other point agreed upon, which will vary, and can be easily determined upon by inquiry at some ticket office; and say $25 for board before and after the trip. From this total amount deduct $75 for share of proceeds of sale of team, and we have about $225 for a summer's enjoyment. Those that possess the tools of the craft are of course much ahead, and their expense much lighter.

Many there are who do not think much of spending their leisure time every summer at the watering places and the like; and how much better in health, both mentally and physically, would they be if they would rough it for the same length of time. Go to Colorado, my friend, and come back a new man. I say Colorado, for it is the most easily reached, and has more attractions to offer which are "get-atable" than any of the Western States. Let him that is nervous, worn out, broken in health, diseased in mind, go to Colorado, spend three months in the mountains, sleeping out of doors or in a tent, eating coarse food (for he can eat it there), and if he does not come out more of a man than he was before, I will give him my head for a foot-ball.

PRAIRIE DOG.

MOSQUITO AND FLY A FLY PREVENTIVE.—Bangor, Me.—Allow me to suggest an addenda to your paragraph headed "Mosquitoes and Black Flies." There are more than a hundred different liquid preparations that are effective against mosquitoes and black flies, but so soon as one gets heated by the sun, or by exercise in the woods, they flow off with the perspiration, get into the eyes, causing considerable pain and annoyance, and too frequently, where tar is used particularly, stain the clothing, whether linen or flannel. The basis of all preparations should be mutton tallow stiffened with white wax to a consistency that will bear the heat of the skin without melting. Tar, while effective, is not only disagreeable to most persons, but stains badly. The best preparation we have ever used was devised for us by Dr. Harlow, a druggist of this city. It contains as much carbolic acid as the skin will bear without detriment. It is not only a preventive, as it is offensive to all insects, spiders and even snakes, but is likewise the antidote used in all cases of wounds by these creatures in India. The preparation is entirely colorless, agreeably perfumed, and can be carried in a small tin box in the vest pocket.—G. M. STILWELL.

Special bargains in W. & C. Scott & Sons' fine guns, 10, 12, 16 and 20-bores. Call personally and convince yourself. CHARLES L. RITZMANN, 945 Broadway, New York.—*Adv.*

TIM POND AND THE SEVEN PONDS.

Editor Forest and Stream:

After my health became impaired I went to Maine, my native State, for rest from a large business, for recreation and strength. While there I was persuaded by friends of other years to go to Tim Pond. I found such myriads of trout, had so much sport and gained so much health that I often talked of it, and the next year took friends and neighbors with me, meanwhile writing to FOREST AND STREAM about it. My friends and I have continued to go, and I have continued to write, and in short this is how Tim Pond and the Seven Ponds became my Mecca.

Some things that I first wrote were then criticised by a class that now enthusiastically endorse them. What I have stated as facts are now so recognized, and what I gave as estimates have proved to be substantially accurate.

But from letters which my friends and I are almost daily receiving, and from statements and questions which I see in FOREST AND STREAM, which, now that I am shut in from the green world around me, I read with redoubled avidity, I am admonished that I can still be of service to those for whom I have an increasing sympathy—invalid sportsmen, the exhausted business man, and the gentlemanly patron of manly sports. I am made aware also that several ladies are anticipating revisiting the scene of their last years' enjoyment at Tim Pond during this season.

It is generous and just that those visiting these places should know the facts regardless of any personal pecuniary interest in them. What statements I present as facts can be substantiated by cumulative and undoubted evidence, and what I give as estimates are backed by an array of honest authority.

Parties from this State, New York, and Massachusetts, for the last year or more, on starting for Tim Pond and the Seven Ponds via Smith's, have taken the popular routes, after reaching Boston, of the Eastern, or Boston & Maine, Maine Central & Somerset R. R. to North Anson, arriving at — P. M. Then take a stage the same day for Northern Portland, eight miles distant, and spend the night at the Dingo House. The next morning they take the stage or private team, as they may elect, and travel in view of the loveliest and most varied scenery to Smith's Farm. After dinner they take a buckboard wagon to Smith's cabins at Tim Pond, arriving in good season for tea. The next morning, if one be in such haste, the journey may be continued to the Seven Ponds.

The distance given by residents on the route from the railroad terminus at N. Anson to Smith's Farm is forty-five miles. The distance from Smith's Farm to Tim Pond, as recently measured by chain, is a few rods less than six miles, and from Tim Pond to Big Island Pond—one of the largest of the Seven Ponds—also measured by chain, is a few rods more than twelve miles, making the entire distance from N. Anson to the Seven Ponds sixty-three miles, and the time from Boston to the Seven Ponds, two days and a half.

Smith, for excellent reasons, has selected as the site of his forest hamlet, high ground a few rods from a sandy cove of Big Island Pond, and a few rods from "L." Pond, two of the largest of this grand cluster of ponds.

Speaking with reference to a line running about north and south, this location is about the center of the group, making it very convenient to reach any of the number, for the distance from one pond to another varies from a quarter of a mile to a mile.

On one side of this site is a clear, cold spring of water, and on the other a beautiful brook comes rollicking down from Snow Mountain. By putting a dam across this stream Smith proposes to construct a trout basin in which to impound the charming, finny fellows to take at any moment fresh for the table or for guests to take home.

At Tim Pond there are eight good log cabins, besides one for cooking and one for dining. And a friend writes: "Smith has three cabins ready for use the 1st of June at Seven Ponds, and before the 1st of July expects to have as good a set of cabins here as at Tim Pond."

The buckboard road from the Farm to Tim Pond and thence to Seven Ponds is no ordinary affair. I have ridden over it and walked over it, and know every rod of it. It is made and used for double teams as well as single ones.

Bushes and old logs are cut and put aside; trees are taken out by the roots; stones are dug up; knolls are shoveled off into hollows; streams and marshy places are bridged, etc., etc. In truth, it is a good forest road. I have ridden on worse public roads in more than one town in Maine. Some parts of it are rough. I do not say the best of it is as good as those through the village of New Portland. But it has cost Smith many hundreds of dollars. All sportsmen are indebted to him for their great pleasure in passing through this shady retreat, with the boughs of the umbrageous trees, centuries old, intertwined over their heads, and for the comfort they receive in riding here, instead of being forced to tramp over a precipitous trail, marked by spotted trees, and crawling under windfalls or splashing in mud when tired nature is just ready to faint by the way. Yes, and we will thank him that, with strong horses, he will take all the tackle, guns and munition we may desire, that we need leave nothing behind that we so much wish to have with us for the two weeks' fishing and shooting.

"Look here upon this picture, and on this," to sketch some of which I have seen the original myself. Two who have been far more than a quarter of a century hunters, trappers and guides in the Rangeley, Kennebago and Seven Ponds regions shall furnish some material and some shall be gleaned from the writings of Capt. Barker, the columns of FOREST AND STREAM, etc., etc.

Phillips is the terminus of the railroad on the route from Boston to Seven Ponds via Kennebago. From the above authorities, and I think them good and reliable, Capt. Barker says: "Arriving on the train at Phillips spend the night there, next morning take the stage twenty miles to Rangeley." So far we agree with him. "After dinner," he says, "make ready and start for Kennebago." We still agree. He does not say at what time the guests will reach Kennebago and so I must rely on several truthful persons, who have been over the path many times and know every furlong of it. We will say that they reach there in season for supper and spend the night there. The next morning they pack into a boat, pull five miles on the large lake, up a stream, cross a small lake, up an inlet, then take a trail that leads to the most southerly of the Seven Ponds, and my authority puts it at fifty-five miles from Phillips. But they have not yet reached Big Island Pond, where the Smith cabins are, and the central and most prominent of the ponds for trouting, location and scenery. Those ponds north of Big Island Pond are considered better for trouting than those south of it. I do not mean exactly north and south, but speaking in general terms. From a map at my side I judge it to be from three to five miles from the southern point of the group of ponds to the central point which will give us a common point from which to compare the distances of the two routes in question. Adding then, say, three miles to the fifty-five of the Kennebago route from Phillips where the trail strikes the southerly region of the Seven Ponds, we have fifty-eight miles from the Phillips terminus of the railroad to a common and central point of the region under discussion. And my friends, you have the two pictures. For I have already shown you, it is sixty-three miles from the North Anson railroad terminus to the Seven Ponds common point via the Smith Farm and Tim Pond route. So far I have endeavored to show the whole of both pictures, that those who have never seen them may see and choose for themselves. Those who have seen the original of both make the same choice.

But to follow the example given me, I must call attention to a few features. By the N. Anson line the stage takes us through charming scenery and over good roads forty-five miles to the Smith Farm, and then come eighteen miles to the common point, spoken of at the Seven Ponds, by buckboard wagon. We can take with us much or little baggage. We can walk a part or all of the distance, shooting or fishing by the way; or we can ride all the distance and need not soil the blacking on our shoes, from the platform of the station at N. Anson to the door of Smith's cabin at Seven Ponds.

By the other line we can take a stage twenty miles to Rangeley—good road, grand scenery. Then "a strong wagon, three miles," then ten miles on foot or horseback; then more change of baggage into a boat; down the large lake, up a stream, across a small lake, up an inlet to a twelve mile trail. "Well, it is none of your modern smoothed out ones," so a sportsman told me last September, just as he "grounded arms" after "coming through" said trail, nor did he feel as though he had been sauntering through "The Happy Valley." He thought the proprietors would make a buckboard road if it was possible or practicable, but he did not see any need of it, now that Smith had chosen the better way, etc., etc. After we come to the end of the old trail we can have more boat and more "carry," or all "carry" till we arrive at the common central point on the shore of Big Island Pond, thirty-five miles from where we began our "Paddle and Portage." Shades of our grandfathers! Leave out twenty-five miles ride on a good stage, over a good road and through a fine country for the sake of a tramp of such hardship! What an "inspiration!" It almost equals that of which we have heard too much of late. Suppose I have been misinformed and have overestimated—though I think I am nearly correct and have underestimated rather than overstated—and instead of this thirty-five miles of "hardship" there are but twenty-five. Can I, or any other invalid or merchant, minister, or hardy, fun-loving sportsman afford to undergo such an unnatural and exhausting strain rather than ride twenty-five miles in a stage? Since this exhibition of the two pictures, it is unnecessary for me to say which route has the least hardship.

We will now consider the question of time. Being ill I have not seen the most recent time tables, but think that trains from Boston arrive and depart at the same or about the same time at Phillips and North Anson, and we have seen that via the North Anson route a passenger is two days and a half in going from Boston to Big Island Pond.

By Phillips and Kennebago the passenger from Boston stops for the first night at Phillips; next day he is on his way to Kennebago, and spends the second night there. The third day he is to do the balance of the thirty-five miles, and if he is a strong man and has a good guide he will reach Big Island Pond late in the afternoon, with a good appetite and a disposition to sleep. It is not requisite to take another view of the pictures before we decide as to the superiority in the matter of time.

I will now speak of the transportation of supplies and baggage by horse power. Oh! no. I have no example for this! It is, however, the real thing after all. Just here a most discreet silence has been observed.

I may be able to walk the eighteen miles from Smith's Farm to Seven Ponds, though in impaired health, by taking a rest at short distances, a frequent lunch and perhaps a night in some of the temporary camps on the road, and certainly the road is an easy one for a walk. But I want supplies for the table in plenty and fresh. I am fond of trout and game in their season, but do not want them all the time. I want variety; meal, flour, salt pork, butter, eggs, potatoes, and if I remain in long, beef, mutton, buckwheat, syrup, sugar, coffee, etc., etc. With a good road and double team to connect with the outer world we get them. When we depend upon a trail and a man's back things are sometimes scarce. T. S. Steele found it so, and I did once. Then I, with thousands of others, want my "traps" with me. A full "kit" for a gun and rod and perhaps for a rifle. Yes, and I want some changes for raiment. Accidents have occurred. A small medicine chest along shows good judgment. Shall, can a man "carry" all these for me and a score of others? I tell you the supply train is a good thing to have, and I shall board with the man having one, though I do ride on a stage. Gentlemen, you have a right to keep silent on this point just as much as I have to talk about it; or you have a right to tramp those thirty-five miles rather than ride in a stage, but let me advise you to send your supplies by a good strong team.

I have said but little this time about trouting, shooting, scenery, cabins, cooks, etc., etc. I need not, for I did it long ago. Others have taken up the refrain, and have been crowding honors thickly upon the beauty of the scenery, the excellence of the fishing and shooting, and I have decided to rest. It would seem that certain parties wish to inform us who dwell in cities that their favorite proprietors were pioneers at some chosen ponds before the redskins or before the glacial period. Others are profuse in showering blessings and commendation on the head of hard-toiling Kennedy Smith. All these things amuse me or afford me a sort of satisfaction. I have had great pleasure and benefit from the days I have spent by the clear waters and in the dark forests of Maine. I have engaged quarters at Seven Ponds for the last Tuesday in August. It is now uncertain if I occupy them, but if fairly up from my cot I shall go there to regain my strength. And I shall go via Tim Pond. It has no hardships that one who is able to travel at such places as Saratoga and Newport cannot stand. I had hoped to take my wife and daughters with me. I cannot decide that now. But let me repeat to such as have nervous prostration, malaria, first stages of pulmonary troubles, dyspepsia, etc., it is far more for your benefit, and you can better endure to spend a few weeks at Tim Pond and the Seven Ponds than a trip to the White Mountains, Niagara Falls and the usual summer resorts.

I had arranged to go with Rev. Dr. Craighead of Howard University, a friend or two of this State, friends from New York and also from Maine. I owe much to those old Maine friends who have pilgrimized to those beautiful spots with me so many times. Once we left Farmington with our private teams in the morning, and took supper at the Tim Pond cabins, and had time enough to have caught fish for a meal if we had thought of it. Again we took breakfast at a Tim Pond camp, and supper the evening of the same day at the Dingo House at North New Portland. It was a splendid supper; never did I enjoy one more.

My neighbor, J. Goodrich, Esq., returned last month from Tim Pond, and says he had just such meals at the Dingo on his way to and from his sport. He says the trouting at Tim Pond was so excellent that he did not wish to go to Seven Ponds, and gave it up for this time. He and the friend with him thought they had the richest feast yet.

I began these lines as a few kind words to those who have never been to Tim Pond and the Seven Ponds, and who wish to go by the easiest route. I think that I have shown this, and will close by saying that round trip tickets from Boston via West Waterville and North Anson to Smith's Farm are sold for $8.50. J. W. T.

NEW BRITAIN, Conn., July, 1882.

Natural History.

THE SELF-PRESERVATIVE INSTINCT OF ANIMALS.

THE RATTLESNAKE.

Editor Forest and Stream:

Yesterday, in company with two citizens of this place, I spent the day in riding over the country on horseback. Our object was to look into the coal formations hereabout. We found coal abundant, and of very good quality. The fossils are in a remarkable state of preservation. I picked up a number of the genus *Productus*, with the shell perfectly white and pearly, almost as much so as it could have been when the animal lived in the carboniferous seas. Also got many specimens of *Euomphalus* and cup-shaped corals, which were perfect in all their parts. Also got one trilobite, which had been converted into a beautifully polished clay-iron stone, and the complete preservation of the little animal is something wonderful to behold. Here are his eyes and every lineament, as plain as when they were instinct with life. If this little chap could talk, what a tale he could unfold! But he can't talk; he is as dead as Hector; as dead as forty broiled mackerels. The more's the pity. And yet he is so life-like as I hold him in my hands, I can hardly help thinking that he is about to jump away from me.

While riding along, our horses became strangely agitated as we neared a fence, and grew more and more so the nearer we got to it. They pricked up their ears, stuck their heads out as far as they could, snorted with their nostrils, and showed a great unwillingness to approach the fence. They were in so nervous a state as we urged them forward with whip or spur, that they actually trembled. The fence was on an open prairie, with no brush about it, and we could see nothing whatever to cause such singular agitation. Finally, one of my companions, Dr. Poindexter, of this place, spoke up and said: "There must be a snake here, one of those big, rusty old rattlers." Mr. Scribner, my other companion, thought so too, and proposed that we hunt the rattler. Our horses acted so foolishly that we took them out of the way, dismounted and hunted the snake on foot. Sure enough we found him lying in the shade of the fence, just opposite where our horses behaved most ridiculously. He was lying at full length, seeming to be in a great state of contentment, but proceded to coil himself up as soon as he perceived that he was the object of our attentions. He remained perfectly quiet, except that he licked out his tongue at us. While we did nothing but look at him, he did nothing but look at us and lick his tongue, as if he meant to say: "Be careful now, don't come near me, if you'll let me alone, I'll let you alone. If you bother me, I'll give you lightning."

I had an excellent glass with me, so I could study this *Crotalus horridus* just as closely as if he had been but fourteen inches from my eyes. I could note every movement of his nerves, and read, as I thought, the very thoughts that rose up in him. What a proud, scornful, wicked eye he has. That eye looks as if it was never softened by a single good thought, and yet as if it were too proud to have reflected a single mean one. Villainy of a high and honorable sort is his nature, if it is possible that villainy can be of that sort. It seemed to me that he had the eyes of Satan himself. Did Mother Eve allow herself to be seduced and ruined by such an infernal-looking "cuss" as this? Then I say that her taste must have been miserably perverted, and her virtue morbidly weak.

The snake remained looking at us and licking out his tongue, with no other demonstration whatever, until the Doctor and Scribner began to advance upon him with stones. He then lifted his head high up and sprung his rattles. I kept my glasses upon him. His eyes blazed with fury; they now had an expression of malignancy and hate impossible to describe, and every part of him quivered with excitement, or with the impulse, desire or intention to strike a deadly blow. It was really a fascinating spectacle to look upon, but not unmixed with a good deal of apprehension and horror.

Presently a huge stone from Scribner's hand came down upon him with crushing effect. He struck it a tremendous blow with his fangs, but that was the last warlike demonstration he made. He had got enough, and acknowledged himself whipped. He uncoiled himself and tried to escape by dragging his mutilated form through the fence, but before he could do so another stone had put him entirely *hors de combat*. He ought to have run a little sooner, as I have many times had to do when confronted with "overwhelming numbers and resources." He was as thick as a man's arm, and above four feet in length. He was a villainous looking varmint, to be sure. I do not blame our horses for cutting up so. Did not think to count his rattles, but believe he had only four, possibly only three.

Is it not singular how horses are provided with this powerful instinct which warns them of their deadly enemy, and that they receive the first warning of his proximity through their nostrils? How thoughtful and good is the great Creator even of his dumb brutes—if he did make rattlesnakes! Often in riding about over the wilds of Texas I have had my horses behave strangely without being able to

see any reason for it, and now I feel sure it was the *Crotalus horridus* or some other bad snake that caused it.

Am reminded here of a black dog whom I well knew in Bandera county, Texas, some years ago. He dwelt at the same house that I did, and he was with me constantly. He was a very bad fellow to fight. He seemed to regard fighting as his chief business in this world, and took great delight in it. He would not hesitate to tackle a bear, wolf, or a roaring bull on sight. Yet whenever he saw a rattlesnake he would immediately hang out the white flag, utter a low growl, then tuck his tail between his legs and "git up and git." I have often seen him do this. He was so much afraid of a rattlesnake that he would be run clean out of the country by shaking at him the rattles of a dead snake. I have often run him entirely off the premises by doing this. And yet he never was bitten by a rattlesnake to my knowledge, for I raised him from a puppy. How did he learn that *Crotalus horridus* was so dangerous? How did he conceive the idea that even the snake's tail, detached and dried up as it was, was still loaded with danger?

This dog was a curious dog anyhow. There was another thing that he hated very greatly, besides rattlesnakes. I had a fool neighbor who was much given to playing on the accordeon. He would sometimes come over to my house to treat me to his music. Just as soon as my black dog heard that accordeon he would clear the fence around my house and take his departure for the deep woods, and there he would stay until the accordeon man had left. I used to envy the dog for his absence on such occasions, and wish that I were with him in the deep woods. It used to amuse me to see what an air of inexpressible and sick disgust the dog put on as he took his departure when the accordeon commenced. N. A. T.

Bridgeport, Wise County, Texas, June 24, 1882.

SOME NEW NAMES.

THE constant changes which scientific nomenclature is undergoing are remarkable, and nowhere more noticeable than in the department of ornithology. Within about a year three new catalogues of birds have appeared, two of them referring to the avifauna of North America and the other to that of Europe. These lists are not from the pens of tyros, new workers in the field of science, but bear the names of the very foremost ornithologists of either continent. They are Mr. Robert Ridgway's "Nomenclature of North American Birds" (Washington, 1881), Mr. H. E. Dresser's "History of European Birds" (London, 1881), and Dr. Elliott Coues's "Check List of North American Birds," second edition (Boston, 1882). These lists, bearing the stamp of the highest ornithological authority, may be supposed to have been correct up to the date of their publication, to have represented the state of our knowledge at that time, and the names given in them may be expected to hold until further research shall have revealed the untenability of some of them. But how long will this be? The answer comes to us after no long delay, for, in the advance sheets of the "Proceedings of the United States National Museum" we find a paper by Mr. Leonhard Stejneger, in which a number of our most familiar names are spoken of as untenable, and to be replaced by other older ones, most of which are entirely unfamiliar to the eye or ear of the student. Whether or no these substitutes will meet with acceptance among ornithologists is a question only to be answered after a careful investigation of their claims to priority, and a thoughtful weighing of all the facts in the case. It is true that certain rules of nomenclature have been laid down by scientific authorities, but still there are wide differences of opinion among naturalists as to what constitutes a *valid name*. It is thought by some that no name should be employed which is not grammatically correct, properly spelled, whose derivation is not according to rules established in such cases, etc., while others believe that the proper name is simply the oldest name, unchanged. The personal equation enters so largely into decisions on such points that it is apparent that until some hard and fast rule is laid down, which shall meet with the general approval of workers in science, changes more or less frequent will continue to be suggested. In ornithology and in other departments the list of synonyms has been unduly swelled, and it is with regret that students note constant additions to the list.

The view taken by Mr. Stejneger of this subject may be quoted here. He says: "The only rule which can be carried out with safety is the use of the oldest name, without regard to its appearance, derivation or significatiou. If this be adopted, most differences would disappear from the nomenclature, and it is in fact the only rule which is able to establish a passable uniformity in place of the present variety. Once universally accepted and put in practice, it would save much time, labor and dispute; disputes concerning year and date may easily be settled, while all philological and linguistic disagreements may be thereby avoided. The question as to which species one or another name is to be referred has nothing to do with the rules of nomenclature, and are [is] therefore liable to come up at any time.

Passing on to the changes which the author regards as necessary, we see that they will affect some of our most familiar names. They are as follows: *Ruticilla* Naum., to *Phœnicurus* Forst.; *Cinclus aquaticus* Bechst., to *C. merula*, Schäff; *Regulus satrapa* Licht., to *R. cristatus* V.; *Hirundo* Linn. and authors generally to *Chelidon; Chelidon* Boie to *Hirundo; Cotile* Boie, to *Clivicola* Forst., *Centrophanes* Kaup. to *Calcarius* Bechst.; *Plectrophanes* Kaup. (1829) to *Plectrophenax* Stejneger; *Eremophila*, Boie, to *Otocoris*, Bp.; *Archibuteo lagopus* Gm. to *A. norvegicus* Gunn.; *Strepsilas* Ill. to *Morinella*, Mey. and Wolf; *Vanellus cristatus*, M. and W., to *V. capella*, Schäff; *Aegialitis cantianus*, Lath., to *A. alexandrinus*, Linn.; *Gallinago media*, to *G. cœlestis*, Freuzel; *Totanus glottis*, (Linn.) Bechst., to *T. nebularius*, Gunn.; *Machetes*, Cuv., to *Pavoncella*, Leach; *Tadorna cornuta*, Gmel., to *T. damiatica*, Hasselq.; *Harelda glaciatis*, Linn., to *H. hymealis*, Linn.; *Polysticta*, Eyt., to *Eniconetta*, Gray; *Bucephila albeola*, (Phipps), to *Cucia alba*, (Gunn.); *Larus glaucus*, (Brünn.) to *L. hyperboreus*, (Gunn.); *Hydrochelidon lariformis*, (Linn.); to *H. nigra*, (ibid); *Stercorarius crepidatus* and *parasiticus* to be respectively, *S. parasiticus*, Linn., and *S. longicaudus*, V.; *Colymbus*, Linn., to *Urinator*, Cuv.; *C. torquatus*, Brünn, to *U. immer*, (ibid), and *C. septentrionalis*, Linn., to *U. lumme*, Brünn.

The radical changes above indicated are certainly of interest in themselves, and it is besides rather curious that they should all have been brought out together. If the points attempted to be made are valid, it is somewhat remarkable that they should have so long escaped the keen eyes of the ornithologists, which are always on the watch for cases of this kind.

We shall look with interest for any replies to or criticisms of the present paper.

A Falcon's Fury.—San Francisco, Cal., July 18.—While collecting eggs last March I found a set of five prairie falcons, in a small cave near the top of a cliff eighty feet high. By climbing up the back of the cliff and descending by means of a rope I secured the eggs. The birds by this time were furious, swooping past and screaming, but never approaching nearer then ten or fifteen feet. As I was returning to the top of the cliff a piece of sandstone loosened and rattled down, frightening a barn owl from some crevice. She had flown twenty feet before one of the falcons with wings half closed darted swiftly downward; there was an audible thud and the unfortunate owl fell stunned to the chaparral on the hillside below. Afterward, on skinning her, I found a dent in the skull against which a clot of blood had settled. I have since witnessed a similar attack upon a barn owl under the same circumstances. In this instance the owl was struck down three times, each blow being followed by a little puff of feathers; the chase carried the birds behind a hill so I do not know whether the falcon eventually killed the owl or not.—W. E. B.

What is It?—While reading the article in the last Forest and Stream on the hoop snake, that wonderful unseen curiosity which seizes its t'other end in its mouth and goes "bilin'" (as Uncle Remus would put it), I fell to thinking of the many snakes I had seen and read of, among which is a curiosity peculiar, so far as I know, to Florida. It is a huge worm or small snake, lives entirely under ground, is of a light pinkish color, and rarely ever eight inches in length and a quarter or five-sixteenths of an inch in diameter. Its head has a flattened snout, with which it burrows in the sand, getting out of sight with remarkable rapidity. No perceptible eyes. What is its name? And have others observed it elsewhere?—S.

Game Bag and Gun.

Open Seasons.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN AUGUST.

THE following schedule exhibits the game now in season. (Also, in parentheses, seasons which open during the month.):

Alabama—Doves.
California—Deer, doves.
Dakota—(Aug. 15, grouse, quail, snipe, curlew, plover).
Delaware—Woodcock.
District of Columbia—Woodcock, ruffed grouse; (Aug. 15, deer).
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo.
Illinois—Woodcock; (Aug. 15, wild-fowl, pinnated grouse).
Indiana—Woodcock.
Iowa—Woodcock; (Aug. 15, wild-fowl, pinnated grouse).
Kentucky—Woodcock.
Louisiana—Deer.
Maine—Plover.
Maryland—Woodcock; (Aug. 15, ruffed grouse).
Massachusetts—Woodcock, doves.
Michigan—Woodcock.
Minnesota—Woodcock.
Missouri—Woodcock, plover, meadow lark, dove; (Aug. 15, pinnated grouse).
Montana—Fool hen, grouse, ptarmigan; (Aug. 10, buffalo, elk, antelope, mountain sheep and goat, moose, wildfowl).
Nebraska—(Aug. 15, grouse).
Nevada—Elk, antelope, mountain sheep and goat, sage grouse; (Aug. 14, deer).
New Brunswick—Woodcock, wild-fowl, snipe.
New Hampshire—Woodcock, plover, wildfowl, rail.
New Jersey—(Aug. 25, reed birds).
New York—Woodcock (except Dutchess, Herkimer and Oneida cos.), squirrels, deer. (Hounding season opens Aug. 15; forbidden in St. Lawrence co.)
North Carolina—(Aug. 15, deer).
Nova Scotia—Woodcock, wildfowl, snipe.
Ohio—Woodcock.
Oregon—Grouse, wildfowl.
Ontario—Woodcock; (Aug. 15, wildfowl, snipe).
Pennsylvania—Woodcock, plover.
Rhode Island—Woodcock, plover.
Texas—Deer, pinnated grouse.
Utah—Elk, deer, antelope, mountain sheep; (Aug. 15, grouse, quail, wildfowl).
Virginia—Ruffed grouse, woodcock
Washington Territory—(Aug. 15, deer, elk, antelope, mountain sheep, grouse).
Wisconsin—Woodcock; (Aug. 15, grouse, quail).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp-tail grouse; (Aug. 15, ruffed grouse, wildfowl, plover, curlew, snipe).

☞ For exceptions, local laws, etc., see Forest and Stream Schedule "B," issue of July 20, page 480.

THE PHANTOM POND.

IN November, not having had a good duck hunt since I had been in business, I decided to take the first favorable opportunity and get myself off to some new haunt of which I had heard glowing accounts from the very few men who had been lucky enough to find it. The haunt which I speak of was nothing more than that of a splendid duck pond, which was supposed to be situated on an immense marsh island near the head of Suisun Bay, which is the extreme north end of San Francisco Bay. The pond, though being within fifty miles of this city, had not been shot on, I am positive, by more than half a dozen men. A great many knew of the existence of the pond, but could not find it, as I may state that the island was some fifteen miles long, by from one to five miles wide. This hunt was the fourth time that I had tried to find the place, and I was successful both in finding the pond and in the size of my bag. I had received positive instructions how to find the pond this time, and was confident of success.

Having taken advantage of Thanksgiving day, and started on that always welcome day of the year, one companion and myself took the morning train for a two hours' ride up the bay to a small town where we were to join the yacht. In due time we were aboard our comfortable schooner, speeding along with a moderate breeze. We had to tack all the way, and after various calms and squalls, arrived off the mouth of the slough which separated our island from another. About two o'clock Friday afternoon we came to anchor off a certain point. After letting go our anchor we immediately commenced operations. We landed with three boats—one for the pond if we should find it, one for the slough which was on the island, and one to ply between the yacht and the shore. Our first move was to haul two boats over a narrow strip of land to the island slough, which feat we were not long in accomplishing, and were soon rowing along the slough with our boats loaded with decoys, ammunition, etc.

My instructions were to row south along this slough about half a mile, and then to land and strike out directly east, and I would find the pond. Now, the next question, how to judge a half-mile on this narrow rounding slough, which had a general southerly direction. We kept on rowing until we came to an almost impassable obstacle in the shape of an immense pile of drift tule, wood, etc., which completely blocked the slough from bank to bank, so we decided that we had rowed a mile; at least, we did not intend to carry over or around the mass of drift stuff before us. So landing on the east bank we tied both boats and after walking out of the very high rushes which bordered the slough, we shoved an oar into the ground and tied a handkerchief to it to mark the place where we had left the boats. This was a very necessary operation, as we could otherwise never find our boats again on account of the similarity of the rushes. Separating about fifty yards apart, we started to look for what I was inclined to think was a phantom pond. We walked, and we walked; the sun was hot; the ground was mushy and the tules high; but no signs of a pond. Soon after we had left the boats we had come to another slough, and had followed it to the right. After walking along the bank about two miles, I should judge, and meeting other sloughs, we retraced our steps, tired and disgusted, and we had lain down to rest just at the point where we had first struck the slough we had been following.

We had hardly been lying there more than a minute or two when one of us noticed two swans flying toward us. Nothing very extraordinary, as we had seen a great number of swans, also plenty of ducks and geese flying around us all day. But these two swans passed us about three hundred yards to the right, and then set their wings and soon after lit about five hundred yards away. We had seen a great many birds alighting in this same spot, but there always seemed to be a slough separating us from the place, and our instructions were not to cross any slough after rowing on the first one. We jumped to our feet and both seemed struck with the same idea, at the same instant, and sure enough, we had not walked more than two hundred yards when we commenced to hear the peculiar noise which a large flock of wildfowl make while feeding in a pond, that is, a continued splash from their unceasing diving. Our excitement was such that we both hurried along, and soon a beautiful pond stretched out before us, just completely covered with wildfowl of every description. Instead of crawling up cautiously as we should have done, we advanced in too much of a hurry, and let go our four barrels at the nearest of the immense flock. And then for a moment what a noise, a rush, splash, and whirr of wings. I never saw its like in my life, and hardly ever expect to see again.

We had disturbed a wildfowls' sanctum. It was a sight to make a sportsman—well I was going to say crazy, as we were so excited we hardly knew which way to start. The ducks after their first fright commenced to come back, some even wheeled after flying not more than fifty or a hundred yards, and we shot and shot till most of our cartridges had gone, as we had left all but a few with our traps and decoys with the boats. We then stood up and took a survey of our situation. We found the pond to be nearly circular, and 150 yards in diameter, and the slough which we had been following ran into the pond, so if we had followed it to the left instead of to the right, we would have soon come to the pond.

Our flag and boats were in a direct line about 350 or 400 yards from us, so taking off our coats and leaving our guns at the pond we started for the boats to drag the pond boat full of decoys to the pond. We were not long in doing this as we were in a hurry to get back to the pond, and as the sun was approaching the Western horizon we were all fixed in our separate blinds with the decoys out and shooting as fast as we could wish.

It being a moonlight night we stayed at the pond till about half past seven, and then started back to the yacht, having first hauled the pond boat out of sight in the tule. Then after getting our game together we looked at it and then at each other, and then came the question, how were we ever to get that load of game to the yacht. Among the pile were five immense Canadian geese (honkers), three of which are all one man wishes to carry. We also had about one dozen white geese, a swan, and ducks I was going to say innumerable. Well, we compromised. We first drew all the birds, which considerably lightened the load, and then each took a sack which the decoys had been in and filled it with the best ducks, the rest, with all our traps, except our guns and empty cartridge bags, we stowed in the boat and covered with rushes for the next day. We each then shouldered his sack and started for our white flag, which we soon reached, and then after a short row arrived at the narrow strip of land which separated us from the yacht. We were soon aboard, and after a supper, to which we did ample justice, we wasted no time getting to bed so as to be up and off long before daylight.

It seemed to me that I had hardly been asleep more than ten minutes when the whirr of the alarm clock told us that it was time to turn out. We had to go home during the next night so we decided to make one long hunt from early dawn to late at night. Just before sitting down to breakfast I went on deck; and found it very cold. A heavy thick fog had settled down on everything, dampening all but our spirits. After breakfast we took every cartridge we could get hold of, and started for the grounds with instructions to one of the men to join us, about four in the afternoon and help us out with some of the game. The boat was found in the slough as we had left it the night before; and after rowing along till we came to our landing we tied our boat, and started for the pond. The fog was so thick that we could get no bearings, and having no compass, the first thing we knew we were lost. We walked first north and then south and then east, and found no pond. There was nothing but high rushes and mud-holes and sloughs. We tried to retrace our steps, but got more bewildered than before; and at about eleven o'clock we sat down and waited for the fog to lift. At twelve o'clock the fog rolled away, and we found that we had been completely turned round and evidently been wandering in a circle, as we found ourselves within two hundred yards of our flag. We immediately struck out for the pond which we soon reached, very tired from carrying so many cartridges, but nevertheless full of spirits and ready for the rest of the day's hunt. We scared quite a goodly lot of ducks off the pond on our approach; and were soon ensconced in our blinds banging away at a great rate, as the ducks and geese came in very lively.

We shot all the afternoon and then, it being moonlight, though very cloudy, we shot till late at night, nearly ten o'clock. The Canada geese did not come in till late, but when they did come, they came with a vengeance. You could jump up and nearly hit them with the gun. Our man joined us about dusk and stayed to help us out with our game. We stopped shooting as soon as our cartridges gave out, and then proceeded to get things together. We gathered in the decoys, had the game drawn and packed in the pond boat with the rest of the traps, which filled the boat to more than overflowing. And I wondered when we looked at that load how we were ever going to get it to the yacht. Two of us took hold of the rope at the bow and the other shoved; and by dint of pulling and shoving we finally, after nearly two hours' work got the loaded boat to the slough, where we transferred some of the birds to the other boat, and after launching it were (after another hour's work) aboard our yacht, with everything stowed away. We were not long in getting asleep, and the orders were that we were

to be aroused about three A. M., as soon as the tide changed and get under way.

The next thing I knew, I suddenly awoke with the sun streaming in the cabin skylight, and on looking out the porthole aobve my berth I was very much surprised to see the pile of a wharf obstructing my view. In fact the two men had brought the yacht down during the night, and we two hunters being so tired had slept through the whole voyage, they having made the run down in about six hours. It was eight o'clock in the morning when I awoke, and we had just landed. We proceeded immediately to clean up and get ready for the train, which passed in the afternoon. We made presents of game to all those we knew at this town, and packed the rest in sacks for our city home, where, upon our arrival, we gave to all our own friends around. And we had geese, duck and swan cooked in every style for the next week.

I will try and remember a few figures. I know we got nineteen Canada honkers, tremendous fellows; about two dozen white geese, a dozen ordinary gray geese, one swan, and I will not state how many ducks, as I suppose I might shock my Eastern friends, who have, I suspect, already put me down a black mark for shooting at night

I have visited the "Phantom Pond" several times since, but never had such a hunt and such hard work at the same time. But the work only made the hunt more agreeable, and the game more acceptable when I got it.

San Francisco, California. Duck Call.

JOSEY EARLS AND THE CUBS.

BY CARL WHEELOCK.

A BEAR robbed of her cubs is not a pleasant thing to encounter. Even experienced hunters do not covet a "set to" with such a foe single-handed. When to her great strength is added the fury which apprehension of harm to her young inspires, the hunter is well aware that in an old she bear he finds "a foeman" well worthy of his skill, his courage and "his steel."

Fifty years ago Clearfield county, Pennsylvania, was a vast pine forest. Deep ravines, lofty hills, sparkling mountain streams, impenetrable thickets of pine, hemlock and laurel characterized that vast expanse of country that stretches from the summit of the Alleghanies northward to Clearfield town, and from Philipsburg westward to Ebensburg. A few hardy pioneers had erected their cabins at different points, "underbrushed" a few acres, and by hunting, fishing, and farming a very little, were eking out a rustic romantic living for themselves and families.

By some means an old hunter and trapper by the name of Josey Earls found his way into this wilderness, formed the acquaintance of the settlers, and engaged in his chosen pursuit. Mostly, during the summer time, he camped out, choosing for his camping ground that part of the valley of Beaver Run which now constitutes the site of Houtzdale; but the winter evenings he spent in the cabins of the settlers, and having served as a soldier in the Revolutionary War, he never failed to render his presence very agreeable (especially the children) by narrating incidents of that memorable struggle, and giving enthusiastic descriptions of the effectual manner in which "Giner'l Washington finally thrashed the British." So intimately did he become acquainted with the simple, hardy pioneers, and so thoroughly did he succeed in ingratiating himself into their affections by his kindness to the children, and his many interesting, patriotic stories, that no matter at what time of the day or at what period of the night he put in an appearance, he was sure of a hearty welcome by all; and, although he never gave or even offered any money in exchange for his victuals and lodging, yet the many strings of fine trout, the many saddles of venison and the many rich roasts of bear's meat which he brought to the cabins of his benefactors were, by them, considered an ample reward for all he received at their hands.

In appearance, Earls was an oddity. Being not more than five feet five inches in height and rather slender (not weighing over one hundred and twenty pounds avoirdupois), he was well-adapted to slipping through the thickets of laurel and alder that skirted those mountain streams. His dress was a pair of buckskin knee-breeches, buckskin leggings, shoes, a buckskin tight jacket and a large 'coon-skin cap. Thus dressed, with his knapsack on his back, his trusty rifle on his shoulder (he was an excellent shot) and his "shot-pouch and powder-horn" swung under his right arm, but for his diminutive stature, he would readily have passed for Daniel Boone or Davy Crockett.

Thus equipped, one morning in the latter part of June, 1833, the renowned hunter of Clearfield county might have been seen setting out from a cabin (which stood in the wilderness, two miles southwest of Philipsburg, on what was known as "the Upper Clearfield road") in the direction of Upper Moshannon and Beaver Run. A tramp of five miles brought him to the present site of Houtzdale. Here was a large "mud lick"—a place where, in summer time, deer came to lick the mud because of its saltness. Here, in the heart of a vast wilderness, Earles resolved to camp. Having brought with him no provisions save sufficient "pone bread" for his dinner, supper and breakfast, and a few quarts of corn meal and as many of white beans, and being intent on spending the greater portion of the summer at that place, he realized the importance of adding to his stock of provisions, if possible, a good piece of venison. So, having decided on his camping spot, and having done much in the way of erecting his cabin (which was constructed of small poles and covered with large flakes of hemlock bark), he ate his evening lunch, and, wending his way to the mud lick, took his position on a hemlock tree about twenty feet above the ground, to await the approach of deer.

Nor did he have to wait long. Just as the sun was setting, and while the birds were rendering the vast forest melodious with their evening carols, a herd of no less than ten deer, headed by a lage buck, made their appearance in the immediate vicinity of the lick. The sharp report of the hunter's trusty rifle soon reverberated through the forest, nine white tails flew into the air and bobbed up and down among the underbrush as nine deer leaped and snorted in their precipitous flight from the lick, leaving behind their gallant leader, the big buck, struggling in the last agonies of death. The well-aimed rifle-ball had done its work; the heart was pierced and already the hunter had five times as much venison on hand as it would be possible for him to preserve and consume.

His larder now thoroughly supplied, he felt comparatively easy, and whiled away several days in watching the beavers constructing their dam, in noticing and studying their habits, and in devising ways and means by which to "trap" them in the coming fall, when their coats of fur would be at their best. At length, weary of this quiet life, he resolved on a new venture. Knowing that bears were plenty, and not desiring to kill any at that time, because they are not valuable for their skins, their flesh nor their oil (except in the fall and early part of the winter), he resolved on hunting and capturing some young cubs. This he determined to do both for the sake of the "fun" and because live young bears could be profitably disposed of if taken east of the mountains. His plan was perfected, and after an early breakfast of corn bread and broiled venison, with his trusty rifle on his shoulder (dog he never kept, a most singular peculiarity for a hunter), he set out in quest of "young cubs." Leisurely he strolled over hills, across ravines, through laurel thickets, looking carefully in every direction, until the sun was rapidly sinking in the west, when he resolved to return to his cabin and hope for better luck another day. His steps now quickened by hunger and a desire to "reach camp" before night set in, he was pursuing his way through a deep ravine which was completely roofed over with pine and hemlock boughs, and across which lay the prostrate trunk of a huge pine tree. Having climbed upon this, he was walking on it to avoid the laurel thicket, and by chance he cast a glance down to the side of the log, when there, among the leaves and underbrush, in a huge nest, he espied, to his great delight, a fine pair of cubs, not more than eight or ten days old. They were cuddled together in their warm nest, enjoying a sound sleep, quite oblivious of all surroundings.

The experienced hunter knew that there was no time to be lost. It was one thing to find so rare a prize, and quite another thing to secure it. If nothing interfered, it would be the easiest matter in the world to convey the young prowlers of the forest to his cabin, which was not more than a mile distant; but if Madam Bruin put in an appearance (and, owing to the day being so far spent, she was almost certain to do so inside of the next ten minutes), she would be very apt to object to the removal of her progeny, in a manner calculated to make things both warm and lively for the hunter. A moment's thought, a few seconds spent in sharply listening for the approach of the dam, and his plan of operations was formed. A glance at his rifle, and placing his hand on his belt to reassure himself that his large hunter's knife was in place, in much less time than it takes to write it, he leaped down to the edge of the nest, grasped the cubs, thrust them into his large shot pouch, scrambled to the other side of the ravine, and made off in the direction of his cabin as swiftly as possible, ever keeping a "sharp look out behind."

But he had not proceeded twenty-five rods when the cracking of the brush warned him of bruin's being in close pursuit with all the fury of "a bear robbed of her whelps." He could easily have freed himself of all danger by dropping the cubs; but that did not suit his purpose. They were such a desirable prize, such grand trophies, that he resolved to retain them at the risk of his life. Quickly he took his stand behind a huge hemlock tree, lowered his rifle in position, and when the bear, on a full run, was within ten steps, he fired. But, alas for his chances. In his haste and excitement his aim was not as sure as it was want to be, and the ball, while it did not disable the brute, took sufficient effect to thoroughly arouse all her latent fury. On she rushed like an avalanche, uttering the most terrific growls; and dropping his rifle the hunter grasped his knife, and the monstrous infuriated brute and the lithe little old disciple of Nimrod closed in a life and death struggle. The mere momentum of the bear was so great that she at once bore the hunter to the ground; but fortunately he held on to the knife and retained sufficient presence of mind in his trying ordeal to use it with efficiency. For as much as five minutes (it seemed an age to Earls) they rolled and tumbled over each other, the hunter as often as possible making thrusts at the bear with such telling effect as to cause the blood to flow freely.

At last, when his breath and his strength were rapidly failing, and bruin, having flung him to the ground apparently for the last time, was standing over him attempting to get hold of his breast with her monstrous teeth, the hunter, mustering all his strength, sent the trusty knife upward and forward through the abdomen and chest of the bear, pierced her heart, and with a hideous growl she rolled off him dead.

For as much as ten minutes he could do nothing but lie still and pant for breath. The perspiration rolled off his brow and his clothing was wet from head to foot with blood and sweat. Having regained strength he gathered himself up, viewed for a moment the dead body of his monster antagonist, examined his shot pouch to find that the cubs were still safe—"alive and kicking"—and then, limp and bleeding, he set out for his cabin, where he arrived just as twilight set in. For as much as two weeks he did nothing but dress and nurse his wounds and take care of his young cubs. Then he set out for the settlement, where he amused the children by exhibiting his trophies, and startled the parents with an unvarnished account of his terrible encounter and his hair-breadth escape from a terrible death.

Lebanon, Pa., July 4, 1882.

GAME IN QUEBEC.

IN response to your invitation for reports as to game prospects in different parts of the country, I send you the following notes:

The winter here was the mildest that that celebrated individual, "the oldest inhabitant" ever knew. In consequence very few deer or moose were killed by crusting. It was equally favorable for grouse, and the old ones are very plenty; but the spring was exceedingly cold and wet, and the broods are small. I have rarely seen one full one, the most of them being from two to six.

In a recent trip up the Arnold River I found moose and deer tracks plentifully scattered along its banks, and on returning the same day, found that a very large moose had traveled for a quarter of a mile along the main road during our absence, browsing off the green herbage on each side of the road ditches. Although they escaped the crust hunter, they have not been so fortunate since. One party of fishermen from Sherbrooke killed a yearling moose on the Spider River, and a veritable "slaughter of the innocents" took place on Big River a short time since. A party of fishermen who had taken a gun with them, on rounding a turn in the stream, saw a moose's head projecting from a clump of bushes; they shot her dead in her tracks, and going ashore found a cow moose, with the milk running from her udder, and crouching a few yards away, three trembling little calves! They were obliged, in sheer humanity, to shoot these to prevent a lingering death from starvation. There is nothing in the English language that will properly characterize this transaction, and such things simply make one sick.

The season has been a very unfavorable one for trouting, and but few good catches are reported. Penobscot.

Cookshire, Quebec, July, 1882.

THE PRAIRIE CHICKENS.

WE do not expect extra shooting here this fall. The incessant and heavy rains, which continued all through the nesting season, could not but drown out all the nests on low ground. There are a few young birds in this county, enough to enable our local sportsmen to get a breakfast of them once in a while, but we do not expect very many. I am on a farm, and among the farmers a good deal. The general report is that chickens are scarce. We do not see them in the oat, wheat and rye fields as we would if they were plenty. I have heard of several bevies, all on high ground. Mark.

Morning Sun, Iowa, July, 1882.

ONTARIO GAME SEASONS.

WE stated in our issue of July 20 that the Ontario game seasons then printed were given provisionally. We append the correct dates as given in a certified copy of the existing statute furnished by a Belleville correspondent.

The open seasons are :

Deer, elk, moose, caribou	Oct. 1st to Dec. 15th
Grouse, pheasants, prairie fowl, partridge	Sept. 1st to Jan. 1st
Wild turkey, quail	Oct. 1st to Jan. 1st
Woodcock	Aug. 1st to Jan. 1st
Snipe	Aug. 15th to Jan. 1st
Mallard, grey and black and wood duck	Aug. 15th to Jan. 1st
Other ducks, geese, swans	Aug. 15th to May 1st
Hares	Sept. 1st to March 1st

A Wisconsin Pigeon Roost.—A correspondent of the Germantown *Telegraph*, writing from Sauk county, Wis., says: You have undoubtedly heard "pigeon-roost" as well as "fish stories," and imagined the former to be gross fabrications. If such is the case a visit to the "roost" near Kilbourn (this county) would have confirmed what you have heard respecting them. Long before the locality was reached, vast columns of pigeons could be seen passing to and from the roost. In their flight they appeared to follow certain routes, the array of flocks being so close as to resemble an army of feathered warriors. When their camp was reached, it was six miles in length and from one to two miles in width. The noise caused by the flapping of wings, and shooting and shouting of pot-hunters and trappers, also reminded me of the surprise of an enemy. There was no let up in the uproar and fusilade, and it was a matter of surprise that the birds succeeded in hatching a single egg, judging from the manner in which they were driven from their nests as soon as they settled upon them. Hundreds of trappers, Indians as well as "pale faces," were engaged in netting the old birds. One of the experts caught in a single day six hundred dozens. These are sold for trap-shooting, the price ranging from seventy-five cents to one dollar per dozen. The profit of the business is so great that the telegraph is brought into requisition to notify the professionals of the location of a roost, and they are hurried there by the "iron horse" in time to drive the assemblage from one or more locations before it finally settttles down to be slaughtered and captured, as if despairing to escape from the inevitable. In addition to netting and shooting, some follow the business of plundering the nests for "squabs;" these are palatable and sell readily, being shipped to distant markets by the barrel. Some idea of the wholesale slaughter is also conveyed by the immense number of young birds which are tumbled out of their nests before they are of any account whatever. As the pigeon lays two eggs, and the nest consists of a few twigs placed loosely together, the destruction by shooting through the nests is also immense. National as well as State laws should be enacted and enforced to put a stop to the wholesale slaughter of game. At the present rate of systematized destruction the time is not far distant when the sportsman will have to seek an almost inaccessible wilderness to find the larger species of game. When I first visited Wisconsin (about thirty years ago), from eighty to one hundred prairie chickens were easily bagged in a day; quail, jack-snipe and ducks were also abundant. Now I rarely venture on a hunt, for as a general thing it don't pay, as far as the game is concerned. A friend once remarked after he had been sold out by the sheriff, "The sheriff did not succeed in disposing of fourteen years of good living that I have enjoyed." I can add to his philosophical conclusion, "Neither can trappers, market shooters and nest-robbers remove the pleasant recollection of many a day of fine sport enjoyed in the past. The present and future dearth of game is also bearable from the fact that with advancing years one loses his enthusiasm for tramping over hill and dale in search of a few stray birds, said to be located in a certain but rarely found locality. Fortunately the sparrow is left for the coming sportsman. Judging from its rapid increase it will be hard to exterminate. Possibly this feat may be accomplished by improved breech-loaders and dogs bred to meet the requirements of the sport.

The Connecticut Rail Law.—South Norwalk, Conn., July 21.—*Editor Forest and Stream:* As the season for rail shooting approaches, a few lines on the Connecticut rail law passed last April may not be amiss. As the law stands, no rail can be shot till after September 12. This law was passed at the instigation of parties living on the Connecticut River, where there are extensive rail covers, and for the purpose of keeping parties from other States, who go there in yachts, from killing the birds off early in the season. This is all very proper and right, but in making the 12th of September instead of the 1st the open season have they not overdone the matter? On the Housatonic River, between Stratford and Derby, there are some good rail covers, and much sport is had with these birds from August 20 to September 20; as the corn grass begins ripening early in August, the birds commence to arrive, and in a few days become very fat. The best shooting at them has always been the last week in August and the first week of September After that the shooting does not amount to very much. I have shot rails on the Housatonic for fifteen years, and the record I have kept shows this to be the case. After September 15 the seeds have fallen, and the corn and oat grass seems to rot down, leaving no more cover for the birds, and the remainder of the shooting is done on the sedge flats at the mouth of the river. As rail are a migratory bird and leave us on the first frost, the open season for them under the new law is too short. The time to shoot the birds is when they are here, and the 1st of September should have been the open season, as it is earlier with us than the States further South, and there is nothing gained by protection to so late a date as September 12. I have talked with all the shooters in this vicinity, and they are of the opinion the open season should commence September 1. Another year we shall endeavor to have the law so altered as to allow shooting September 1, at least for the Housatonic. Co-operative legislation is what

we need in this State as regards our game laws, and the sooner the sportsmen understand it the better it will be for all concerned. Laws that are too hastily drawn up and passed, which clash with the views of sportsmen of different counties, fail of their effect and intention. We have no objection to the shooters on the Connecticut River passing any law they may see fit that is adapted to their own waters and county, but we do object to their embracing the entire State with a September 12 rail law.—F. B.

PHILADELPHIA NOTES.—Although many "quail are reported whistling all over the country" in almost every State, it does not absolutely prove we are to have a plenty of birds this autumn. Your correspondent knows of not a few nests of eggs that never hatched owing to the cool and wet season, and some broods of young birds that were "draggled out" and perished in the rain. We will have more quail this fall than last most surely, but the whistling of Bob White does not prove he has brought his youngsters safely through the host of ills quail flesh is heir to. We have gained greatly, however, on last year, but we need one or two mild winters like our last to put us ahead. Owing to the rainy summer, and what more affected the birds, the deluge of water throughout the spring, woodcock shooting has been poor in our State. Most of the birds that have been shot proved to be old ones, which carries out the expectation that the nesting was interfered with and the young birds were destroyed by the floods and wet weather in the spring. The longbill can now feed almost anywhere so moist is the ground, consequently the remaining birds a.e scattered over a great extent of country and are hard to find. Next month he will hie to his moulting ground and find a rest and return again in cooler weather.—HOMO.

TENNESSEE GAME NOTES.—Now that the grain has been harvested, as I predicted some time back, doves have appeared in countless numbers. The sport is a grand one, and those who do not have a day or two at it are to be commiserated. Fancy lying quietly on the long blue grass sward in one of the many heavily wooded pastures protected by huge forest trees from the parching sun of July, and having frequent shots at single or double birds flying past at a lightning speed, and about as hard to kill as a blue rock, and then answer if that is not luxurious sport? Yet that is the mode of shooting doves, only to be varied later in the season, when the fodder has been pulled from the corn, by strolling through the fields about sunset to have a few more rounds at the lovely emblems of purity. Why doves are considered not game in other portions of the land I cannot imagine, for certainly from the immense quantities of them out here and the high excellence of their flesh as food, certainly they were intended for man's use. Charley Griffith bagged quite a number of them on Saturday last.—J. D. H.

ADIRONDACK DEER.—Our well informed correspondent writes, under date of July 15: The slaughter ot deer on the Sixteen-Mile Level and in the vicinity of Blue Mount still continues. There are at the present time five or six different parties of hunters hunting in that neighborhood. One large party went up on Thursday, but that came from St. Lawrence county. And there are now quite a large number from the cities and large towns in different parts of the country camping at many of the ponds throughout the St. Regis district hunting deer. They make their headquarters at Paul Smith's, and other large posting houses, from which they fit out themselves with tents, guides, boats and all camping outfits, and go often fifteen or twenty miles away to some pond or small lake, away from any settlements; and kill all the deer that they can. I tell you, this early hunting in June and July destroys more game than all the rest of the hunting combined, and I know it to be a fact.

MICHIGAN.—In a recent conversation with Mr. W. B. Mershon, Secretary of the Michigan Sportsmen's Association, we were told that the prospects for quail and partridge shooting about East Saginaw are very satisfactory. It is thought there will be a fine supply of birds.

Camp Fire Flickerings.

"That reminds me."

THEY were cooting at Brant Rock, and one of the party, probably venturing too far in the surf in order to secure his game, had filled his rubber boots. At night, as all hands sat around the stove, the boots were brought forth and the question arose as to which was the best way to dry them. Various methods were proposed by the company, one of which was to fill them with hot beach sand and leave them over night. This being gravely suggested by one of the oldest of the party, and sanctioned by all present, was immediately carried into effect.

I don't think he looked more thunderstruck when he came to see those boots in the morning than Charlie Bickford did when he rowed out to Manomet Point cooting, and got into line only to find he had left his gun and shells on the beach.

When the boots came to be emptied, out came stuffing, linings, everything but the outer skin. To cap the whole, they were borrowed boots. SASSA-CUS.

SOUTH ABINGTON, Mass.

Uncle Siah was an old fellow, fond of his bottle, fond of the woods, and of telling big stories; but he would fly into a passion if anyone doubted his word. On the banks of the Merrimac was an old, deserted farm house, with no doors nor windows. We were sitting around the store, one evening, when Uncle Siah said he was sitting in the old farm house that afternoon, when a partridge flew through the house, in at one window and out at the other.

One of the boys said, "I guess it was a two-legged partridge."

"It's a lie," shouted Uncle Siah, as he left the store and wended his way home, mad all through that anyone doubted his story. WAS THERE.

MAINE.

Look at this.—W. & C. Scott & Sons' breech-loader. Damascus barrels, top action, rebounding locks, low hammers, large strikers, patent fore-end, double bolt, pistol grip, horn heel plate, in a square leather case, with crimper, loader, powder and shot measure and cleaning rod, for $65.00, and same gun with extension rib for $75.00. Each gun is warranted in the first place to be a genuine gun by these celebrated makers, secondly to shoot to satisfaction, and third if anything should not suit will make it right on gun or exchange for another if within thirty days from purchase. CHARLES L. RITZMANN, 943 Broadway, New York.—*Adv.*

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN AUGUST.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Brook trout, *Salvelinus fontinalis.*
Grayling, *Thymallus tricolor and T. montanus.*
Rainbow trout, *Salmo iridea.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var. *sebago.*
Quinnat salmon, *Oncorhynchus chouycha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius.*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca fluviatilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, two species.
War-mouth, *Chænobryttus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscyon regalis.*
"Sea trout," *Cynoscyon carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciwnops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

AND for you that have heard many grave, serious men pity anglers, let me tell you, sir, that there be many men that are by others taken to be serious and grave men, whom we contemn and pity. Men that are taken to be grave, because Nature hath made them of a sour complexion, money-getting men, men that spend all their time first in getting, and next in anxious care to keep it; men that are condemned to be rich, and then always busy or discontented; for these poor, rich men, we anglers pity them perfectly, and stand in no need to borrow their thoughts to think ourselves so happy. No, no, sir, we enjoy a contentedness above the reach of such disposition.—*Izaak Walton.*

FLY OR BAIT?

IN a late number—I think it is dated July 13—I notice Mr. Jhonson holds forth on the fly and worm question. This is an old and much argued matter, but always interesting to the angler. If not taking up too much of your valuable space, I would like to state a few facts bearing on the case.

There are streams so small or overgrown that it is utterly useless to try the fly; and again, sometimes the water is so high and discolored that trout will not rise to them, and will hardly touch bait; but taking the streams when in proper condition and the two anglers equal in skill and knowledge of the locality, the fly-fisherman will kill more trout and larger ones. This is a well-known fact to old anglers, and in England would not be questioned. Most men do better with the worm, because there are far less good fly- than bait-fishermen. Fly-fishing requires more skill, practice and experience, and is no more to be compared with worm-fishing than shooting birds sitting does to wing-shooting. I presume it is easier to kill birds on the ground than on the wing, but I believe sportsmen do not advocate the former because it is easier. Knowledge of the locality is of the greatest importance; no amount of skill will make up for that want. There is, generally, where the angler fails; he goes to some trout stream and fishes it carefully and does the best he knows how, but, to his disgust, finds that the boy or countryman with the worm beats him. It is not the worm that does it, but the countryman is at home, and knows where every trout is to be found and where to expect him, and if anything of a fisherman, beats the stranger out of sight.

I fished one stream in Lycoming county, Pa., for eleven seasons, and fished it from one to three months each year, and I found after the first two or three years I was just beginning to learn how, when and where to cast my flies in that stream. I do not wish to boast, but I never met a bait-fisherman there, during the last few seasons, that could kill the trout that I could. Yet I met a Welshman one day on the stream—a miner—who was using his own make of flies, and who could discount me.

There was a gentleman from Baltimore there one summer who enjoyed the reputation of being a great bait-fisherman, and he looked upon fly-fishing with the utmost contempt. He was very anxious to go out with me, and, I must admit, I was a little afraid of him. I knew if he beat me, there would be no more peace for me in that place, but finally I agreed to make a day of it with him. The first pool we started in at—we fished side by side—I took seven nice trout, three times two at a time, and he three small ones. He gave up fishing at noon. I caught sixty odd and he thirteen. The next night, to my surprise, he was practicing with a fly.

Another time, one rainy day, I came across a boy fishing in a favorite pool. He was perched on a log overhanging the best part of the water. I took eight fish almost from under him and he did not get a bite. A little latter he ran after me, holding up a fair-sized fish and yelling, "Hello, mister! I got one!" He wanted me to see he could catch trout too. The experienced angler will not bother with flies in the middle of the day in hot, clear weather; the trout are hiding. Then a worm or a grasshopper, cast with a light line and leader, will tempt them out when flies are useless; but as soon as the sun is off the water and behind the hills put on your coachman and yellow—sally and fish until you cannot see the end of your rod. W. HOLBERTON.

"It's an awful pretty thing to see one of those dandy fishermen get to work, so it is," said Tom Jenkins one day. "Why, they rig up in high ole style, I tell yer; they get on a pair of tight-fittin' trowsers that's cut off at the knee—guess the cloth run short—then they has a wes'coat that's got pockets all the way up, and a bob-tail coat that fits like the bark on a spruce tree, and it's got an awful sight of pockets and fixin's about it; and then they has a pair of ingy-rubber treowsers without any seat to 'em, that runs up under their arms and looks like they was made for their gran'father, and on t'other end they has rubber boots which has big iron nails on the part they walks on, and on top of all they gets a dandy little hat, and then you has a picter. My, ain't he nice! only them big rubber breeches, them's overcomin'. Wall, it don't ameount to much what kind of close you has on when yer goes a-fishin', but I ginerally leaves my Sunday close home on fishin' days. But that ain't all his rig; oh, no! he has a basket slung over his shoulder big enuff to hold a peck of treout, and a net hooked onto a button-hole of his coat; and then he's got a fishin' pole; golly, what a pole! It's a little bit of a thing, about as big round as the stem of one of them long clay pipes, only it's smaller than that at t'other end, and it's all finished off with bright shiny rings around it that looks like some of that jewelry that the peddlers bring round for the women folks to go crazy about; and he has a wheel on it to wind up his fish line. Wall, now I just like to look at one of them fellers, they look so nice in all their good close, and their putty little bits of fish poles.

"One day last week one of them fellers went fishin' in the branch, and was at it all day, and he thrashed the stream like a man a whalin' at his hoss; and he got his hooks away up in the trees, and left 'em there so's he could find 'em when the water got up high enuff, and when he got back from his days' fishin' he didn't look so nice, for he tumbled down and tore his putty coat, and busted the knee out of his rubber boots, and twisted his feet on the stones, and got all wet in the big mud hole and got chock full of mud all over him; and then the basket got loose and he smashed the beautiful little fishpole into a good many pieces; and the worst of it was, he only got one little fish. These kind of fellers always vows they'se had such a jolly day's fishin', but they hasn't any fish to show.

"My little cub Sam went out fishin' that day; he had on all that's left of a pair of my old treowsers, fastened on with one of my old galluses, and he had on his bare feet, and a straw hat; he got a pole up in the woods, that was big enuff to make about six of the other feller's, and he started out fishin' on the branch too. Wall, sometimes he'd be on the bank and sometimes in the water, then he'd be on both sides the stream to once, and then he'd be a swimmin' a piece, and you ought to see him ketch the fish. Wall, it ain't no use a talkin', he did ketch 'em lively. And when he cum home before supper time, he had jest the nicest mess of treout you ever see. I guess he must have had five dozen fish and they was good ones too.

"But that ain't all my story, either, for the dandy fisherman with the little thin pole, he seen Sam a ketchin' of the fish and havin' sich a jolly good time; so when he wus comin' along he ses to Sam, 'Say, sonny, what's yer goin' to do with yer fish?' And Sam told him that there wus a big family to home to supply, and it wuz his day on at that bizness; and do you know, the feller followed him home, and when he found out that we were not starvin' fur fish, he up and offered Sam five dollars fur his fish—the hull lot—and Sam got five dollars for that day's work, you bet.

"I dunno, but I 'spect that feller went home and told his folkes what a gelorious day's fishin' he had, and how he got 'em all with his little pole, and never said anything about his five dollars."

There's a moral to this tale. I suppose it is this: Don't despise a humble bait rod; don't exalt your light fly rod—you can't always sometimes tell which will do the work.

J. R., JR.

THE RESTIGOUCHE SALMON CLUB.

WE make the following extracts from the St. John, N. B., *Sun* of July 24:

The fish stories that are annually wafted down to this city from the northern portion of New Brunswick are not infrequently cunningly devised fables calculated, if not directly intended, to impose on the credulity of our amateur sportsmen; and only those who have correspondents at the front are in a position to detect the amount of exaggeration underlying each particular story and to form a pretty correct idea of the exact state of the salmon crop in the particular locality to be visited. But it sometimes happens that the stories from a good station are so contradictory as to puzzle even the old stagers, and then nothing short of a personal visit to the spot will suffice.

"Going to Metapedia!" echoed a well-known fisherman, as a *Sun* reporter, seated in the Quebec express a few evenings ago, had indicated his destination in answer to a leading question—"good fishing there now; never was better," and this was with the air of one speaking with authority and not as a novice. The reporter smiled at the veteran's enthusiasm, as some hours later he contrasted it with the gloomy picture drawn of the sport generally in northern waters by a railway man who acknowledges no master in the art of whipping a stream or tying a fly. "Salmon are salmon this year," said the R. R. Man, "and don't you for get it; but if you want to see some of the prettiest trout that ever came down the line, stop over to-night. I'll hitch up my horse at daybreak and drive you out to the spot. If they don't catch on by the basketful in two or three hours, I'll never say fish to you again."

On arriving at Metapedia the *Sun's* reporter was most cordially received by Mr. John Robinson, Superintendent of the Restigouche Salmon Club, an association of American and Canadian gentlemen who have purchased the celebrated hotel and fishery privileges of Mr. Daniel Fraser, the long time popular landlord, and who is now to be found about a mile below on the New Brunswick side.

The officers of the club for the present year are as follows: President, Locke W. Winchester; Vice-President, Francis L. Lawrence; Secretary-Treasurer, Oliver K. King; Counsel, John L. Cadwallader; Superintendent, John Robinson: Executive Committee, L. W. Winchester, Marvelle W. Cooper, Oliver T. King, A. L. Mason; Directors, L. W Winchester, M. N. Cooper, O. K. King, F. C. Lawrence, W. H. Penfold, C. F. Fearing, W. E. Dodge, Jr., A. L. Mason, H. I. Nichols, D. T. Worden.

The gentlemen who compose the club have gone to a heavy expense to secure this, one of the best fishing privileges in Canada, and it is to be regretted that the sport this season has fallen far below their expectations or the average catch of past years. [A detailed statement of the catch of 1881 is given. It is: Division No. 1—90 salmon and 93 grilse, weighing 1,471 lbs.; largest fish, 39½ lbs, by Mr. Robinson. Division No. 2—Mr. King, 2 fish, 45 lbs. Division No. 3—49 salmon and 2 grilse, 1,158½ lbs.; largest fish, 38 lbs. by Mr. Jones.]

At the present date the club house is practically deserted, and little fishing has been done for some time. The small attendance of members is due entirely to the scarcity of fish. Mr. Robinson not feeling justified in forwarding encouraging information to the members. Indeed those who have visited the grounds this season have not remained as long as in years past, simply because the sport is so bad. The patrons this season have been: J. Hartt Welch, A. Stach,

pole, J. Carter, Jr., J. Robinson, John J. Kane, Mr. and Mrs. D. T. Worden, W. Stackpole, Mrs. Mason, A. L. Mason, R. G. Dun, G. W. Hall, J. Livingston, Wm. H. Scott, J. Catlin, Jr., W. K. Vanderbilt, H. B. Hollins.

Operations were begun in the big pool on June 19, when J. H. Welch landed a 25-pounder with a Jock Scot. The catch in June around this pool was sixteen fish, of which J. Robinson took five and J. J. Kane six—a 32-pounder by Mr. Kane topping the list. Mrs. D. T. Worden caught a 20-lb. salmon in Titus pool with a butcher. The weights in the order of catch were 25, 20, 11, 12, 25, 12, 11½, 25, 25, 27, 32, 25, 27, 11½, 20. During June the sport up the river was chiefly confined to Mr. Catlin, Jr., and Mr. Welch, the former getting a 15-pounder at Brandy Brook, and the latter nine salmon aggregating 163½ lbs. at Pine Island. The feature of the present month was Mr. D. T. Worden's success at Camp Harmony, where he scored nine fish with a total weight of 145 lbs. At Cheyton's Brook Mr. Stackpole, Mrs. Mason and Mr. A. L. Mason took 630 lbs. of fish.

The total catch in the club waters up to last week was 131 fish, of which two went over 30 lbs.; twenty turned the scale at 25 lbs. and over; seventeen over 20 lbs., and about thirty ranged from 10 lbs. downward. The flies chiefly used were the silver doctor, Jock Scot, dusty miller, butcher, durham, ranger, black dose, silver gray, fairy and wilmot. The most taking fly was the jock scot, which is credited with fifty-one fish, the silver doctor coming next with thirty. A special feature of the season was the capture of two salmon on July 20 from the big pool during the progress of a thunder storm, the fish rising to a Jock Scot.

Mr. Robinson and Dr. Mason said that the fishing on the river had been getting worse and worse for the past three years, until now it was practically an utter failure. The fish this year are smaller than ever before, and unless some radical changes are made in protecting the fisheries, it is Mr. Robinson's opinion that the people can soon bid good-bye to the salmon in the rivers and on the coast. This opinion was based on information derived from several quarters, all tending to show a sad falling off. At Indian House pool, formerly a perfect salmon bonanza, only fifteen fish have been landed this season, and the record on the Patapedia is still worse. In four weeks' fishing at Kedgewick but twelve salmon were secured, whereas formerly that many have been taken in a day. From Causapscal the returns are so meagre as to totally shut off all visitors.

Having invested a large amount of money at Metapedia, the club naturally takes a deep interest in all measures looking to the conservation of the fisheries, and express their desire to co-operate with the authorities in every practicable way.

Mr. Robinson said that he had given the subject a great deal of consideration, and was satisfied that speedy steps were necessary to prevent the total extinction of the fish. He attributes the extinction of the fish in no small degree to the almost total blocking up of the tideway by nets, and in proof of this points to the fact that a large proportion of the fish taken in the club's waters bear the marks of having had to force their way through the nets. Then again, the inland waters are not efficiently protected against poachers, who operate on the spawning beds and drive away the fish that they do not kill. All the riparian owners on the river are anxious to join in the protection of the spawning beds. It is a noteworthy fact that this season the nets between Metapedia and Campbellton have done very little, all the fish being caught down towards the mouth of the river. Mr. Robinson, recognizing the importance of the net fishery industry, is inclined to meet the difficulty half way, and while advocating either a shortening of the season or more open days, is prepared to go in for cutting off fly-fishing, say from the middle of August. Unless something of this kind is done, he considers it useless to continue the artificial propogation of salmon on the river. He is an ardent believer in fishculture, though he takes exception to the manner in which it has been conducted here in the past. The system has been in operation some ten years, and instead of the river being stocked, the run is becoming smaller year by year.

THE UPPER HUDSON.

HAVING seen many articles in your valued journal in reference to the wholesale abuse of the game laws in various parts of the country, it has been a matter of surprise to me that no complaint has reached you from this quarter. I doubt if the locality exists where less regard is had for the game laws. This quiet village, as you know, is situated three miles above Troy, and about one and a half miles above the State dam, which backs the water of the "noble Hudson" above Waterford, in Saratoga county, three miles from the dam. In the basin thus formed fishing used to be good, and on the "rifts," of which there are four between this place and Stillwater (some ten miles up the river), those gamy fish, the black bass, wall-eyed pike, and chub used to be found in goodly numbers and size.

The fykes, "dummies" and seines have so exhausted the supply that for several years a few of the net fishermen have given up fishing. Let me here explain for the benefit of many of your readers who are not acquainted with the "dummy" that it is a small "hoop" or fyke net, with the wings stretched and held in place on a bow, instead of being on poles as in case of the fyke. This net, when set, is held in place by two stone anchors, each one tied to a rope, one holding the bow and wings in an upright position, the other the body of the net, which is stretched up the stream. This is the most common kind of trap net in use here, and is the "poacher's delight," as it may be used in swift or still water, and on either mud, gravel or rock bottom, and when set is completely hid from view, being under water. These trap nets have been the cause of poor fishing. They are used during the spring and fall months, and at each rise of the water in summer. They are usually of one inch mesh netting, and catch all fish (excepting eels) of more than four ounces weight.

The seining is now almost wholly confined to tidewater below the dam, in consequence of the arrest of one gang, in the lower branch of the Mohawk by Cohoes parties, but there are several gangs that work the bars near the rifts at night all through the summer, in the interest of Saratoga parties, catching most of the choice bass and obtaining fancy prices for them.

As a natural consequence of this our bass fishing is far from being good, and the fish are generally of small size, not averaging more than three-quarters of a pound, a fish of two pounds or more being a rare catch. No fishway has ever been built in the dam although one was promised long ago, and at this present time a fourteen foot dam is being built across the Hudson eight miles above this place with no thought of a fishway being built in it.

The seiners below the dam pay no regard to the law against hauling on Sunday, and the excuse our local fishermen make for using nets is that this "used to be tidewater" some fifty-eight years ago before the dam was built. To all persons who inquire if they catch hard fish (bass, pike, etc.,) they say "no," but, strange to say, they generally have such fish for sale at good prices, and at times when they cannot be taken with the hook and line.

Hunting is carried on at all seasons, and very few birds are to be found. I will mention an instance that on the 20th day of May wild ducks were being hunted and shot on the river opposite the city of Troy. Stone Arabia.

Lansingburgh, N. Y.

[Complain to your nearest game protector and form clubs.]

PALAVER OF THE PANIONKEES.

I HEREWITH inclose you a copy of the rules governing our last Annual Hunt. When Panionkee Tribe No. 2 Imp. O. R. M. was instituted its membership was made up of pale faces fond of manly sports, such as fishing, hunting, etc. The custom of having an annual fishing and hunting party was therefore easily engrafted on the tribe in the first great sun of its existence, and never since then have we failed to honor the event with a full attendance and a grand time. We do not catch trout, but make the bass, perch and bullheads grace our festive board. We occassionally have our line and an eel entangled in a Gordean knot, but such trifles are sneered at by the "injuns" of our tribe. As a rule, to use the expression of one of our members, "Ve has more fun as ve can get away mit."

Our last camp was on Spring River, in the Flower Moon, G. S. D. 391, that is to say in May, 1882.

The rules are as follows:

THE SACHEM.

The Sachem shall have supreme authority during the hunt and the encampment. He shall prescribe all rules and regulations, make details for special duty, and direct all affairs necessary to secure harmony, comfort and fish. And he shall enforce his authority whenever he is able.

THE SAGAMORE.

The Sagamore shall be Ruler of the Feast, and it shall be his duty to provide hewers of wood and carriers of water, taking special care not to overtax his own energies. He shall see that the commissary stores are properly cared for, that the same are kept convenient for the cooks, that the feast shall not be wanting in quantity and quality, that the dishes be properly cleaned at least once a year, and that all things shall be so directed that every man may retire to his wigwam when night cometh, in comfort and content.

BIG MEDICINE MAN.

The Big Medicine Man shall provide a sufficient quantity of Malarion to ward off the miasmatic dangers of the country; he shall care for the stock of snake medicine, and when any one has been snake bitten, or fears that he shall be, he shall prescribe the remedy laid down by the traditions of the race; he shall also distribute among the early risers a judicious assortment of lemons, sugar, spoons and cups, so that if such e. r. shall know what other ingredients will make a perfect compound, they may provide for themselves a remedy against the dangers of the day, likewise an appetite for breakfast.

KEEPER OF WAMPUM.

The Keeper of Wampum shall gather from each Red Man his proportionate share of wampum, paying the same out for such things as may be necessary for the comfort of the Tribe, bearing in mind that the tastes of the Red Men are simple and their appetites good; the larder need not boast a lordly variety, but the quantity must be munificent. The Keeper of Wampum must know how to make both ends meet; to his care and caution we commit the belt.

CHIEF OF RECORDS.

The Chief of Records shall keep a faithful record of the expedition, truly recording the achievements of each; he shall not too hastily give credence to fishy stories, nor make history out of the vainglorious imaginings or sanguinary dreams of the inexperienced.

GENERAL LAWS

1. Business is business; come down with the shekles. Talk is cheap, but it takes lucre to lure catish.

2. Each Red Man shall provide his own bedding, fishing tackle, towels, soap, killikinnick, and paper collar; and while in camp it shall be imperative on each to wear at least the last named article. The Sachem is authorized to appoint a Grand Bouncer to enforce this rule.

3. None shall lie abed after sunrise, without permission, nor shall any vex the stillness of the night by turbulent snoring.

4. There shall be no unnecessary tramping of mud into the tents, no getting up in the middle of the night for malarion.

5. No one shall participate in the pleasures of the hunt whose constitution requires more than eighteen hours rest out of the twenty-four.

6. No one shall at any meal appropriate all the fish.

7. He who refuses to eat chowder is a liar.

8. Meals served in private apartments shall be charged extra.

9. There shall be no stealing of "kivers."

10. If the Big Medicine man finds his duties so laborious as to endanger his health, he may appoint one or more assistants.

11. The Golden Rule of the Tribe is that no one shall do any work himself which he can get anyone else to do for him.

12. No one shall insist that his bass weighs four pounds when it is notorious that it weighs but four ounces, nor shall anyone proclaim that he "caught a thirty pound cat, but it got off the hook just as he got it out of the water."

13. Anyone detected in using charms, incantations, or spells, such as using asafœtida, spitting on his hook, taking a drink, or making use of any other superstition to draw fish to his line, shall be promptly scalped.

14. Small strings of fish and many applications for malarion shall be inadmissible without great labor in cleaning fish, cutting wood, and carrying water.

15. Coons shall be counted lawful game.

16. No song shall be sung or story told, that could bring a blush to the cheek of the most modest Red Man present, (and for the purpose of enforcing this rule Parker shall be counted the most modest Red Man present.)

17. When King Phillip hangs his pantaloons over a limb, no one shall put turtle heads or eels in the pockets thereof.

18. The "fun of the thing" is known only to him who does his share of the work. He who shirks shall know no happiness, nor shall the fastidious man catch fish.

19. It is likewise ordained and established that while we are in camp, and there's plenty to eat, every one shall eat when he's hungry, and drink when he's dry, and to his fullest capacity, so far as is consistent with the safety of his buttons, which every man must sew on for himself.

Note.—Some of the foregoing rules may seem to be inconsistent with each other, but we can nowhere find any law which requires a Red Man to be uncomfortable. He is his own judge of law, and may obey that which suits him best.

Girard, Kan. Shawondasu.

COLORADO TROUT FISHING.

I HAVE been here since the 20th of May, and have been running around sight seeing among those wondrous, gigantic formations, by far too stupendous to undertake any description of in a short letter or even in one of many pages, for in reality no pen picture, photograph or stereoscope can do half justice to the reality. I have spent some days along the banks of the surpassingly beautiful Rio Grande, casting the fly to the speckled beauties of its rushing, limpid torrents, with almost unlimited success. From this place below for ten or fifteen miles the fishing is reasonably good. But the best fishing is above, and higher up among the mountains better, and up so high as Wagon Wheel Gap, and even up thirty miles above the Gap still very much better. Up in Antelope Park, sixty miles above this, it is only a two hours' task to catch your sixty or seventy, and even one hundred pounds. I was up only ten miles above Del Norte, on the 15th inst., with two other gentlemen, and in six hours caught 180, many of them weighing three and three and a half pounds each. The road up the Rio Grande is beautiful for buggy or wagon, with a railroad up nearly to the Gap, and the balance, all the way up to Antelope Park, a nice smooth road for any kind of vehicle.

The trout are as fine game fish as their congeners of the Hyannis or any other part of America. The only objection, to the sport is that anybody will be allured into the sin of killing too many, and more than they ought to kill at a time. They are being caught in great quantities by the market fishermen for the Denver market. They get forty-five to fifty cents per pound in Denver, and there are thousands shipped by express on the Denver and Rio Grande Railroad.

R. T.

Del Norte, Col., July 25.

WHITE BASS.

I FOUND the "white bass" at the mouth of Grand River, Mich., to be the ordinary silver bass of the Northern lakes; and the day I spent at Grand Haven taking them, although cool and blustery, was a very enjoyable one, not on account of the number of bass I took, but the novelty of the scene and the valuable information I received added additional pleasure to the day's sport. These silver bass appear at the mouth of, and some distance up, the Grand River generally, about the first week in June, but this season they were a full month late, owing to the cool weather and continued storms. They are taken with minnow bait in the same manner that black bass are caught, from the long piers extending into Lake Michigan at the mouth of the river or from a boat allowed to gently drift with the current. They appear in schools, it seems, and when one is taken it is safe to expect more. I found them bold and lively fighters, and those I took weighed from one quarter to one pound. I had but about an hour's sport with them, as they suddenly ceased biting; and going to other grounds tried the black bass with but poor success.

I learned from one of the fishermen at Grand Haven that the shad planted in Grand River at Lansing about eight years ago, have showed themselves. My informant, one Fendwood, who supplies the boarders of the Cutter House at Grand Haven with minnow bait, told me a year since he caught several in his minnow seine that weighed a pound. I was also told by a fisherman by the name of Wessel (a Hollander) that he had also taken similar fish. I am satisfied of the truth of these statements, for I took great care in making further inquiry on the subject, and the story was in every case verified. This should lead to further experiments of planting the young of fish which ascend our tide-water streams from their salt-water home to spawn. I also heard of a salmon weighing five pounds having been caught last summer by a man by the name of A. Fischer, of Grand Haven. It was taken in his gill net, which was set for lake trout. Whether this fish was a "land-locked salmon" or not, I was not able to learn, for none knew the latter fish. The natives of Grand Haven are somewhat surprised at the appearance of eels in the Grand River. They were never known to have been caught before, and I was told by Johnson, who keeps the rowboat slip at the steamboat wharf, that they were new to him. These eels have only shown themselves in the last year. The notes I give may prove interesting.

Homo.

CARP ANGLING.

THE question of the game qualities of the carp has often arisen since their introduction into America, but no one seems to have fished for them enough to entitle him to speak positively regarding their wariness and fighting qualities. The old English writers speak of it as a game fish, and it was one of Walton's favorites; but the German carp is an improved variety, much superior in growth and table qualities to the English fish, which is a scaled carp. Knowing that many of our readers are interested in the possibilities of carp angling, we take the following from the London *Field:*

In answer to "Moss Pool," one of the best and most certain methods of killing large carp is as follows: Carefully bait a spot for a week or so every evening with semi-boiled potatoes. Have a strong stiff rod with plenty of line on the winch, and at the end of the line a yard and a half of salmon gut. The hook should be a medium-sized triangle, carefully covered with potato. A small bullet a yard or so from the hook, and a small cork four yards from the hook, and the tackle is complete. Throw out this bait over the place previously baited. Keep the rod out of sight and a little slack line on the bank. Patience is then all that is required. The carp must be allowed to take the cork quite out of sight before struck.—A. J. D. Chapman. [We have known large carp killed in this way, but the bottom must be raked clear of weed first.—Ed.]

In reply to "Moss Pool," I may say that the tackle for carp should be made out of very fine gut, stained to the color of the water, with a hook about the size of No. 8, and a float made of quill, so weighted that only the tip lies above the surface of the water. The bait I use is sweet paste, made by mixing bread crumbs with honey and a little gin, and kneading it till of the proper consistency. Blue-bottle flies, ripe cherries, green peas boiled in sugar, larvæ, grains, worms, green gentles, and grasshoppers are sometimes used as bait.—J. W. Williams.

"Moss Pool" in Notes and Queries on Angling last week, asks how to catch carp. Some years ago, when living in the Midlands, I had access to a large pond in a gentleman's park, where there were plenty of these fellows ranging from 2lb. to 7lb., and many a fine basket full of them did I take home while yet in my teens. Sometimes, by baiting over night, I have caught 30lb. weight before breakfast the next morning. I found the best baits to be small red worms

found in dry earthy dunghills, rolled up like a ball, and various kinds of paste, new bread, white or brown, worked in the hands until stiff, also dough sweetened with a little honey or sugar. I have taken them with green peas, and small round balls of the green silk weed, so common in ponds during the summer. But the waters which I fished were generally discolored, which was favorable to success. It may be that the waters fished by "Moss Pool" are clear, and low, with cold hard water, and clay bottom. If so, I fear he has a problem to solve, as I have ever found them very difficult to capture under such circumstances. If there are any waterlilies in the pond, let him suspend two or three nice little wriggling small worms over the side of one of the large leaves, and they may be lured in this way. Mr. Francis in his book on angling, recommends a small boiled potatoe, which I should say is a very likely bait, but I have not yet had the opportunity of trying it. It should be used on small treble-brazed hook, put on with an ordinary bait needle, and the points of the hook duly imbedded and out of sight. A good 16ft. cane-built rod with upright rings should be used. This will permit fishing some distance from the shore, and, as the carp is the shyest of all our fresh water fish, the float should be one of the finest goosequills. For hooks I prefer the unjapanned Carlisle round bend.—THOMAS FORD.

SYDENHAM LAKE, Ontario.—While spending a short season some sixteen miles back of Kingston, Ont., a friend invited us to enjoy part of a day fishing on Sydenham Lake. As we were stopping about a mile from the lake, it was agreed that we should come to the foot of the lake early the following morning. The man with the boat was awaiting our coming when we reached the lake at 7:30, and with dinner basket and trolling spoons we set off up the east shore. Will, Clarence and your humble correspondent completed the trio. This whole section of Ontario is full of lakes, many of which are very small, covering but a few acres, while others extend for several miles. Most of the lakes have bold, rocky shores, which are generally covered with dense growth of spruce, cedar, and pine, with some hard woods, such as birch, maple, basswood, and ash. The water of most of the lakes is very deep, and so clear that the bottom can be plainly seen at a depth of from ten to twenty feet. The different lakes have different kind of fish, such as rock bass, large and small-mouth black bass, muskalonge, salmon, pike, pickerel and eels. The only fish in Sydenham Lake are pike and black bass, and these grow to very good size. We went up to the head of the lake and through a creek about half a mile long to Eel Lake, which, though not so large as Sydenham Lake, is a good place for black bass, and also contains a few pike. Our trip back was not as successful as going up, but getting back to the starting point we counted our fish and found that we had thirteen pike, varying in size from twenty to twenty-four inches, and eight bass of from two to four pounds weight. In all, we had fish enough to last a family for several days. Almost every day are to be seen parties of two or three out in small boats trolling. A number of Americans are now boarding in the village at foot of the lake, enjoying the fine trolling and boating to be had up and down the chain of lakes that extend several miles back. Board can be had in Loughboro' at very reasonable rates. Any party wishing to spend a few weeks should bring their boat with them, or at least bring one from Kingston. The farmers and settlers are a good class of fairly intelligent people, and will give sportsmen reliable information concerning the best places for fish and game generally.—SHETHAR-BOZNAI (Dugdale, Pa., July 26, 1882.)

TENNESSEE NOTES.—There has been almost too much rain lately for good fishing in this portion of the State, although those who were fortunate enough to strike the streams before becoming too muddy had fine sport. Charlie Curry, who has just returned from the mountains of East Tennessee, gives glowing accounts of the speckled trout fishing up there. He was out several times with Major Harry Heiss, formerly of the Nashville *American*, which is of itself a guarantee of good sport, because a more scientific and industrious angler than the Major cannot be found anywhere. Charlie says that so abundant are these beautiful fish that hardly does the fly strike water than it is gobbled up by one of them. I hear of some superb fish being taken out of the Cumberland River at points in the mountains above navigation; these waters are entirely exempt from the evil of pot fishermen, and bass grow there to great size. Col. Geo. F. Akers and Col. Griffith, President of the Kentucky Fish Commission, propose making these secluded regions a visit shortly, and then we will hear of marvelous fish and still more marvelous adventures. Col. Akers has secured from a Scotch nobleman traveling in this country a novel reel, which, by the aid of a small electric battery carried upon the person, is said to denote the size and character of the fish biting at the hook, which is attached to it. If this is really so, the days of fabulous fish stories and unhidden monsters of the deep are numbered.—J. D. H.

TWO SEA SERPENTS.—A Montreal correspondent furnishes the following from a local paper regarding the Aylmer Lake serpent: "We have been favored with a full description of the monster captured, not at the Chats, but in Aylmer Lake on Saturday last. Its full measurement is 13 feet 9 inches from end to end. The diameter at the thickest part is over a foot and half, and at no part does it measure less than a foot. A peculiarity that was not observed at the time of the capture is the presence of a large number of excrescences protruding from its body at various distances of from 2 to 3 inches to as many feet. It is almost impossible to detect the head from the tail, although at one end the two large knobs, covered with a film of a bright and shining appearance, bear the appearance of what might be the monster's eyes. It is covered with a thick hide, closely resembling the bark on a sawlog. In fact it was a sawlog 'only that and nothing more!'" And in the *Sun* of this city we find this: "It's a trifle early for the sea serpent, but if things get very dull I reckon we could persuade one to appear opposite any hotel you might pick out. My brother's the man to tell you about sea serpents. Years ago we fished at Cape May, and one day a spruce looking chap came up and says to my brother Phineas—Fin they called him—'Fin' says he, 'what do you suppose it's worth to me to have a genuine sea serpent appear off my hotel?' Fin was a man of a few words, and said that $50 ought to cover the whole thing. The queerest thing about it was that three mornings after that a sea serpent did appear off the hotel owned by that man. All the boarders saw it, the Philadelphia papers were full of it, and a train came down in the afternoon bringing a big crowd, and lots of people tried to hire boats to go out, but you couldn't get a boat or a man for love or money. Some of the men said they had families, others didn't like the looks of the critter, and so it went on until the second day when the serpent dissappeared. Fin never said anything only to mention that it was curious how things happen just after you have been thinking about it. About a month later I went up into Fin's loft after something, and there was that identical snake. Fin had taken a lot of wired shoots that they used aboard ship and sewed them together, stuffed them out with barrel hoops, tarred the whole thing black, painted white eyes on it, and put on a mane of jute. It was about 150 feet long, and a hundred yards away looked just like a big snake. He towed it off and anchored it a mile out in front of the hotel the night before, and in the mean time the hotel man hired all the boats for two days, so that no one could get out to it. It was a big thing. I know an old gentleman that often speaks about it. I tried to tell him about it once, but it wasn't any use. He'd seen it himself and you couldn't fool him."

LIGHT VS. HEAVY RODS.—When Mr. Geo. W. Van Siclen appeared in print with the evident intention of raising Dr. Henshall's hair, I felt that any fair-minded man had a call to the front. What is it that Mr. Van Siclen finds fault with? The worthy Doctor starts by telling his readers that he is a "great stickler for extreme lightness in rods when compatible with strength and action." "Anything wrong with that?" I think not—good, sound sense I call it. I presume that Mr. Van Siclen knows that to obtain the best results his line in weight should bear a certain proportion to the conditions of his rod. How light a line would he use with his four-ounce rod, and what would he have done with it on that morning at Niagra Falls when Frank Arrowsmith cast seventy-one feet, under the conditions of the heavy wind that was blowing? Mr. Van Siclen thinks the Doctor prefers to "thrash around" with a ten-ounce rod. Imagine a light rod fast to a five-pound bass! Most likely there would be some of the most uncontrolable "thrashing around" there that he ever saw. Mr. Van Siclen compares billiard cues with fly rods. Perhaps it is just. In long fly-casting the same accuracy and power or control cannot be obtained with a six-ounce rod as with an eight or nine-ounce. This rule applies equally well, I think, after the fish is hooked. Look it over, Mr. Van Siclen, and see if there be not a grain of truth in it.—RHODY.

LARGE-MOUTHED BASS IN FLORIDA.—The Sumterville (Fla.) *Times* of July 21 says: "Mr. S. W. Corley, of Okahumkoe, brought into our office on Saturday last the head of a trout that weighed 15¾ lbs. He caught one the day before that weighed 6¾ lbs. after it was perfectly dry." Fair specimens. "What say all of you?"—AL FRESCO.

BIG PIKE.—Bellows Falls, Vt., July 29.—A pike was taken out of the Connecticut, at this place, last evening, which weighed fourteen and a half pounds, the largest this season.—F. C. E.

Fisheulture.

TAKING MACKEREL FOR OIL.

WE print the following letter from Mr. D. T. Church, manufacturer of menhaden oil and guano, Tiverton, R. I.:

Editor Forest and Stream—In your issue of July 13 you have an article in regard to the destruction of food fishes which is incorrect. Please insert in your paper the inclosed article. There is one error you will do a favor to correct. Prof. Baird's estimate of destruction by bluefish is fifteen hundred million barrels in four months instead of one hundred and fifty millions.

Providing your sporting friends wish to learn the fact that as a whole the menhaden purse seiners don't catch food fish enough to supply the men on the steamers and at their factories, they can do so by going on board of the steamer George W. Humphrey for a month or more and learn by personal observation.

As I understand it, you and all your patrons are for right and truth. If so, you are wide from the right in your position in regard to the purse seine fishery. Why should not the harvests of the sea be reaped by improved machinery as well as the harvests of the farm?

As we look at it, and we are prepared to make it good by argument, your position in regard to the sea fisheries and the improved methods of taking fish is the same as the men who want all railroads discontinued and to go back to the old stage coaches. D. T. CHURCH.

Here is the article from the *Herald* referred to:

"The statement made in you issue of the 11th, that fishermen and property owners interested in the mackerel business are excited because a steamer is making arrangements to catch mackerel for the purpose of manufacturing them into oil and guano, is not true, for the reason that no steamer is being fitted to take mackerel for that purpose. We are offered for mackerel as they are taken from the water $3 per barrel, and the market value of a barrel of mackerel, after being rendered into oil and guano, is $1 per barrel.

"People other than practical fishermen often get excited in regard to fish; for instance, Shebnah Rich was in that mood during the last period of scarcity of mackerel on the coast of New England. He read a lecture before the Massachusetts Fish and Game Association of Boston, taking the ground that catching mackerel in purse seines was the cause of their absence, and that there never would be any more mackerel worth making a business to catch unless that mode of taking them was discontinued. William Stowe, one of the firm of the American Net and Twine Company of Boston, who should know something of the ebb and flow of sea fish, got excited also, and he preached, with the fervor of Mahomet, to the effect that taking mackerel with purse seines had destroyed that fishery. I heard him make the statement in November, 1878, that, in his opinion, there never would be another makerel purse seine made in the United States In the light of the last three years' mackerel fishery, it is shown that their excitement was uncalled for, and it is also shown how little they knew of what they were talking about. As to the assertion that steamers have broken up and driven off the menhaden, it is worth just as much as Rich's and Stowe's statement in 1878 that the mackerel purse seines had destroyed the mackerel. It is a fact, well known to all who have taken the pains to study the history of fish that live and multiply in the sea, that they have periods of being plenty and scarce, and that man, in his puny efforts of capture, is as nothing in comparison with the destruction by bluefish, sharks, bonitas and other fish of prey. Prof. Baird estimates that the bluefish in four months destroy on the coast of New England 150,000,000 barrels of fish. When we add to the above the destruction by sharks, whales, etc., and add to that the whole coast from Maine to Mexico, and take twelve months' destruction instead of four, we see that man's influence is about the same as a fly's would be in trying to stop the steamer Bristol's engine by lighting on the end of her walking beam when it was running wide open, with all the steam the law allowed..

DANIEL T. CHURCH."

[The impression which we have formed of this business is that while bluefish are often let out of the purse nets because they cut the net so as to render it useless, other food fishes are retained. These fishes would, of course, be worth more in market than for oil, but the steamer is not bound for market, and by the time of her return with her catch the fish are past the marketable condition. Our article was based on a report from Massachusetts papers that the Rhode Island steamers were being especially fitted out for a foray upon the mackerel for their oil. If this report is true we maintain our position of hostility to the movement. In this connection we publish the following from the Cape Ann *Advertiser*, an able paper published in the interest of the commercial fisheries at Gloucester, Mass.:

"A statement has been published in the Boston papers from gentlemen interested in the fish oil and guano business asserting that the idea of catching mackerel for oil and guano purposes is preposterous, from the fact that mackerel are worth, as they are taken from the water, $3 per barrel, while the market value of a barrel of mackerel after having been converted into oil and guano is only $1.

"We trust that this statement is correct, and if so there will be no fears of diverting this valuable fish from its legitimate channel, that of affording a nutricious and highly palatable food, which has become staple in many families, who regularly lay in their half-barrel, quarter-barrel, or kit of mackerel as a part of their winter's provisions. These gentlemen "scout the idea that man's best efforts can have any perceptible effect in reducing the quantity of fish in the ocean. We wish that we could agree with them; but in our humble opinion a fleet of steamers such as have followed the menhaden, pursuing that of the mackerel fishery, intent on filling up the steamers, irregardless of having to stop to dress or market the catch, but just turn them into the hold, taking them to port in bulk and bailing them out again, would so harass the sensitive mackerel that they would soon follow in the wake of the menhaden, seeking other waters where they could be free from their pursuers."]

HABITS OF BLACK BASS.—While in Grand Rapids, Mich., during my late vacation, I was informed by Dr. Parker, of the State Fish Commission, and a Mr. Hall, of that city, of a new feature in the habits of the black bass during spawning time, which had come under the notice of those gentlemen. It that of the nest building of these fish within two or three feet of the surface in ten and fifteen feet of water Mr. Hill told me he had frequently observed at the head of some lakes and ponds in Michigan, a collection of ring moss and other vegetable matter, placed with apparent design on the top of brush heaps which rested on the bottom of the lake and extended nearly to the surface of the water. Not knowing what they were he made a critical examination and found them always guarded by the bass which had constructed the nest in the same manner in which they protect their ordinary nests made in the bed of the stream or pond. In many cases the nests would be three or four feet in diameter and larger than the top of the brush pile on which they rested. This habit of the bass I have never heard of before, and both Mr. Hill and Dr. Parker confessed they had never seen an account of it published. It may be some of your correspondents know of it and can give further light on the subject. May it not be that some peculiar character of the bed of these bodies of water where the nests are found renders it impossible for the spawn of the fish which inhabit them to properly develop if deposited there, and the nest building is resorted to to aid in a better or more speedy hatching of the eggs? Perhaps more sunlight is wanted. I am at a loss to give a better explanation of the matter.—HOMO.

BLACK BASS FOR ENGLAND.—London, July 11.—Among the pleasant acquaintances made here—those interested in fisheulture and angling—I have been very much gratified by the kindness and hospitality of Mr. R. B. Marston, editor of the *Fishing Gazette*, whom I first met at the Society of Arts recently, on which occasion he read a very interesting paper on artificial propagation of coarse fish; there was a large attendance of anglers from the 120 different Angling Societies of London and vicinity—Edward Birkbeck, M. P., presiding. Mr. Marston exhibited a drawing of the apparatus, describing an exceedingly feasible plan for securing spawn of perch, bream and other fishes whose eggs adhere to brush or grass, thus enabling them to be transported and placed in suitable water in which to be hatched. Mr. Marston's paper was received with a good deal of enthusiasm. The people here seem to be unfamiliar with the abundance of game fish in our own country, such as trout, salmon, black bass, therefore it is strange that it should seem desirable to hatch fish of this kind, which afford little sport in their capture and are not good food fishes. I was invited to speak upon the subject of black bass; the audience was greatly interested and unanimously adopted my suggestion that steps should be speedily taken, towards stocking the vast extent of waters in the country now deficient in game fish, especially of such as our famous black bass. GEORGE SHEPARD PAGE.

FISHERIES OF NEW HAMPSHIRE, RHODE ISLAND AND CONNECTICUT.—We have received Census Bulletin No. 291, giving the statistics of the fisheries of New Hampshire, Rhode Island and Connecticut, prepared by G. Brown Goode, special agent in charge of ushery investigation, and A. Howard Clark, special agent. The report comprises a series of three tables, and shows in detail the number of persons employed, the amount of capital invested, and the value to the fishermen or producers of the various products. Table I. shows that in the fisheries of New Hampshire 414 persons, and a capital of $209,465 are employed, and that the value of the product is $176,684. From Table II. we find that Rhode Island fisheries employ 2,310 persons and $596,678 capital, and that the value of the product is $880,915. The fisheries of Connecticut, as shown in Table III., employ 5,131 persons and $1,421,020 capital, and the value of the product amounts to $1,456,856.

MICHIGAN NOTES.—I have learned through Mr. V. Wilson, of White Pigeon, that the whitefish put into Clingers Lake by the fish commissioners of this State have lately shown themselves, and several have been taken in minnow seines, weighing ten pounds The silver eels, also planted in Michigan waters from Pennsylvania streams, seem to have thrived, but whether they have reproduced is another question. Those that are frequently taken from the ponds, lakes and creeks, where they were deposited in a very young stage of growth, may be the original fish of increased size. Dr. Parker, of Grand Rapids, Mich., wishes me to state to you that the trout fry deposited in the Southern Michigan streams, where the fish were never known to have been, are thriving nicely and doing as well as the fish placed in more northern waters. The bass fishing on the flats of the Detroit River is now fine, and your correspondent has been having a full share of it.—HOMO.

GROWTH OF TROUT.—Ripon, Wis.—Mr. Cody took two trout from out Silver Creek, weighing 2½ and 2¼ pounds respectively. One was 17 inches long and the other 16¾ inches, the first week in July. The stream was stocked with fry in April, 1880. Pretty rapid growth.—A. C.

"A uniform" or "an uniform." Regardless of which is correct, the Esterbrook Steel Pen Company will still go on making pens of uniformly good quality. The stationers have them.—*Adv.*

The Kennel.

FIXTURES.

BENCH SHOWS.

April 3, 4, 5 and 6, 1882. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters wheiped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Slayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

September 4.—National American Kennel Club Field Trials on Prairie Chickens, Fairmont, Minn. Entries for the Derby close July 1, for the All-aged, Sept. 4. Jos. H. Dew, Columbia, Tenn., Secretary.

November 17.—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 884, New York, Secretary.

December 4.—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11.—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

WHAT IS A COCKER?

Editor Forest and Stream:

The most pronounced feature in "Senex's" letter in your last issue is the deep-rooted opinion of which he seems unable to divest his mind that the A. C. S. standard was specially devised to fit certain black field spaniels, which he apparently cannot find terms contemptuous enough (even by throwing consistency to the winds) to characterize. They are, according to him, in one breath, "a worthless set of pug-nosed, crooked-legged, Jumbo-like specimens," and in the next he speaks of the "long head and snipy nose of the nondescript."

In my letter to you of the 3d inst., published in your issue of 15th idem) I endeavored to show the construction that the American Cocker Club standard bears to my mind, and I am curious to know how many spaniel breeders take a different view of it. "Senex" calls it a "false and pernicious standard," causing "foul and wicked injustice, and a blot, a scandal and a burning disgrace to the name of the cocker spaniel."

Now I would like "Senex," whom I know to be an honorable and just man in intention, calmly and dispassionately to follow me while I try to show him how the best specimen of the black field spaniel exhibited at Cleveland, according to my judgment, would come out if measured and weighed as a cocker. As a field spaniel he made the very high score of 92¾, under, as I think, very critical judging.

I will suppose that the question of weight, which would otherwise disqualify him, is entirely waived.

To avoid useless repetition, I would ask "Senex" to read in connection with this letter the description of the points as given in your number of 15th inst.:

	Full Score.	Benedict as a Cocker.
General appearance and symmetry	10	5
Head	15	9
Eyes	5	2½
Ears	10	10
Neck and shoulders	10	7½
Body	15	10
Length	5	—5
Legs and feet	15	10
Coat	10	10
Tail	5	5
	100	07—5
	Deduct negative	5
Total score of Benedict as a cocker		55

As "Senex" was present at the judging of the spaniels in Cleveland, it will probably give him little trouble to recall the only entry in class 37—No. 189, the Hornell Spaniel Club's Flirt. She was there entered as a field spaniel, because, being very fat and heavy with pup, her weight precluded her from competing in the small class; but properly shown, she is a capital type of cocker, and would, barring her rather plain head, make a very high score under the cocker standard. It would have shown much better judgment in the Hornell Club had they entered Baroness, No. 190, in the field spaniel class, having added, as might easily have been done, an ounce or two to her weight; and Flirt as a cocker, of which, as I said before, she is a good specimen.

I find it necessary in order to make my meaning unmistakable, thus to refer to dogs that have been publicly exhibited and criticised in the sporting papers, as being the shortest and most easily understood method of explanation.

I hope I have succeeded in making it clear that, according to my lights, the A. C. C. Standard does *not* fit the modern black field spaniel and that "Senex" is wasting his powers in an entirely wrong direction, and setting up imaginary bogies to keep himself occupied in knocking down.

Having purposely refrained from following "Senex" into any discussion on the comparative merits of the cocker and field spaniel, about which every man is entitled to his own opinion, I will close by telling him that he will find among his fellow-members of the American Cocker Spaniel Club, thoroughly true and staunch friends of the handsome little dog, and plenty of room for exerting his influence, both by pen and example, in furthering the true interests of the breed.

J. F. KIRK,
Secretary American Cocker Spaniel Club.

TORONTO, July 22, 1882.

Editor Forest and Stream:

"Senex" again treats us to one of his highflown appeals on the cocker question. I do not propose to answer his very wild statement and erratic assertion, because it would take up too much of your space. I think, however, that I have got one sentence upon which the whole of his heartbreaking appeal hinges, and to that I will confine my attention:

"Is the genuine cocker to be divested of his prerogatives and to be absolutely excluded from our bench shows because a few interested persons (I mean in connection with the cocker entirely) have seen fit to foist upon the community a worthless set of pug-nosed, crooked-legged, Jumbo-like specimens of the black dog, and call them by the euphonious title of cockers?"

The genuine cocker has been especially provided with two classes at each of the bench shows held this year—a decided improvement on any prerogatives hitherto enjoyed by that breed.

"Senex" should be more explicit in his charges and name the "few interested persons," so that they may know what he is driving at.

The winners in the cocker classes this year have been Dr. Niven's Black Bess and Bene, Dr. McCollom's Alma, G. Macbeth's Zulu, and the Hornell Spaniel Club's Princess, Flirt II., Beatrice, Madge and Topsey. Of these the blacks are Dr. Niven's pair, Zulu, Beatrice and Topsey. "Senex" saw all but Beatrice and Black Bess at Cleveland. I want to pin him right down to facts now, and I ask which of the black cockers he saw had a pug nose, or was crooked-legged, or Jumbo-like, whatever that may mean. Your readers need not expect an answer from him—he has no answer to give short of an apology.

"Senex" wants to make out that the field spaniels are shown as cockers, and though he knows just as well as I do that they are not, he harps on this string continually. A year ago he wrote a lot about the New York show, although he was not there, and he accused the Lachine Kennel Club of showing Benedict as a cocker, and when brought to task replied personally to the club, saying he had been misled, was very sorry for having made such a mistake, and would at once write to the paper in which the statement appeared. Up to the present date, however, his promised letter of correction has yet to appear. Now he goes off on the same course of misstatements with regard to Cleveland and the shows of this year. The first case might have been a mistake, what is the second?

We will even suppose that Benedict, Dash, Black Prince, Success and others were shown as cockers. Which of them has a pug nose? Which, with the exception of Success, has crooked legs, and which is Jumbo-like? Give us facts, "Senex," not vague assertions, or else come down with your correction, tacking on by way of P. S. the one promised last year in the case of Benedict.

What is the matter with "Senex?" is the question I have had put to me several times since his appeal appeared. All the trouble is, that he is at present a disappointed exhibitor. Last February he asked to have his name proposed as a member of the Cocker Club. It was done, and he was elected. He took no further step in the matter until after the New York show, when, in response to a friendly communication from Mr. Kirk, the present secretary, he perfected his membership and said all sorts of good things about the club, harmonious working, etc. The next step is his showing at Cleveland, and failing to get a win for either of his exhibits, and now comes the onslaught on the club and the standard. Every person is at liberty to draw his own conclusions from this little history of mine I have given above.

"Senex" will find it a much easier thing to write appeals than get support from cocker breeders who are content to abide by the present club, which has, in its one year of existence, had the schedules revised and put in shape, and given $45 in prizes. The club started on its second year of existence with a balance in the treasury, and let me say that at the annual meeting there was not one attempt made to alter or amend the present standard. Yours respectfully,

JAS. WATSON.

DOGS ARE PROPERTY IN OHIO.

FOLLOWING is the full text of the late Ohio decision determing the status of dogs as property in that State. The decision will be received with great satisfaction by all owners of valuable dogs in Ohio, and by every one who is interested in securing better protection for these animals. The decision is as follows:

The State of Ohio vs. Michael Moran. In the Probate Court:

At the July criminal term of this court the said Michael Moran was tried and convicted for stealing a Scotch terrier dog, the property of one Charles Asmus and of the value of $25; and thereupon the defendant, by his counsel, moved an arrest of judgment upon the ground that the stealing of a dog was not larceny in the State of Ohio. The counsel, in support of his motion, relies upon a decision made by our Supreme Court, in the case of the State vs. Lymas, 26 Ohio St. Rep. 400. The court in this case held that the stealing of a dog was no larceny at common law, and not made so by statute, yet in deciding the case they express the opinion that the taking and carrying away of a dog was such an evasion of property as might amount to a civil injury, but from the statute then in force defining larceny they found no authority authorizing them to pronounce as larceny the stealing of a dog.

The statute under which this decision was made is found in Swan & Critchfield, sections 408 and 409, and it defines larceny to be the stealing of money or other personal goods or chattels. The court says in passing upon the case that these words "goods and chattels" have a settled and well-defined meaning, and did not at common law embrace dogs, and when these same words are used in the statutes then in force defining larceny, it follows that the statute is not to be understood as embracing dogs, and for the purpose of enforcing their views the court further say "that bonds, bills and notes were held at common law to be goods and chattels, and yet they were held not to be the subject of larceny, and, therefore, it was necessary to enlarge our statutes so as to make the stealing or maliciously destroying them punishable in the same manner and to the same extent as other goods and chattels.

The opinion of the court there in this case was: That prior to this amendment defining larceny, neither bonds, bills or notes were the subject of larceny, but dogs not being included in this amendment, the law as to them remains unchanged. In other words, not being goods and chattels, the stealing of them is not punished under the larceny act.

But how stands the law to-day? The statute under which this decision in the 26 O. S. was made has been repealed, and the statutes defining larceny and the only statute on the subject is found in Sec. 6856 of the Revised Statutes, and it declares "that whoever shall steal anything of value shall be guilty of larceny." Nothing is here said of the stealing or destroying of bonds, bills or notes. These are not named in this statute, and from this is it to be inferred that there is no law in Ohio by which the offender can be punished who steals bills or notes? This will hardly be presumed, and how is it, then, they can be brought under our larceny act? The answer is obvious. It is because they are things of value; and what reason can we give for bringing bonds, bills and notes under this statute and at the same time shut out the dogs? Are they not things of value? Had the present statute defining larceny been in force at the time the case of Lymas was passed upon by our Supreme Court, his sentence for dog stealing would have been confirmed. The court in that case expressed the opinion that there was such a thing as property in a dog, and it necessarily follows from this that a dog is a thing of value. Whatever doubt the court may have entertained as to a dog being goods and chattels, they could have none as to his being a thing of value.

It may not be necessary for me to say anything further upon the question here made, but for the purpose, if possible, of relieving the mind of counsel moving in this matter of all doubt as to the law governing the case, I will refer to one or two decisions made in other States, based upon statutes similar to our own. In Kansas they have a statute defining larceny. It declares "that it is the stealing and carrying away of any money, goods, or rights in action." The question came up before the Supreme Court of that State, whether the stealing of a dog, under the statute, was larceny. The court held that a dog was property, and so considered at common law, and that under the statute the stealing of a dog was larceny.—Section 2, Kansas Reports, 480.

In a recent case which came before the New York Supreme Court, on error, Mullany was convicted in the court below, under the larceny act, for stealing a dog. See New York Reports, volume 2, 480. The court held that, while a man, for stealing a dog, could not at common law be punished for larceny, they held that the definition of personal property as found in the statutes is not to be referred to the common law rule bearing on the case, but to the common understanding at the time the statute was enacted.

They say that the common law rule is exceedingly technical, and can scarcely be said to have a sound basis to rest upon; that while it was not larceny to steal a dog at common law, it was larceny to steal the skin of a dead dog. This court did not seem to be embarrassed by this common law rule, and construed the word property in their statutes embracing dog property. The court held to steal a dog was larceny under their statutes. See also 34 New Hampshire Report, page 523; 4 Parsons's Criminal Report, 386; 1st McArthur, page 53, where the stealing of a dog is decided to be larceny there.

There are some decisions to be found in this country where the common law rule is adhered to that there can be no larceny in the feloniously taking and carrying away a dog, but I venture to affirm that no decision can be found in any State with a statute similar to our own that declares the stealing of a dog is not larceny. I therefore decide that a dog is property—a thing of value, and that the stealing of a dog in Ohio is larceny. The motion in arrest is therefore overruled.

Alexander Hadden and J. P. Dawley, attorneys for the prosecution; Frank E. Dellenbaugh, attorney for defendant.

THE BYRON HOUNDS.

Editor Forest and Stream:

A history of the Byron hounds, a strain of dogs so justly celebrated in this section for indomitable energy, tender nose, unsurpassed speed and untiring dash, cannot fail to be interesting to all huntsmen. I have hunted for over forty years with Byron hounds, and had ample opportunities to test their value as red and gray foxhounds, and do not hesitate to say that they generally excel, as a class, any other. I have hunted hounds fully their equal in many respects, but they were isolated and accidental cases, and not representatives of a class or strain. I think I should qualify this statement, for I have never seen nor hunted a hound that could maintain his character for ten consecutive days as the Byrons. They are without rivals both in gameness and endurance.

Old Byron I knew from his breaking to his death, which, by the by, occurred at my house in 1837 of old age. When only a few years old I rode over him and his brother Rattler, in couple in my father's lawn, and mashed his right leg from his toes to the knee. The injury lasted his life, and greatly disfigured that leg. But it did not impair his speed or power of endurance. Gen. P. B. Starke hunted the four original Byrons, owning two of them. "Pious Joems" (Col. James Gordon of Pontotoc, Miss.) hunted both red and gray foxes with them when on a visit to me ten years ago this coming October. In a friendly letter to me of recent day, after expressing regrets that both of us must soon "hand in our checks," he remarks, "Could I be satisfied that you and I would one day meet in a better land, mounted on thoroughbreds, with Watchman in the lead of a pack of Byrons, after an old red, this world would not now be so attractive."

Watchman, mentioned by "Pious James," at the time of visit, headed my pack, and was used in the stud by me up to his death. He was the lineal descendant of Old Byron and Rattler, two full and litter brothers, and the founders of the Byron strain of foxhounds. Broadnax's pack consists almost entirely of Byrons, and a more certain and reliable red or gray fox pack has never existed. His Telephone, full sister to my Blunder and Blunder is the mother of two indigo-blue female pups sent the Hon. Jno. E. Kenna, of the House of Representatives, from West Virginia. He writes me (June 29) that "they have had a round after a red and acquitted themselves, even at their early age, most creditably. Beauty (Bett–Logan) is what her name implies, and is the largest of the four. Fancy (Fanny-Logan) is well grown, very graceful, active in her movements, and as quick as thought." I have just sent my two indigo-blue Byron pups (one Bett-Trailer, the other Kate-Blunder) to him. These two puppies are very fine and extremely promising, and will at some future day equal the best of any other strain or will belie their ancestry. I have been thus particular so that all inquiring huntsmen may be enabled to form an estimate of the merits of the Byrons of the past and of those of to-day. My "Roanoke 'Coon Hunt," in your issue of the 20th inst., has elicited a correspondence from Massachusetts to Georgia about the uncalled for Byron pups, which I take this occasion to say I shall not hold over longer than ten days for the parties originally ordering them. I hope their views of "business" may by that time be sufficiently modified to notify me of their intentions. T. G. T.

GASTON, N. C.

GARRYOWEN SPEAKS.—At the recent Belfast Dog Show Mr. Giltrap's red Irish setter Garryowen was protested by Mr. Hilliard, who claimed that his nose had been tampered with. Garryowen turns up his nose at this, and with the characteristic wit of the breed writes to the editor of the Belfast *News-Letter* as follows: Sir—In the report of the above show, as published in your issue of the 23d inst., it is stated that it was understood an objection had been lodged against me, alleging that my nose had been tampered with. It is a fact that in my master's absence from the show, and without any previous intimation to him from Mr. Hilliard, whom we both met at the Alexandra Palace Show the week before, such an objection was lodged by Mr. Hilliard, the owner of the defeated Count (my brother) and Viscount Palmerston, his kennel companion. The committee of the show, having investigated the objection, after having got my nose examined by the veterinary surgeon, confirmed the awards of the judge, and thereby declared me entitled to "first prize" in the champion class for setters, and to "The Newry Challenge Cup," as being the best of all the sporting dogs or bitches in the show, and the Newry Challenge Cup is now conveyed to me by my kennel. The origin of Mr. Hilliard's frivolous objection can only be accounted for by the fact that I had beaten my brother, Count, in the champion class at Belfast, as well as at the Alexandra Palace the week previous, and also had beaten his kennel companion, Viscount Palmerston, for the Newry Challenge Cup; and, if the objection had been sustained, the double prize gained by me would probably have been given (as I suppose Mr. Hilliard thinks) to my brother and his kennel companion, as I believe it was for that purpose they were sent to the show as well as myself. In return for the £1 deposit which Mr. Hilliard paid to deprive me of my honors, and which he has now forfeited, he has got the benefit of the opinion of a professional veterinary surgeon that my nose does not require to be tampered with to sustain my reputation on the show bench, gained under different judges at the leading shows in the United Kingdom, having won numerous prizes, including seven first prizes, and beaten every other champion Irish red setter dog or bitch now living that has been exhibited against me. As that "nosey" objection has been circulated to my prejudice through the press, and as the unfavorable result to its originator has not got the same publicity, I trust this will be a sufficient apology for being troubled with this communication by GARRYOWEN, the champion Irish red setter. (Whitehall House Kennels, 26 South Circular road, Dublin, June 29.)

DEATH OF GLEN.—Dr. Aten's Glen died at Centreport, L. I., on Thursday, July 20, from poison administered by some miscreant whose life would be considered by many of much less value than that of his victim. Glen's age, at the time of his death, was eight years, and he had been a faithful companion, both at home and in the field. He was thoroughly broken, and few canines could add more to a man's pleasure than he. Coupled with Ned (who has also gone to the happy hunting grounds), he was the winner of first in the Brace Stakes, at the inaugural trial of the Eastern Field Trials Club, at Robin's Island in 1879, and in 1880 divided with Sensation the third and fourth prizes in the All Aged Stakes of the same club. Though not a bench show dog he was always considered by the different judges before whom he was shown as worthy of a vhc, and his stall was always surrounded by many admirers. He was also the winner of two silver medals, given by the W. K. C. in 1880 and 1881, for the best black and tan with a field trial record. His disposition was of the best, and his loss will be greatly deplored by his many friends, as well as his owner, who has our heartfelt sympathy. "Peace to his ashes."

Spratt's dog buscuits, either by case or retail; also Spratt's dog soap, Glover's mange cure, Steadman's flea powder, &c. CHARLES L. RITZMANN, 943 Broadway, New York.—*Adv.*

MR. J. H. GOODSELL'S ENGLISH SETTER DOG "PLANTAGENET."

PLANTAGENET.

OUR illustration this week is of the lemon belton English setter dog Plantagenet, owned by Mr. J. H. Goodsell, of New York. He was whelped July 15, 1880, and was bred by Mr. John C. Higgins, of Delaware City, Del. He is by his Dashing Monarch, out of Petrel, and is of good size with lots of quality. Plantagenet's first public appearance was at Robin's Island last November, where he ran in the Eastern Field Trials Derby. Although he was unplaced he completely won the hearts of the spectators with his magnificent style and dash, his wonderful speed, and the easy gracefulness of his movements. He also exhibited a first-class nose, combined with staunchness, giving promise of rare excellence in the field when added years and experience shall have wrought their perfect work. We add our report of the heat run by him, believing, should nothing befall him, that we shall be called upon next season to chronicle the results of more than one heat in which he will participate. The following, from our issue of December 1, 1881, is a full description of the heat between

PLANTAGENET AND ROYAL DALE.

At 2:10 Plantagenet, owned by Mr. James H. Goodsell and handled by Martin, and Royal Dale, owned by Mr. J. De. T. Blackstone, of Norwich, Conn., and handled by Mr. Barber, were cast off in the oak scrub west of the barn. Passing through the scrub and around the briar patch into the open, Plantagenet was cut loose and gave us an exhibition of his wonderful speed. His style is also grand, and as he quartered the ground in front, with head high in air, his long, level, far-reaching stride and graceful turns brought exclamations of wonder and praise from the lips of the delighted spectators. Royal Dale, though a very good dog, as far as we could judge, had not much chance to display his quality, for Plantagenet cut out the work and committed all the faults. In fact he beat himself. He is a very high-strung dog, and has had but three weeks' work, and his carnal desires occasionally got the better of his training; and then there was fun, for his chase means something; and, as once or twice he broke away he gave us an exhibition that will long be remembered by those who saw him. Of course these performances cannot be permitted at Field Trials, but as we witnessed these displays, memory brought fresh before us fond recollections of two or three dearly loved companions of our earlier days afield, whose youthful days were full of these wild escapades, and as we thought of the many days of rarest sport that their riper years afforded us, from our heart we condoned the faults, and were only sad that we could not call the magnificent creature all our own. When near the south shore, Royal Dale challenged and roaded a short distance and made a flush.

Plantagenet now took a hand, and as both roaded up the gully, he made a flush. Both moved on and Dale pointed; he soon started, but was charged by Barber, who appeared to be looking for the trail, as he kept well ahead of his dog. The birds were widely scattered, and were evidently running fast, as the scent was very poor even when close to the birds. Dale roading on for quite a distance, lost the trail, but soon found another in the briers, but the bird flushed wild. Both dogs worked well for so bad cover, until Plantagenet, going at speed down wind, flushed a bird, for which he was not to blame; but his wild chase was, under the rules, very reprehensible, and he was properly penalized. Working north, a bird was flushed by Barber, who was again ahead. The dogs were then worked south to the little pond, and given a drink, then up the shore, when a bird was flushed by Martin, who was ahead this time. The handlers were now cautioned by the judges, and reminded that the dogs should be allowed to do the hunting. This caution was given none too soon, and was greatly needed. The dogs were worked down to the south point; both challenged once or twice, but nothing was found. As they swung to the north, Plantagenet made a very stylish point at a bunch of bayberry bushes. Dale, called up to back, was penalized for not doing so. Martin was ordered to kill, but they failed to find and the puppy was scored a false point.

A little further on, Plantagenet came to a point, but soon moved on a little further, and came to a magnificent point in the open. Dale was brought up and backed in grand style. Martin flushed to order and made a clean kill. Three or four of the birds almost brushed Plantagenet's nose as they passed, which was more than his ardent temper could stand, and he broke for them at headlong speed. Martin checked him before he had fairly caught up with the birds. Bringing him back, he retrieved the dead bird very nicely. Moving on up the edge of the bluff, Martin was taken with cramps, but was soon all right. Meantime, the spectators flushed a brace of birds, which flew along the edge. A little further on Plantagenet made another grand point. Dale, brought up to back, got credit for it, but we thought that he was pointing instead. Barber was ordered to shoot, which he did, and missed; both dogs were steady. Crossing the gully, Dale pointed, and Plantagenet backed. Both moved on, and roaded some distance, but no bird was found. A little farther on, Dale accidentally flushed, and Plantagenet immediately followed suit, and lost all chance by a very ill-advised chase.

Notwithstanding his defeat, his owner was offered one thousand dollars for him, which he very properly refused, well knowing that as a rule many times this sum would be expended before an animal of his merit would be obtained. Plantagenet has been shown on the bench three times. His first appearance was at Pittsburgh last March, where he was awarded first in the open class for imported English setter dogs, and first with Don Juan, Petrel II., Petrel III. and Fairy II. for the best kennel of five English setters. At New York, in April, he won the special prize for the best English setter dog under two years old, and first with Don Juan, Petrel (his dam), Petrel II. and Petrel III. for the best kennel of five English setters. At Cleveland he won first in the special class for English setter dogs that have won one first prize, and first with Don Juan, Prince, Petrel II. and Petrel III. for the best kennel of five English setters. For so young a dog this is indeed a record to be proud of, and one that exemplifies the truth of the old saying that "blood will tell," for among the ancestors and relatives of Plantagenet are to be found many of the proudest names of canine history, in the old world as well as the new. As we have before stated, we believe that Plantagenet, if nothing befalls him, when mature, will achieve the highest honors, both of the bench and the field. The cut is from a sketch by Harry Tallman, and is a capital likeness.

THE IRISH RED SETTER.

Editor Forest and Stream:

There is probably no race of sporting dogs on the face of this earth that has stronger friends or more bitter enemies than the Irish red setter, and I doubt if there is a single breed about which so much has been written in times gone by in regard to form, color, coat and worth, not worth alone upon the show bench, where the rich sheen of his deep red coat attracts admirers, but in the field before the gun, through the bogs and over the mountain heather. It has come down to us through the pages of canine history that the Irish red setter was the wildest and most headstrong of all his race, and as a sort of atonement for all this, that he was, too, the most enduring. To be sure, there is a certain devil-may-care sort of way about the true Irish dog that can not fail to create admiration, even though it casts a doubt as to the best methods of government, yet all must remember that it is the spirit to do and endure that carries all before it and when educated, marches to the front. There are Irish setters with all the fire and wildness that has ever been thrown out against them; and there are Irish setters with all the mildness and lack of spirit that could suit the most fainthearted, and there are grades between.

This breed, which has made Ireland famous for her setters, has been a favorite with the Irish sportsmen, and, too, before dog shows and field trials came into fashion, and it will find admirers in all lands so long as there remains a man who loves to use the gun in autumn months. There are some who would desire to merge everything of the setter kind into the race that carries the English name, to claim all others as only varieties of the English setter. But I do not understand how any one can throw out such assertions. For the Irish dog, at least, is no more a variety of the English setter with a red coat, than the pointer is one with a close coat, and free from feather. Neither is he a made-up dog of recent years. He was known before birds were shot on the wing, and his color was of the reddish hue that nearest matched the brown herbage of autumn weather; and he has come to us through all these years of work, and fancy modern mixtures, with the same red color, perhaps enriched in beauty by careful breeding, though not changed to other hues, and his style of working low before the net has been altered to meet the wants of shooting flying.

It is perfectly safe to say that no breed of sporting dogs in existence has stronger characteristics than the Irish red setter, and there is no breed that preserves those characteristics better when transported to foreign lands. An Irish red setter is an Irish red setter the world over, and for beauty, speed, endurance, pluck, intelligence and nose—in fact for all that goes to make up the sportsman's dog—he has no superior; and no matter how hard pushed by other breeds in numbers, no matter how fickle fashion rules, you generally find him at the front when given an even chance. He is, day in and day out, ever the irrepressible Irishman, ready and anxious for his work, free and open-hearted in his ways, and blessed with the faculty of adapting himself to various climes and all sorts of game. It is a shame that in Ireland, where the grand race has been bred for generations and kept pure, there have been no field trials to more fully bring before the public its field qualities on Irish land and Irish game. Whatever honor the Irish setter has won in public field trials has been gained in foreign lands and against large odds in numbers. And it is only within the past few years that the best specimens have been brought out at the leading Irish dog shows.

The late Mr. Laverack tells us, in his book on "The Setter," that he visited Ireland four times for the express purpose of selecting an Irish setter to cross upon his own breed, but that the true Irish dog had degenerated, and he could find nothing he dare use, though he does mention several strains as being the best and purest. He had a high opinion of the true breed or else he would not have taken so much trouble. Certainly his search must have been very superficial, for he does not mention in any way the strain that has, since first exhibited, swept the prize lists at Irish and English shows.

Perhaps many of your readers have heard of Palmerston, considered the most perfect specimen of an Irish setter in all Europe while he lived, yet they only knew of him as a bench show champion, and did not dream that he was used in the field for years before he ever saw a bench or gained honors for his beauty. He was an old dog when first exhibited, and was given away for the sole purpose of exhibition by his breeder, who assured me that handsome as Palmerston was, there were others of his race as handsome that never saw a dog show, and so passed away unknown to fame, though held in honor by friends and owners for their value in the field. Since old Palmerston's death, at eighteen years of age, there has been a keen strife among his descendants upon the show bench for the honors he held, till now, by the record, his son, the handsome Garryowen, holds the championship of the United Kingdom.

Now, this race of Irish red setters is of no mushroom growth, for they hunted the fens and mountain sides of Ireland years and years ago, even before the late Mr. Laverack made his four memorable trips to that land of the shamrock and the thistle, and they have not degenerated. I mention the above strain not because there are no others of the right sort, for there are, but because this one has gained more honors at Irish bench shows than any other. Now, these dogs, the best and purest strains, could not have been possessed in Ireland all these years for the sole purpose of exhibition, for there were no dog shows there until late years; and I see no proof that they have been kept for mere household pets, therefore they must have been held in high esteem for their field work, and so those strains that were the purest and most useful, were just the ones that were most zealously guarded by their owners, and the ones most difficult to obtain by outsiders.

Being a staunch admirer of the Irish setter, I have made no small effort to keep the breed up to the highest standard, both by importation from the best strains in Ireland and by careful breeding; and I have held a continued correspondence with many of the most noted Irish breeders, which to me has been the most agreeable sort, and I trust it has been the same to them. My belief in the characteristics of the true Irish setter, as expressed in the columns of FOREST AND STREAM some years ago, and which was attacked by several writers, has been confirmed by the winnings at the leading Irish and English shows of the strain that Mr. Laverack could not find, and that Stonehenge never mentioned in his earlier works. Stonehenge has written that there are good Irish setters nearly white, black, black and tan, or closely crossed with black and tan, but in the same breath he said that the Irish setter of high mark is red, and so he describes him. To be sure there are other breeds in Ireland than the red Irish, but they are not true Irish setters, and all the number of words any one has a mind to put on paper cannot make them so. It is the red setter that has made Ireland famous for her setters; the red setter that is not a black one, nor a blue one, nor a white one, neither a black and tan; the red setter that breeds red setters; the red setter that has been red, is red, and will be red; and when you breed him other than that color, depend upon it you have got some other breed mixed in. There may be now and then some other dog that approaches the true Irish type, in head and form; there may be one that shows the Irish color, but such are exceptions, and may be after all owing to an Irish cross.

It has been somewhat the custom to call a red dog an Irish setter, even though he might be half English, and in some of the leading dog shows in England and America, dogs so bred have won in the Irish classes. I have in my mind now a well-known imported bitch so bred, and a winner, and I presume the offspring are classed as Irish setters. The mere fact of a race of black or white, or black and tan, setters having been bred in Ireland does not make them Irish setters, any more than the breeding of Irish setters in England makes them English setters. Only there are no doubt good dogs in Ireland, black in color, or black and tan, or white and tan, but the true Irish strains have not been kept up by breeding to any such dogs, neither are such considered Irish setters by the most noted breeders. I have been long in correspondence with a famous breeder in Ireland, who has possessed the same strain of Irish setters since 1846, and he writes me, "I am still trying to keep up this breed, although at my age I can scarcely expect to enjoy them much again in the field." Now, this gentleman's dogs have not been black ones, nor white ones, nor blue ones, neither have they been black and tan, but red from the day he first obtained them. Their color did not turn to red when they came to him; it was red in 1819, red in 1814, and red in 1776, and I don't believe the color was manufactured then. Why, this red belongs to the Irish setter by right of inheritance, saved from years and years ago, and when other dogs possess it they have stolen it from this red dog of Ireland.

Not only is the pure Irish dog different from all other breeds in the color of his coat, but he is different in his head and in his form. The Irish setter stands higher on his legs than either the Gordon or the English, and he is of a more racy mold throughout, more of the greyhound build, yet strengthened in all his parts.

His head is longer and narrower than either of the other breeds, and of a different color, and no dog compares with him in the expression of his rich, brown eye. Because the Irish dog is not seen by daylight much better than other setters, no one need, for a moment, think that he is any the less enduring, for he has the deep chest, well-sprung ribs and strong loins that make him last, and his legs set well under him are not lacking a bit in bone or muscle, while his feet were made for Ireland's bogs and heather. There is no lumber about him, either in head or form; blood like from end to end, and of the richest and most beautiful color that ever a dog could boast of, he proves that he is no mongrel.

MONT CLARE.

THE COLOR OF BULL-TERRIERS.

Editor Forest and Stream:

In your issue of this date "Brindle" misrepresents me slightly. He says I "complain" and "begrudge." I did neither. I only asked a question or two for information, in the interest of pure dog science, and with no other motive.

What I wanted to find out was, whether there was any later and better authority than Stonehenge's "Dogs of the British Islands." If "Brindle" will refer to page 223 of the third edition of that work, he will find my statement as to what Stonehenge says fully sustained. The passage he cites from the (so-called) American edition, is taken from the earlier work, "Stonehenge on the Dog," and must, therefore, be considered as repudiated by the writer.

I do not see that I am called upon to answer "Brindle's" questions, or to "give good and substantial reasons why white bull-terriers are to be preferred to colored ones." I did not make the rule. In fact, I had no part whatever in making it. However, I will say that I don't see much to find fault with in Stonehenge's views on the subject. He admits that the rule is arbitrary, but says that, as the breed is purely a fancy one, there is no valid objection to an arbitrary standard of color. I take this to mean that bull-terriers are kept principally for their looks, which largely depend on their color, and that in the eyes of most judges, there is no color so pleasing as pure white. Possibly white is preferred, for one reason, because being, as "Brindle" remarks the "emblem of innocence," it affords a striking contrast with "the known characteristics of the dog." Just so a spirited woman, who looks as if butter would not melt in her mouth, is not on that account less attractive to the majority of men. V. H. C.

NEW YORK, July 27.

IMPORTATION OF SETTERS.—The Steamship Helmstead, now in this port, brought from Mr. H. F. Grant, Isle of Wight, a black, white and tan bitch consigned to Mr. J. J. Snellenburg, of New Brighton, Pa., and two black, white and tan pups, one dog and one bitch, consigned to Mr. J. H. Goodsell of this city. A description of the dogs will be given next week.

DR. HUGGINS AND HIS DOG KEPLER.

THE well-known astronomer Dr. Huggins had a four-footed friend dwelling with him for many years as a regular member of his household, who was a mastiff of very noble proportions by descent, and who bore the great name of Kepler. This dog possessed many rare gifts, which had secured for him the admiration and regard of a large number of scientific acquaintances, and among these was one which he was always ready to exercise for the entertainment of visitors. At the close of luncheon or dinner, Kepler used to march gravely and sedately into the room, and sit himself down at his master's feet. Dr. Huggins then propounded to him a series of arithmetical questions, which the dog invariably solved without a mistake. Square roots were extracted off-hand with the utmost readiness and promptness. If asked what was the square root of nine, Kepler answered by three barks: or, if the question were the square root of sixteen, by four. Then various questions followed, in which much more complicated processes were involved—such, for instance, as "add seven to eight, divide the sum by three, and multiply by two. To such a question as that Kepler gave more consideration, and sometimes hesitated in making up his mind as to where his barks ought finally to stop. Still, in the end his decision was always right. The reward of each correct answer was a piece of cake, which was held before him during the exercise; but until the solution was arrived Kepler never moved his eyes from his master's face. The instant the last bark was given he transferred his attention to the cake. Dr. Huggins was perfectly unconscious of suggesting the proper answer to the dog; but it is beyond all question that he did so. The wonderful fact is that Kepler had acquired the habit of reading in his master's eye or countenance some indication that was not known to Dr. Huggins himself. The case is one of the class which is distinguished by physiologists as that of expectant attention. Dr. Huggins was himself engaged in working out mentally the various stages of his arithmetical processes as he propounded the number to Kepler, and, being therefore aware of what the answer should be, expected the dog to cease barking when that number was reached: and that expectation suggested to his own brain the unconscious signal which was caught by the quick eye of the dog.—*Live Stock Journal, July 14.*

KENNEL MANAGEMENT.

H. P. J., Fort Sill, Ind. Ter.—Apply hot fermentations to allay the inflammation, and drop a small pinch of the finest pulverized sugar upon the ball of the eye.

J. M., Manlius, N. Y.—Give your dog one or two drops of Fowler's solution of arsenic twice daily after feeding. Stop if his appetite is lessened, and give instead a pill, containing ½ grain reduced iron (Fenicm redacti em) with 1 grain extract gentian.

W. B. P., Crockett, Texas.—Your dog has the symptoms of true mange, which is due to a parasite, consequently your internal treatment is of no avail except as a tonic. Wash thoroughly with soft soap, then apply sulphurous acid (not sulphuric), diluted with three parts of water, and let it dry on. Repeat it two days. This is a successful and cleanly method of treatment.

B. P., New York.—My setter dog, aged 3yrs. and 3mos. has been ailing for more than three months; he seldom finishes a meal without throwing up part of it. He is very thin indeed; his eyes water, his nose is often very warm. For more than three months he has been shedding his coat. Any advice will be kindly received with many thanks. I think he has distemper. Ans. Give him a small quantity of milk (a teacupful) every two hours; if this is rejected give half the quantity of milk with the same amount of lime water—increasing the amount of the latter until it is not rejected. Rub the belly well with a handful of cod-liver oil every other day.

DOG OWNER, New York.—1. Are puppies taxable according to the New York city dog law? 2. Are their carcasses permitted to take dogs which are brought from the country to the city led by a chain? Ans. 1. Not satisfied with our examination of the statutes and the city ordinance, wherein we failed to find any legislation defining the age at which a puppy becomes a dog, we applied to the Corporation Attorney, W. A. Boyd, Esq., for information on the subject. He informs us that there is no age mentioned in either, and that the practice has been in the city to consider all puppies as dogs when old or large enough to run about. 2. Following is section 1 of the city ordinance, which covers by far the greater part at least in the dog catcher animals whose owners conform to its requirements: "Section 1. Hereafter it shall not be lawful to permit any dog to go abroad loose or at large in any of the public streets, lanes, alleys, highways, parks or places within the limits of the city of New York, under a penalty of three dollars for each offence, to be recovered against the owner, possessor, or person who knowingly harbored such dog, within three days previous to the time of such dog being so found going loose abroad or at large; and the Commissioners of Police are hereby authorized and directed to cause complaint to be made to the Corporation Attorney against the owner or possessor of every dog permitted to go loose or at large within the corporate limits, as aforesaid, for the recovery of the penalties prescribed in this ordinance; such penalties and all license fees, when collected, to be accounted for semi-monthly, and paid to the Comptroller of said city, and, upon the requisition of the Mayor, to be applied towards the payment of enforcing the provisions of this ordinance. Nothing in this ordinance shall prevent any dog from going into any such street, lane, alley, highway, park or public place, provided such dog shall be held by such owner or other person secured by a cord or chain, to be not more than four feet long, fastened to a collar around the neck of the animal."

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Lucy Gladstone. By Mr. A. M. Tucker, Charlestown, Mass., for black, white and tan English setter bitch puppy by Gladstone out of Sinatow.

Vixen. By Mr. R. E. Nichols, Newark, N. J., for black and tan terrier bitch, 4mos, old, by Vortigern out of Lily II.

Monmouth Bess. By Mr. M. M. Duncan, Chattanooga, Tenn., for mastiff bitch, whelped Nov. 18, 1881, by Salisbury (E. K. C. S. B. 9336) out of Tigress II. (E. K. C. S. B. 10,596).

Flint and Billy. By Mr. Hugh Ricker, Biddeford, Me., for liver and white cocker spaniel dog puppies by Rover out of Kate.

Jumbo. By Mr. Hugh Ricker, Biddeford, Me., for liver cocker spaniel puppy by Rover out of Kate.

Argile. By Mr. Isaac T. Norris, Baltimore, Md., for Gordon setter dog puppy by Mr. H. Malcolm's Malcolm out of Dream IV. (Grouse—Dream II.).

Leeto. By Mr. T. T. Phlegar, Pearisburg, Va., for white, black and tan mottled beagle bitch, whelped May 23, 1882 (Ringwood—Norah).

Queen. By Mr. T. T. Phlegar, Pearisburg, Va., for black and tan foxhound bitch, whelped May 24, 1882 (Maine—Kiz).

Pillie. By Mr. T. T. Phlegar, Pearisburg, Va., for black and tan foxhound bitch, whelped May 24, 1882 (Maine—Kiz).

Joy. By Mr. T. T. Phlegar, Pearisburg, Va., for black and tan foxhound bitch, whelped May 24, 1882 (Maine—Kiz).

Noshia. By Mr. T. T. Phlegar, Pearisburg, Va., for white, black and tan beagle bitch, whelped May 23, 1882 (Ringwood—Norah).

Winonia. By Mr. T. T. Phlegar, Pearisburg, Va., for white, black and tan beagle bitch, whelped May 23, 1882 (Ringwood—Norah).

Lizzie. By Mr. T. T. Phlegar, Pearisburg, Va., for white, black and tan beagle bitch, whelped May 23, 1882 (Ringwood—Norah).

Lalie. By Mr. T. T. Phlegar, Pearisburg, Va., for white, black and tan beagle bitch, whelped May 23, 1882 (Ringwood—Norah).

Duke II., Phil, Jock and Dandy. By Mr. E. S. Bradford, Springfield, Mass., for liver and white pointer dogs, whelped June 7, 1882, by Whitin's Duke (Old Phil—Fan) out of Dr. Corcoran's Vinnie (Ranger—Bess).

Vinnie II., Victoria, Vera, Violet and Virginia. By Mr. E. S. Bradford, Springfield, Mass., for liver and white pointer bitches, whelped June 7, 1882, by Whitin's Duke (Old Phil—Fan) out of Dr. Corcoran's Vinnie (Ranger—Bess).

Thorn II. and Lady Emma. By Mr. A. McDonald, Rockland, Me., for black, white and tan beagle bitches, whelped July 4, 1882, by Sput (Mint—Julep) out of Thorn (Victor—Lucy).

Snap. By Mr. A. McDonald, Rockland, Me., for black, white and ticked cocker spaniel dog puppy by Wildfire (Wildair—Joe) out of McAllister's Bertie.

Liverweet. By Mr. A. McDonald, Rockland, Me., for liver and white cocker spaniel bitch puppy by Wildfire (Wildair—Joe) out of McAllister's Bertie.

Pine. By Mr. T. T. Phlegar, Pearisburg, Va., for white, black and tan foxhound bitch, whelped May 24, 1882 (Maine—Kiz).

Cairo. By Dr. Charles D. Smith, Portland, Me., for red and white English setter bitch, whelped April 6, 1882, by Mr. Manasseh Smith's Guy out of his Cora III.

Hough, Hilo, Dirigo, Independence, Clifford and Slash. By Mr. A. McDonald, Rockland, Me., for black, white and tan beagle dogs, whelped July 4, 1882, by Sput (Mint—Julep) out of Thorn (Victor—Lucy).

Raleigh. By Mr. O. W. Rogers, Billerica, Mass., for white, fawn and tan beagle dog, whelped June 17, 1882, by King out of imported Music.

Dawn—Dandy.—Granby, Conn., July 29.—In last FOREST AND STREAM I notice Mr. Percivall's request, which I cheerfully comply with, as I was not aware that he had previously claimed the name Dandy for one of his beagles. I will now change the name of my beagle dog Dandy, whelped June 17, by Flute (Rattler—True) out of Lady (Inno—Old Bess) to Dawn.—N. ELMORE.

BRED.

☞ *See instructions at head of this column.*

Pride—Duke. Mr. Charles E. Shaw's (Clinton, Mass.) mastiff bitch Pride (by his Duke (Bd Boston, 1882), May 21.

Modjeska—Dash III. Mr. A. M. Tucker's (Charlestown, Mass.) English setter bitch Modjeska (Leicester—Peeress) to his Dash III.

Countess II.—Dash III. Mr. A. M. Tucker's (Charlestown, Mass.) English setter bitch Countess II. (Count Dick—Phantom) to his Dash III.

Snow—White Silk. Mr. A. Walker's (Pittsburgh, Pa.) bull-terrier bitch Snow to Mr. G. W. Moore's White Silk (Silk II.—Rose), July 3.

Lucy—Mac. Mr. Paul Hacke's (Pittsburgh, Pa.) imported Skye-terrier bitch Lucy to champion Mac (Sam—Quick), July 4.

Madge—Conquest. Mr. Fred. H. Hoe's (Tarrytown, N. Y.) cocker spaniel bitch Madge (imported Snip—imported Juliette) to his imported Conquest, July 2.

Queen—Conquest. Mr. J. F. Apgar's (New York) cocker spaniel bitch Queen (Charlie—Daisy) to Mr. Fred. H. Hoe's imported Conquest, July 24.

Bird Royal—Ranger. Mr. S. B. Dilley's (Rosendale, Wis.) pointer bitch Bird Royal to his Ranger.

Nan—Rush. Mr. J. P. Swain's (Bronxville, N. Y.) pointer bitch Nan (Sensation—Juno) to Mr. Edmund Orgill's champion Rush, July 15.

Dally—Doctor. Dr. J. S. Niven's (London, Ont.) field spaniel bitch Dally to Mr. Geo. Macbeth's Doctor (Boo III.—Black Bess).

Norah O'More—Rory O'More. The Rory O'More Kennel's (Albany, N. Y.) red Irish setter bitch Norah O'More (Berkley—Tilley) to their champion Rory O'More.

Gem—Rory O'More. The Rory O'More Kennel's (Albany, N. Y.) red Irish setter bitch Gem (Elcho—Firefly) to their champion Rory O'More.

Girl—Glenmark. Mr. R. T. Greene's (Jersey City Heights, N. J.) liver and white pointer bitch Girl (Maryland—Tell) to Mr. W. F. Steele's Glenmark (Rush—Romp), July 18.

Royal Fan—Bow Ranger. Mr. S. B. Dilley's (Rosendale, Wis.) pointer bitch Royal Fan to his Bow Ranger.

Flora—Rory O'More. Mr. Loymann's Flora to Mr. J. C. Higgins's (Delaware City, Del.) Dashing Monarch.

Grace—Scout. Mr. A. W. Pearsall's (Huntington, L. I.) red Irish setter bitch Grace (Hill—Donner) to Mr. D. G. Hartt's Scout (Plunket—Carrie), July 8.

WHELPS.

☞ *See instructions at head of this column.*

Pride. Mr. Charles E. Shaw's (Clinton, Mass.) mastiff bitch Pride (Duke—Juno), July 21, eight (two dogs), by his Duke (Bd Boston, 1882).

Lady Berkley. The Rory O'More Kennel's (Albany, N. Y.) red Irish setter bitch Lady Berkley (Berkley—Sampson's Nora), July 21, ten, by their champion Rory O'More.

Maida. The Westminster Kennel Club's liver and white pointer bitch Maida (Frank—Maida), July 7, five (three dogs), all lemon and white, by the Borstall Kennel's Don (Sensation—Psyche II.)

Queen May. The Westminster Kennel Club's black and white ticked pointer bitch Queen May (Rake—Gillespie's Fan), July 20, eleven (five dogs), by champion Sensation.

Brownie. Mr. Manasseh Smith's (Woodford's, Me.), English curly retriever bitch Brownie, July 22, nine (one dog), by Mr. Geo. Millikin's Sancho.

Vannette. Mr. J. C. Higgins's (Delaware City, Del.) English setter bitch Vannette (Count Dick—Petrel), May 20, four (all dogs), by his Dashing Monarch.

Lisl. Mr. J. C. Higgins's (Delaware City, Del.) English setter bitch Lisl (Lincoln—Petrel II.), May 22, ten (four dogs), by his Dashing Monarch.

Tigress II. Mr. Charles E. Wallack's (New York) mastiff bitch Tigress II. (E. K. C. S. B. 10,596), July 7, six (three dogs), by Zulu—Jet (New York, 1882—(Colonel—Diana); one dog since dead.

Feather. Mr. G. Hill's orange and white setter bitch Feather, July 13, seven (five dogs), by Mr. Waterburie's St. Ives.

SALES.

☞ *See instructions at head of this column.*

Modjeska. English setter bitch (Leicester—Peeress), by Mr. N. P. Haskell, Gloucester, Me., to Mr. A. M. Tucker, Charlestown, Mass.

Lucy Gladstone. Black, white and tan English setter bitch puppy (Gladstone—Sinatow), by Mr. Luther Adams, Boston, Mass., to Mr. A. M. Tucker, Charlestown, Mass.

Monmouth Bess. Mastiff bitch (Salisbury—Tigress II.), by Mr. Charles E. Wallack, New York, to Mr. M. M. Duncan, Chattanooga, Tenn.

Emperor Fred—Polka whelp. Black and white bitch, whelped June 21, 1882, by Mr. E. A. Herzberg, Brooklyn, N. Y., to Major Wheeler, New York.

Betsy Ricker. Orange and white setter bitch, by Mr. Hugh Ricker, Biddeford, Me., to Mr. George Millikan, Saco, Me.

Rory O'More—Nora whelp. Red Irish setter bitch puppy, by the Rory O'More Kennels, Albany, N. Y., to Mr. H. Gaylord, Eddytown, N. Y.

Rally. Beagle dog known as Rowett's Rally, by Mr. Colin Cameron, Brickerville, Pa., to Mr. Geo. Hummel, Jr., Lancaster, N. Y.

Lil. Beagle bitch, by Mr. Colin Cameron, Brickerville, Pa., to Mr. J. M. Bergold, Canal Fulton, Ohio.

Fairy and Lucy. Beagle bitches, by Mr. Colin Cameron, Brickerville, Pa., to Mr. B. F. Dexter, Marion, Mass.

Rally—Lil whelps. Beagle dogs, by Mr. Colin Cameron, Brickerville, Pa., to Mr. B. F. Dexter, Marion, Mass.

Bessie. Beagle bitch, by Mr. Colin Cameron, Brickerville, Pa., to Mr. W. F. Streeter, Lehigh Tannery, Pa.

Chip Royal. Pointer dog (Croxteth—Royal Fan), by Mr. S. B. Dilley, Rosendale, Wis., to Mr. R. H. Pooler, Sereno, Ill.

Bird Royal. Pointer dog (Croxteth—Bird Royal) by Mr. S. B. Dilley, Rosendale, Wis., to Mr. R. W. Shaw, Galveston, Texas.

Sprite. Black and white cocker spaniel bitch (Wildair—Mignon), by Mr. F. L. Cook, Sherburne, N. Y., to Mr. M. O'Brien of the same place.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Bow—Vick whelp. Liver and white pointer bitch, whelped May 8, 1882, by Mr. Edward Odell, New Orleans, La., to Mr. E. S. Carr, Gallatin, Tenn.

Vera. Liver and white pointer bitch, whelped June 7, 1882 (Whitin's Duke—Dr. Corcoran's Vinnie), by Mr. Edward S. Bradford, Springfield, Mass., to Dr. George M. Whitin, North Uxbridge, Mass.

DEATHS.

☞ *See instructions at head of this column.*

Duke. Lemon and white English setter, 4yrs. old (Grouse—Gypsy), owned by Mr. L. J. O'Connor, Merrimac, Mass., from distemper.

Murray. Cocker spaniel bitch, owned by Mr. L. Van Driessche, Littlegrog, N. Y.

Princess Dyne. Blue belton English setter bitch, 16mos. old (Dash—Princess Draco), owned by Mr. Geo. C. Sterling, New York, from distemper.

Glen. Black and tan setter dog, whelped June, 1874 (Colburn's Dash—Mullins's Belle), owned by Dr. H. F. Aten, Brooklyn, N. Y., July 20, from poison.

Rena III. Black pointer bitch (Howe's Rex—Rena) owned by Mr. E. A. Spooner, New York, July 29, from distemper.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CREEDMOOR IN AUGUST.

THE programme of matches arranged for shooting at Creedmoor during August stands as follows:

Wednesday, 2d.—"August International Military Practice Match."—Arranged to furnish practice to those desiring to compete for places upon the American team to shoot against the British volunteers in the International Military Match to be shot during the second week in September, 1882, though any person may enter and shoot without competing for a place upon the team.

Open to everybody. Distances, 200, 500, 600, 800, 900 and 1,000yds., seven shots at each distance. Standing at 200, prone (i. e., lying "head toward the target") or sitting, at 500 and 600yds. Any position at 800, 900 and 1,000yds. Any military breech-loading rifle. Cleaning of rifles not allowed, excepting between distances. No windgauge or lateral motion to sights permitted.

Members of the National Guard entering this match will not be required to appear in uniform. Entrance fee, including all distances, $2.

For this month, seven prizes to be awarded at the end of the month, to the corresponding number of competitors who, in order of merit, shall have made the highest complete score (7 shots at 200, 500, 600, 800, 900 and 1,000yds.) as follows, cash: $15, $10, $5, $5, $5, $5, $5—$60.

Also to be awarded at the end of the season, three medals, offered by Gen. Robert Olyphant, as follows: To the competitor making the highest aggregate complete score in any three competitions (determined by adding together the highest complete scores made in any of the three competitions), a gold medal. To the second highest as above, a silver medal; and to the third highest, as above, a bronze medal.

Note.—It has been incorrectly stated that none but native-born citizens are eligible on the team; the terms of the match do not discriminate against adopted citizens, provided they were enrolled in the National Guard on or before September 1, 1881.

The "Carton" Match—Open to all comers. 200yds., any position. Any military rifle to fire five shots, any's, four shots, four inch cartoons only to count. Entries, fifty cents each. Not more than six re-entries permitted on one day. At the end of four matches, the competitor having made the greatest number of cartoons in all competitions, to be awarded 50 per cent. of the total entrance fees received; the next greatest number 15 per cent., and the next 5 per cent.

At each competition the first man to receive 10 per cent., the next 8 per cent., the next 6 per cent., the next 5 per cent., the next 4 per cent., and to the sixth and last 2 per cent. of the total entrance fees.

The "Rapidity" Match—To be shot at Creedmoor twice each month until prize is finally won (unless otherwise specified).

Open to all comers. 200yds., any rifle with open sights, magazine guns to be fired as single loaders. Competitors must take to the firing point not exceeding twenty cartridges. Entries, fifty cents each; re-entries allowed to the extent that time will permit. At sound of the bugle each competitor opens fire at his own target, and continues loading and firing until the bugle again sounds sixty seconds after first signal). A deduction of five points will be imposed for: 1st—Each shot fired before the first signal. 2d—For each shot fired after the second signal. 3d—For each shot signaled on his target in excess of twenty. Triggers will be tested at the firing point.

Prize—An elegant gold medal, presented by Mr. Pierre Lorillard, Jr. To be won three times (not necessarily consecutive) before becoming personally property of winner.

Half the entrance fees in each match will be divided equally among the three highest competitors at each competition.

Saturday, 5th.—The "Qualification" match of 1882—Open to members N. G. S. N. Y. and N. R. A., the former being in uniform (jacket, cap and belt) may count scores made as partially qualifying them to shoot for the N. Y. State Marksman's badge, provided that they use the State Remington rifle. 100 and 300yds.; standing at 100, kneeling at 300yds. Five shots at each distance with any military rifle. Entries, 50 cents each. Re-entries permitted at the discretion of the executive officer, but only the highest score to count. To the competitors in each competition making the five highest aggregate scores, sixty per cent. of the entrance money will be equally divided.

The "Champion Marksman's Badge" match of 1882—Open to all members of the N. G. S. N. Y. and U. S. Army and Navy, however not being eligible to win the principal prize. Distances, 200 and 500yds., five shots at each distance. Weapon, the Remington rifle, N. Y. State model. Position, standing at 200yds.; any, with head to the target, at 500yds. Entrance fee, 50 cents. Competitors allowed re-entries in each competition at the discretion of the executive officer, but only the highest scores to count.

Members of the N. G. S. N. Y. in uniform (jacket, cap and belt) may count scores made in this match as qualifying for the N. Y. State Marksman's badge, provided that if ordered, they have attended (or do once through the season attend) general practice, and provided they have previously qualified in the "second class" (100 and 300yds. See "Qualification" match).

First competitor—A gold Champion Marksman's badge of 1882, offered by Brig. Gen. Alfred C. Barnes, General Inspector of Rifle Practice, S. N. Y.

The badge to become the property of the competitor who, at the close of the season of 1882, shall have won it the greatest number of times.

In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide.

Winners of former Champion Marksman's badges to be handicapped five points at each competition.

Ten other prizes (silver medals) presented by the N. R. A. to the ten highest competitors in order of merit. The same man can only win one medal during the season.

Wednesday, 9th.—"August International Military Practice" Match.—Conditions as on 2d.

Thursday, 10th.—"Rapidity" Match.—Conditions as on 2d.

Saturday, 12th.—"August International Military Practice" Match.—Conditions as on 2d and 9th.

The "Rapidity" Match.—Conditions as on 2d.

Selection of the American Rifle Team to shoot in the International Military Match in September. Final competitions:

Tuesday, 15th; Wednesday, 16th; Thursday, 17th; Friday, 18th.

Wednesday, 23d.—"Champion Marksman's Badge" and "Qualification" matches.—Conditions as on 9th.

The tenth annual fall prize meeting of the National Rifle Association will open at Creedmoor on Tuesday, Sept. 12, and will continue for five or more days. The complete September programme will be issued on or about August 20th (to be mailed to members in good standing before the commencement of the meeting), and "post entries" will be charged fifty per cent. over the usual fees to those who defer entering in matches till after Sept. 5, 1882. The range will be closed for purposes of preparation on Monday, Sept. 11.

NEW ORLEANS, July 23.—The Louisiana Military Rifle Association met to-day at the Continental Guard Armory for the purpose of considering and taking action upon the following communication:

115 CANAL STREET,
NEW ORLEANS, July 19, 1882.

To Gen. John Glynn, Jr., President Louisiana Rifle Association:

GENERAL—Feeling a great interest in the welfare and perfection of rifle practice by the various local military companies, and noticing a lack of interest in the regular military shooting of our company and battalion rifle teams of late, I hereby offer as an inducement for resuming the practice, a silver cup of suitable design and finish to be presented to the team of eight men winning the same by the first three best scores, under your own rules. Very respectfully,

A. M. HILL.

The offer was accepted with thanks, and Mr. Geo. W. Charlton, treasurer, under the instructions of the association, addressed the following reply to Mr. Hill:

HEADQUARTERS CONTINENTAL GUARDS,
NEW ORLEANS, July 23, 1882.

A. M. Hill, Esq.:

DEAR SIR—Your kind favor of the 19th inst. received with many thanks, and in behalf of the Louisiana Military Rifle Association, I beg to state that a meeting has been held and it was unanimously resolved to accept your liberal offer, and that the first match will take place next Sunday, July 23, for the "Hill" cup.

With much appreciation of your kind effort to revive rifle practice, I have the honor to remain yours truly, GEO. W. CHARLTON,
Treasurer Louisiana Military Rifle Association.

The cup will be a magnificent trophy. A square base will support a stack of guns, on which will rest the cup, oval in shape, with a heavy cover, on which will stand a rifleman in the act of shooting. On the front of the cup will be a target. The whole will stand twenty-one inches high.

ALBANY, July 27.—People who sat indoors, fanning themselves and moving slowly to keep comfortable, can have but little appreciation of the nerve and endurance of the riflemen, who, for four

hours, stood out in the blazing sun to-day working hard to make a good score. The attendance was not large, though those present did not complain, but were ready at the appointed time to commence scores. The principal match of the afternoon was at 200, 500 and 600yds., the first stage of which was commenced promptly, and the last stage when the 500yd. firing point was cleared of the competitors in the military match. The leading scores were as follows:

J I Miles	(20yds	5 5 4 4 4 5 5 4 5—45)	
	500yds	5 5 4 5 5 5 5 5 5—49	143
	600yds	5 5 5 4 5 5 5 5 5—49)	
Charles H Gaus	(200yds	5 4 4 4 5 4 5 5 5—43)	
	500yds*1	5 2 5 5 5 5 5 5 4—45	138
	600yds*1	5 4 5 5 4 5 5 5 5—48)	
William E Fitch	(200yds	5 4 4 4 5 5 5 5 4—40)	
	500yds	5 5 5 5 5 5 5 5 5—50	136
	600yds	5 3 3 4 3 8 5 5 5—46)	
Miles	(200yds	5 5 4 4 5 5 4 5 4—45)	
	500yds	5 5 2 3 4 4 3 3 5 5—39	131
	600yds	5 4 5 5 4 4 5 5 5—47)	

Allowance.

The second competition in the military match developed some good scores, though it was with difficulty that the military guns could be kept in good condition, on account of the heat, causing the burnt powder to cake in the barrels.

The leading scores were as follows:

Military Match—200 and 500yds.

	200yds.	500yds. Total.
Charles Keller	43[5]5—23	5[4]5[5]—24—47
Charles H. Gaus	44454—21	55535—23—44
J. I. Miles	33434—18	55455—24—42
H. Batchelder	45344—20	34555—22—42
E. R. Sperman, Jr.	44351—18	35455—23—40
John L. Babcock	44444—20	45324—19—39
William E. Fitch	51143—20	35534—19—39
A. Donner	43443—18	42522—14—32

Next Thursday, the Captain John Daily Match and the W. G. Paddock Match will be shot.

CREEDMOOR, July 26.—The July International Military Practice Match, seven shots each, at 200, 500, 600, 800, 900 and 1,000yds.

	200	500	600	Total.	800	900	1,000	Total.	Aggre gate.
S A Day	32	33	29	94	38	28	25	81	175
T W Griffith	31	30	29	90	26	38	25	79	169
T J Dolan	25	31	27	83	26	26	25	77	160
J C Paulding	25	32	29	86	25	27	21	73	159

J S Smith	30	27	25	82	28	23	14	65	147

July 29.—"Off-hand Pool" Match.—Open to everybody. 200yds., any rifle, 5 shots each entry. Military's to receive one point allowance on each five shots. Original entries, 50 cents, re-entries, 25 cents each. Shooting closes at 5 P. M. Sixty per cent. of the total entrance fees received will be divided equally among the ten highest competitors. Three scores to count possible 75. G. J. Seabury 69, E. E. Lewis 67, F. W. Leavitt 67, T. J. Dolan 66, J. W. Todd, 65, G. V. Wels 65, S. A. Day 65, E. R. Hills 63, J. C. Hallery 63, H. T. Reilly 63.

The "Rapidity" Match—Open to all comers, 200yds., any rifle with open sights; magazine guns to be used as single loaders. At sound of the bugle each competitor opens fire at his own target, and continues loading and firing until the bugle again sounds (sixty seconds after first signal). R. L. Hare (Hotchkiss) 53, M. W. Buell (Hotchkiss) 49, S. A. Day (Elliott) 47.

BOSTON, July 29.—At Walnut Hill to-day a goodly number of gentlemen availed themselves of the opportunity to get away from the dust and heat of the city and enjoy the cool air which blew at times quite briskly from the north and northwest. The light at times was quite troublesome, but not so much so as to prevent Messrs. Lee and Sturgis from making 45 in the Victory match, Mr. Lee 99 out of 75 at 5 yds., and Mr. Howe 95 in the Novelty match. The following are the scores:

J B Fellows	5	4	5	5	4	4	5	4	5	5	—46
A B Archer	5	4	4	5	4	5	4	4	5	5	—45
W Charles (mil.)	4	5	5	4	5	4	4	5	4	5	—45
A L Bent	5	4	4	4	5	4	5	5	4	5	—45
W A Chester (mil.)	5	5	5	5	5	2	5	4	4	5	—44
J A Cobb	3	4	4	5	3	5	4	4	4	5	—41
C Weston (mil.)	4	3	4	4	4	3	3	5	5	5	—40
T Howe	4	3	4	4	4	3	5	3	3	6	—40
C A James	4	3	4	4	3	5	3	4	4	4	—39

F J Nichols	4	8	5	8	9	9	9	5	5	5—67

GARDNER, Mass., July 27.—The Gardner Club, at their recent shoot, had about the average attendance. The inch ring and Creedmoor target combined was used. Distance, 200yds., off-hand. The following is the score:

	R.	C.	R.	C.	Totals.
G F Ellsworth	94	47	95	47	189—94
Chester Hinds	91	46	86	46	177—92
A Mathews	72	45	82	44	154—89
G H Haywood	71	44	71	44	142—88
G C Goodale	65	42	58	41	123—83
C Skinner	67	43	47	39	114—81
C Merritt	54	42	55	41	109—83

A match for the team gold badge of the Massachusetts Glass Ball Association will be shot by the Marlboro Club and the Worcester Club on the grounds of the latter, Wednesday, August 9, beginning at 10 A. M.

WORCESTER, Mass., July 27.—The regular field day of the Worcester Rifle Association took place at the Pine Grove Range this afternoon. The wind was blowing from 9 to 12 o'clock. A Massachusetts target was used. Distance, 200yds. Off-hand out of a possible 120, the following records were made:

M Carter	11	10	10	12	11	11	11	11	12	11—110	
	12	9	11	10	11	11	12	11	12	10—109—219	
S B Winchester	12	11	9	7	10	8	10	7	11	12— 97	
	9	11	9	8	11	8	10	8	11	12— 99—196	
A J Faxon	12	10	11	11	8	10	9	9	10	11—101

Stedman Clark	12	12	9	9	9	11	10	9	10	5— 96	
	11	8	11	10	9	9	8	8	8	11— 94—190	
A L Rise	9	10	12	8	12	9	10	9	12	8—101	
	10	8	9	9	8	7	11	11	10	8— 91—192	
F Wesson	8	7	15	4	9	6	12	7	19	7— 83	
	8	8	10	9	8	12	3	6	8	8— 82—165	

WAKEFIELD, July 29.—The Wakefield Amateur Rifle Association held a shoot at its range this afternoon in the July series. The following are a few of the best scores:

W B Daniel	5	4	5	4	5	3	5	5	5	—46
C Lindsay	4	5	4	4	4	5	4	4	4	—43
W Brown	5	4	5	4	5	4	4	4	4	—41
W C Perkins	4	4	4	5	4	3	3	4	3	—37

THE BRITISH TEAM.—London, July 26—The following marksmen have been selected as members of the British team to go to America to compete in the rifle match: Bates, of the First Warwick; Boulter, of the Second Caesnire; Caldwell and Dods, of the First Berwick; Godsall, Goodear and Heap, of the Sixth Lancashire; McVittie and Mellish, of the Second Notts; Oliver of the Third Kent; Parry, of the Second Cheshire, and Major Pearse. In the Bass match at Wimbledon, shot at 800, 900 and 1,000yds., under conditions corresponding to those of the second stage of the international match, the following scores were made: Caldwell, 73; Dods, 68; Goodsall, 69; Goodear, 65; Heap, 70; McVittie, 78, and Parry, 68.

THE TRAP.

THE TRAP AT MARLBORO.

MARLBORO, Mass., July 22, 1882.

Editor Forest and Stream:

I enclose you two scores our club have shot in the last two weeks. July 11 the Middlesex Club of Cambridge visited Marlboro' and shot the local club a match of twenty balls per man from a swift Holden trap. This is the fourth match the two clubs have shot. The Marlboro Club have been the winners in all the matches. After the match all sat down to a good dinner at the Gates House. The remainder of the day was spent very pleasantly, shooting sweepstakes. Below is the full score:

Marlboro.

Eager	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	—20

Umpire, Mr. Fielding, of the Malden Gun Club.

July 30.—The Worcester Club came to Marlboro to shoot a friendly match. The day was perfect for out-door sport, and a first-class time was the result of the meeting. The match was won by the Marlboro Club, 161 to 148. Each man shot at twenty balls, thrown from a Holden trap. The Marlboro's are going to shoot the Worcester's for the Champion Badge very soon. Below is the score in full:

Marlboro

Eager	1	1	1	1	1	1	1	1	1	1	1	1	1	1	0	1	1	1	1	1	—19

Crandall	10100		— 3

WASHINGTON GUN CLUB, Brooklyn, E. D.—Score regular shoot at Ridgewood Park, July 24; Messrs. Evans and Newton 25yds.; the others 21yds.:

H Hedeman	1101110—5	Geo Van Sise	0111111—6
J Evans	1011011—5	P Morgan	1100110—5
A Rockfeller	0101101—4	S Newton	1111102—7
W E Trott	1111111—7	J Moller, Jr	1001101—4
W Thompson	1101001—4		

Amateur Score.

B Muench	1100001—3	H Newton	1100101—4
H Winans	0100111—4		

Ties at 26yds; H. Winans, 011—2; H. Newton, 00. W. E. Trott wins regular badge; H. Winans, amateur badge. The attendance is considered good for this time of the year. The birds were good. Sweepstakes followed the shoot, also an interesting shoot at smoke balls, which was the first time the club has used them, and they seemed to please the boys. The badges were presented on the grounds; an elegant gold badge of the latest design for the regular team, and a silver one of same pattern for the amateurs. At our last meeting we expelled a number of lame ducks and have filled their places with new and active members, and for a club of only two years' standing we claim to be alive, having attended three State conventions with full delegations and done our share of the work, our President, Henry Altenbrand, being now Chairman of the the Standing Committee of the State Association, and the club at present is in a very prosperous condition.—W. E. Thorr, Sec.

EXETER, N. H., July 27.—The annual tournament of the Exeter Sportsman's Club was held to-day. A large number was present, including delegations from Boston, Worcester, Westboro, Marlboro, Stoughton, Cambridge, Brockton, Amesbury, Malden, Mass.; and Manchester, Epping, Brentwood, N. H. Every one present voted it the best field day of the season. Over twenty sweeps were shot at clay birds and glass balls, the home men making fine scores and winning first money in the team shoot, which was the event of the day. The regular events are as follows:

First match, seven clay birds.—First prize, De Rochmont of Amesbury, Smith of Worcester, Godsoe of Amesbury, Taylor of Exeter; second, Johnson of Boston, Allen of Brockton; third, Beaudry of Marlboro.

Second match, seven glass balls.—First prize, De Rochmont of Amesbury, Schaefer of Boston; second, Eager of Worcester, Taylor of Exeter; third, Fielding of Malden, W. R. Smith of Brentwood, E. T. Smith of Worcester.

Third match, five birds and five balls, teams of three.—First prize, Exeter team, Messrs. Gerrish, Cooper and Taylor; second, Worcester team, Messrs. Eager, E. T. Smith and Perry; third, Marlboro team, Messrs. Smalley, Beaudry and White.

Fourth match, five pairs double balls.—First prize, Taylor of Exeter; second, Rowell of Amesbury, Houghton of Worcester; third, Cooper of Exeter.

Fifth match, seven clay birds.—First prize, Cooper of Exeter; second, Schaefer of Boston, Godsoe of Amesbury; third, E. T. Smith and —Perry of Worcester.

Sixth match, five pairs double birds.—First prize, Cooper of Exeter, Taylor of Exeter, Beaudry of Marlboro; second, Wilbur of Brockton; third, Perry of Worcester and Fielding of Malden.

BOSTON, July 26.—At Walnut Hill to-day the long-range targets were covered by three marksmen, but before the match was concluded Baker withdrew. H. Tyler's score was: At 800yds., 63; 900yds., 68; 1,000yds., 69; total, 210. W. H. Jackson's score: At 800yds., 70; 900yds., 67; 1,000yds., 70; total, 207.

The trap shooting resulted as follows: First match, Noble and Sawyer divided first prize. Second match, Eaton and Noble divided first prize. Third match, Sawyer won. The fourth match was at doubles, the right hand object being a glass ball, the left a clay bird. Noble won. Fifth match, Noole first on a clean score. The sixth sweep was also at doubles and Noble again led. Seventh match, at five clay pigeons, Noble first. Eighth match, Noble first. Ninth match, Noble first. In the tenth match, Jones, Emerson and Sawyer tied with three, and in the shoot off, Emerson won. In the eleventh match, Emerson and Sawyer tied on five each, and in the shoot off, Sawyer won. In the twelfth sweep, Sawyer was first.

SACRAMENTO, Cal., July 21.—There was a large gathering of local trap-shots at Agricultural Park to-day. The Capital Club had a contest for the medal, and C. H. Todd and George Wittenbrook shot at a $40 match. The latter shot at five birds, but they were too young to be good flyers, and were, therefore, not difficult to bring to grass. The score was:

Wittenbrook	11111	10101	11010—10
Todd	11111	10101	11111—10

The tie was shot off at double birds (three pairs), with a like result:

Wittenbrook	11	10	11—4
Todd	11	10	10—4

Second tie:

Wittenbrook	11	11	11—6
Todd	00	01	00—1

The Capital Club shoot was at clay pigeons. Wm. Nesbit and Chas. Flohr tieing on 12 straight, and in the shoot-off at live birds Nesbit won the first medal with five straight kills.—*Bee.*

RIVERSIDE CLUB, Topsham, Me.—Ball shoot, July 18th. 15 yards and 5 pair.

A Q Goud	0	1	0	1	1	1	1	1	1	1	—8

G M Lee	1	0	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	—18

Badge won by A. E. Hall.—M. C. Hall, Secretary.

WELLINGTON, July 29.—The Malden Gun Club's quarters were not thronged with shot-gun manipulators as largely as usual, owing to the warm weather and the fact that many of their members are in the Maine woods. Yet the presence of lady friends tended to keep the spirits of those present up to the pitch, and hence the following good scores:

Club shoot at 20 birds—A. H. Jones 19, J. Buffum 19, J. S. Bailey 18, G. D. Wemyss 18, J. F. Stutsman 17, A. C. Adams 17, G. P. Durand 17, A. H. Binder 16.

Club shoot at 20 birds—J. Buffum 20, A. H. Jones 19, G. R. Durand 18, G. D. Wemyss 18, A. C. Adams 18, J. F. Stutsman 17, A. H. Binder 15, J. S. Bailey 12.

Sub-Match No. 1—A. H. Jones first, J. S. Bailey second, G. R. Durand third.

Sub-Match No. 2—G. R. Durand first, A. C. Adams second, J. S. Bailey third.

BATH, Me., July 29.—On account of the extreme heat of the last few days, the attendance of the first of the series of three shoots for the Society's Badge, by members of the Sagadahoc Association for the Protection of Fish and Game, was thinly attended yesterday, only six participating. Following is the score:

A Q Goud	1111110101010—11	Cyrus Keay	1111110100101—11
A S Alexander	0101111111111—12	C H Winslow	1011111111111—14
H A Stetson	0101110100111—10	C H Greenleaf	1111101111101—13

The second shoot will take place at Topsham Fair Grounds Thursday, August 10, at 1 o'clock P. M.—G. E. N.

PAOLA GUN CLUB.—Paola, Kan., July 22.—Match at glass balls, 21yds., 20 balls each: H. C. Gano 20, G. H. Sherman 18, L. P. Perry 18, Ed. W. Mitchler 18, T. B. Spencer 18, L. J. Perry 18, Wm. Bufford 17, Steve Quimby 17, Wm. Abbott 16.—E. M.

Yachting and Canoeing.

FIXTURES.

Aug. 2—New York Y. C., Annual Cruise.
Aug. 3—New Bedford Y. C., Second Class, $50. Principal Clubs.
Aug. 5—Jeffries Y. C., Club Match.
Aug. 5—Buffalo Y. C., Sweepstakes Race.
Aug. 5—Buffalo Y. C., Annual Matches.
Aug. 5-19—Quaker City Y. C., Annual Cruise.
Aug. 7—Dorchester Y. C., First Championship Race, Cat-Rigs.
Aug. 8—Salem Bay Y. C., Second Championship.
Aug. 8—Jersey City Y. C., Ladies' Day.
Aug. 8-12—American Canoe Association Regatta, Lake George.
Aug. 10—Southern Y. C., Annual Sweepstakes.
Aug. 12—Hull Y. C., Second Club Matches.
Aug. 12—Merrimack Y. C., Club Match.
Aug. 12—Toronto Y. C., $350 Cup.
Aug. 14—Royal Nova Scotia Y. S., Ocean Match to Chester, 1 prize.
Aug. 16—Royal Nova Scotia Y. S., Chester Town Cup, 2d prize. All comers.
Aug. 18—Royal Nova Scotia Y. S., Ocean Match to Halifax, 1 prize.
Aug. 19—Beverly Y. C., Open Races.
Aug. 19—Jeffries Y. C., Club Match.
Aug. 22—Quaker City Y. C., Ladies' Day.
Aug. 22—Oswego Y. C., Annual Matches.
Aug. 23—Dorchester Y. C., Second Championship Race, Cat-Rigs.
Aug. 23—Quincy Y. C., Fourth Club Match.
Aug. 26—Southern Y. C., Inter-State Regatta.
Aug. 23—Hull Y. C., Club Championship Match.
Aug. 24—New Bedford Y. C., 2d Class Schooners, 1st Class Sloops, $100, $75. Principal Clubs.
Aug. 26—Beverly Y. C., Open Regatta, Marblehead.
Aug. 29—Salem Bay Y. C., Championship Sail-off.
Aug. 29—Hull Y. C., Club Championship Match.
Sept. 2—Beverly Y. C., Third Championship Match, Marblehead.
Sept. 2—Jeffries Y. C., Club Match.
Sept. 4—Royal Nova Scotia Y. S., Mayor's Cup and third prize.
Sept. 4—East River Y. C., Fall Matches.
Sept. 5—Dorchester Y. C., Third Championship Race, Cat-Rigs.
Sept.——Hull Y. C., Club Championship Sail-off.
Sept. 4—Quincy Y. C., Fifth Club Match.
Sept. 5—Jersey City Y. C., Ladies' Day.
Sept. 9—Merrimack Y. C., Open to All Match.
Sept. 10—Quaker City Y. C., Harbor Cruise.
Sept. 16—Dorchester Y. C., Open Races, Cat-Rigs.
Sept. 16—Royal Nova Scotia Y. S., Three Classes, one prize each.
Sept.——Royal Nova Scotia Y. S., Yachts dinghies, sailing race.
Sept.——Royal Nova Scotia Y. S., Charlottetown, P. E. I.
Sept. 19—Jersey City Y. C., Ladies' Day.
Sept. 24—Quaker City Y. C., Harbor Cruise.
Oct. 1—Quaker City Y. C., Closing Cruise.
Oct. 3—Jersey City Y. C., Ladies' Day.

THE DISOWNED TROPHY.

IN the deed of gift now in force governing challenges for the America Cup occur the following clauses:

"The challenging party shall give six months notice in writing.

"Accompanying the six months notice must be the Custom House certificate of the measurement and a statement of the dimensions, rig and name of the vessel.

"In case the parties cannot mutually agree upon the ter

The club has no right to bring the good name of American yachtsmen into disrepute abroad.

It has no right to cover a trophy held in trust with ridicule through such a document as the circular sent broadcast to foreign yachting ports.

At home we are charitable enough to lay the blundering of the club to stupidity. Abroad they are openly charging sharp practice.

The New York Y. C. has no right to put American yachtsmen in a false light, and it matters not one iota what has gone before. The errors of the past should have been repented, not repeated, and stiffened when the club induced the recent modifications in the deed.

FOREST AND STREAM has put this issue plainly before those responsible, for good and honest reasons. We desire to see the introduction of a worthier type of boat than our light draft butterflies and believe this can be aided to a material degree by international contests between our sloops and British cutters. In making such contests an impossibility, the club has assumed the role of a partisan in favor of a certain type protected by unfair, unmanly and unsportsmanlike handicaps imposed upon yachts from abroad.

The object for which they hold the Cup in trust is defeated by their actions in the case which are unworthy the standing and influence enjoyed by the club in popular opinion. We trust now that the club is beginning to properly estimate the blunder committed, we may find them display at no distant date the honesty and courage requisite to rescue the Cup from obliquity and international racing from obloquy.

The club should not permit itself to be influenced by the friendly counsel of those seeking to keep the yacht question mystery disguised as a "defence" of its actions for a stray subscription or two so necessary to maintain life in the stale copyists yelping our heels.

ROYAL CANADIAN Y. C. SWEEPSTAKES.

ACROSS the northern border yachting is still confined only to those whose inclinations naturally lie toward seafaring sport. Yachting has not as yet become a fashionable appendage to a fashionable establishment and yachts are kept in commission for use and not for show and ostentation. Hence we find an inborn leaning among the Canadians towards ships in which a sailor can take pride, and a desire to rank foremost as sailors, however few their boats may be in numbers or how modest each vessel is in tonnage. For a long time yawls and cutters have been familiar sights in the harbors of Toronto and Kingston and their merits for work in the open lakes have been quite generally noted. That great is the contrast between the commercial metropolis like New York and so insidious the temptation to copy what is spread before one in columns and columns of newspaper accounts of the doings elsewhere that a tendency to pattern after New York models has not help but show its head, and the number of new shoal draft sloops introduced into Canada during the year in consequence threatened to crowd from the public mind far more meritorious specimens right at home.

Of all vessels in the world the light draft, flatiron sloops of New York are probably the least to be commended. Dangerous, cramped, expensive, and short-lived, sensible people would be likely to turn their backs upon them wherever they are really understood. But for the false reputation for high speed woven about her by romance, and repeated victories over old-fashioned turnouts from abroad, the New York light draft would have been spurned all over creation as a deformity brought into existence by the pursuit of the fantastic craze for "sliding over the water," by which procedure known laws of nature compelling a craft through the water" are made to yield easily for the benefit of the rustic talent from whom the new propaganda emanated. In the innermost circles of Canadian yachtingdom this wild doctrine had never quite been subscribed to, and all the fictitious speed claimed for the New York flyer failed to move the genuine sailors of Toronto from their belief that there was a great deal of smoke and very little fire about the so-called wonderful doings of the sloop. They stuck to their first love, the cutter, but resolved upon bringing her up to date for competition with the latest ideas adopted from American models. In doing this in a practical manner and considerable risk, Toronto yachtsmen deserve the admiration of all, and none will begrudge them the handsome polishing their new and utmost untried cutters gave to the fleet they met July 22. They are the last of a number of sailing that have occurred, and the question has given an impetus to cutter ideas and cutter building which is bound to lead to the eventual dismissal of the New York traps and the substitution of more creditable examples of naval architecture on this lake.

Much racing has been done in late years on those charming fresh water seas, but desultory only in influence and meaning. The recent matches of the Royal Canadian, however, pale all past records in the important influence they are destined to exert upon model and rig, and numerous will be the cutters, extremely fast for sea going vessels as far as local topography will permit. We take it for granted that the cutter rig will drive out the sloop altogether on the Atlantic seaboard, but the process of displacement is necessarily slow. On the lakes the signal advantages of Aileen and Verve will cause to hasten the day when the unmechanical and unsailor-like rig borrowed from the North River lighter shall give way to the smarter and handier arrangement of the cutter. If nothing more than that were accomplished, it would be a great deal, but the Aileen and Cochrane might cite in pride. But great modification in model is quite as certain. The veneration of beam is a broken spell, and servile adherence to New York's light draft quackery may be set down a thing of the past on the lakes. Cutters may still continue to be a butt of ridicule to airy-brained reporters of the metropolitan press, but their chatter is now no longer of influence on the lakes. Toronto has learned that the big bass drum of the press, through which the sloops have so long and noisily proclaimed their virtues, is a hollow instrument, and that the cutter is the true sailor's craft, with the concussion of wind. Hereafter, Toronto yachtsmen, and with them all Canadians, will work out their own salvation freed of baneful influences from other climes.

For the first proof across the border have furnished in sustaining the validity of the lessons preached in these columns they have the thanks of FOREST AND STREAM, as their liberal minded enterprise has our highest esteem and the tendency of their tastes our approbation.

The races, though only a handicap in allowances, afforded an excellent opportunity for noting the comparative performance of the narrowest of cutters and beamy shoal sloops, as the starters included some of the best of the latter on the lakes. Of course, in those, as in all handicaps, who will say that "if" so and so had only started the result might have been different, and they will back their opinions by reference to the records showing the absentee to be a very, very fast boat and faster, of course, than those who actually competed. We take it for granted that Oriole is classed in this way, certain there is not a sloop on the lakes which could have turned to windward with the new thirty-ton beauty Aileen, much less cut down her astonishing win of more than an hour to nothing. Cygnet, formerly Eulalie, but now under the colors of the R. C. Y. C., is acknowledged the fastest light weather sloop on the lakes, and unfortunately she did not come to time, being on the dock at Port Dalhousie for an overhaul. In point of tonnage there is too wide a difference between Cygnet and Verve to really test the first. The cutter is 68ft. over all, with 11.8ft. beam and 8ft. depth, while the Cygnet counts only 56ft. over all, 15.6ft. beam and 5.6ft. deep. If Aileen be taken as 30 tons, Cygnet would measure but 18.

The course sailed was about forty miles, and the time due Cygnet from the cutter would be about 3h., according to Y. R. A. scale, just ten minutes. It would have been a physical impossibility for Cygnet to have landed within that allowance, as the big schooner Oriole, of 57 tons, the second vessel in, was beaten by no less than 53½ minutes, actually sailing over the course in the windiest kind of weather, though Oriole she could no more catch the cutter than fly. Cynet is one of MacGlehan's flat irons, and we venture to predict that in a moderate blow and little kick-up she will be dropped by little Verve without trouble, let alone making a match for the Aileen, except in the thirds and fourths a sight. The cutting won by too much water by far to suppose that some other boat, probably neither better nor worse than those present, could turn the tables completely.

Aileen performed wonders to windward, and going large more than held her own with the 57-footer, though we do not accounted a slow boat either, as appears from this extract, taken from the Toronto *Mail*: "A further ground for comparison as to the absolute speed of the yachts was the presence of the schooner Oriole, which until yesterday was recognized as the fastest sailing vessel built to Dominion waters, even including the time allowance which her size compels her to give to smaller boats." On the wind Aileen proved noticeably stiff and so close-winded as to reduce the race to a good deal of a farce, for she quickly dropped the tuck, then Oriole, and jogged home as though there was nothing good enough for her on the lakes, and that we certainly believe to be the case. We even go further and question whether there is her equal in American waters. The way the cutter jumped out on the schooner's weather on the beat down to the steaming from buoy No. 2 was a caution. She fairly soaked away and put twenty minutes to her good when she squared for the next mark. That bit of work was of a kind never seen or dreamt of on the lakes before, and to suppose that Cygnet stood the gaff for any such a show is much going beyond stretch of the imagination. The ten-ton Verve, another Watson design, displayed the same weatherly capacity as her big sister. She worked out from a leeward position, took third place with only Aileen and Oriole ahead, and in the twelve mile beat down to the examination turned away from the sloops larger than herself, rounding half a minute ahead of Madcap, and three minutes ahead of Brunette. Down the wind the little shaver could not hold the 17-ton sloops, their length and size being too much to overcome by mere cloth.

The wind stiffened towards the close, and gave the yachts a beat in with a short sea. Here the superiority of Verve was plainly demonstrated. She again left all the rest, for while the light drafts kept pile-driving without going ahead, the cutter shot through like an arrow, and in place of clinging out like the centerboards, went straight as the crow flies, and hugged so close that she finally crossed a winner by five minutes actual time over Madcap, with the rest distanced. Aileen and Oriole being the only two home before her. That she is very much superior to the sloop in close winding of detail has not as been demonstrated, but to get a correct estimate of her running it is necessary to match her with boats of the opposite type of about the same size. Madcap is too large for a test. To sum up, the cutters did splendid work, nothing failing, while the sloops, as a class, have had some misgivings, not as to her design, but as to the manner in which she was put together and rigged by local talent. If Toronto possesses in Aileen's originators mechanics capable of handling the 3000 pounds of lead in the cutter, with the nice of detail that calls for more fortunate than New York. Judging from the way Aileen squandered the fleet, she must be fair and thoroughly well-rigged for getting out of her all there is in a Watson model, and with Lapthorn sails out to be used to start with she ought to find no difficulty in dealing with our sloops as she has with those in home waters.

The conditions of the race were as follows:

Open to yachts listed in the Province of Ontario. Sweepstakes of $30 each entry. A handicap allowance to be determined by the regatta committee after the start by preventing grumbling and retirement from the contest, a very politic precaution or the entries would have been badly decimated. As a sort of rough and tumble, go-as-you-please for cruisers and racers, big and little in one class, the handicapping necessarily resorted to was the worst, especially if kept a secret before the race. As a regular thing, of course, handicaps cannot receive countenance, for they really amount to a tax levied upon the fast for the benefit of the slow instead of making yacht racing more attractive and superb by giving the latter the best weight on the turf for the superior stamina due to age. Beyond this the rules of the R. C. Y. C. were in force. Course forty miles as the marks were set. Start from off club house inside of Island, then west to buoy No. 1, round buoy No. 2 at Mimico, then back to the nine miles about E. by S. to buoy No. 2 half a mile outside the Island, thence around steam tug, six miles S.W. of buoy No 2, then return to buoy No. 3, round the Scarboro buoy No. 4 and home to the start by the Island flag. Wind S.W. and W. and moderate. Fresh on the beat to the Mimico mark and back to the Island buoy and on the beat out to the steamer, then light on the run to Scarboro and at times stiff again beating back to the Island, where it fell light to the finish. There was not enough to test hard weather qualities, the only bubble being encountered after rounding the Scarboro No. 4 on the way home.

It was, taken altogether, a day favorable to light weather boats, or Verve would have given a much better account of herself and disposed of the 17-ton sloops in her fashion as handily as Aileen. She also lifted away from Madcap while beating home through the kick-up. The fleet was got away to a flying start at 10:30 as follows: Alarm, 38-ton yawl, Lieut.-Col. Grassett, at 10:31; Brunette, of Hamilton, 17-ton sloop, Mr. Wigle, Verve, Lieut. Bent, Mr. Cochrane, at 10:32½; Aileen, 30-ton cutter, Mr. W. T. Gooderham, at 10:33; Madcap, 17-ton sloop, the Commodore, at 10:33; Coquette, of Hamilton, sloop, at 10:33½, and schooner Oriole, 57 tons, the Vice-Commodore, at 10:34½. A light air was blowing from S.W., and the Coquette up to windward, the cutters along the city front. All had plain sail, including topsails, the schooner with a topmast staysail and large jib topsail in addition. Coquette got more breeze and looked into the western channel in the lead, with Oriole going over the first mile and a half in the wind flattened out to a calm of nearly an hour's duration, and the yachts were drifting at the mercy of the current. Occasional catspaws then struck in from the old quarter and the cutters holding their way through them soon improved their position. Aileen was in command of the fleet with Madcap, as we think, to be changed to holding their way like a loaded boat while the lighter sloops brought up short after every puff, much like catamarans are known to do, and for precisely the same reason—a lack of sufficient momentum to keep them going, according to critics, was an abomination. Aileen luffed around, followed by the rest as under:

Aileen	12.10	Madcap	12.30½
Oriole	12.11½	Brunette	12.31½
Alarm	12.48½	Coquette	12.54
Verve	12.49½		

It was a quartering jog to mark No. 2, and it was thought the schooner surely had the nibs on the cutter at that kind of business, but the latter did not seem a rack or the kind before and the result proved out in its reckoning, for Aileen slipped away like a chased deer, turned the erstwhile current brag upon the light drafts, by leaving them "as though they were at anchor" and hardening in around No. 2 so far ahead that it became play ahead for the cutter for the remainder of the day. Oriole second, a mile in her wake. Among the rest, Madcap showed great speed at running, her size telling much in her favor. She outran the little ten-tonner, and was driving hard for Aileen's quarter when the latter's jackstay parted and her upper stick threatened to go. The damage was repaired after luffing and some loss of water, enabling the big yawl to prepare for the beat, the first in the second chapter.

Brunette and Coquette, celebrated centerboard sloops, had been pretty well left by this time. Now the beat of six miles out to the committee steamer commenced, and all hands were put to their metal in a nice working wind. Aileen settled down to the job and rapidly eat away from the rest in a close-winded manner that was delightful to see, she looked as to call forth applause from the spectators watching from shore and steamer, and giving her the sobriquet of Flying Dutchman. She swept along in that steady, unfaltering style only known to cutters, and as the occasional puff would hail her down she would fairly twist up into the wind's eye with never a shaking luff. So rapidly did she turn away from her competitor that the club steamer was fetched twenty minutes ahead. Now the old school has been prating with an owlish gravity how cutters must "slide off" when sailing "on their side." We have taken to digest Aileen's performance. If it sits hard on them, serves them right for their stubborn adherence to myth instead of accepting sound principles the result of experience from FOREST AND STREAM. Like Maggie, Aileen refused to "cotch" the width of a hair out of compassion to antiquated talent, but with a hard heart rushed in the fact that for "hanging on" there is nothing equal to the cutter, and that the board is nowhere compared to the keel. Aileen went around the committee with Oriole five miles in her wake, and squared away the main on spinaker for the long run dead before to Scarboro Head. Verve followed creditably her big sister's doings, for no sooner had she buckled down to the windward work than she closed on the sloop Madcap hand over fist, again demonstrating in telling manner the blessings of fine lines and keel. The cutter outwinded the sloop without trouble, and showed her the way around the steamer, the roundbodied yawl Alarm having been left far astern at this work, for she lacks in depth, and her rig put her at a discount with sloop or cutter when turning. Time around the steamer as under:

Aileen	3:33	Brunette	3:35¼
Oriole	3:33	Coquette	3:35
Verve	3:34½	Alarm	3:10
Madcap	3:30		

Aileen, now 7 miles away for Scarboro. As they approached inshore the wind steadily fell, and the leaders running out of it first allowed the rear to close up. Thus Oriole gained on the cutter nearly thirteen minutes. That she could not do this in equal sailing had been made evident by the run from No. 2 to the steamer, when she very much slower with the wind dead aft than with it over the quarter, and, judging by cutters in general, this is not the case. They are as smart driving before it as in running off. No one will pretend that Alarm could hold Aileen before the wind, yet the time show that she lost nothing from the steamer in. Nor would anyone claim the Coquette so faster than the thirty-ton cutter off the wind, for Coquette, apart from being only half the tonnage, is rather slow for a flyer. Yet she held her own along some thirteen miles this time, though outrun several minutes on the six-mile distance of the first leg of the course. One thing is certain, Madcap again slighted by Verve, but the latter was slow with her spinaker and lacked the size of her sister. She held Brunette, while Coquette, having no spinaker, was out of it. The Scarboro mark brought mainsheet two blocks again for the westerly beat around the island to the finish at the times as mentioned:

Aileen	4.08	Brunette	4.10
Oriole	4.15	Coquette	4.11
Madcap	4.30	Alarm	4.46
Verve	4.38		

The wind was now a little doubtful. Aileen cast to seaward in hopes of more strength but Oriole went inshore after land breezes. The cutter found what she was after and zigzagged for the island in approved fashion. The schooner came out after the same wind but lost a mile or more through her misadventure. Things were now again lively, for the wind rushed in from the lake with a cheery snappishness which soon worked up a short bit of chop for the first time in the day. The cutter began small work for she knew if there is anything which will make a light draft look forlorn and sheepish it is a wallish jump which slaps them under the bilge, cuffs them about and fetches them up all standing ever and anon with the wind spilled out of their sails. Aileen took both heels and her self and went her way from all hands at a marvelous rate. Every board seemed to lift her clear by a long piece, until finally, having weathered the lighthouse on the island, the cutter paid out sheet and wound up at the finish a veritable Aileen first, the rest nowhere," administering upon the lakes the lessons of depth, lead keel and shipshape rig as effectually as the America instilled the new ideas of fine bows and that sails to Johnny Bull thirty years ago. "A feat probably unparalleled in yacht racing on the lakes," says the Toronto *Mail* most truly of this deft sally of the cutter for light draft sculps.

Madcap was unfortunate at the Scarboro buoy, for she lay in the doldrums, while Verve and the rest came sweeping down with the new wind. She got the breeze, however, before the rest had caught her, but as the work home was to windward her chances against Verve were gone, as Madcap can do nothing with the cutter at the real test of a yacht's qualities. Even had the sloop not been left without way at the buoy it is hardly likely she could have lead Verve to the line, except by duke, for the sea broke up the sloop very badly. Like all light draft centerboards, she pitched and tossed and chopped to leeward in such an annoying way that Verve put five minutes to her good over the eight miles twisting. The cutter was a picture as she went steadying along like a car on a rail, never laboring, never dragging her sail, but carrying all through the puffs to advantage. She never buried, simply laid down a little further, but kept her course, and the more she laid over the faster she seemed to go and the higher she could look. It was just the sort of work the sloop has never been built to catch a racing cutter under such circumstances, so our Canadian friends may console themselves, knowing that if their sloops cannot do it no others of the same breed can do any better. Verve again ground like a car on a rail, never labored, never dragging her sail, but carrying all through the puffs to advantage. She never buried, simply laid down a little further, but kept her course, and the more she laid over the faster she seemed to go and the higher she could look. It was just the sort of work the sloop has never been built to catch a racing cutter under such circumstances, so our Canadian friends may console themselves, knowing that if their sloops cannot do it no others of the same breed can do any better. Verve again ground like a car on a rail, never laboring

COMBINATION ROW AND SAIL BOAT.

COMBINATION ROW AND SAIL BOAT.

IN last week's issue reference was made to illustrations of Joiner's excellent combination of a row and sail boat. Through the faithlessness of the artist the cuts were received too late for that issue, and we now make good the deficiency. The Irene, one of the first of her class, is 15ft. 6in. long, 4ft. 9in. beam, 2ft. deep amidships. Carries a 60-lb. centerboard and a sail having a 10ft. hoist, 15ft. foot, and 7ft. 3in. head. Weight of boat, 150lbs. Concerning the Irene, her owner, Mr. George Conkey, of Glen's Falls, writes that he can suggest no improvements, as she seems near perfection for the all-round work demanded of her. She is fast, able, and sightly, and serves her purpose more nearly than anything of the kind he has tried. In Joiner's newest boats of this class the deck is carried aft to the centerboard well and "foldlng boards" used instead of one piece, economizing greatly in room.

ATLANTIC Y. C.

A FINE fleet assembled in Larchmont harbor July 21, subject to the flag officer's orders for the annual cruise to the Eastward. Anchor was weighed next afternoon for a run of thirty-six miles to Black Rock, where Sunday was spent in harbor The fleet mustered the schooners Atalanta, Com. Vermilye; Lotos, Agnes and Sunshine, and the sloops Gracie, Eclipse, Rover, Pirate, Curiew, Sagitta, Annie, Hypatia, Lurline, Truant, Fanita and Ethel. The run was very tedious work and the squadron arrived late at night in straggling order in consequence of the lack of wind, too late to enjoy the hop in their honor at the George Hotel ashore. Schooner Crusader here joined the fleet, also sloops Clarita, Stella and yawl Caprice. Monday an early start was effected for New London in light southwest zephyrs, Crusader and Agnes fouling in the drift out and the former taking the ground aboard with her deep-draft centerboard. She was got clear after some trouble. Off Stratford Point more breeze was found and a little life put into the squadron with kites all drawing. Eclipse ran through the lot in very good fashion, showing that the lead added to her keel has not fulfilled the theorists' prognostications about making her "logy" or slow in light winds. On the contrary we attribute the excellent speed this sloop evinced throughout the light weather met as due in a great measure to the very lead keel which was to have spoiled her racing qualities, according to old school doctrine. Schooners Peerless and Watervitch fell in on the run and went into port with the rest, Eclipse showing the way in and coming to at about 4.20 P. M., the rear bringing up with the moon shining brightly. Tuesday, July 25, the fleet left for Greenport with sloops Elephant, Onward, Cute, Whiteway, Scioia, Corsair and Phantom added to the list.

In paying off, Atalanta's board got jammed in the trunk, and it took several hours' hard work to drop it below and float it up alongside. The diagonal brace had sprung from its fastenings and held the board in the box. The schooner had to lay by till repairs were executed at the Trumbull yard, which proved to be an all day's job. A moderate southeast wind enabled the fleet to beat clear of the Connecticut shore and weather Gull island for the Race passage. Eclipse again worked away from the rest till the wind died out, and came in from southwest steady, taking them all into harbor before sundown, Eclipse with ten minutes' lead. Atalanta hove in sight at 10 P. M. with her board shipped again and in working order, Schooner Clio joined the command. At 7 A. M. next morning the squadron slowly drifted out of Greenport harbor, bound for Newport, with light winds still from southwest, which failed for a time entirely. The schooners had something of a brush, Clio showing that she had lost none of her old-time speed since bolting lead up from below, and smart Eclipse leading all hands till past noon, when, with a freshening wind, the Commodore's schooner drove by her, the two coming to anchor within ten minutes of each other, and nearly half an hour ahead of the rest. The last yachts did not fetch in before 10 P. M. Thursday, July 27, anchors were got at 9 in the morning, six schooners and ten sloops obeying the signal. Light, contrary airs fanned them out to Brenton's, where they squared for the run along the coast, setting kites all around, Eclipse once more doing duty as pilot to the crowd. About eight bells the wind picked up and schooner Agnes showed to the fore, but again gave way to the Cow Bay crack, Mr. Willard leading in with Eclipse at 2.20 P. M., Agnes a good second, with Clio and Peerless close aboard, the latter having cut inside Old Cock and Hen and Chickens reef.

A pleasant reception awaited the fleet by the New Bedford Y. C. during the evening. Friday opened with a heavy fog, clearing at 10 A. M., so hat it was after 11 before anchors were catted. A southerly wind made it a beat clear across Buzzard's Bay to Quick's Hole. Atalanta had hardly cleared the harbor when she struck her board and it jammed once more in the trunk, compelling her to beat down with only half the regular allowance of tin. After the Hole had been got through sheets were checked in Vineyard Sound and with the wind abeam a spanking rate was made the rest of the distance to the Haven. Peerless led in with Clio second. Eclipse, Stella, Pirate, Corsair and others had parted company and taken the southerly wind to the westward again, homeward bound. Late in the evening the squadron was disbanded by the Commodore.

As a whole the cruise, though a pleasant one, barring the want of wind, was devoid of special features. The only thing worthy of note was the sailing of Eclipse, which was such as to warrant the belief that she is probably without rival this side of Cape Cod and our champion to save us from defeat at the hands of cutters from 30 to 30 tons, Y. R. A. measurement.

FACTS ABOUT THE MAGGIE.

OUR sloops have been beaten by nothing better than a cruiser after all! We have read a letter from the gentleman for whom the cutter Maggie was originally built. He did not design her for a racer at all, but for a safe, able sea cruising yacht and for fishing. With his wife he spent many months knocking about the British coast with no intent to compete with professional flyers. Some of the cutter's head was put on the keel to gain head room inside. Mr. Beavor Webb, who got out the lines for the famous twenty-ton Freda, gave counsel in the modeling of Maggie, and this accounts to some extent for her great speed, as all of Mr. Webb's ships are noted for that quality. The Maggie answered her purposes admirably and proved herself a grand boat in rough water, besides showing such speed that in her class she was without a peer, and often made it warm for the twenty-tonners designed expressly for fast sailing. Those who have been seeking to escape the logic of events by calling this cutter a racing machine and our sloops only cruisers, have got the cart before the horse, for the truth fits just the other way.

BEVERLY Y. C.

Editor Forest and Stream:

The club's annual regatta and second championship race of the B. Y. C. was sailed off Swampscott last Saturday, July 29. Owing to vacillating winds only a portion of the entries actually came to the start, those hailing from a distance being unable to reach the harbor in time. Only the two cutters Beetle and Mavis appeared in the first class. They were sent away to a flying start, and picked up a smart wind after a while. The same wind, however, put the small yachts to leeward way up to windward at a bound, and Peri withdrew in consequence. Course for first class: From start, leaving Spindle Rock on port, starboard off southwest breaker buoy off Big Rocks to starboard, Egg Rock same, and then home, about 13 miles. For second and third classes: From start, leave Egg Rock to starboard, stakeboat off Little Nahant same, and home. Mr. C. W. Galloupe's Clochette was used by the judges, Messrs. W. Lloyd Jeffries, H. U. Jeffries and C. W. Galloupe. Mavis ran out a slight lead on her sister cutter, but before the whistling buoy stakes were reached Beetle was showing the way, finally winning by five minutes actual time. In second class Holden won on best actual time, and takes the champion pennant, having won also in the previous championship race. On corrected time she also takes the special cup. In third class Dandelion takes the pennant, Psyche having won in the first of the series, necessitating a third race to decide. Corrected time could not be obtained, as the boats have not yet been measured according to the new rule. Summary as under:

TILLER.

THE GREAT CANOE MEET.

Editor Forest and Stream:

Letters are being received daily at our camp from the little fleets of canoes that are cruising from many points of the compass toward the beautiful Horican. Dr. C. A. Neide, Secretary of the American Canoe Association, arrived here with his brother two days ago, and we are putting Lorna Island into the best order to receive the large number of canoeists who are to be present at the annual meeting and regatta of the A. C. A. The Springfield Canoe Club will leave Springfield, Mass., August 3, cruise 30 miles to Hartford, then take steamer to Rondout, N. Y. (via New York city), where they will be joined by the Rondout canoeists and will proceed to Glens Falls nine miles south of Lake George in their canoes.

Rev. Chas. A. Cressey and Capt. S. D. Kendall, will leave Vermont, following the Connecticut River to Long Island Sound and New York, from which city they will ascend the Hudson to Troy and go by canal to Glens Falls. Commodore Longworth, of the A. C. A., is at the lake. The Cincinnati Canoe Club will report to him on August 1. The Lake George Canoe Club will go into camp about August 3. The Mohican Canoe Club, of Albany, the Knickerbocker and New York Canoe clubs, of your city, have had their camp grounds already located. There are about thirty canoeists already at the lake.

The Crescent Canoe Club is at Coldwell, at the head of the lake. From Canada comes cheering news. Capt. E. B. Edwards, Vice-Commodore of the A. C. A., will well represent the Dominion canoeists from the Peterboro' region. These knights of the single blade will bring some fine canoes to the regatta.

Robert Tyson, Secretary of the Toronto Canoe Club, will be present by the 7th of August with his party, and Messrs. Baldwin and Symmes, of Ottawa, will reach Lake George about the same time. The canoe builders have been crowded with orders for canoes since the last meet at the Canoe Islands. There will be a magnificent display of new canoes from all canoeing centers.

A paper called *The Canoe* is published on the steamer Horican, which runs on the lake, and it will be the official organ of Judge Longworth, the Commodore of the A. C. A., during the stay of the canoeists at the Canoe Islands.

The races will occupy a part of three days, August 9, 10, 11, and will take place off Crosbyside Hotel, at the southern end of Lake George. Besides the canoe clubs which will be in attendance, there are individual canoeists from many of the States and from Canada who will be present. As the railroad extension now reaches Lake George, it will be an easy matter to visit the canoe regatta from New York, Boston and the West. N. H. BISHOP.

CANOE ISLANDS, Lake George.

NEW YORK Y. C.

FLEET CAPTAIN FISHER has issued the following orders from the Commodore for the annual cruise, which is expected to bring out an unusually large fleet:

The squadron will rendezvous for the annual cruise at Glen Cove on Wednesday, August 2.

All captains will repair on board the flagship (schooner Estelle) at an hour to be announced by signal.

A start for New London will be made early on the morning of Thursday, August 3.

Special prizes have been offered by Captain Cook, of the Tidal Wave, and Captain Goelet, of the Norseman, to be sailed for at New London and Newport respectively. It is desirable that large entries be made for these contests.

Officers and members are expected to conform to the revised regulations regarding uniform and dress.

Attention is called to the new rules for hoisting colors, salutes, etc.

During the cruise, except under special orders, guns will be fired only as follows: By each yacht joining or leaving the squadron, to be answered by the flagship, when the Commodore or senior officer in command joins or leaves the squadron, when each yacht will return his gun.

In getting under way in squadron no yacht shall start before gun fire.

As it is expected that an unusually large number of steam yachts will accompany the squadron, the Commodore will appoint one of their captains as a commanding officer to direct their movements.

A large attendance on the portion of the sailing fleet has signified an intention to join in the cruise, and captains are urged to make special efforts that the squadron be such as to reflect credit on the club.

"HER WEATHER."

SO far Maggie has taken enormous odds. She has sailed in light winds, "our weather," and under length rules, "our rules." But Maggie is held by those who know her well to be best in a blow and a sea, when she will take a good deal more pressing than in zephyrs, her poorest chance to display what is in her. She has beaten us without even drawing upon her hard-weather reserve. Now let it blow enough to tie down a cringle or two and stuff for second jib, and we venture to say Maggie will leave her opponents hull down or send them scudding for home without as much as making the weather mark of the course. If we are favored with brisk winds this fall such a display is surely in store for us.

LARCHMONT Y. C.—The Zoe having won the challenge pennant in the open boat class, in the races June 3, reported in these columns, she was challenged by the Hornet recently, the conditions being that the holder should sail any challenger thirty days after winning the whole class being allowed to enter. The second race was sailed July 22, and excited much local interest where the boats are known. The race was under shifting ballast rules, the only drawback deprivlng a fast boat of moving ballast, making more a test of the crews. Six boats started—Zoe, 22ft. 4in., H. Sanderson; Nymph, 22.4, F. Flint; Willis, 22.9, Com. Jenkins; Fairy, 21, F. Towle; Hornet, 22.6, F. S. Scott, and Cruiser, 20.9, A. B. Alley. Judges, Newbery D. Thorne and Alexander Fisher. Course, Larchmont Yacht Club dock buoy, around Spar buoy off Matinnecock Point, around buoy off Constable Point, thence again around Execution Rock and home, 17 miles. Start flying, five minutes grace. Wind light E. and tide first of flood. Zoe took the lead with Hornet a good second, rest straggling. On the windward work to second mark Cruiser crept through the fleet, Zoe and Fairy alternately in second place. Matinnecock buoy was rounded: Cruiser, 2:03:30; Fairy, 2:09:29; Zoe, 2:10:08; Hornet, 3:31:02; Nymph, 3:32:55. The wind now fell and it was little more than a drift with a lee-going tide for a while. Fairy got around Constable Point buoy first at 3:13:14; Cruiser, 3:18:21; Zoe, 3:19:30; Hornet, 3:31:02, and Nymph at 3:32:55. The breeze fell away altogether, Hornet taking an ash breeze for home. The others kept at it, Fairy going round the Execution buoy at 5:01:25; Cruiser, 5:57:59; Zoe, 6:06:50, and Nymph at 6:31:30. A light air from S. W. ran the boats home as under:

	Actual. H. M. S.	Corrected. H. M. S.		Actual. H. M. S.	Corrected. H. M. S.
Willis	Gave up		Zoe	7 19 20	7 18 39
Hornet	Gave up		Fairy (winner)	6 47 48	6 44 49
Nymph	7 21 05	7 20 24	Cruiser	7 05 59	7 02 31

BUNKER HILL YACHT CLUB.—The fourteenth annual regatta was sailed July 29 off Long Island. Course for first class: From judges' out Broad Sound, leaving fog whistle on northeast ledge of the Graves on starboard, Green Island on starboard, Shag Rocks on starboard, Lovell's Island and Sound Point beacon on starboard, George's Island and Gallop's Island and Nix's Mate buoy on port, to judges' boat, thirteen miles. Second class: From judges' boat, leaving west head of Long Island on port, Raimsford on starboard, George's and Lovell's Islands on starboard, Gallop's Island and Nix's Mate buoy on port, Sound Point beacon on starboard, Spectacle Island on port, Sculpin Ledge buoy on port, to judges' boat, ten miles. Third class: From judges' boat, leaving Spectacle Island and Sound Point beacon on starboard, Spectacle Island and Sculpin Ledge buoy on port, to judges' boat, five miles. Variable and light winds, ending in fair southeast breeze. Judges, P. M. Bond, Jas. White and Randall Gould, aboard Mr. Hurd's Echo. Summary as under, Arrow being disqualified for sailing wrong course:

	Length.	Actual.	Corrected.
FIRST CLASS.			
Name.	Ft. In.	H. M. S.	H. M. S.

Rose, T. H. Cabot	15 09	1 26 38	1 18 16
Comet, G. W. Mansfield	16 00	1 26 13	1 18 06

OCONOMOWOC Y. C.—July 31.—*Editor Forest and Stream:* The Oconomowoc Y. C. sailed their third regatta of this season, and the fourth annual regatta for the first and second class pennants, over the usual course on Lac La Belle, Monday, July 21, a stiff, puffy wind blowing from the S. W. Summary:

		H. M. S.
FIRST CLASS.		
Buda	F. W. Peck	— 55 30
Sunbeam	H. H. Shufeldt	disabled.
Tweedledee	W. L. Peck	— 53 28
Tweedledum	P. S. Shufeldt	— 52 41
SECOND CLASS.		
Nip	G. Shufeldt	withdrawn.
Daisy	C. I. Peck	1 03 27
Pearl	C. T. Sutton	1 01 46
Tuck	H. H. Shufeldt	disabled.

The Tweedledum was declared winner of the first class and the Pearl in the second class. The presentation of the Shufeldt cup, finally won by the Tweedledee at the regatta of July 18, and of the pennants, took place at the club house in the evening.—S.

THUNDER BAY Y. C.—This Canadian club, with headquarters in Thunder Bay, Lake Superior, has about thirty members, with the following officers: F. Jones, Commodore; Mr. H. K. Wickstead, Vice-commodore; W. J. Clarke, Secretary-treasurer; and Messrs. G. T. Marks (Chairman), C. V. Warmoil and W. F. Davidson, members of the Committee of Management. The fleet contains the following yachts: Algoma (6 tons), S. J. Dawson; Pride of the Wave (2 tons), W. Clark; Nautilus, R. Anderson; Shamrock (6 tons), F. Jones; Lurline (7 tons), G. T. Marks; White Wings (11 tons), Club boat; Winnie (2 tons), H. K. Wickstead. The new club house is an ornament to the harbor. The ground floor is 24x48, with a height of nine feet. It is perfect in its fittings, and has accommodation for eight boats. The upper portion of the building is divided into club room, secretary's office, and dressing room, the former being 10ft. high and 34 by 18, and the dimensions of the two latter each 10 by 7 feet. These are approached by a staircase, built on the outside. Facing the bay a wide verandah projects from the upper room, from which a magnificent view of the lake is obtainable. The contract price was $684.

YACHTS' PHOTOS.—We have received from David M. Little, 24 Franklin street, Boston, some superb photos taken instantaneously from yachts tearing along at high speed. These photos are marvels of modern art, and besides the associations clinging to the yachts themselves, represent their manner of passing through the water, showing the bow and quarter waves and the pillow sunlships according to the vessels' form. There is the well-known Shadow, Boston's little pet, and the big-waisted keels Viking and Hera, and also the beautiful cutter Maggie, affording an opportunity for contrasting the style and pose of our sloops with the cutter, greatly in the latter's favor it must be acknowledged. The photos of the Shadow and Hera are exceedingly spirited, the Shadow driving along at a great rate to a quartering wind, and Hera's crew lighting out the balloon jib topsail on the bowsprit for bending. All these mentioned were taken during the matches of the Eastern Y. C. June 26. They are mounted in exceptional taste, and we recommend them as an American production relating to yachting, in which we may take pride with good reason. They will be sent to any address for $1 each.

NEW HAVEN YACHT CLUB.—In accordance with orders from Commodore H. B. Hilliard, the club fleet gathered off the Thimble Islands, July 23, preparatory to the first annual cruise in squadron to the eastward. Sunday the squadron remained in harbor, the members partaking of a dinner at the Island View House, to which Land lord Northrop had generously invited all hands. Monday morning anchors were got and sail made for Newport. A very creditable fleet obeyed the Commodore's signal, including Endeavor, the Commodore; Defiance, Vixen, the Vice-Commodore; Zephyr, the Fleet Captain; Ripple, Lorelie, the schooners Haze, Prospero, and several others. Newport was made the same evening, and next morning the squadron hove up for New Bedford in a light southwest wind. In beating out, Vixen worked away from the rest, Prospero schooner making the Whale City in the lead, and the rest is tolerably close together. July 26 they sailed for Edgartown and Jarlin's Vineyard. Geo. Graves again threatened to bring out that wonderful cutter of peculiar design he has been building so long, but we fail to hear from her. The cruise is to continue two weeks.

SEAWANHAKA Y. C.—The open boat races of the club set down for July 29, failed partly for lack of entries and also for want of wind. Race open to Atlantic and Larchmont Y. C. Mean length for measurement, one hand to every five feet length; all to be amateurs. Fixed ballast, plain sail, no limit for canoes. Flying start with five minutes' grace to cross. Cash prizes from $30 to $20; classes for sloops over twenty-five feet and under; cats over twenty-five feet and under; catamarans and canoes. Course from club house around the stake-boat 1¾ miles below, thence to buoy 18 off Bay Ridge, thence around Robbins' Reef buoy and home, 7¼ miles, sail over twice, canoes only once. Three canoes were sent away at 3.25 P. M. They were the Pearl model Ripple, W. Witlock; Shadow model Wraith, D. Vaux and Shadow model Dot, C. B. Vaux. They were a long time getting over the line for want of wind, and after Ripple had fanned out a lead it fell calm again and the race fell through. The open sloop classes mustered only two, Cruiser and Falcon, which were got off at 4.07, but took nearly seven minutes to get over. After a bit of luck taking Cruiser around the lower mark, the wind again dropped and no race was sailed.

HULL Y. C.—Last Saturday was ladies' day with the members of the Hull Yacht Club, and the yacht owners took their lady friends on a cruise among the islands of the harbor. It was a delightful day, with just wind enough to make it pleasant sailing for the ladies. About forty yachts participated, and each of them carried from three to five "timid beauties." The non-yacht owners were distributed among the crews of the yachts participating. At 3.30 the yacht captains reported to Commodore Lambert, and fifteen minutes later the yachts passed in review before him, saluting as they sailed by. The signal for starting was given at 4 o'clock, and the white wings directed their cruise towards Quincy Bay, keeping in close company. Most of the yachts returned a little after 6 o'clock, and the company was entertained at the club house, a collation being served, followed by dancing. It was the most enjoyable day of the season at the club, and the club's mode of entertaining was pronounced a grand success by many fair critics.—*Boston Globe.*

BRUNSWICK SOUPS.—Anything which saves labor, time or fuss in the steward's department is a boon to yachtsmen. For rich body, flavor and convenience none of the soups can be highly recommended than the Brunswick Soups. They are not merely canned articles or extracts, but the actual material preserved in the shape of powder by a special process and need only the addition of boiling in water to produce a nourishing white soup, equal or superior to anything served fresh at hotels or restaurants. There are twelve varieties from which to choose and with beef, vegetable and bean soup and clam chowder at his disposal, the yachtsmen must be hard to please who cannot manage to live high and economically with such stores to draw upon. They are the handiest thing imaginable for canoeists and sportsmen generally.

"CUTTERS CAN'T SAIL."—Says the Toronto *Mail;* "The sailing of the cutter Aileen was simply wonderful. She stood up to the wind perfectly. . . . Running free she not only maintained but increased her lead from the 10-ton schooner. . . . Aileen was by this time miles to windward, sailing like the Flying Dutchman. . . . Aileen beat to windward at an extraordinary rate, apparently making two feet to Oriole's one. . . . Aileen, fairly flying, snowed her heels to the rest of the fleet in an extraordinary manner, until miles ahead of Oriole and everything else. . . . The theme of discussion was the wonderful sailing of the Aileen. . . . The popularization of deep boats has had a startling push forward given it. . . . The Aileen outpaced by out-tops anything afloat in this neighborhood."

FAIR ALL ROUND.—From the Toronto *Mail:* "It was believed that the race would prove a test of the respective merits of the deep-draught cutters and the centerboards. The absence of the Cygnet and the Eudie, both fast sloops, somewhat interfered with the anticipated test, but the presence of the Madcap, Brunette, and Coquette, all centerboards, are certainly of all fast boats in light winds and quiet water, left a certain ground for estimating the performance of the Aileen and the Verve, the two cutters. Both these last, of course, are typical deep-draught yachts. The day could scarcely have been more favorable for a severe fair-weather test of the sailing qualities of yachts of all classes and sizes."

AILEEN.—Says the Hamilton *Spectator:* "Saturday's race was a fair test, and it must be confessed that as far as the Aileen is concerned there can be but one conclusion. If she was too fast for the Verve, centerboard though she was, and with her long mast and her ill-fitting suit of canvas, she would beat the schooner out of sight under other circumstances, for other circumstances could not have been more unfavorable. The Aileen is a very fine boat, and can, undoubtedly, defy any craft in the bay. Her long mast may not like the hull, there were none who could deny that the cutter rig is a fine one, and must come into favor on the lakes."

TORONTO CANOE CLUB.—Officers for the year: Commodore, Hugh Neilson; Vice-Com., Edward Leigh; Secretary, Robt. Tyson; Treasurer, John Hayne. Twenty-five members with seventeen canoes, of which four are Pearls with double centerboards, one a Nautilus with single board, two Racine Shadows, one Racine Rob Roy, one lapstreak Jersey blue with centerboard, two others not classed, and the rest open and tandem canoes. The Toronto *Mail* says the decked canoes are rapidly falling out of favor. "They in the experience everywhere, the open canoes being relegated to sporting purposes, but seldom used for cruising.

A LONE VOYAGER.—The *avant courrier* for Lake George has left Toronto in the person of Mr. M. Fish Johnston, son of a former well-known journalist. He left Rob Roy on Lake Simcoe on Monday morning shortly before 9 o'clock. He carries no sails, and will paddle the whole distance to Brockville via the Bay of Quinte. On Tuesday evening he camped east of Oshawa; and when last heard from he was at Port Hope at a quarter past four on Wednesday afternoon. He holds the paddling challenge cup, and his chances for holding it will certainly not be lessened by the steady daily paddling practice involved in a cruise of over 200 miles.—*Toronto Globe.*

AMERICA CUP.—But for the clause giving us the right to name a yacht at the moment of the start according to the weather, thereby taking the visitor at an advantage, we might have seen a "tory" in our waters this fall and received a sound thrashing. We are saved the thrashing but at the expense of a most valuable practical lesson in modern naval science. Does this satisfy the ambition of the New York Y. C.?

LIGHT DRAFT.—As will be seen in our report, the schooner Atalanta got in trouble with her board twice during a week's cruise. As a keel she would have drawn 10ft. instead of some 20 with a board, and time and a bill of several hundreds would have been saved. Sometimes, oftener than supposed, the light draft of the center board vessel is theory only while stern practice finds her drawing much more water than the keel.

CHALLENGE CUP.—The owner of the sloop Eclipse, Mr. E. Willard, offers to be one of four to contribute $250 each toward a silver service to be sailed for by yachts over 50ft. length, Larchmont rules and course, in month of August. The Eclipse is unquestionably one of the smartest yachts in New York, blow high or low, and it would be interesting to know whether Gracie could make her time off of Mr. Willard's sloop in ordinary weather, so that should a cutter of between 50 and 60ft. ever show her number here we may have something to go by in the choice of the most likely opponent.

CHICAGO Y. C.—Mackinaw is to be the summer rendezvous of the club, and a house may be erected in the harbor. The August cruise is to last two weeks. A cup, value $500, is offered for the run up. Schooners Viking, Comanche and Idler, and sloops Cora, Ariel, Burke and others will form the squadron.

BEVERLY Y. C.—The sum of $673 is to be given in prizes at the coming great union or open races off Marblehead, Aug. 26. It is hoped that the famous cutter Maggie and other well-known Eastern yachts will show up. Entries to W. Lloyd Jeffries, 78 Devonshire st., Boston, before 2 P. M., Aug. 25.

DECLARED OFF.—It will be remembered that in the Hull Y. C. races, July 22, many protests were recorded on account of starting some of the fifth class with the larger yachts. The race in that class has now been declared off, and will be resailed upon request of five of the yachts entered.

SILVIE.—This schooner, one of Geo. Steers's models, has been sold by C. V. Whitten to C. C. Moubury, Hull Y. C.; 83ft. 9in. long, 74ft. 7in. load line, 21ft. 6in. beam. She is the widest and shoalest schooner of any size in America.

HULL Y. C.—For open races, August 19, the sum of $1,000 has been subscribed for prizes, open to yachts of recognized clubs. Think of a New York club offering such a sum in cash and asking all to enter,

NEW HIGH SPEED.—The Herreshoffs, of Bristol, R. I., are to build another fast steam yacht for Mr. Hopkins, of Port Huron. Speed guarantee 20 miles in five hours.

BUFFALO Y. C.—The different interests in the club have now been harmonized and the annual races fixed for August 5, 2.30 P. M. Sail for Commodore's prize, value $25.

LAPWING.—This handsome little seven-ton cutter is being fitted out with great care by Lawley & Son, of South Boston. The keel for a new cutter is to be laid in a few days.

MORE CUTTERS.—Members of the Chicago Y. C. have determined to build two cutters this winter, one to be a large one of thirty tons like Aileen.

KATIE GRAY.—This well-known racing sloop, of Belleville, Ont., has been sold to Mr. Cunningham, of Montreal.

Answers to Correspondents.

R. C. S., Boston, Mass.—See answer to W. B.

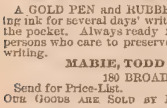
G. B., New York.—Please let me know if there is any good angling up the Hackensack and in Pequonn and Mill Creeks, N. J., and what kinds of fish. Ans. Yes, often good strings of white perch and small striped bass are taken there.

J. W. E., Erie, Pa.—There were two prizes offered at a picnic for a glass ball shoot. A got 17 out of 20; B 17 out of 20; C 14, etc. No mention was made in regard to class shooting. Who receives first and second prize? Ans. In the absence of any express stipulation that a match shall be under class shooting rules, the contrary is understood. In this case A and B, having tied on highest score, should shoot off for first and second prizes.

W. A. H., Bellows Falls, Vt.—1. Can you tell me of any way to keep helgramites for bass-fishing alive? The other day I caught about thirty and put them in a pail of fresh water, and the next morning they were all dead. I have been able to find no reason why they should die, as I kept them in a cool place, and I always thought they were very hardy. 2. And are the helgramites as good bass bait when dead as alive? Ans. 1. Keep them in running water. 2. No.

F. C. E., Bellows Falls, Vt.—Will you please tell me if there is any way to cook the common mud turtle? I have never heard of its being done, but can see no reason why they would not be as good as frogs. Ans. Soup is made of the snapping turtle, and also of other fresh-water turtles, but they do not compare with green turtle in the matter of soup, while they are not to be spoken of in the same day with the diamond-back terrapin of salt marshes. They are not as delicate.

G. McA., Worcester, Mass.—The red Irish dog to whom you refer we presume is Makedah. He was whelped July, 1877, and was bred by the late Wm. M. Tileston. His sire is Dr. Wm. Jarvis' champion Elcho. His dam was Lill III., imported by Mr. Nicholas Saltus, of Brooklyn, N. Y. Lill II. was whelped in 1874, and was by Saumrock out of Kataleen (Barton's Larry—Lill II.). Shamrock was by Brennan's Rap out of Jepson's Belle. Lill II. was by Cooper's Ranger (Hutchinson's Bob—Lilly) out of Jepson's Belle.



W., Morristown, Minn.—1. A thoroughbred liver-colored spaniel pup for the past month or six weeks has been out of sorts completely, throwing up meal twice, often times more, during the day. Thought at first it was due to raw meat, and so cut him off it, but the vomiting continued the same. Otherwise the animal appears in pretty fair health. I see he has been trying to doctor himself by nibbling quite an amount of grass in the ejected matters. What had best be done for him? 2. What species of insect is the helgramite, and what is its technical name? Ans. 1. See answer to W. B. 2. It is the larva or pupa, for both are used for bait, and so called; of the helgramite fly *Sialis infumata.* The fly is rarely seen.

S. A. S., Tilton, N. H.—A fish pond containing ten square rods of water, from two to six feet deep, supplied through four-inch iron pipe, the water falling about five feet into the pond; a temperature of 72 deg. to 76 deg. Fahrenheit at the present time. The trout are dying in large numbers. They have been freely fed by visitors. Has the temperature of the water or the feeding anything to do with such a result? Is there a standard temperature for cold-blooded animals, as is deg. is for warm blooded? Ans. It was the temperature which killed your fish. See our editorial note on temperature for trout in this issue. The temperature of the blood of fishes is usually from two to three degrees above the water they are in.

PUBLISHER'S DEPARTMENT.

THE ELEPHANT NOW GOES ROUND.—The latest Parisian costume one hears of as destined to create a great sensation is the Jardin d'Acclimation dress, which is thickly covered with minute elephants, dogs, camels, etc., all artistically grouped and represented in the most natural attitude possible.

"ACCIDENTS WILL HAPPEN," and the only sensible thing to do about it is to provide against them by taking out a policy in the United States Mutual Accident Association. A notice of this concern will be found in our advertising columns. It is well worth the while of every single man to look into the merits of the company, and we hold it to be the duty of a married man, for the protection of his family, to make provision for possible calamity.

TARRANT'S SELTZER APERIENT New York Paris

The King of the Body is the brain; the stomach its main support; the nerves its messengers; the bowels, the kidneys and the pores its safeguards. Indigestion creates a violent revolt among these attaches of the regal organ, and to bring them back to their duty there is nothing like the regulating, purifying, invigorating, cooling operation of TARRANT'S SELTZER APERIENT. It renovates the system and restores to health both the body and the mind.

SOLD BY ALL DRUGGISTS.

THE UNITED STATES

MUTUAL ACCIDENT ASSOCIATION

OF THE CITY OF NEW YORK.

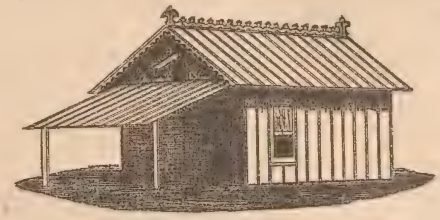
(Incorporated October 11, 1877.)

Office, 409 Broadway, New York.

Before Mr. Sniffkins, the broker, entered the park, he thought the best bargain he ever made was the purchase of his handsome mare. When he left the park he was of a different opinion. He said the contract he made with the UNITED STATES MUTUAL ACCIDENT ASSOCIATION to pay him $50 per week indemnity in case of being disabled, and $10,000 in case of death by accident, at a cost of about $20 per annum, was, under existing circumstances, by all odds the better bargain. The policeman's report that he believed the mare could travel a mile in less than a minute causes Mr. Sniffkins no satisfaction. The doctor thinks that with careful nursing his patient will be out in ten or twelve weeks.

Moral.—Insure in the U. S. Mutual Accident Association, 409 Broadway, N. Y.

$5,000 Insurance, and $25 Weekly Indemnity secured at an annual cost of about $10, which is one-third the rate of stock companies.



$10,000 Insurance at corresponding rates.

All valid claims paid at sight.

JOSEPH GILLOTT'S STEEL PENS

SOLD BY ALL DEALERS THROUGHOUT THE WORLD
GOLD MEDAL PARIS EXPOSITION—1878.

The Parker Gun.

Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Standard Works.

FOREST AND STREAM BIRD NOTES.

An Index and Summary of all the matter relating to ornithology contained in the first twelve volumes of the FOREST AND STREAM. 195 pages, paper. Price, postpaid, $1.50.

SHOOTING.

Its Appliances, Practice and Purpose. By JAMES DALZIEL DOUGALL. Contains practical information on guns and gunning. Its chapters treat of the Barrel, the Stock, Locks, Triggers, Recoil, Breech-Loaders, Rifles, Care of Guns, Ammunition, Loading, Dogs, Grouse, Woodcock, Black Game and Partridge Shooting. The chapter on "The Purpose" of Shooting is the best defense of legitimate field sports ever published. Elegantly printed on fine paper, 380 pages, cloth. Price, postpaid, $3.

SHORE BIRDS.

I. Haunts and Habits. II. Range and Migrations. III. A Morning Without the Birds. IV. Nomenclature. V. Localities. VI. Blinds and Decoys. This is a reprint of papers from the FOREST AND STREAM. Pamphlet, 45 pages. Price, postpaid, 15 cents.

PRACTICAL DOG TRAINING.

Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of FOREST AND STREAM. Pronounced by those who have read the chapters, as published in this journal, to be the best work on the subject ever written. 100 pages, cloth. Price, postpaid, $1.

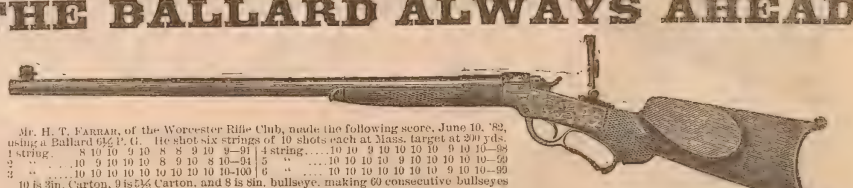
TERMS:

A Draft in full with the order.

NO AGENTS.

IMPORT DIRECT FROM

PIONEER WORKS, BIRMINGHAM, ENGLAND.



And also No. 1 Conduit St., Regent St., W., London. One minute from Regent Circus.

For the above sums the guns described can be placed on the cars in New York, all paid, in eight weeks from order reaching us. A comparison of these prices with those charged in the gun stores for really fine English guns, of first-class quality, will result in your ordering direct from the manufactory.

It has come to our knowledge that common guns are being sold in the States bearing our name. As we make only fine guns, genuine "Tolley" guns have engraved on the rib:

"J. & W. TOLLEY, MAKERS, ST. MARY'S SQUARE, BIRMINGHAM."

THE BALLARD ALWAYS AHEAD.

Mr. H. T. FARRAR, of the Worcester Rifle Club, made the following score, June 10, '82, using a Ballard 6½ P. G. He shot six strings of 10 shots each at Mass. target at 200 yds.

1 string	8	10	10	9	10	8	8	9	10	9—91	4 string	10	10	9	10	10	10	10	9	10 10—98
2 "	10	9	10	10	10	8	9	10	8	10—94	5 "	10	10	10	10	9	10	10	10	10 10—99
3 "	10	10	10	10	10	10	10	10	10	10-100	6 "	10	10	10	10	10	10	10	9	10 10—99

10 is 3in. Carton, 9 is 1¼ Carton, and 8 is 5in. bullseye, making 60 consecutive bullseyes on Creedmoor target.

THE ANGLER'S

AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

THE OLIMAX PATENT GUN CLEANER

is the most practical cleaner and oiler for breech-loading arms ever invented.

It operates on an entirely new principle, and it is astonishing how quick and well it will clean and oil a gun. Each cleaner is packed in a neat box with full directions for use, and will be sent to any address, postage paid, on receipt of $1.50.

Hotels and Routes for Sportsmen.

OLD DOMINION LINE.

The Steamers of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Kittyhawk Club Grounds, Van Slyck's, etc., etc. These points can now be reached by rail and stage from Norfolk. Norfolk steamers sail Tuesday, Thursday, Friday and Saturday. Lewes, Del., daily except Saturday at 4 P. M.

Full information given at office, 197 Greenwich street, New York.

KENEBAGO LAKE HOUSE.

This justly-famed sportsmen's resort is situated in the heart of the best fish and game region accessible in the State. Trout always plenty and take the fly, and deer, moose and caribou have here their favorite haunts. The Seven Ponds are easily reached from the house, most of the route by boat, where are established fine camps and boats by the undersigned, who were pioneers in opening up the country for sportsmen. The scenery around the lake is lovely beyond description. Distance from Rangeley City ten miles, by carriage and horseback. Mail service tri-weekly. Rates reasonable. Address GRANT & RICHARDSON, Proprietors, Kenebago Lake, Franklin Co., Me. July 15, '82.

NEW YORK AND PHILADELPHIA.

New York Transfer Co. will call for and check baggage from hotel or residence to destination.

H. P. Baldwin, General Passenger Agent, W. W. Stearns, General Superintendent.

TIM POND AND THE SEVEN PONDS.

The best trout fishing in Maine. The mountain and Lake scenery is unsurpassed by any in New England. The buckboard road has been repaired and improved, new cabins built, and everything put in first-class order. Good accommodations to all those seeking rest, recreation and pleasure. Round trip excursion tickets will be sold at low rates to Smith's Farm, in Eustis, and buckboard teams in waiting to carry passengers and baggage from farm to ponds. Good board, camps, blankets and boats, and guides if wanted. Terms reasonable. Everything in readiness.

Address KENNEDY SMITH, Eustis, Maine.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,

Grand Rapids, Mich.

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kenawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

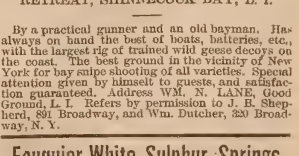
Guns, fishing tackle and one dog for each sportsman carried free.

THE ROUTE OF THE TOURIST,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, V., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords



THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. V., between the mouth of Chesapeake Bay and the Pacific Ocean.

KAY'S CHIP.
OR EXPANSIVE SHOT CONCENTRATOR,
with Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg, "Sea-Shooting,"—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

WE WISH TO CALL THE ATTENTION OF ANGLERS TO

Our Split Bamboo Rods,

They are six strip from butt to tip, have solid metal reel plate, German silver and nickel plated mountings.

They are superior in calibre and durability, and equal in finish to any rod in the market except H. L. Leonard's.

3-Piece Bass and Trout Fly,

EXTRA TIP AND TIP CASE.

Length, 10½ to 11½ feet. Weight, 8 to 10½ ounces, - - - - $18.00

3-Piece Black Bass Bait,

"HENSHALL PATTERN," EXTRA TIP.

Length, 8½ to 9½ feet. Weight, 10 to 12 ounces, - - - - $20.00

3-Piece Black Bass Bait,

SOLID REEL PLATE, EXTRA TIP.

Length, 10 to 11 feet. Weight, 12 to 15 ounces, - - - - $20.00

The above rods will be sent on receipt of price, and guaranteed to give perfect satisfaction, or money refunded.

Why buy the common Split Bamboo Rods of miserable calibre and poorly finished that are in the market, when you can get a splendid rod for about the same price or less?

The Hazard Powder Co.

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

ANSWERS TO CORRESPONDENTS.

THE FOREST AND STREAM has been permanently enlarged to a twenty-eight-page paper.

LOOSE MOOSE MORALS.

WE have it on excellent authority that three "visiting sportsmen," namely, Mr. W. B. Harding and Drs. Hunt and Wing, of Worcester, Mass., "after one night's watching, captured and killed a fine three-year old moose." This was in the early part of last July, at a Maine camp, which had the previous year gained unsavory notoriety as the scene of a like escapade. The proprietor of the camp appears to think July moose killing a huge good thing. He writes of it in that way, and drops a gentle hint to "let sporting men know" that by coming to his camp they can get moose at any time of the year. We do not propose to gratify him by advertising his illicit business of "steerer" to law breakers.

If, however, upon the specific information which has been furnished to them, the Maine game officials succeed in punishing these July moose killers, and the camp proprietor too, if his complicity in the misdemeanor can be shown, we shall take great satisfaction in publishing that fact. If these offenders are convicted, we will give our friend every opportunity to "let sporting men know it" to his heart's content.

This is a fresh illustration of the loose morals of men who think that because away from home and in the woods they are released from the obligations of good citizenship. They ignore or defy the rights of others, and, regardless of decency, capture and illicitly destroy what does not belong to them.

The fundamental principle of all game legislation is this, that in its wild condition game is the property of the State.

It follows that, as the game belongs to it, the State may prescribe when, how and for what purposes the game may be killed.

When captured in compliance with such expressed conditions, and then only, game may become the property of the individual. But until thus lawfully transferred, it continues to be the property of the State.

For example, wild moose in Maine belong to the State of Maine. That State gives public notice that it will retain possession of its moose until the first day of October. It agrees that on and after that date, but not previously, the individual may capture a moose, and so make it his own.

This resolves itself into a simple matter of ownership. Some of the principles involved in moose property are the same as those which obtain in horse property. If A says to B, "Upon certain conditions I will give into your possession, on the first day of October, the horse now in my stable," then when that date arrives B may acquire lawful possession of the horse. But if, some dark night in July, B sneaks into A's barn and clandestinely carries off the animal, he is a horse thief. The law recognizes his act as a crime.

In a precisely similar way, if before October, the time agreed upon by the State, which owns the moose, a man sneaks into the woods at night and kills a moose, he is a moose thief, and the law recognizes his act as a crime. In the eyes of the law, horse-stealing and moose stealing are similar offenses.

There are two ways in which the game laws are broken, and while each is a violation, one is vastly more reprehensible than the other. In the one case a person may be hunting for one kind of game that is a legitimate object of pursuit, and another kind of game, which it is forbidden to shoot, appearing before him, he may, in the excitement of the moment, kill it without much thought. The other case is where a party deliberately and with malice prepense watches for forbidden game and kills it. In other words, there are certain degrees of crime in respect to game, just as the law recognizes such different classes in respect to persons. But in the present instance the offence was clearly premeditated. The proprietor of this Maine camp and his guests knew perfectly well that the law on moose would not be up before the first day of October, but the guests went out and killed the game after "one night's watching." They cannot plead any extenuating "excitement of the moment."

We have said that this instance illustrates the loose morals relating to the game laws. But because this looseness of morals prevails, offenses against the game laws are not thereby any the less heinous crimes. Because a lax state of public regard for human life exists on the frontier, murder there is none the less murder. Because certain classes of politicians do not hesitate to plunder the public treasury, stealing the people's money is not thereby rendered any the less stealing. No hocus-pocus reasoning can excuse nor palliate crime by pleading public indifference to it.

It is high time that offenders against the game laws should stop boasting of their exploits. There is enough game left in this country yet to enable every man to get his share of it honestly. And one had better go without it than to steal it.

BLACK BASS.

THERE are no fish in America which are such general favorites, on account of their wide distribution, gameness and accessibility, as the black bass. The salmon angler must go long distances to a few streams and expend much time and money to strike his favorite fish, and the brook trout is only to be found in preserved streams, inaccessible to the many, or in the wilderness. But the bass is now found in most of our lakes, and there are few places east of the Mississippi River where the bass angler cannot find sport within a few miles of his residence, and good sport, too, from June to January, if the climate permits him to fish so late.

Except in western New York and a few isolated localities the name covers the two species properly known as large and small mouth. In the excepted places the name of black bass is restricted to the latter alone, and the other is, by some strange freak, termed "Oswego bass," as though it was a fish peculiar to the vicinity of that city instead of an indigenous species ranging from Canada to Florida.

Other local names hamper these fishes, even that of "trout" being applied south of Virginia, where they are termed "chub." Much difference of opinion exists regarding the comparative game qualities of the big mouth, many regarding it as greatly the inferior of its congener, and others claiming equal rank for it. Dr. Henshall does not discriminate between them, and we incline to think that the merits of the big brother with the open countenance have been underrated. This is one of those fairly debatable questions, but may be found to be mainly one of locality, and, therefore, hard of solution. Certain it is, if there were only one species, and that one the big mouth, it would be accorded high rank among our game fishes, far exceeding the pike or pickerel, or, in fact, any fish taken in fresh waters, excepting the salmon and trout; and many of our anglers do not except the latter in this comparison.

We are continually asked where good black bass fishing can be had. We hardly know of a lake large enough to afford range and breeding grounds between Connecticut and the Mississippi, and Canada and Florida, which does not furnish more or less good black bass fishing, as well as many of the rivers. Even some of the cold lakes of Maine contain them. There are lakes on Long Island which might furnish good bass fishing if stocked, for these fish are not natives of the Atlantic water shed, east of the Mississippi, excepting the lakes and streams emptying into the great lakes and the St. Lawrence.

In the early summer they usually take the fly well, and again in September. Then they are found near the shores, around rocks and among the stones, seeking the insects which drop from the trees, minnows, and other food. In midsummer the larger ones retire to deeper water, and are taken with baits of various sorts, as minnows, dobsons or helgramites, revolving spoons, etc. In some lakes they are reported as refusing the fly at all times, but it has never been our misfortune to find such water since we learned to take them with the fly.

We have recently been taking them with both fly and bait in the well-known Greenwood Lake, lying partly in New York and partly in New Jersey, and for the benefit of those who wish the detail of such fishing we will give our methods, first premising that there are almost as many modes of angling for this fish as there are anglers.

Our practice is to use trout tackle throughout when fishing for black bass, whether with fly or bait, unless casting the frog or minnow, which we rarely do. Therefore we do not care for the stiff "black bass rod, Henshall pattern," for the reason that a trout rod and tackle affords more sport. When fly fishing we hav a man to row the boat fifty to a hundred feet from shore and, seated in the stern, we cast about thirty feet toward the shore and from twenty to fifty feet from it, according as the shore is bold or sloping. On striking a fish the boatman stops and it is landed in a landing net. With bait, in midsummer, we anchor in twenty or more feet of water and try to fish on a bar, or ridge, if such a place can be found, and for this some knowledge of localities is necessary and should be possessed by the boatman. We use no float, but try to keep the bait a foot or more from the bottom, and in easy motion. In skittering a minnow or frog, the boat is rowed slowly and a stiffer rod is necessary, although we have cast a small frog thirty feet with a stout trout rod, but this is severe work for it, and is hard on a waterproof silk line, chafing it in the rings.

In July the water in most lakes "blooms," or "purges," that is, vegetable matter rises from the bottom and the water is no longer pure and clean. Then only small bass of a few inches long will take the fly, usually the small mouth alone, and the larger ones must be sought with bait, the big mouths upon the shallows among the lily-pads and the small mouths in the deeper waters. At Greenwood Lake bait is scarce, especially minnows, which is often the case in good bass lakes, as the bass eat up the suckers, chubs and other soft finned, desirable fishes, and leave only the spinous sunfish, which they care little for. Therefore the angler will do well to carry his bait alive, or to take salt water shrimps; the latter prove an excellent bait, even if salted, and are almost as good as the helgramite. We hope to offer them the fly again in September.

A MUCH ABUSED TITLE.

THE well-worn title "true sportsman" is as often misused as the opposite one of pot-hunter. What is the true sportsman but a true man with a fondness for field sports? To bear a fine gun; to own a brace or more of blue-blooded dogs; to be outfitted with all the conveniences, and and inconveniences, with which the latter day shooter is tempted; to wear a shooting dress with fifty pockets and costing as many dollars—these do not make the true sportsman, nor make him the less one. He may carry an old flint-lock and charge it from his grandfather's powder horn and buck-skin shot pouch; hunt with a cur of low degrew, or with no dog at all; wear hoddin gray with patches of another color; and yet be a true sportsman—or he may not be. Whether much money or little has gone to setting him afield, whether his pedigree and that of his dogs are of many generations, or few, if he is a true man he is a true sportsman. He will kill no game bird nor beast nor fish in its breeding season, nor by unfair and murderous methods, nor when the law of the land says they shall not be killed. He will not be "a law unto himself," nor preach the law to the multitude when he himself breaks it; nor kill for mere blood thirst or desire to kill more than another, nor for lucre only. It matters little whether he will shoot a grouse sitting, or scorns such a thing

one way or the other he will tell the truth about it, and be not ashamed so long as the grouse was killed in season and not for the sole sake of killing. Outwardly he may have the rind of the chestnut or the bloom of the peach; prickly or downy be the outer part, inside is there sweetness and savor. He may be a Christian or a pagan, worship God or an idol; whatever his religion, he worships Nature devoutly, though perhaps silently, and belongs to the great and goodly brotherhood of true sportsmen.

ADIRONDACK SURVEY NOTES.

IV.—THE ALL-DAY-PIDDLEY.

"WHAT bird is that just now making that singular combination of six syllables and drawing them down in a wearied cadence?" This was asked as we were going down a lake and taking notes of all living things and the sounds they made. Most of the notes of the birds were familiar, but this one, while it had a flavor of familiarity, had also a sort of dim, far-away memory of former acquaintanceship which would not be located. The guide rested on his oars and listened for a moment until I nodded when the same song began again, and then he said:

That is a little wood sparrow, something like our song sparrow of the fields. We now call it the 'all-day piddley bird'; and some say that it has changed its note within the past ten years."

"That's a queer name for a bird! What does it mean?"

"The story goes that the bird had, in former years, a lively note instead of the heavy, dragging one with which he now ends his song; but since so many tourists and no-account idle fellows have taken to loafing in the woods all day and doing nothing, in fact just piddling with wi'd flowers or pretending to fish, the bird has taken to scoffing at them. Just listen to him and hear how he says 'all-day-piddley-piddley-piddley,' with a rising inflection on the second syllable and then falling in jerks."

After this explanation one could not help putting the words to the song every time, and even imagining that a tone of discouragement was to be observed in the dropping staccatto of the last syllables. My guide was a very observant man, and, like all of his class, had his opinions of the people whom he met and took care of, for the woods is the place to study character, when all the trammels of conventionality are laid aside and the true inwardness of the man stands revealed. He evidently looked upon the men who came in the woods to dawdle away a life that was of little use to them with no great amount of admiration, although he did not say so. We held no further conversation on this subject, but it served as food for reflection; and this is how one of us reflected:

Here are plenty of young men who have every facility, plenty of time and money, to do something which will be of use to themselves and to mankind, but they are contented to have a guide row them about lakes in an aimless sort of way without an objective point, or if they have one they do nothing when they get there. They are "killing time," and the time of youth at that. Alas! this is the poorest and most unprofitable of all occupations. A little boating, a little lying under trees, a dinner, and a little feeble gossip or flirtation, and the day is done. A few weeks of such days and the season is ended, and the young man has "done the Adirondacks." Yes, but he knows nothing of them beyond the names of lakes, hotels, guides and the carries. He knows nothing of the geology, botany, zoölogy, the character of the timber or the depth of the lakes. He goes to the Adirondacks because it is the fashion, and he is bored.

These thoughts naturally suggested a contrast with the character of my own visit. Here I was with only a few weeks' leave of absence to gather the fishes, and in that time to try and get a few specimens of all that exist here. Every day was worked to its greatest capacity, and each new species hailed with delight. A few things were learned each day, and the entire trip was so full of enjoyment that the time to leave was looked forward to with apprehension of its coming before a complete collection could be obtained. I met one of the young men of whom the little bird sang, and he told me that he had exhausted the Adirondacks. Had killed three deer last season and no end of trout this year, but he cared very little for it, and really there was nothing to be seen in the woods. I thought of Sir Charles Coldstream and mentally said: "Used up; you've found that the world has nothing new for you at twenty-five." And we went our ways as the little bird sang: "All—day—piddley—piddley—piddley."

Now, after the young man departed there was another mental soliloquy, and this was about the style of it: "You have time, money and brains. You use only the first two. With all three you have the world before you to do what you will. If you could only take up some study in the woods you could make your mark and enjoy life. Take up some branch of natural history and it will open a new life to you. You will always be making discoveries which will give you no end of pleasure, and life will cease to be a burden. As an unpaid investigator you can do much toward contributing to knowledge while gaining it. Your powers of observation will develop, and you will become absorbed in something which will make life a pleasure. True, you may not become a Darwin, a Lubbock, nor a Baird, but then again you might; or, if not, you would have a new world open to you that you don't know of now. There are men who would esteem your chances beyond those of any other class of men, and here you are throwing them away." Having thus given the young man a good lecture mentally, I looked around to see if there was a chance of it doing him any good, but a field-glass showed him flat on his back with a novel, and imagination heard a little bird singing its sorrowful notes above him. I hope he will read this, and that it may give him a hint how to become a useful man instead of being the butt of ridicule for birds and guides. The Adirondacks are full of good things for one who knows how to find them; every mountain, lake, tree or rock is teeming with them. And yet the collection of postage stamps, of hotel cards, and kindred things occupies the intellect of human beings! I believe if some one would begin a collection of knot-holes the fever would be caught by others, and "beautiful thing in hemlock," or "a most unique poplar" would be shown with all the pride with which a geologist would exhibit a cabinet of rare specimens.

I have been much interested in talking with Mr. Colvin, the superintendent of the survey, and had no conception that so much was to be learned about mountains and the water systems which drain them. He has made a study of their characters, and delights in getting hold of a new "nest" of them. Facts concerning their elevation, shape, and their position in regard to other mountains, are all noted down, so that each mountain has an individuality of its own to him, and he knows them as a herdsman knows the members of his flock. I asked him if young men of the "all-day-piddley" class ever had an ambition to go to the mountain-tops to get views. He said: "Rarely. The labor is rather more than they care to perform, although it would richly repay them in the breadth of view they would obtain of the wilderness which can be had in no other way."

Ah, me! If those who have time to kill could only give some of it to those who have not time enough, the little sparrow would no longer sing his depressing song of "all-day-piddley-piddley-piddley." F. M.

MAINE SPORTSMEN'S ASSOCIATION.—The Maine Sportsmen's Association will hold their annual meeting and tournament with the Norombego Sportsmen's Club, of Bangor, about the middle of September, lasting four or six days. It is intended by the management to make this the most interesting and representative meeting that this association has ever enjoyed. The secretary is Mr. Chas. York, Bangor, Me.

EXPRESS TRAIN LOGIC.—When delayed by a "hot box," the most expeditious plan sometimes is, as they put it in railroad parlance, to "jack up the car and put in a new brass." As many men conduct their lives on the express train system, this hint may induce some of them to go a-fishin'.

The Sportsman Tourist.

TO THE BACKWOODS.

DOUBTLESS every one whose labors are strictly within doors feels an uneasiness and longing for change, when the genial springtime has flowed along to its full. It is ever so with us. Labor in the office becomes irksome and life seems a burden. Our eyes wander continually to the hills that rise in the distance and from whence our help has come in days past. Soon the resolution is formed to squander one full day and two half days among the clearings that lie beyond, and a companion is found and a horse engaged for the journey. Our recreation season has never yet exceeded three days in duration. We are not of the class that has time unlimited to spare for pleasure. Our fortune is not yet secure.

As we pass over the hills, the afternoon is well advanced and the atmosphere charmingly fresh and cool. There is a change within us already. The cigars that invariably must solace after the midday meal, within the confines of the office walls, now lie unlit in the case shorn of their tempting power. A distractor, mainly, is tobacco; and when one is not plodding through daily routine, but passing through changing scenes and experiencing new pleasures, has no mission. As we journey on, the farms, at first well-nurtured and attractive, give place gradually to uncultivated fields and stumpy pastures. The small brooks, as we rumble over the bridge that spans their rippling waters, become suggestive of trout. The primitive woods now stray to the wayside occasionally, and the voices of throstle and catbird salute us as we pass. Among some tall trees by the roadside were a number of purple grackles, and as they flew from one tree to another we noticed a peculiarity not observed in any other bird, which was the using of the tail feathers as a vertical rudder. Is this bird favored with unusual facilities for steering a flight that is comparativcly weak and awkward?

There are still further indications of changes in locality and mode of life. As we pass the rude unpainted buildings with bunches of hand-made shingles piled about the doorways, the forest line comes yet nearer to the roadway, pressing it closely upon either hand, and as the shades of evening are falling, darkening the margin of forest trees, the bridge that crosses the "river" that is our goal is passed and we shake hands with the generous hearted backwoodsman that is to be our host.

An early morning start along a dim path through a clearing and woods beyond, and that promises to lead us to the "still-waters" above, gives us an opportunity to observe, first of all, the bird life that abounds in these favored spots. Of singing birds there are those that frequent the towns, others that love the farmer's fields, and others that spurn both and take to the backwood clearings, and these latter are in the vast majority. It is not as though they shunned man altogether, as few are found in the dense forests unfrequented by man, but as though they had loved him and sought to be intimate, but were yet mistrustful.

I am sure birds make progress toward an intimacy, but still I hope this may not advance to an unseemly extent, so that contempt rather than regard will rightly express our feelings. The omnipresent robin that is found in our gardens and door yards and equally as well along the creek bottoms of the woods among the alders and rank-growing weeds where is the woodcock's chosen retreat, is upon the very verge of rejection because of growing familiarity. The English sparrow has passed far beyond the boundary line and is irrevocably lost. No mind that appreciates Nature at her best can ever advocate the sparrow's cause. Her yawp is ever the air rising from near and from far, and perchance a warbler or finch visits our dooryard and essays a strain of melody the song is drowned in the cry of this wide-mouthed cynical present nuisance. In the backwoods the blue jay is at home. Surely he is a rollicking rowdy and his wife is a scold. He tenaciously does the purple finch cling to his thread of song until seemingly he is ready to drop from his perch breathless. How clearly the white-throated sparrow's prolonged tone does ring through the clearing! The most attractive song, as we as the most plentiful, methinks, is that of the metallic-voiced thrush that rises and falls the scale on every varying key.

The morning sun cast flickering shadows of leafy branches about us as we stepped forth into the shallow rippling stream with adjusted tackle, to cast our bait for the wily trout. The air upon those highlands was fresh and pure and the brightness of the scene was enchanting, causing the inspiration of the occasion to flow full upon us as we paused a few moments in contemplation. Here was now the height of our anticipations. The prize was within our grasp, and we thought no more of office toil or the drudgeries of life. A new bond of sympathy seemed adjusted between us and mother Nature, and our ears were opened to the music of the stream, the rustle of the trees, the songs of the birds, and our eyes rested long upon the scene of blue sky, green foliage and steel blue water flecked with sunlight and foam. We know not whether these feelings are characteristic of the "sportsman" and whether we should classify ourselves as such. We were not arrayed in special garb and had invested only a few paltry dollars in an outfit of rod, reel and line. Externally am sure we were not "sportsmen." On the other hand feeling of greed and gain did possess us, and we felt the eagerness strike at the bait and saw the rush of line with the keenest pleasure. We love a heavy catch, and yet the recollection of our fishing days, as we bring them to remembrance, is most pleasant in these things that form the accompaniment to a fishing trip. The freedom from care, the change of scene the intimacy with bug and bird whom we love, form the chief attractions

We were not long in suspense as to the success or failure of our fishing this day. The speckled beauties caught eagerly at the bait, and as the stream was broad we easily secured them as we waded downward. None were found however, exceeding eight inches in length until the still waters in the natural meadows were reached, where were trout occasionally of a pound in weight to be had for the asking. Our catch at this point was full large enough, and our baskets began to hang heavily upon the straps.

Below the meadows we passed through a tangle of alders of immense size and plentitude of numbers, and it was here that we experienced some of the greatest pleasures of the day. The branches were full of birds, that seemingly sought intimate acquaintance. A Canadian flycatcher, with his bright yellow breast and black necklace, flitted about very near. The Blackburnian warbler, with rich blending of yellow and orange, the American redstart, spotted warbler, chestnut-sided warbler, and the summer yellow bird were especially plentiful and intimate and several times were we tempted to reach for them that we might take them in our hand. Above all their harmony arose the sweet voice of rose-breasted grosbeaks that were in the trees above in surprising numbers. At one place we paused and counted the song of six of them in the immed ate vicinity.

Wild pigeons were everywhere about us, chiming their unmusical calls with the rest. Disgrace should rest upon the man that would seek to kill these coveted birds, here where a shied stick or stone could easily reach them. Let no man take with him a gun to these favored retreats, these sanctuaries where bird housekeeping is practiced, lest he be tempted, and the agonized call and distressed song of the unmated birds come to him in his dreams to disturb his slumbers. One feels his interest in the things pertaining to the wilderness greatly intensified by the presence of the wild pigeon. The swift rustling flight is calculated to startle one and bestir his blood. The sound of their call-note brings suddenly into prominence one's hunting instinct. In fact the woods cannot be lonely and without interest when this noble bird is present. Through the woods where we were there was cut a straight road to a distant point, which was seldom ever traversed by man or team. It was nearly filled with second growth timber, but along the narrow track we saw many small flocks of pigeons feeding. These flocks would allow of near approach and then arise in unison in a dense bunch to the tree-tops above. We had no gun and, therefore, no slaughter of these is to be charged to us, but we did make an observation as to their habits that tended to confirm a theory we had heard previously advanced. We traversed this road in the morning of the second day for some distance and noticed all the pigeons that were then feeding to be of one sex, the male sex. The fact seems to be that the males feed in the forenoon, then return and "keep house," while the females feed in the afternoon.

The time for our return to our lodging place came all too soon, albeit we were both tired and hungry. As we wended our way along a dim trail the bluejays chattered and scolded all about us, and we had a realization of their wondrous beauty, as occasionally one would allow of near approach. Ernest Ingersoll, writing for New York, speaks of "birds that reside all the year around in our fields like the bluejay." One surely understands this to mean that the jay lives in open fields in the immediate vicinity of man, whereas we have never seen him but in the largest forests and as timid and wary of man as could well be the case. It is even difficult to get within good shooting distance of this bird. We cannot certify as to his living all the year around in northern New York.

At our entertainer's home, after a late and hearty meal we sat outside the door in restful content. The shades of evening were falling and we found about ourselves an ever-inviting scene, which we are disposed to try and picture. Before us was the grassy valley, extending far below and through which the river wound its way. On either side of this arose a darkened forest line of hemlock, beech and ash. Adown the valley a misty haze was taking form and low-covered, white and cloudlike, above the cooling earth, and covering the ground over as with a downy mantle. The crescent of a new moon hung in the western sky. The atmosphere was not disturbed by the slightest trace of a breeze, but was still, heavy and misty. The few sounds that came to us seemed exceeding fit accompaniment to the close of a backwoods day. There was the voice of the nighthawk from

above, the melody of many hylas, the cricket's sharp tremulo, the hum of many winged insects, and finally, as the mist and darkness grew apace, from the valley below came sharp, clear, and yet modified by passages through the heavy air, the tinkle-tinkle-tinkle of the musical, mellow-toned cow-bell. No music has been tuned in honor of this essential thing in backwoods life, which fits so becomingly the primitive conditions and customs of man. How timid and ephemeral is the cow-bell. The boy may hear it; the old man never. It has "moved on" to other sections where the axe has but begun, not completed its work. It ever will be moving on in company with the pioneers of civilization, and will be no more known to the second or third generation than is the keen bright axe of the pioneer known.

The mist had finally o'erspread the whole valley, other voices of the evening time had ceased, the last "high-reaching spoke of day's chariot" had disappeared from the sky, the moon alone shed its pale light over the scene, and as we rose to enter the house the gentle tinkle from below, the last knell to the close of day, had also ceased. J. QUAY.

CAMP FIRE IN THE GREAT SWAMP.

BY A. MULE.—PART III.

THE battle was o'er and our bugles sang truce, for the night clouds had lowered. The grim warriors of the chase and supper-table gathered close around the fire, and a pause prophetic of some fearful ills hung listening in the air. The little jobs of camp work were brought out. Here Jack F—— is sewing up the chair end of his breeches, lost in the reaching grasp of Bruin; there Tom S—— cobbles away at a bridle, and the Doctor and Shelb. are greasing and washing the dogs crippled by the day's fight.

"Been made a Son of Malta, Jack?" asked P——.

"That would make him a Maltese Jack."

"I'm willing," said Jack; "it comes from Bruin, and I always Malt-easy."

"Been since I heard you cussin' the bartender for not giving you something 'to take hold of your tripe,' then!"

"That was all assumed for the occasion," said Jack.

"Assumed! Like your tooth the summer you spent in Maine. Drank up all the cologne in the house on the plea that he had a bad breath, a rascal, and has a breath like a cow in clover."

"Well, my aunt had me cornered and I had to do something, for I was swelling up like Dickens' Shepherd on the tea-total dish."

"Hope you left your kinfolks more politely than you did the bar to-day when your undergirding gave way," said old Shelb., drily. "Blessed if you didn't leave there with more hurry and less breeches than I ever did see two friends part before—"

"I wasn't before, it was behind!"

"That was a lively fight, wasn't it Shelb.?" asked the Doctor.

"It was a heap livelier race after Jack got his legs started. But I've been so spiled by good luck that I don't call anything a first-class bar fight so long as you can see the man. In a real tip top scrimmage the bar and dogs and man ought to be mixed up so harmoniously down in the cane that you could no more tell which was which than you could separate the nose from the jackass out of a mule. Things has to get mixed in bar hunting. If a man ain't a mixer he had best keep outside. For I tell you this rambling around shooting business, blazing away and hitting two dogs twice for once into the bar, won't do. A man that wants to get bar meat has to go right in and rastle for it with the bar, and when, as I said, him and the dogs and the bar is down thar a humming like an eighty-saw gin, with the fur a flying up like a lint room, then he can catch some idea of what a genuine bar fight means."

"I cannot say that your picture is one I am very fond of," said Tom S——. "But unless one does go in with a knife, bear hunting is poor sport. The wild hog is far more dangerous as a fighter as the bear seems to fight a good deal like the nigger, plenty of bad temper and jaw, but an instinctive dread of hurting a white man, when it comes to close quarters."

"Tut tut," said the Doctor, pompously, "anybody can hunt the black bear. I'd rather kill forty bears than one desperate old tusker."

"You had better kill one first, Doctor," said old Shelb., who was riled at the attack on his favorite. "A bar ain't much to kill, I know, if you happen to start right, and I saw Andy Granger beat the brains out of one with a stick, but all the same I don't go about hunting sore-nosed old shes with cubs in order to kill 'em with sticks."

"Tell the boys about the fight you saw between the boar and a bear," said P.

"It was a great many years ago," said Shelby, "when game was much more plenty about here than now. I was out on a still hunt, and slipping through the woods I came upon a fine mulberry tree full of fruit and with a big old he picking berries off the ground. Presently he got tired of that and went up the tree. In a few minutes I saw a wild hog come trotting up and also stop just at that same tree. He was a very big boar, and of course saw the bar, but he wasn't afraid of anybody's bar and so went to rooting away among the trash, picking up the fallen berries on his own account. I guess he had some idea of the bar having been before him, for every now and then he would give a quick look up the tree and chomp with his teeth as if fairly cussin' the bar. All this time the old he took no manner of notice of the hog, but sot rared back up thar—hauling in the limbs and stripping the berries—smiling politely to hisself, and no doubt felt as fat, and sleek, and happy as any other rich old gentleman. This pretty scene might have lasted till yet but for the ambition of the bar. Arter collecting all the berries just around him and throwing the leaves down to the boar, who would resent it every time, he concluded to go a little ways out on a branch whar fruit was thicker and bigger. Out he went, and evidently got a fine haul, as he had both hands and all his jaws working like a engine. Little by little, as he ate his way, he would hitch further out on the limb. At first he was very cautious about his weight, but as the berries got sweeter and thicker, just so he forgot the situation. The boar had also come round the tree and was greedily picking up the loose berries that fell in a stream from where the old he was moving about above.

"How it happened, God knows—perhaps the branch was rotten—but, getting a little too far out, crack went the limb and down came the bar exactly a-straddle of the hog. It didn't take the hog more than the hundredth of a second to buck the bar off and give him a second tumble before he could say a word.

"When he riz I saw there was blood on the moon!

"'Whe-e-w! Blast you what did you do that fur?' said the bar.

"'You're an infernal black liar!' rip, rip, said the hog, charging at him.

"And they had it. Clear boxing and science on one side; gouging, and rough and tumble on the other, and a devil of a temper equally distributed. Fust the bar and then the hog had the advantage, and it was the loveliest fight I ever saw. One round the old he got the boar fairly in arms, and as he brought out his best hug, the hog's bones cracked. But as he struggled to release himself, by mere accident his head hits up against the bar's under jaw. Of course the old fool had his tongue lolling out, as usual, and when the lower jaws shut up suddenly with terrific force, off went about three inches of tongue—bit off.

"I had got so interested that I forgot all about what they was, and there I was a-skipping around and encouraging first the bar and then the hog. I think the hog, though, would have got the best of it, but they suddenly seemed to catch an idea of man about. Both stopped short off, looked first at me and then at each other, and then with a fearful grunt and snort they broke for the woods. By the time I remembered who I was they had gone."

"When that bear got home I'll bet a hat he said pretty much the same thing that Jack F—— did after his fight with a man named Sam Turk," said the Doctor.

"Jack was a little full—possibly his breath was troubling him again—and he got into a fight with Turk, who wears a wig and has no more hair than a billiard ball, though Jack didn't know that. During the scrimmage, of course the wig fell off, and after they were separated Jack swore he would have whipped Turk in three seconds but for the bald-headed scoundrel that ran in and jumped on!"

"Oh, Doctor, may the Lord forgive you for that one!" groaned Jack.

"Wish I could have seen the fight," said Tom; the "finest sight in the world is a rough and tumble fight between two well-matched men."

"Just so long as they only use fists and muscle I believe that to be true. But when it comes to shooting and stabbing, as it does easily out West here, then it is horrible," said P——, waking out his dreams of new and rare species of birds.

"I have heard my father tell of an incident that is sickening. Long time ago a party of lawyers were riding circuit in Alabama. In those days the terms of lawyer, gambler, drunkard and bully were about synonymous. And this particular party were extra in each of the four lots. There were five of them, all half drunk. My father had just crossed himself over the river at a lonely ferry when the party rode up. As the ferryman was absent, they offered a little copperas-breeches of a mover, who was also waiting to cross, five dollars to ferry them over in the flat. After some demur, the little man yielded, drove his wagon into the boat, followed by the high toned horsemen, and set off. Now, more miserable looking specimens than this mover and his outfit are rarely seen; and in default of other mischief, the restless bullies began to make fun of their ferryman. Finally one of them raised the cover of the wagon and discovered a ragged, sallow woman and a dozen scared children. They crowded round to see the show, in spite of the gentle remonstrances of the husband, and finally commenced to make outrageous and vulgar remarks about the whole family. Then he spoke sharply, and one of them kicked him. Breeches fumbled down in front of his wagon, drew out a rusty knife about two feet long, and went for the party. He killed four on the boat, and the other jumped in the river and swam ashore, where my father beat him nearly to death with a stick."

"Those were queer times. In such a state of society only could such characters as Bowie, Houston, McClurg and others have arisen. Desperadoes are necessities in such a case as a protection to the community. Otherwise the average bullies would soon destroy all society, but kept down by the predominant ones of their own class—these are readily controlled through their pride and interest to protect the peaceable citizens."

"The finest character of the kind that ever existed," said P., "was a man named Logan Brandon. He lived in Alabama in the flush times, and was a gambler, horse trader, speculator, everything by turns and nothing long. There are many sorts of courage, but Brandon's was very simple. He was without fear. Silent, gentle and pleasant; he never exhibited the ordinary symptoms of anger or temper. In his worst troubles he was entirely unchanged. Every child, woman and respectable citizen who knew him loved him with enthusiasm. Every desperado feared him. His friends used him, joked him, abused him at will, and to the roughest treatment he responded only with a patient smile. On one occasion with a party, he had stopped on the bridge over the Black Warrior River, which was very high. As they sat on horseback, looking down at the boiling flood beneath, one of them, Brandon's best friend too, offered to give him the fine horse he was then riding, if he would jump into the river. Without a word horse and man instantly went over the railing into the water! The friend rushed down to receive them as they came out; caught Brandon and pummeled him soundly, and took the horse away at once, making him walk home, swearing he was too 'blamed a fool to own a horse!' Brandon thought it was a tip-top joke.

"On one occasion a cousin of his had been divorced by her husband wrongfully and with great insult. The respective counties "took up" the cause of each, and there was the very greatest excitement. Brandon rode down over a hundred miles and found the man making a speech to a large crowd at a muster, as he was colonel of the regiment. Without a moment's hesitation Brandon scrambled up on the platform, and just as the dashing colonel finished a bitter tirade against his wife and her friends he felt a hand laid on his shoulder and a low voice sayin' 'Now you have abused a woman, turn and face a man!' He did turn and got one glance at Brandon's gloomy eyes and set face before he fell with a bullet through his heart.

"The fury of the crowd was awful. Only the most tremendous exertions by the sheriff and a few of the calmer citizens saved him from lynching. During all Brandon never said a word nor did his cheek pale or eye waver. Of course he was never tried by law in those days.

"On another occasion a fierce Indian outbreak occurred, and the settlers fled to the little towns or forts. Brandon heard that a poor widow had been left unwarned some twenty miles off, and was there in the very midst of the redskins. His own horses were lent out of course, and he could neither borrow nor buy at that time. Without a word he left on foot, penetrated the Indian lines, got the widow and her children and brought them to safety, having fought the Indians for the ten last miles with a four-year old baby strapped on his back!"

A curious sort of sound, something between the filing of a saw and the whistle of a bird, made us all look round at old Shelb. There he sat with a face drawn up like a bamboo root and the tears rolling down his face.

"Why, good heavens, Shelb, what is the matter?"

"Not a thing in the world," said the old man "'ceptin' that baby."

"What has that got to do with your spouting like that."

"O, nothing much, 'ceptin' that baby was me!" said Shelb, trying to grin. "Thar was mam and little Jake and Bet and the baby, or me, if you like, on that trip the colonel was telling about, and a big brindled dog that we allers called Pup. And but for Brandon we was surely dead people that night. God bless him and bless 'em all, for they are all gone long ago, all dead but the baby, and that's me!"

"Do you remember much about it?"

"No," said Mc. "I don't, of course, bein' as I was a mere pup then, and scarcely had my eyes open. But I've heered that Brandon and mam both fainted when they got into the town, and poor old Pup he died with a arrow inside. I wish I had his breed, anyhow."

"The Lord knows you have dogs enough now for any middle-sized man!"

"Tain't the number that makes a pack, but it is the temper," said Shelby, evidently glad to change the subject. "Now I make it a rule never to feed my dogs at home, but hide all the vittles the best I know how, and let them take chances for finding it. Then the peartest come out first best, and so merit is rewarded!"

"Well, that is a new system of dog-breaking," said the Doctor, who was awfully scientific on sport.

"New or old, it brings out the best dogs. For a dog that can't make his own living ain't worth keeping. My dogs know the seasons as well as I do. In the summer they live in the orchard on fruit, berries and fruit in the woods, and I have a hard time to keep them out of the green corn. They will eat corn, dried or green, off the ear, as bad as a mule, and go out on regular hunts for rabbits, rats, moles, bird nests, snakes—anything almost that is chewable at all. In this way I can keep a large number of dogs, and keep them peart and active. Of course when I hunt they get all the fresh meat they can eat, and so they are always anxious for a hunt, and soon learn to be careful about it as a mere question of belly-timber. I don't keer much about having a dog larnt to dance or whistle, or anything of that sort, but I do want to develop what brains he has got, so as to fit him for my business. And for man or beast the best school house is the belly. This is like the washing machines—'self-acting, universal and cont nuous.'"

"I heard of a case in point in Virginia," said Tom. "A gentleman was bragging about his trotting horse, when a neighbor offered to match a hog against him. The race was made. One month for training and the course three miles on a certain road. The horse in harness, the hog to go as he pleased.

"The hog being selected—a long razor-backed pike—was first put into a pen at one end of the course. Kept without food for twenty-four hours, he was then kicked and pulled over the track to another pen, there fed, then returned to pen No. 1. The next day or two the same thing.

"In a few days Major Hog had grasped the situation. In fact he soon became impatient to make the run at least one way. And the day of the race he fairly distanced the horse—squealing at every jump!"

"Bed time!" yelled the Doctor.

"Sleep—sleep—man must have sleep to live. Eusebius says the key of life is to sleep early and rise early."

"Oh, he was an ass, as you-see-by-us."

The Doctor nearly fainted.

"May a million of mosquitoes stick you for that," said he.

"Have to be like Florida muskeeters, then, big enough to carry my net off."

"Florida is where they swarm so that they put out the fires, isn't it?" said Jack.

"Same place where you sometimes have to poke a hole up through the insects to see the sun!" said Tom.

"And vessels coming up to the coast look out for the mosquito haze over the land as a mark," said P.

"Shaw!" said old Shelb, "what air you boys lying so for? Why, I've got a breed of 'skeeters back of my place as big as turkeys, and every time they nip a man he thinks a dog bit him; and they bit a little nigger last August so much like a dog that it gave him the hydrophoby, and——"

"That's enough—that's enough. Good night—good night."

THE FORT KLAMATH COUNTY.—A Fort Klamath, Oregon, correspondent, in a personal letter says: "I think it would be hard to find a place that has a larger variety of game than is to be found in the vicinity of this post. And the fishing—well, it must be seen to be believed. An officer of my regiment, whom I relieved here, and who is an excellent fisherman, told me that he several times started to write up some of the catches of large trout he made and saw others make; but did not do it for fear of being accused of lying. I saw a string this evening brought in by one of my men, among which were four fish weighing all over five pounds, and a number ranging from two to three pounds each, all genuine *Salmo purpuratus*. They take a fly beautifully, the trouble is not in hooking them, but in landing them afterwards. Williamson River certainly "takes the cake" as a trout stream, and I hope eventually to make a tolerable fisherman myself if I stay here long enough. At present the birds take up most of my spare time, I find so many species, here whose acquaintance I have not been able to make heretofore, that I don't find much time for fishing."

NORTHERN PENNSYLVANIA TROUT.—Wellsboro, Pa., July 31.—Am just out of the woods, where, thank Heaven, I had one well-put-in week under the shade of hemlock and pine, where I could lie hour after hour on fragrant browse, in a silence only broken by the wood warbler, the hermit thrush, and the silvery whisper of a mountain brook. I had an Indianapolis editor along, a man of large experience in outdoor life. He votes Northern Pennsylvania the most pleasant land he has struck for camping out, though the Nepigon and many other regions give much larger trout and more of them. We found the trout full of eggs and ran it light on them. I took over 500 eggs from three trout less than seven inches in length. It looked like wanton destruction—trout murder—and we let up.—NESSMUK.

LONG ISLAND.—Elwood, Suffolk County.—Plenty of foxes on the plains out this way. Quails are scarce.—J. H.

LIGHT vs. HEAVY CANOES.

IN FOREST AND STREAM for July 13, appears an article by "J. R., Jr.," in which he alludes to a little canoe against which he kicked his toe, at Ferrier's camp on Third Lake, Fulton Chain, Bronson's Tract. The canoe was the worse for wear. He turned it over and read the name "Nessmuk." He says, "Ah! I see how it is now. 'Nessmuk' paddled around the waters in that miserable little cheese box, cramped up, sitting on the damp bottom of this boat. No wonder he told us such pitiful tales of his coughing continually, being sick all the time, finally going out of the woods disgusted, and determined to cry down the Adirondacks as a fraud and a humbug. Now Mr. 'Nessmuk,' when you go into the Adirondacks again, go in a boat—take one of the new double-enders that weigh about sixty pounds, and as you get into it sit down on a seat—stretch out your feet, and row like a man, let the Indians keep to the paddle if they like, then you may be able to shake off that cough, etc."

I rise for a few explanatory remarks.

The canoe against which "J. R., Jr.," kicked his toe last June at Third Lake was not the canoe I cruised in last summer. I cruised in the Nipper, larger, longer, and two pounds lighter than the Nessmuk. I cruised in the latter about six or seven weeks and 550 miles, the previous summer.

That healthy men and women are, in our changeable climate, subject to sudden and dangerous colds, is mournfully true. Deaths by pneumonia, pleurisy, and kindred diseases are sadly frequent, as well in city as country, and sickness is more apt to strike the comfortable, well fed citizen than the dweller in forest camps. That through exposure to storms and an all night soaking in a submerged forest I contracted a cough that was hard to beat was no marvel, and might easily happen to a younger and stronger man. Just how it would have helped my case to have been chilled through in a heavier boat, is one of the things I shall never find out. I am always a little ashamed of being sick. I have a sort of blue water notion that no man has any business to be sick. "Nobody ships for nurse," as old sailors say. However, I stuck to the cruise for over 200 miles, taking my canoe over all the carries. She only weighed sixteen pounds. Had she been a double-ender of sixty—well, I shouldn't have been there.

As to the superior comfort of riding in such a boat such as "J. R." recommends, he has simply got the cart before the horse. The comfort is all on the side of the canoe. The boat he recommends is the regular long-laker—the guide boat of the wilderness. In her you sit all day (you dare not stand up) on a hard, painted board, with no choice or change of position. The position becomes very tiresome in an all day ride. You are even glad of the relief afforded by a "carry." Now, if you be a genuine canoeist, you reverse all this; you go as you like, and you sit on a soft cushion, with four or five changes of "posish," and consequent relief to stiff, tired muscles. To wit: You are provided with a seat, made by stitching the two ends of one yard of unbleached sheeting together, and closing one end with a circular piece of the same twelve inches in diameter, sewed in strongly. This makes a round bag a little more than two feet long and one foot across. To convert it into a cushion, fill it to the desired height with hemlock browse, grass and leaves, dry moss, or grass. About four or five inches suits me. A taller man may prefer a seat an inch or two higher. Pack the stuffing solid as possible, and turn in the loose cloth at the top. Shape and flatten it to your notion, and you have a seat that adapts itself to the lines of the canoe—and the canoeist—perfectly. It is never hard or tiresome, and, on making a carry, you throw out the filling, put the bag in your pocket, and fill it again in five minutes, when wanted. At night it makes a capital pillow; or, if not needed for that, an excellent and safe depository for the loose duffel that is always getting lost in the leaves and debris of an improvised camp.

When tired of the one position, push the seat back, double a coat or blanket, and sit lower.

Next, paddle in a kneeling posture, varying it by sitting back on your heels, when tired.

Then try the squatting position, as a relief.

Finally, go back to the bag cushion, which is the first and best position. The others are, each one, a rest—just what you do not get in a crank long-laker, as you "row like a man," with "room to stretch out your feet, swell out your lungs and fill them full of the health-giving air, etc."

The pulling of oars is not new to me. When I was twelve years of age it was my daily task to pull an oar (not a swivel oar, but loose in thole pins) from East Dennis, on the fish-hook end of Cape Cod, straight out to sea, in a second-hand whale boat, for fish. In my young manhood I "pulled stroke" in the waist boat of old Rajah, of and from New Bedford, West, master. The dog's life of a sailor sickened me forever of a life "before the mast."

I have plied the round-bladed paddle of the *Muris* and *Mundrucus* on the Amazon River, the Madeira, the Rio Negro, and the Tocantims, in Brazil, and the narrow blade of the Chippewas in a light pine dugout on the upper waters of the Mississippi. I have at last come to accept the light, double-bladed paddle as the *ne plus ultra* of propulsion in a light canoe.

I have never gone on a cruise in which I did not learn something new. I am always open to advice. But in return perhaps I can give a useful hint or two; at least I can try.

First. If you love nature in undress learn to go alone. You can study your route and the courses of streams, and you carry a compass? Be self-reliant. *Go alone.* If, in the grand old forest, you are not sufficient unto yourself, select a partner, and take a thirty-five-pound clinker-built cedar canoe. Two men make lighter carries, and some men must have company (I prefer to be alone).

Second. While breech-loading guns and bamboo rods have been brought to something like perfection, nobody seems to have made a study of light, single, paddling canoes. The question of the ounces and pounds of the canoe in proportion to weight of the canoeist I have not seen agitated as yet. In boats and canoes we run all too heavy and trust too much to guides. Careful experiment, covering months, or at least, weeks, through several seasons, leads me to put in type a few general rules—approximative only, but mainly correct. As thus: For a light weight canoeist, one pound of canoe to six pounds of canoeist.

This gives a canoe of 20lbs. to a 120lb. man. It is more than is needed. The dimensions of such a canoe should be, length, 10½ft.; beam, 27in.; rise at centre, 7 to 8in.

For a heavier man, increase weight and size of canoe slowly. For instance, weight of canoeist, 150lbs. For such a man, a canoe 10ft. 9in. in length, 28in. beam, weight, 22lbs. (The canoe will carry the man and a light passenger of 100lbs.)

For a muscular, strong welter of 180lbs. or thereabouts, a canoe 11ft. long, 28in. beam, 9in. rise at centre, steep fore foot, and 14in. shear at stem; weight, about 26lbs.

Strength of each of the above canoes, mainly on keel, keelson and garboard streaks, with pretty strong and well guarded stems.

(As boatmen and canoeists, my dear "J. R. Jr.," we mostly go over-weighted. Remember it.)

As to the well-worn "cheese-box," against which you kicked your toe last June, I sold her to Perrie last summer. But, as regards her, Harry Bronker, a muscular young cheery Baltimorean, paddled her from the Forge House last July, through three first lakes of the Fulton chain, at a rate that left me, in the Nipper, out of sight. His weight was 175lbs.

Mrs. Sperry, who has a camp on Fourth Lake, used to borrow the Nessmuk, and paddle her around the lakes, delivering supplies. Mrs. Sperry weighs over 130lbs.

No, I cannot, as yet, say just what the proportions of canoe and canoeist ought to be, to get the proper combination of relative weight, with safety, pleasure and convenience.

But, I am going to know.

I have ordered another canoe of Rushton to weigh 12lbs. (I think 10lbs. would do). Under date of June 9, he says, "Can build you a boat of any size. Whether it would float you or not cannot say. I will build it awful light, but won't say how much racket it will stand. I expect it will drown you, yet. So far as I know no one has ever seen a 12lb. boat of any make, fairly afloat, with a man in her."

Under date of 26th June, he writes, "I'll make it. I'll make it light. But you just go in it in shallow water for a spell. I don't dare guarantee *anything* for strength. It may go to pieces like an egg shell."

Mr. Rushton builds better than he knows. He can build a 10lb. canoe that I can ride. I am astonished and rigged that even my personal friends should say, "Ah! your light canoes are for notoriety, and a trifle of bluff, eh?" Now, I am no gambler—never was. But I am no moralist. I had as lief back an opinion with a wager as an argument. And I will wager $100 or $200 that J. H. Rushton makes me a canoe to weigh less than 10lbs.; less than 8ft. in length. That I take the canoe at Tom Nightingale's door (Moose River House) and paddle and carry the same through the Fulton Chain to the Raquette Lake, register at Ed. Bennett's, at Leavitt's on Forked Lake, go through to Paul Smith's, come back by way of the Tuppers, Smith and Albany lakes, to Ed. Dunbar's on the Beaver; from there by the Beaver and the seven-mile carry to Twitchell Lake, thence to Big Moose and down by the three carries to Fourth Lake, and down from thence to the Forge House. All to be done by a light-weight, who has never been over the route before farther than Long Lake. My duffel shall not exceed 20lbs. Less is better.

Row boats are good; sailing canoes splendid for those who delight in canvas.

We all have our hobbies. My hobby is the lightest possible clinker-built cedar canoe and the double paddle. I do not quarrel with other men's hobbies. I like them, rather.

One word as to my decrying the Adirondacks as "a fraud and a humbug." Never. Where do you get that? A better, manlier, sturdier class of men than the guides of the North Woods I have not seen. All the same, I am no baby. I have read "Adirondack Murray" and "Camp Lou." Bismillah! It is bosh! There were twenty-three deaths from lung diseases in the St. Regis country and the Saranac region; many more barely crept out alive to die at home, last summer. Don't tie to a vain thing.

The entire North Woods region is exceptionally healthy, but it won't quite bring the dead to life, "Adirondack Murray" and "Camp Lou" to the contrary notwithstanding.

But it is the best region on this earth for a cruise by a lone, self-reliant canoeist.

Never again when I get sick will I own up.

Verplanck Colvin and other writers have put up the value of the Adirondacks as a park, so to speak; a National or State park. Just so. And on a score of the main streams, without let or hindrance, dams have been placed, and the bright, green shore-lines have been converted into lines of desolation and death.

Time passes. I am one of the great army who are always working. But I have time for a cruise. Does "J. R., Jr.," mean what he says? Will he meet me for a cruise of a month or more at any point between "Paul Smith's" and the Forge House? I in a 12lb. canoe, he in such boat as he pleases. Address "Nessmuk," care of FOREST AND STREAM.

NESSMUK.

Natural History.

SOME ICHTHYOLOGICAL TERMS.

BY PROF. D. S. JORDAN.

THE terms most commonly used in the description of fishes may be explained to the beginner by a sort of object lesson. The reader is supposed to have at hand a specimen of the common brook sucker (*Catostomus commersoni*) and a black bass (*Micropterus dolomieu*).

The general form of the body may be indicated in general terms, as elongate, oblong, ovate, etc.; more specific terms are compressed (flattened laterally), depressed (flattened from above); fusiform (spindle shaped), etc.

The depth of the body is measured at the point of greatest height. It is described by comparison with the length, along the side from the tip of the snout to the middle of the base of the caudal fin. The depth is usually proportionately greater in adult fishes than in the young, a fact that should never be forgotten. "Depth 5" is a concise way of stating that the greatest depth or height of the fish is equal to about one-fifth the length of the fish from tip of snout to base of caudal. By a few writers the length is measured to the tip of the caudal. In such cases the phrase "total length" may be used. There are many good reasons why the caudal fin should not be included in reckoning the length of the fish's body.

The proportionate size of the mouth is often best measured by noticing at what point the maxillary terminates, the jaws being usually longer in proportion in old than in young fishes. The length of the head is measured along its side from the tip of the muzzle to the end of the bony opercle, and is described by comparison with the length of the body, as above noted. Thus, "head 5" indicates that the head forms about one-fifth part of the length from the tip of the snout to the middle of the base of the caudal fin.

The principal bones of the jaws are the following: The two dentary bones, joined in front by a symphysis, forming the mandible or lower jaw; the premaxillaries (or intermaxillaries) forming at least the middle of the front part of the upper jaw, and in some cases (as in the black bass) its entire edge. Attached to the premaxillaries, either behind as in the case of the black bass, or below, as in the trout, are the maxillaries (or supramaxillaries). In the black bass these are broad and conspicuous, extending backward below the eye; in the sucker they are scarcely recognizable without dissection, sometimes the maxillary is subdivided, provided with a supplemental bone or otherwise modified.

The jaws are sometimes provided with lips. These lips may have various forms, or they may have about the mouth fleshy appendages various in form or size, known as barbels. These are found in the catfish, but not in the bass or the sucker.

The upper jaw or the premaxillaries are said to be protractile, when there is a furrow in the skin which separates them from the skin of the forehead, as in the sucker. They are not protractile, when the skin covering the upper jaw, in the middle at least, is continuous with that of the forehead.

The principal membrane bones of the head may be readily recognized on the sucker. The large bony plate occupying the posterior portion of the sides is the opercle (*operculum*); below this, and extending up obliquely behind it is the subopercle; in front of the opercle, nearly parallel with its edges, and separating it from the cheek is the preopercle, and below the angle of the preopercle, wedged in between it and the subopercle, is the narrow interopercle. Below the eye is the series of suborbital bones, and in front of the eye, below the double opening of the nostril, is the preorbital. On the top of the head in the sucker, is the characteristic unossified space between the parietal bones, known as the fontanelle.

The eye is proportionately much larger in a young fish than in an old one; its relative size is usually expressed by comparing its diameter with the length of the head, with the length of the muzzle (distance from tip of snout to front of eye), and with the width of the interorbital space (distance between the eyes above).

The tooth-bearing bones of the mouth can be readily recognized in the black bass. The principal of these are the following:

1. Dentaries, the bones of the lower jaw.
2. Premaxillary, above described.
3. Maxillary, above described. This bone is usually toothless, or merely toothed upon its edge.
4. Vomer, the bone on the middle line of the palate, immediately behind the premaxillaries. It is provided with a patch of teeth in the black bass.
5. Palatines, the bones on each side extending backward and outward from the vomer. They are armed with teeth in the black bass.
6. Pterygoids, on each side, behind the palatines. These are provided with teeth in the rock bass, but not in the black bass, nor, in fact, in most fishes.
7. Tongue.
8. Hyoid bone, the base of the tongue, to each side of which gill arches (usually four in number) are attached.
9. Gill rakers, the stiffened appendages of the gill arches, or more particularly of the anterior pair. The gills are on the outside or convex edge, the gill rakers on the interior or concave edge of the arch.
10. Upper pharyngeals, on each side of the median line on the upper side of the œsophagus, behind the gill arches.
11. Lower pharyngeals, one on each side of the median line, below the œsophagus and behind the gill arches. These bones are modified gill arches, and their form and structure varies widely in different groups. In the black bass they are flattish and triangular. In the sucker they are sickle-shaped. Sometimes the two bones are fully united.

Below the subopercle and interopercle, and nearly parallel with them, are the bony branchiostegals, enveloped in the gill membranes. These are three in number on each side in the sucker, six in the black bass, and their number often furnishes characters of importance. On the median line below, separating the gill openings from each other, is a region known as the isthmus. To this the gill openings are sometimes attached, as in the sucker, in which case the gill openings are separated and each restricted to its respective sides.

The scales when normally developed are usually either ctenoid (with the exposed or posterior edge rough or ciliated, as in the perch or black bass), or cycloid (smooth, as in the sucker). In most fishes a series of scales along each side of the body is provided each with a mucous tube, those forming a conspicuous ridge known as the lateral line. In many scaleless fishes this chain of mucous tubes is also developed.

The relative size of the scales is indicated by counting them. Of course, the smaller the scales are proportionately, the more numerous they are.

The number of scales forming the lateral line is one of the most valuable of specific characters. When the scales in the lateral line are larger than the rest (as in the trout), or smaller or otherwise irregular, the number of cross rows of scales above the lateral line should be taken.

"Lat. l. 65" expresses lateral line with 65 scales. "Scales 10—65—X," the scale formula of the sucker, indicates 10 series of scales between the dorsal fin and the lateral line, 65 scales in the lateral line, and 7 rows between it and the ventrals.

The fins are (a) the paired fins, which are pectorals (corresponding to the anterior limbs of the higher vertebrates) situated immediately behind the gill openings, and the ventrals (corresponding to the posterior limbs) placed behind or below the pectorals, and (b) the vertical fin or fins on the median line of the body. These are the dorsal (on the back), caudal (on the end of the tail), and the anal (on the lower side of the body behind the vent). The dorsal is sometimes divided into two fins, or even more. In this case the fins are distinguished as first dorsal, second dorsal, etc.

The position of the ventral fins is a matter of much importance. They are said to be abdominal when on the belly, considerably behind the pectorals, as in the sucker; thoracic when inserted under the pectorals, or very nearly so, as in the black bass; jugular when in advance of the pectorals, as in the codfish. A more minute account of the position of the ventrals may be given by comparing their position with that of the front of the dorsal fin, or with the middle of the body.

The rays composing the fins are either spines or soft rays. Spines are usually stiff and pointed, and in any event are never articulated and never branched. When spines are present there is usually one in each ventral fin, and one or more in the anterior part of the anal, and several in the front part of the dorsal, the spines constituting the whole first dorsal when there are two separate fins. The pectorals and caudal are seldom provided with spines.

The soft rays are always articulated or jointed toward

their tips, and most of them are also branched. They therefore usually widen outward, and are seldom rigid in life. In some fishes the spines are so feeble or flexible as scarcely to be distinguished from soft rays.

In all cases where the dorsal and anal fins are composed of soft rays only, there are at the anterior edge of the fin from one to three undeveloped or rudimentary rays. In most cases, these rudiments are not included in giving the numbers of the fin rays. True spines, no matter how short, should never be overlooked. The last ray in the dorsal and anal fins is usually split to the base. This is counted as one ray, and not as two.

The number of fin rays may be conveniently indicated by the use of Roman numerals for the spines, and Arabic numerals for the soft rays. When there are two distinct dorsal fins, a dash is used to separate the enumeration of the first from shape of the second. When a fin contains both spines and soft rays, a comma separates the number of the former from that of the latter.

Thus in the black bass, "D X, 13" indicates a continuous dorsal fin, with ten spines and thirteen soft rays. In the white bass (*Roccus chrysops*) D IX—I, 12 indicates two separate dorsals, the first with nine spines, the second with one spine and twelve soft rays. The number of rays in the pectoral and caudal fins is seldom of much value in the classification of fishes.

THE MONSTERS OF WHITE RIVER, ARK.

SECOND PAPER.

IN my last I wrote the facts, so far as I could gather them, about the alligator gar and the loggerhead turtle. Recent observation and hearsay go to prove that I got these facts about right. But I will relate some facts about the loggerhead turtle given me since I last wrote by a gentleman whose veracity there is no reason to doubt. He said: "I was living near a bayou fifty or sixty yards wide in Louisana. I had living with me a colored boy thirteen or fourteen years old. This boy went down to the bayou one day to fish, but soon came tearing back, crying, 'Oh, boss; oh, boss; Ise see de debil down in de bayou suah.' Seeing that the boy was fearfully frightened and had seen something strange, I and a friend took a rifle and went with the boy to the bayou. When we reached there the boy pointed to the other side of the stream, about forty yards away, where we soon saw a round body as large as a man's head appear above the surface of the water for a few seconds and then go down again, soon to reappear. As it came up the third time I shot at it with the rifle, but missed. I shot twice more, but could not hit. About this time the friend with me made out that it was a turtle's head. I could not believe that it was so large, but he insisted that it was. As there happened to be a dugout there with a 'gig,' 'spear,' or harpoon in it, we concluded to paddle over and investigate. As we approached we found that it really was the head of an immense turtle, or the immense head of a loggerhead turtle. He would drop his head down under the water for a minute, then raise it out for a bit, then repeat.

"My friend being an artist with the harpoon, threw it, when the turtle came up, with all his force into his neck. These harpoons or spears are generally made with three sharp points of steel with barbs, set on a straight light pole with a loose socket, with a strong cord tied to the spear proper, so that when a fish is struck the handle or pole pulls out, leaving the harpoon in the fish or animal attached to the cord. As we drew the struck turtle to the surface we were astonished to find another of equal size with its jaws firmly clasped on one of the wounded one's legs. We slipped a cord around this one's neck, and "toted" them both ashore and up the bayou "bluff" thirty to forty feet, before the one let go of the other's leg. When we stopped he let go. We then separated them a little way, but they made right at each other again like two bulldogs, not paying the least attention to us. After a few snaps the one fastened on to the other again, having secured a good hold on the other's leg and held on, the other fought by snapping alone, and though they have such great strength in their jaws he could not tear the skin on the other's legs, but when he would strike the edge of the other's shell he would chip a piece out. After a time we separated them again, but they glared at each other a moment, then rushed together again. From their appearance they had been fighting a long time. Each had the skin all torn from the back of their heads and the skull laid bare. We let them fight for some time, then cut their throats and weighed them, one weighing 138 pounds, the other 142 pounds. On opening them, as further evidence of their long battling, we found no food in either except a few large fish bones in the stomach of one."

Here we have some facts about this turtle, giving some idea of its size and its ferocity in battle. The person who gave me these facts is a butcher and had facilities for weighing them, and from good evidence I have reason to believe that specimens have been seen weighing 200 and even 250 pounds. As I said before, they appear to be entirely inoffensive so far as danger to human beings is concerned.

The next monster I will name is the ubiquitous White River mosquito. If it takes a million of these little pests to make one agglomerated monster, countless millions can easily be found. There are many different species of them, but the worst, and I think the very worst of all mosquitoes, is the small black one prevalent in June and July. This little pest is a sneaking, miserable little thing, it as a rule bites you behind your back, makes its way up your pants leg, under your shirt cuffs, behind your ears, or any other place where it can take a mean advantage of you. It don't give you much warning, like a good honest "skeeter," by its song, but drops right down silently on some unguarded place and "slaps it right to you." Ordinary mosquito bars are but little protection from it, for enough will work their way through them to make things lively for you before morning, and if the "bar" is not carefully tucked in all around, if any point is left hanging down loose, this miserable creature, unlike any other mosquito I know of, will find it, and pass up between the bar and bed and point out the way for all her brothers, sisters, uncles, aunts and cousins, and introduce them to you. A "smudge" or smoke has but little terror for them, a good bobbinet (I believe that is right) bar is your only surety of getting rest unless you sleep in daytime and fight "skeeters" all night. These mosquitoes are only bad in ordinary seasons along White River during the months of May and June; after the "overflows" entirely subside and the "bottoms" become dry, which they usually do by July first, they are not bad, but in seasons like this, after very high and very late high water, they are like the poor, with us always.

The next dreaded monster I will name is the "swamp fever," twin brother to "yellow Jack," or the yellow fever of the tropics. It was formerly just as fatal and uncontrollable as the yellow fever itself, but I am now assured that the Southern physicians have developed a treatment by which, if they can reach the patient in time, they can save the great majority of cases; but if they cannot reach the patient directly after the attack there is little more hope than if it were the yellow fever itself. It seems to be an acute form of "biliousness," attacking the brain and kidneys, resulting in speedy, drowsy, painless death. It is not contagious, like yellow fever, and is brought on by long continued exposure in the swamps and water, and the improper treatment of more mild forms of bilious or malarial diseases.

The next vicious monster that none need wish to meet is locally known as "bilious fever," with or without "congestion" or "congestive chills." I do not know what the doctors call them, nor do I care, but I do know that I do not want any of their kith or kin to call on me again.

I located myself here on the banks of White River the 1st of June, at the commencement of what had every indication of being one of the most malarious seasons ever known, and at one of the most sickly points on White River, trusting that my great experience of nearly a half century in the Illinois River bottoms—the most malarious stream north—would enable me to take care of myself and ward off all such troubles.

But as old Hank said at the close of his hoop snake story, I thought myself a little too blamed smart, so I "catched it" and "catched it" hard. I was in very bad condition when I reached here. As the major would say, I was "very, awful bilious." But I "tuck" my old well tried Illinois remedies, that knew no failure in warding off chills and fever, there, and serenely followed my principal occupation in life, namely, searching for hoop snakes, coach whip snakes, cotton mouth snakes, spreading adders with fangs an inch long, lizzards, cray fish, swapping lies with the natives, etc. I could not keep out of the swamps or off of the river, there I could find things new to me every day and perhaps some new to science, and what was refreshing, I could get sight of a steamboat once in a while, which reminded me that there was somewhere, even yet, civilization on this continent. But, how I got sick and how I am trying to get well, and how I found out that Illinois biliousness as they call it here, will not answer in this White River country, I will tell in my next.

BYRNE.

CROCKETT'S BLUFF, Ark., July 26.

FLORIDA ALLIGATORS AND CROCODILES.

ALLIGATOR catching may be something new to your readers, and I am willing to confess that my experience in fishing for, or rather catching, "gators" is very limited. In 1875 I ascended the Calloosahatchee River to its source and indulged in shooting large "gators" among the islands between Fort Meyers and the telegraph crossing. On my return from Lake Ochechobee I resolved upon devoting one day to the destruction of these useless saurians. Early morn found us at anchor among the islands.

When cruising I use tin plates and cups, and when surrounded by salt or brackish water I never allow them to be washed. I see some of your readers manifest disgust at such filthy housekeeping; but let censure be kept in abeyance until I can explain, for to the explanation hangs a tail [not tale]. I provided before leaving home an amply supply of waste paper, and after each meal I had the frying pan, plates, cups, knives and forks wiped and rubbed with it until they resembled nickel plate, and rust was prevented, which would have formed if salt or brackish water had been used in washing our utensils.

For breakfast we indulged in breakfast bacon and fried eggs. After the meal was over I engaged in oiling and cleaning my rifle preparatory to a day's "gator" shooting, and Harry commenced wiping the breakfast things, and when the wads of paper were saturated with grease and egg he threw them astern. My attention was attracted by a large alligator some twenty yards astern. He approached a piece of the paper, sniffed it, opened his countenance, and as it "was a stranger he took it in." This proceeding was repeated and I deemed it time to act. I requested Harry to make haste slowly and keep the "'gator" on the lookout for more paper.

I disappeared under the cabin and secured the end of a pine box measuring 10x14 inches. Balancing the board on the end of my finger I found the center, at which point I made a hole with an awl, and at one end I made a cut with a saw. I passed the end of a stout braided linen line through the hole and tied a knot on the end, after which I wound the line loosely around the board, and attached a long-shanked hook to the free end of the line. The hook was baited with a savory piece of bacon dipped in fat and egg, and I secured the shank of the hook in the saw cut. While these preparations were hastily made, Harry supplied the victim with teazers in the way of wads of paper soaked in the frying pan. The board was dropped astern, and as it floated towards the game I hoisted the anchor and Harry and Frank manned the oars. The bow of the boat was headed down stream, and by backing water she kept in position. Very soon the current drifted the tempting morsel to the "'gator." He indulged in a sniff of the bait, took it in, gave a yank and fixed the hook in his dimpled cheek. Frank and Harry gave way with a will; the "'gator" saw us approaching, and started for shore, and the coils of the line slipped from the board. I seized the board, gave a lusty yank to fix the hook securely, and the performance commenced. To my surprise the ugly monster was easy to manage, and after playing him for fifteen minutes I coaxed him to the side of the boat, his nose being in a line with the stem. Harry made a mark on the deck corresponding with the end of his tail.

Being opposed to the use of a gaff, and the introduction of an alligator into the interior of the good boat Spray, I requested Frank to get his rifle and dispatch the game, but with his proverbial laziness, he removed his pistol from his pocket and fired at the "'gator;" hence, the latter snapped his elongated jaws, struck the boat with his tail, and the curtain rose on the second act. I kept one arm around the mast and sometimes the 'gator, and sometimes Al Fresco had the best of it. After a long and exciting tussle I became master of the situation and the second time I brought the "'gator" to the side of the boat, and requested Harry to finish him with my Winchester, but before he could do so Frank fired a second shot from his pistol. With head down and tail up, the 'gator made for the bottom and sulked. In vain did I coax, tease and twitch the varmint. He treated me with contempt. I tightened the line and Harry punched him with the pushing pole. When struck he would move a few feet away and "play 'possum." After devoting half an hour to this kind of dull sport I resolved to have another look at his ugly countenance, but the hook broke, and there ended my first and last experience in catching "'gators." Measuring the length of the "game" as indicated by the stem of the boat and the mark on the deck, we found that he was thirteen feet six inches. He was the largest "'gator" I have thus far seen. We hear of 'gators measuring sixteen and eighteen feet long, but I have yet to see one longer than the one I hooked. Within one hour at the islands, I killed eight, the smallest measuring eleven feet; and my best day's bag in this State was thirty-six.

Florida "'gators" have a bad reputation and are wilfully and maliciously misrepresented. As evidence of this I quote the following:

"An Appleton, Wis., despatch to the Chicago *Tribune* says: The Hon. Lyman Barnes, one of the leading attorneys and best-known citizens of this part of Wisconsin, went to Florida three months ago for his health. A few weeks ago he left his hotel for a short trip across the country, and on the way had to cross a swampy piece of land infested with alligators and wild animals. He never arrived at his destination, and it is thought that he fell a victim to some of the dangers he had to contend. Three of Mr. Barnes' most intimate friends have left Appleton for Florida to find him, dead or alive, and ascertain what might have been his fate, but not much hope exists of ever again seeing him alive."

My first visit to Florida was in 1844, when I cultivated the acquaintance of "'gators;" and since that time I have met them on numerous occasions, and feel assured that they have been misrepresented. The question is asked, "Will 'gators' attack a man?" In my wanderings I have endeavored to collect information on this head, and will give your readers the benefit of my inquiries and experiences.

In 1868 I visited Enterprise, on Lake Monroe, and met Mr. W., an old resident. He informed me that he started out one day deer hunting and carried an eleven-pound muzzle-loading rifle. He was crossing a marshy place and jumped from tussock to tussock to keep his feet dry. Several times his feet slipped and he was treated to wet feet, and he started to walk in a cattle trail through the marsh. At some points the water was nearly knee deep. He had not proceeded far when he slipped on a slippery substance, and the next instant a "'gator's" head appeared and he was seized by the calf of the leg. In the excitement of the moment the rifle slipped from his hand and shoulder, and the butt struck the "'gator" between the eyes. Not fancying the reception he met with from the butt of the rifle, the "'gator" released his hold and made tracks as rapidly as his legs permitted. Mr. W. informed me that he was confined to the house for several weeks by the injury.

About the year 1870 I was ascending the St. Johns in the company of Prof. Wyman, who devoted much of his time to the exploration of Florida mounds and the study of the comparative anatomy of the alligator. I questioned him to ascertain if he had ever heard of a person being injured by an alligator, and he replied in the affirmative. He informed me that he had met with a native who some time before paddled his canoe to a fishing point in Great Lake George, and had there commenced fishing. The fisherman was bare foot, and being tired of his cramped position in the dugout, he passed one leg over the side, and his foot dangled in the water. Very soon he secured a bite—not on his live minnow but on his heel. A 'gator having noticed a portion of flesh dangling in the water, resolved upon appropriating it. The live bait seized the opposite side of the canoe and wriggled, twisted, writhed and pulled. In due time the live bait succeeded in extracting his heel from the open countenance of the saurian, but minus the skin and fat. The 'gator was perfectly justified in appropriating such a tempting morsel; and an impartial jury empaneled to try such a case would render a verdict to the effect that it "served the plaintiff right."

In 1875, I was ascending the Calloosahatchee River, and Harry pointed out a small-sized "gator" about seven feet long sunning himself on the bank. I handed him my Winchester to try his maiden shot, with instructions to "hit back of the eye." Harry fired, and the "'gator" was apparently unhurt! But these creatures occasionally "play 'possum." Harry was elated, and expressed a wish to see where the ball passed out. We landed, and as the land side of the "'gator" was lowest, Harry could not see the aperture of exit. I suggested to him the propriety of seizing the "gator" by the tail and turning it over. He grasped the tail and commenced the process of turning, when instantly the dead "'gator" doubled on itself and came within an inch of seizing Harry by the arm.

I have reason to believe that alligators will not meddle with man, unless in self-defence, or unless a fisherman is foolish enough to have a tempting morsel over the side of a canoe. But if reports are true, and I believe they are, we have the true crocodile in the southeastern portion of the State; and it is questionable if these carnivorous brutes can be trusted. Mr. D., of your city, who was a companion of Sir Samuel Baker in his Nile journey, spent several months last winter in a cruise around the peninsula of Florida. On his return he visited me, and stated that he "was perfectly familiar with the crocodile of the Nile, and that he saw a number of them at a point in Southeast Florida."

AL FRESCO.

QUAIL IN A CITY LOT.

Editor Forest and Stream:

Last August I noticed, while standing just at dusk one evening on the elevated grade of the P. F. W. & C. R. R., in the southwest portion of this city, a flock of quail fly out of a small tract of woods quickly across an open field and drop down into a couple of vacant lots in a thickly settled portion of the city. My intense curiosity at once prompted me to visit the spot.

I found the two lots covered with a dense growth of currant, raspberry and gooseberry bushes, also what appeared to be the remnant of a neglected osage orange hedge. I was interested enough in this singular custom, as it proved to be of these cunning birds, and made an especial effort to note their mode of arrival, and here again was evinced a superior order of intelligence as they came in from different points of the compass, but almost invariably at the same time, just before dark.

The flock when I first saw them numbered eleven, and this number remained unbroken for some weeks, when it was reduced to nine, and again, losing three more, stood at six, which was the number when I last saw them.

It seems like a sense of the keenest instinct for them to select this thorny and almost impenetrable thicket for their nightly resting place, as this section of the city is literally infested with cats, to which, however, I never charged the decimation of my little flock, but felt it due, like their final destruction, to wing shots and other natural causes.

FORT WAYNE, Ind., July 31, 1882. DORRIS.

THE FEATHERED SONGSTERS.—Minneapolis, Minn., June 22, 1882.—The dates of their arrival this year in Minnesota. Some interesting data. Dr. E. Lyman Hood has now completed his list. Of the 740 species known to North America about 250 have thus far been found within the limits of Minnesota. The present season has been a peculiar one in regard to the movements of birds. The first comers came earlier than last year, although the birds on an average, taking the entire migration, were a week later. For instance, he noted in 1878 the arrival of the crow January 28; in 1879, March 1; 1880, February 24; last year, March 16, more than a month later than this spring. In the latter part of April cold north winds prevailed for two weeks, and the nights were cloudy. Nearly all the birds migrate at night. Examining the list we find that from April 10 to 24 not a single species arrived, a very marked result. All nature was backward. Frogs were first heard March 31, and moths seen April 1. Camberwelt beauty, red admiral and daisy were out earliest. Butterflies and insects were two weeks late in coming out of winter quarters. Anemone hepatica, buttercup, blood root and yellow violet are the first flowers of spring, generally appearing in the order named. The date of the arrival of the different birds he reports to have been as follows: February 10, crow; 21st, red-shouldered hawk. March 4, mallards; 11th, sparrow, hawk; 16th, red-tailed hawk, teal; 26th, robin; 27th, tree sparrow; 28th, bluebird, killdees; 29th, meadow lark, geese; 30th, purple grackle. April 1, red-wing blackird, purple martin, rusty grackle; 2d, wood pewee; 3d, kingfisher; 4th, yellow-shafted woodpecker, fox sparrow; 6th, white-bellied swallow, Wilson's snipe, chewink; 8th, purple finch, chimney swallow, yellow-rump warbler; 10th, dove, loon; 24th, chipping sparrow, sand-hill crane, cliff or eave swallow; 26th, night-hawk, loggerhead shrike. May 1, white-throated sparrow; 2d, brown thrush; 5th, bog-winged buntins, golden-crowned thrush, kingbird, marsh tern, whip-poorwill, bank swallow; 7th, house wren, Baltimore oriole, bittern; 8th, black-poll warbler, kinglet; 9th, catbird, redstart, orchard oriole; 10th, rose-breasted grosbeak, many species of warblers, red-eyed vireo, grebe or dudchick; 11th, bobolink, turkey buzzard, black-billed cuckoo; 12th, Maryland yellow throat; 17th, humming bird, yellow bird; 18th, vircos; 21st, great-crested flycatcher, scarlet tanager. — JOHN D. C. KNAPP.

ROOSTER AND GOSLINGS.—Johnson Ia., July 29.—As I get so many interesting items in natural history from FOREST AND STREAM, I will lay before its readers an instance that occurred on my own place here. A goose, after hatching all the eggs but three, left her nest. These three eggs were put under a hen and in a few days two goslings were hatched, the other egg being spoiled. She took care of them for about a month, when she was accidentally killed. A rooster then took charge of them, calling them and scratching for them as if they were chickens, and he takes them into the hen-house every night and goes about with them all day. They are nearly as large as he is, but he still attends to them.—OLD FOGY.

THAT FLORIDA SNAKE.—Washington, D. C., Aug. 4, 1882.—*Editor Forest and Stream:* The curious snake your correspondent "S." writes about which he has seen in Florida is *Rhinecura floridana*. Could he not send some living specimens to the National Museum, Washington, D. C.? —H. C. YARROW, Curator Department of Reptiles, National Museum.

BEVERAGES IN CAMP.

Editor Forest and Stream:

I don't fully believe the "Scribe" is in mortal earnestness in his little assault on FOREST AND STREAM and the "Kingfisher," but I am satisfied for one that you will not heed his "protest against your arbitrary rule of excluding from the columns of your interesting journal all reference to the use of beverages of an exhilarating nature in narrations of hunting or fishing adventure."

The rule is an excellent one; its influence is good. It commends itself to every man who has had the misfortune to see men, some of them not addicted to drink, get "bilin'" drunk in camp, forsooth because they were away from home and under the influence of so-called jolly fellows.

Among the few disagreeable recollections of my camp life are disasters and misadventures that have grown out of the use of "beverages of an exhilarating nature." I do not deem them necessary under any circumstances; at all events they do harm fifty times where they serve a good purpose once. I have spent six months at a time hunting and fishing in the mountains of Colorado, sleeping on the ground, encountering storms, snow and ice, and never had use for a drop of exhilarating beverage. And we had lots of fun, too, hilarious times that will never be forgotten, days that were not marred by a drunk, nor an accident, nor a disturbance, not even a misunderstanding among ourselves or with the various characters we met.

FOREST AND STREAM is solid in the position, and "Scribe" is on the wrong side of Rhine.

Let me add that "Kingfisher's adventures" are admirably told, and interesting from one to eight, and have had the distinction, as he will deem it, of being read aloud in at least one household, and thoroughly enjoyed from the old ones down to the enthusiastic angler at the foot. J. C. B.

["The Scribe's" note should not be taken too seriously. It was not intended as a criticism of the FOREST AND STREAM, so much as a good-humored "joke" on "Kingfisher," which "The Scribe" told us would be appreciated by the rest of the party, "Bro. R.," "Sloan," "The Editor," and "Kingfisher" himself. The propriety or impropriety of the use of beverages in the field is not a question demanding discussion in these columns. We may add that "Kingfisher's" delightful letters have won many compliments from all around.—ED.]

BOOKS RECEIVED.

"THE ADVENTURES OF A VIRGINIAN."—By Oliver Thurston, Philadelphia. E. Claxton & Co., 1881.

"HOMES IN THE COUNTRY, East, and summer resorts on the Sound, via New York, New Haven and Hartford Railroad." Furnished gratis by the Railroad.

THE GAME LAWS of Pennsylvania, New York, New Jersey, Delaware and Maryland are published in convenient form by the Globe Printing House, of Philadelphia. Price 25 cents. The pamphlet also contains constitution of the West Jersey Game Protective Society.

DISRAELI, at a Windsor reception, once complimented Queen Victoria on her "Diary in the Highlands," saying: "There are only three books in the world, the Bible, Shakespeare, and your Majesty's book." But "Pack on Wheels," for 1882, had not then been published, or Disraeli would have made it four instead of three.

"TAXIDERMY WITHOUT A TEACHER," comprising a complete manual of instruction for preparing and preserving birds, animals and fishes, with a chapter on hunting and hygiene; instructions for preserving eggs and making skeletons; and a number of valuable receipts. By Walter P. Manton. Illustrated. Second edition, revised and enlarged. Boston: Lee & Sheppard, publishers, 1882. Price 50 cents.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN AUGUST.

THE following schedule exhibits the game now in season. (Also, in parentheses, seasons which open during the month.):

Alabama—Doves.
California—Deer, doves.
Dakota—(Aug. 15, grouse, quail, snipe, curlew, plover).
Delaware—Woodcock.
District of Columbia—Woodcock, ruffed grouse; (Aug. 15, deer).
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo.
Illinois—Woodcock; (Aug. 15, wild-fowl, pinnated grouse).
Indiana—Woodcock.
Iowa—Woodcock; (Aug. 15, wild-fowl, pinnated grouse).
Kentucky—Woodcock.
Louisiana—Deer.
Maine—Plover.
Maryland—Woodcock; (Aug. 15, ruffed grouse).
Massachusetts—Woodcock, doves.
Michigan—Woodcock.
Minnesota—Woodcock.
Missouri—Woodcock, plover, meadow lark, dove; (Aug. 15, pinnated grouse).
Montana—Fool hen, grouse, ptarmigan; (Aug. 10, buffalo, elk, antelope, mountain sheep and goat, moose, wildfowl).
Nebraska—(Aug. 15, grouse).
Nevada—Elk, antelope, mountain sheep and goat, sage grouse; (Aug. 14, deer).
New Brunswick—Woodcock, wild-fowl, snipe.
New Hampshire—Woodcock, plover, wildfowl, rail.
New Jersey—(Aug. 25, reed birds).
New York—Woodcock (except Dutchess, Herkimer and Oneida cos.), squirrels, deer. (Hounding season opens Aug. 15; forbidden in St. Lawrence co.)
North Carolina—(Aug. 15, deer).
Nova Scotia—Woodcock, wildfowl, snipe.
Ohio—Woodcock.
Oregon—Grouse, wildfowl.
Ontario — Woodcock; (Aug. 15, wildfowl, snipe).
Pennsylvania—Woodcock, plover.
Rhode Island—Woodcock, plover.
Texas—Deer, pinnated grouse.
Utah—Elk, deer, antelope, mountain sheep; (Aug. 15, grouse, quail, wildfowl).
Virginia—Ruffed grouse, woodcock
Washington Territory—(Aug. 15, deer, elk, antelope, mountain sheep, grouse).
Wisconsin—Woodcock; (Aug. 15, grouse, quail).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp tail grouse; (Aug. 15, ruffed grouse, wildfowl, plover, curlew, snipe).

☞ For exceptions, local laws, etc., see FOREST AND STREAM Schedule "B," issue of July 20, page 489.

MOUNTAIN, HILL AND VALE.

DOGS, GUNS AND VICTUALS.

MY last letter was written somewhat carelessly, I am sorry to admit, from that lovely summer land which lies west of the Blue Ridge of mountains, in the State of North Carolina. So soon as the inhabitant of the regions which have an altitude above tide water of not more than six or seven hundred feet enters the section to which I refer, he feels that he is breathing a purer and more invigorating atmosphere, and after a sojourn of a few days or weeks there is an elasticity of body and mind which makes him almost think himself young again. If a lover of Nature, he is entranced with the grand scenery which is spread before him, or the sparkling waters which ripple gladly at his feet, and in whose melody he finds repose for his wearied body. In case he is a disciple of Izaak Walton, and has the physical endurance to gratify his desires, he can take his rod (but no reel), thread his way up the clear, cold streams which have just burst forth from their birthplace in the rocks, and in their crystal pools find abundance of those agile little fishes which test the angler's skill, and in whose flesh he finds "sweet solace after all his toils." And then, the "cheerful supper done," the pipe filled with choicest mountain tobacco, unadulterated with New England rum or tongua beans, and its fragrant odors enjoyed, one can "wrap the drapery of his couch about him," supplemented with a pair of good blankets, and "lie down to pleasant dreams," and a soft, refreshing sleep which cool air and a tired body only can bring to the human frame.

In my former letter from that delightful country I attempted to give a faint description of the majestic mountains, lovely valleys and limpid streams which are its distinguishing characteristics. I feel that I am incapable of doing justice to the subject, and that a full delineation of all the attractive features requires a pen more graceful and graphic than any which I can wield. It is, perhaps, best, therefore, that I content myself with saying to the readers of the FOREST AND STREAM that if they want mountain views of surpassing grandeur, energizing atmosphere, cool and beautiful waters, or the joys of the fishing rod, there are hundreds of places of easy access in the counties of this State lying west of the Blue Ridge which will afford them all the gratification they may reasonably demand. In September, October and November, I am told by those whose veracity I cannot question, a hardy sportsman, quick and accurate as a "shot," can get as many ruffed grouse as he wishes, and vary his enjoyment by filling his bag with quail. Besides these pleasures he can, if expert in that line, have roast wild turkey for dinner and delicious venison steak for breakfast. If he can tolerate rougher sport he may succeed in enlarging his bill of fare by an occasional dish of broiled bear, that animal being frequently found in the wild and almost impenetrable balsam thickets which cover the sides and tops of the highest mountains. It is my purpose to visit that section again before many weeks, accompanied by a few friends, and see if we cannot live upon the "fat of the woods," gained by our own prowess, with our own breech-loading shotguns. If I have that pleasure I will endeavor to give your readers a description of our success, striving to avoid all extravagance of idea or expression, and to represent truly what took place.

Just here I must be permitted to animadvert upon the habit of some men who claim to be sportsmen, and some, too, who really are, to indulge in extravagance as to their exploits. I cannot say that the fraternity is more given to hyperbole than any other class—for I should dislike, exceedingly, to admit that all men who are fond of field or water sports are in immediate danger of learning how to—err in their narration of facts. One thing, however, is certain; now and then one is to be found who, to say the least, is a very poor judge of distance, and is otherwise inexplicably blinded. During my recent visit to the mountains I met a well-dressed man, the agent of an insurance company, who had all the volubility of tongue which uncharitable individuals say is essential to success in that calling. According to his own account of himself he had great experience in shooting on the wing or on the run, and had brought down a buck at long range with his trusty ten-bore. He had never shot at glass balls or clay pigeons, so-called, but had been so successful at quail and ducks that he entertained no doubt of his ability to shiver them at nearly every shot. Inasmuch as I was at the head of a "scrub" team and one of my men was likely to be absent that day, I was on the eve of inviting the mutual insurer to give us a policy by joining us for the occasion, and would have done so but for the fact that his tongue was so oleaginous it never stopped its ceaseless roll, and I could not make the tender. In the course of his interminable talk he described the charges used by him for different kinds of game, and stated that he used No. 12 shot for quail all the season, No. 10 for ducks and No. 8 for deer!

Of course, after this, I had grave doubts whether the fellow had ever shot at a duck or had the slightest idea of the size of a shot or the calibre of a gun, and was glad he had given me no opportunity to ask him to become a member of the team. With the aid of a delicate punch in the side, I managed to dam up his lingual stream sufficiently long to express the doubt whether it was possible to send No. 8 shot with such force as to make a buck simply drop his tail if over thirty-five yards from the shooter. Now, Messrs. Editors, do you wonder that after such extravagant and senseless talk I had no confidence in the capacity of the insurance agent, either as a marksman or as a man whose statements upon any subject was entitled to implicit belief? So, having none, I preferred to substitute anybody else in the place of the missing man. The truth is, when any one alleges, in my presence, that with shot from No. 7 to No. 10 in size, he kills game, except accidentally, at from seventy yards and above, I am compelled to entertain an apprehension that he is indulging in gas, or has inaccurate ideas of distance. A very light pellet cannot acquire by any propulsive force much momentum, or rather maintain it after it has passed the space of fifty yards. So, therefore, when birds are fully grown and fly with rapidity, it is far safer to use shot not less in size than No. 8, and he who expects to eat venison will surely die of starvation if he depends upon shot smaller than No. 3 buck. In one barrel I use eighteen No. 3, and in the other twelve No. 1, when I shoot a twelve-bore gun for deer. These, with three drams of good gunpowder, No. 2 grain, will go hard enough to reach the vitals of the largest buck, at any distance when there is a reasonable prospect of hitting him in a mortal part of the body. So much for that.

A few days ago, I had an invitation from H. G. Ewart, Esq., of Hendersonville, in this State, to attend a glass-ball and pigeon shooting at that place, on the 15th, 16th and 17th of August, given under the auspices of their club. The location is one of the most pleasant summer spots on the continent, having an altitude of about 2,500 feet and is accessible by rail. Persons desiring to attend go by way of Spartanburg, S. C., from which point there is a railroad crossing the Blue Ridge at the Saluda Gap, and at present completed to Hendersonville, Asheville being the contemplated terminus. The grounds of the club are very eligible, and I doubt not, all persons who choose to be present, will find ample accommodations and have a pleasant time. After the "tournament" is over, those who choose to remain can easily procure the kind offices of the local sportsmen, and indulge in the pastime of taking the mountain trout in the head waters of the French Broad, or have good sport after the ruffed grouse, the young broods of which at that time will be large enough for pursuit. At all events, it will afford a delightful retreat for all who wish to renew their bodily vigor, and restore the mind, enervated by the heat and dust of crowded cities and lower elevations. Possibly, some of the readers of the FOREST AND STREAM may choose to visit what is to them an "unknown land;" and if so I can assure them that they will find a splendid climate, cool and pure water, lovely mountain scenery, and a plain but worthy people, whose good sense and gentlemanly courtesy will make valuable friends. Many a sportsman has had trouble simply because he failed to exercise common prudence and decent breeding, who would have had none if he had observed these essential proprieties. The rights of any landholder, whatever the nature of his tenancy, must always be respected, and his permission obtained before going upon his domain. It is rarely the case that this is refused, if the proper steps to obtain it have been taken by the party desiring it.

From all I can learn, the prospect for abundance of small game during the coming season is excellent. The small grain crops were generally very large, and the breadth devoted to the crop was unusually large in the central counties of the State. Abundant rains after the harvesting have produced, and will produce, a luxuriant growth of the rag weed and grasses, which will afford cover and food for the birds. It is my opinion, therefore, that the association, which is to have its "trials" at and near High Point in November, will experience no difficulty in finding quail in sufficient numbers to let all dogs show the "stuff" of which they are made, and give their owners an opportunity of demonstrating whether their capacities are commensurate with those of their trained canines. I beg to suggest that it is barely possible they might find a few farmers in the neighborhood of that locality who, with a rickety old gun whose original cost did not exceed thirty dollars, could go into the field with the most expert visitor, and come back with an equal number of Bob Whites, and no greater use of powder and lead. Indeed, I am not sure that they would not be overmatched. The successful glass ball or trap shooter is not necessarily superior when he comes down to game which flies from an unlooked for spot and takes a line of flight not known to the ordinary laws of motion. It is my purpose to try to see the performance of the blooded dogs which will be there; but as I am not a member of the association, of course I can take no part in the exercises except as a "mere looker-on in Venice." It may be that I can have the pleasure, after the "field trials" are over, of inviting one or more of owners of the best of the Laveracks or Llewellins or red Irish or blue beltons to join me in a genuine trial of skill, not many miles from the *locus* of the exhibition, in which I and my companions will use not larger than twelve-bore guns, weighing seven pounds, nor heavier charges than 2½drs. of gunpowder and one ounce of No. 8 or 9 shot.

In that event I think we should be able after our trials to discuss in a friendly way a square meal of our trophies, cooked with the entrails taken out—for, with all respect, I have never been able to see what peculiar delicacy of flavor could be imparted to the flesh of any animal by the contents of its intestines. It may be that my taste is uneducated—but I cannot envy that of any man, whether natural or acquired, which leads him to prefer the flavor given by chyle, or half digested or fully digested food, or last, but not least decided, in their odorous exhalations, the fæces which fill the lower intestinal canals. "*De gustibus non est disputandum*" is a familiar maxim—but I speak for myself only, when I say that I want none of the odors of—in my pottage, and earnestly desire that "*Procul, O procul este, profani*" shall be observed by my cook when he comes to prepare anything for the delectation of my palate. To a certain extent I know the food taken into the stomach affects the taste of the flesh of the animal when slaughtered and cooked—but I confess that the natural impartation is all which I desire, and I prefer to avoid the additional quantity which is injected by the opera-

tion of heat. Still I quarrel with no man about his taste (not even the Esquimaux, Indian nor the African of the Upper Nile) but only say that I prefer my food to be the flesh of bird or the beast. After this episode I beg to express the sincere wish that the sportsmen who meet at High Point in November may have a "royal good time," and abundant reason for being satisfied with the abundance of game and the behavior of their dogs. WELLS.

ELLERBE SPRINGS, Richmond County, July 27, 1882.

A STORY OF PRAIRIE SCHOONER DAYS.

CROSSING the plains twenty years ago with the long trains of prairie "schooners" drawn by mules or oxen, which at that date was the chief means of communication with the far West, was, as your readers are aware, very different from the rapid transit by the palace or Pullman cars of to-day; and although generally very tedious and monotonous it nevertheless occasionally furnished romantic, exciting or dangerous episodes, that ever afterward were regarded by those participating as some of the most thrilling events of their lives.

It was in the summer of 1862 that the writer found himself acting in the capacity of hunter for a wagon train sent out by the firm of Irving & Jackman, of Leavenworth, Kan., who had a contract from government to supply some of the frontier forts with provisions. Our train, consisting of twelve wagons, each drawn by six yokes of oxen, was loaded with bacon for Camp Douglass, located a mile or so north of great Salt Lake City.

Nothing of special interest occurred until we had passed Fort Laramie. Antelope and small bands of buffalo (usually old bulls) were fairly plentiful, and furnished a welcome addition to our daily rations of biscuit and bacon, until we reached a spur of the Black Hills, through which meander three tributaries of the North Platte, known as Wagon Hound, Deer Creek and La Bonte. These were about a day's drive apart, and on the evening of the 21st of August we made our encampment on the banks of the latter stream. The cattle were feeding, under the care of the night herders, in a small meadow a short distance below us on the stream, the opposite bank of which had a dense thicket of tall willows, interspersed here and there with cottonwoods.

The remainder of the trainmen were gathered around the camp-fire, smoking, and lounging after the evening's meal, when sudden commotion amongst the cattle, followed instantly by the sound of hoofs and the clashing of horns announced in unmistakable tones that a stampede had began.

The two night herders who were on foot soon came to the fire, stating that a large animal, which, in the darkness, they had mistaken for one of the oxen, had ascended the bank of the stream; but on approaching it to drive it into the herd it had turned and with a snort and bound decidedly unbovine in its character, had disappeared almost before they had discovered their error. The wagonmaster and assistant instantly mounted their horses, and struck out in the darkness in the direction the fugitives were supposed to have taken, while the remainder of the trainmen, after canvassing the matter for an hour or more, retired to their blankets. Early the next morning a number of us hastened to the river bank to endeavor to solve the mystery, when the tracks of a bear, so large that they were immediately pronounced by the old plainsmen to be that of a grizzly, were to be plainly seen in the moist sand, near the half-decayed carcass of an ox upon which he had evidently been feeding. The cattle had not yet returned, and hastening back to the wagons, the writer and one of the trainmen, a strapping Missourian named Jim Jones, made hasty preparations to pursue the midnight forager. I carried a short but heavy 44-calibre rifle, and a Colt's dragoon revolver; and Jones loaded up a large smooth-bore musket with as heavy a charge of slugs as he thought consistent with personal safety; and we both struck the trail with all the eagerness of two fools wholly intent upon sport and knowing nothing of the formidable character of the brute they were pursuing.

The bear had taken down the river and, where the willow thickets were broken by open prairie, walked along in the sand under the bank and near the water's edge, but upon reaching the thickets it invariably left the stream and passed through them, although still following the same course with the river. In such cases one of us went around the thickets, which were usually from five to ten acres in extent, and the other followed the trail through, which was easily done, as they were so thick as to be almost impenetrable except by the trails that had been beaten through them by wild animals.

About three miles below the camp the trail entered a thicket larger and if possible more dense than any we had passed through, and it appeared so difficult that we concluded to pass around to the lower end and take up the trail there if it became apparent that he had gone beyond. The closest scrutiny, however, failed to find any fresh tracks of the big bear leaving the thicket, and we, therefore, felt sure that he was near at hand. As there was no prospect of ousting him by remaining outside, we determined to enter by different trails, and if either succeeded in locating him to inform the other by a low whistle and wait for reinforcements before commencing hostilities. It is hardly necessary to say that a more foolish or impracticable plan could hardly have been devised, but as neither of us had ever seen a bear in his native wilds—to say nothing of shooting one—it may not be surprising that we could not think of a more feasible campaign.

With rifle cocked, I entered the thicket, stooping almost double beneath the willows that interlaced in a heavy arch not four feet from the ground, while my companion did the same about fifty yards to my right. Slowly and cautiously I forced my way along, straining my eyes to discover the first sign that would indicate the presence of our formidable antagonist, and flattering myself that I was not only conducting the operation after the most approved method, but that any disastrous surprise was impossible, until I had penetrated nearly to the heart of the thickest part, when, with a savage growl, the bear arose upon his hind feet, from a large hole scooped in the sand and completely hidden by willows, not ten feet to my right, and "jumped" me with the quickness of thought. So rapid were his movements, and so vigorous the onslaught, that I seemed to have hardly comprehended the situation before I was hurled backward with irresistible fury, the bear aiming a stroke at my face with one of his huge fore paws, the nails of which were longer than my fingers. Fortunately, I was falling so fast that it failed to reach its intended destination, its spent force reaching my arm, each nail drawing blood from elbow to wrist and stripping into ribbons the sleeves of my hickory shirt. Lying helpless upon my back, my revolvers buried in the sand beneath me and my rifle crosswise between us, he having followed up the attack so closely that it could not be used, I endeavored to keep him off with my feet. He paid no attention to these, however, and closing with me, made another pass at my head. His paw struck the barrel of my rifle, between the two bands, and glancing down as the muzzle was violently forced downward, spent its force harmlessly upon the ground.

Enraged at his failure, he seized the elongated stock in his teeth, and I heard it crack and splinter like a rotten stick in his jaws. Taking instant advantage of this, I endeavored to release my revolver with my left hand, still holding to the rifle with my right, but at the first motion I made at my hip the bear let go his hold upon the gun and fastenened upon my thigh. I felt his teeth sink into the flesh, but no pain followed it, and raising partly to a sitting position I struck him as violent a blow upon the nose as my awkward situation would admit of. Impotent as was the effort, it effected the desired result; the bear drew back with a snarl, and wheeling around with head close to the ground, he for the first time since the attack placed sufficient distance between us to enable me to get the muzzle of my rifle against his body and pulled the trigger at my side.

His head was partly turned from me as I fired, I saw the hair raised as it was burned or blown away where the bullet entered. He gave a great bound forward and went crashing through the brush, out of sight at the second jump. My astonishment at this unexpected turn in affairs was hardly exceeded by my delight, for by this time I had entirely ceased hankering after bear meat, and springing to my feet I drew my revolver, expecting his immediate return. My shirt was in shreds, and of a pair of new overalls with which I began the fracas nothing remained but a strip about a foot wide around my waist.

The blood was running in a stream down my leg from my thigh, and was bubbling over the top of my shoe. I stood a moment or two in anxious expectation, seeing nothing, but hearing now and then a strange though faint choking noise in the direction taken by the bear, and then began to load my rifle as fast as I was able. While forcing down the bullet my comrade made his appearance, he had heard the growl and first rush of the bear but was unable to reach me direct, being obliged to return and enter by the trail I had followed. Forcing our way through the brush, we soon came upon large spatters of blood, which led us to where the bear was lying. By stooping close to the ground where the foliage was thin we could see a short distance ahead, and as soon as we made out his position we both dropped to our knees and fired. No noise nor motion, however, followed the discharge, and we found him already dead, the first bullet having passed diagonally through nearly the whole length of his body, tearing a frightful hole in his lungs and other portions of the intestines.

After a very brief examination of the hideous brute, terrific even in death, we returned to the bank of the stream where I endeavored to staunch the flow of blood while my companion hastened back to camp for assistance. In an hour he returned with a saddle mule.

The next two weeks found me confined strictly to a couch in the baggage, wagon where after the ample time afforded me for reflection, I was obliged to confess that those few moments spent in that willow thicket had given my education in that particuly department of backwoods recreation a more elaborate finish than all the happy hours I had spent over the pages of Kit Carson, or Grizzly Adams.

FORKED DEER.

SAN FRANCISCO, California.

WESTERN GAME PROSPECTS.

I see in FOREST AND STREAM received yesterday that you ask for the prospects of prairie chickens. I must say that for the last nine years I have never seen such good prospects as there are this season. The birds hatched out early and well, and the young birds are more than half grown now; in fact, I saw a covey to-day which, when I started them, must have flown one hundred yards, and if they are only left alone until our season opens (a month to-day), we may look for good sport. A few weeks ago I was in Minnesota, and from what I could learn birds were as plentiful there as here. I quite agree with your letter in last paper about the game laws. We have good laws, but who is going to make disturbances, etc., with neighbors and friends by informing against them? It is too personal a matter for one or two men to take in hand, and regular game constables ought to be appointed in each town, and then they should appoint their deputies if they need any, and until that is done the game laws are almost "nil."

CUPIDO.

RINGEWAY, Iowa, July 18.

As I am constantly receiving letters of inquiry in regard to the chicken shooting in this section, I will take the liberty of answering all through the medium of your valuable and widely read paper. The chickens have made an excellent crop the present season, and the game law is rigidly enforced. Open season begins in Iowa August 15, Minnesota, September 1. The northern portion of Kossuth county was a comparative wilderness until the Chicago & Northwestern Railroad built north from Algona into Minnesota some six months ago. That section never having been shot over, is literally alive with chickens, and the lakes along the State line with geese and ducks. To reach that section take the Chicago & Northwestern Railroad via. Clinton, Cedar Rapids, Tama City and Algona to Bancroft, twenty miles north of Algona, and sixteen south of the Minnesota line. Shoot this section over from August 15 to September 1, then cross the line into Minnesota and attend the National American Kennel Club field trials at Fairmont September 4, only twenty-five miles distant from Bancroft. Accommodations can be had at Bancroft or with farmers, or you can try the tent and skillet. A. A. CALL.

ALGONA, Iowa.

You ask for "game notes." The prospect for game were never better throughout Southern Minnesota. Chickens are abundant further west, we have a few here; quail are whistling in every direction. The writer of this was awakened three mornings last month with "Kirk White" being loudly whistled from the roof tree of his house. From my own premises more than twenty flocks of ducks were seen to-day, some not yet grown. Quite a number of fair bags of woodcock have been made since the season opened. The woods are full of rabbits, and young ruffed grouse are seen every day, and why is this not an excellent place for sportsmen to come, rest and refresh themselves and get their dogs in form before the chicken season opens and the campaign at Fairmont?

We are just above the confluence of Root River with the Mississippi, Target Lake, on which a writer in *Harper's* some years ago gave a very pleasant account of a duck shoot, is in sight. Pine Creek, a considerable stream, flows into the lake. Blue Lake and Cameron's Lake are just in sight with many ducks feeding in their waters. Mallards are nearly grown. The miles of Mississippi bottom lands furnish woodcock and snipe shooting. Probably a hundred bass, pike and pickerel have been landed by "the boys" within sight of the hotel veranda to-day. Hon. Daniel Cameron, Fish Commissioner of the First District resides here, and will throw wide hospitable doors to the lovers of the gentle craft.

We are at the termini of three railroads leading North, South and West, and lastly, but not least to a sportsman, a good hotel, the La Crescent House, just opened, with landlord Kirwan behind the desk, knowing just how to take care of a tired sportsman and his dog, and to put them on the best line for game. Parties so wishing could get a man with his dog, knowing every mile of prairie between here and Fairmont, to pilot them through, or show them birds at any intermediate station.

The writer designs driving through with camp equipage and to get a shot at the birds en route.

The L. M. R. R. passenger leaves here after breakfast and arrives at Fairmont in time for an early supper.

No more desirable location for a sportsman can be found in which to pass a few pleasant days. X.

LA CRESCENT, Minn., Aug. 2, 1882.

[See notes on the prairie chicken trials in another column.]

You ask your Western readers to tell of the prairie chicken prospects. They are plenty here. There are a boy and gun ready for every chicken within ten miles. In fact they are buying powder and shot now to shoot hanko and snipe, as the chickens will not be ripe for a month yet. I do not know what else they are going to do with the powder and shot. I would like to have your Western readers to treat the members of the Kitty Hawk Club and all others of the same stamp, when they come West after chickens and other game, the same as they would treat a Western man if he would appear with dog and gun on their ground (of two or three hundred miles in length)—that is, order them off, or have them arrested or fined, as they say they will do if a stranger goes on their ground. If buying up a few hundred miles of the shooting grounds by a few for their own shooting is not a monopoly, what is it? JACK SNIPE.

VAIL, Ia., July 17.

There is no doubt that prairie chickens are unusually abundant in Nebraska this year. Everything is abundant and the crops marvelous. Ponds are full of water and we anticipate excellent fall goose and duck shooting. Quail are heard on every hand. BURR H. POLK.

LINCOLN, Neb., July 31.

DUCKING AT WAUBONSIE LAKE.

LAST October a party of four, including the writer, rigged up a wagon with a cover, and putting in bedding, boat and camp utensils, started for this lake, distant twelve miles south of this city. We went for duck shooting and spearing fish for which this lake is noted. This lake, or more properly a bayou of the Missouri River, is in fact a relic of the old bed of the river. It is two miles long and one wide, and has a dense growth of flags and marsh grass. But there are many open spaces of water. The flags completely conceal the boat and the shooter, thus affording the best of shooting morning and evening. Bass, pickerel, pike and catfish are abundant, and hundreds are caught by the trawl net. A party of three shipped six hundred pounds the morning we arrived. Thousands of ducks in spring and fall find excellent feeding ground here, and good shooting is found after the sloughs and small streams are frozen over. The birds will not be driven away.

We killed as many as we and our friends could use for many days; more than this we did not care for. We spent two days and nights on this lake, days and nights we will remember for years. We secured eight varieties of birds, viz., mallard, gray duck, blue and greenwing teal, broadbill, woodduck; bluebill and redhead. We saw but few geese here; but they are found in large numbers along the river bars, and this kind of shooting was better this year than usual.

In my twenty years' shooting I never saw so many coots (*Fulica americana*) as here. The water was black in places with them; and when they took to wing it was not unlike a wind storm. They are not used for food here, although I have been told that some of the natives eat them. We always found ducks feeding with them, either broadbills or redheads. Owing to previous hard rains that discolored the water, our spearing was a failure, although we procured enough fish for our own needs in camp. One of the party killed a solitary jack snipe, the only one we saw during our stay.

Excellent camping places are found anywhere around the lake, as high bluffs 100 feet high skirt the north and east, broken by ravines, which afford plenty of good spring water and an abundance of wood for camp fires. Corn can be bought near for teams. No hotels nearer than twelve miles. A few wild turkeys are found in the timber back of the lake; but it is the roughest country in the State to travel over, so he who hunts them will have all the exercise he wants. Plenty of quail and squirrels are found, but no ruffed grouse. Andy Moore, of our party, secured a bald eagle (*H. leucocephalus*), and has it mounted. Measured six feet from tip to tip, and was a male in full plumage. It now adorns a leading hardware store in town. We intend to visit this place again this fall, and anticipate a glorious time. W. H. R.

GLENWOOD, Iowa.

BEAR OIL FOR RHEUMATISM.—Rangeley, Me., July 31.—As James Spaulding was mowing near a piece of wood last Monday morning, he heard the wailings of a cub in the vicinity where Charles Sowle had a bear-trap, and surmising the cub to be in the trap proceeded with a club to despatch it. As he was in the act of dealing a blow the mother of the cub presented herself rattling her ivories and snorting vengeance. Then commenced a go-as-you-please race to the clearing, which was barely won by Spaulding. As he ran he gave forth a series of shrieks that made echoes for miles around, causing the neighboring hay-makers to assemble with various weapons. On hearing Spaulding's story they proceeded to the trap where mater familias was guarding her offspring. William Ellis got in a broadside shot and laid her out. Spaulding had for a long time been crippled with rheumatism, but after the affair was over found himself cured. Note.—Those afflicted with rheumatism are advised to try this remedy.—WARFIELD.

PHILADELPHIA NOTES.

ON the New Jersey coast a small number of the earlier returning shore birds are making their appearance, but not in quantities to show the greater flight of waders has arrived. A few short-billed curlew appeared the last of July, and some small flocks of brownbacks were seen passing Long Beach, N. J., on the ocean side, the wind being favorable for that course. During the first week of August the bay men look for an increased number, and say all the shore birds will be a week or ten days later this year, as they arrived from the South "behind" the ordinary time during the past spring, and consequently the departure for their breeding grounds was delayed. Corson's and Townsend's Inlet, N. J., and thereabouts will be the best location for all varieties of bay birds. Last year great flocks frequented these shores almost unmolested. These localities are not so much visited by sportsmen as the points nearer summer watering places, but it will be found difficult to obtain good accommodations unless quarters are engaged at some farmhouse, or a cruise is taken by boat, and a home made aboard.

I hear of no better reports of woodcock shooting than I did early in the season. The birds have proven scarce have been scattered all over the country and seven-tenths of those that were bagged proved to be old birds.

The crop of reed on the border of our river bids fair to be a large one this year, as it begins to show itself in a thick growth everywhere. Many of the new style of "Dinkey" or flat-bottomed skiffs built at Gloucester, N. J., will be in use for rail shooting next month, as it is claimed they can be pushed into shoaler wate. than the old clinker-built ones, and are much easier propelled by the poleman. I shall take the first opportunity that presents itself to make a trial of one, and report.

Had the present hot and dry spell that we are now having occurred earlier in July, the few woodcock we have had would have been collected together in the moist places and more would have been found and killed. It is a blessing for the longbills it came late, as the birds have commenced their moult and are now in the higher grounds. HOMO.

PHILADELPHIA, Aug. 3.

THE GAME OF ARIZONA.

THE bear most common in Arizona is the "cinnamon," supposed to be a cross between the grizzly of the Pacific coast and the black bear of the Mississippi.

The mountain sheep, or as known among hunters "big horn," is found in the mountains from here north, and is in season during the winter.

The California or top-knot quail is abundant in Arizona, and the number seems to be increasing with the harvests of grain. Before the settlement of the country they fed upon the mesquite bean, and the wild grass seeds of the country. The bob white quail are becoming more plentiful.

The sandhill crane, geese, curlew, snipe and rail appear after the rainy season, and remain till spring.

Of duck we have varieties the canvas back, teal, redhead, spoonbill, wood duck, mallard and widgeon. The teal in the winter season is equal to that of any country.

The turtle dove is abundant, and takes the place of the wild pigeon of the Western States for a pot dish. It is killed in season and out of season, the more shame to the pot-hunters.

The Syrian dove, about one-third the size of the turtle dove, appears here, but is scarcely ever killed.

The wild mountain pigeon (*Chiracahua*) appears in the mountains in small quantities, and are about twice the size of the turtle dove, steel blue color, with scarlet neck. They feed on pine nuts, acorns, hackberries and wild cherries.

The chapporal cock (paysano, el capitan, road runner, and many other domestic names), is one of the rare birds of Arizona. Its rapid motions make it hard to hit, and a horseman cannot overtake one in the road. They are the deadly enemy of the rattlesnake, and are consequently highly esteemed by the natives.

The cougar, or mountain lion, is yet abundant in the country, and has proved very destructive to sheep, calves and colts.

It weighs from 75 to 100 pounds, and is sufficiently ferocious to be dangerous.

The silver gray fox can be found along the Gila River, and is chased by the Pima Indians.

The red fox is also found on the mesas or foothills.

Coyotes are the pest of the country in destroying flocks and small game. They are disappearing rapidly before civilization and long-range guns.

The wild turkey is found in the mountains, and is no doubt the indigenous American bird; the weight is frequently 25 pounds when fat in the winter season. They feed upon pine nuts, acorns, berries and grass seeds.

The peccary or musk hog is yet frequently taken in the valleys and consumed for food; they weigh from 30 to 40 pounds.

The burro rabbit is abundant in Arizona, and for a fair shot easily obtained, especially about sunrise or sunset; the weight 12 to 15 pounds.

The cotton-tail rabbit is not so plentiful on account of coyotes.

No statute laws have yet been passed regarding the seasons in which game and fish may be taken, but the laws and customs prevailing in California are generally accepted and adopted by the people of this Territory.

The season for killing large game opens about the 15th of September, when elk, deer, antelope, mountain goats and bear may be killed, and closs March 15. CHAS. D. POSTON.

TUCSON, Arizona.

ADIRONDACK RUFFED GROUSE.—I was somewhat surprised to find the partridges, or ruffed grouse, so plenty as they are about Blue Mountain and the levels this season. Owing to so many being killed and shipped here last season, I had made up my mind that but few would be left over to breed; but in the mornings I heard them drumming in all directions, and flushed quite a number in my rambles through the woods. The prospect now is that they will be as plenty this season as they were last. I believe there is no other part of the country now where the ruffed grouse are as plenty as they are here on the northern slope of the Adirondacks.—ADRION ONDACK.

CONNECTICUT.—Sharon, July 31.—The noble partridge is nearly extinct; here the snare has done its work well. No one seems to take any notice of it here. I have been through several pieces of woods this summer and only saw one old hen partridge and her young brood. Ten years ago I could scare up a dozen flocks where I have only seen one this year.—J. B. W.

SHUTTING THE BARN DOOR.—We find it reported that "Game Constable Brayton, of Albany, who has been investigating reported violations of the game laws in the North Woods, returned yesterday. He proceeded as far north as Chazy lake and river and Rouse's Point, and reports repeated violations of the law. Last week he captured seven nets and one large seine. At the house of C. B. Moon, in Saratoga, he was informed of a contract with W. Van Aernam, of Broadalbin, by which the latter furnished all the game that four or five men can shoot. During the month of June it is said that over 100 woodcock were shot and delivered under the contract, and that, fearing publicity, the game was wrapped in paper bags and delivered at night." This is shutting the barn door after the horse is gone. Where was Game Constable Brayton last June when the woodcock traffic was going on?

NEW YORK.—Frewsburg, August 7.—After a careful reconnoisance of the game resorts of this section, I may say that the present prospect for fall shooting is not flattering. The first of May last found us with a good sprinkling of ruffed grouse, making plenty of music by their drumming through all their old haunts. But the constant floods of rain since that time has drowned out nearly if not all the young broods. The same may be said of the woodcock. I have made several attempts to find a brood, but thus far have been unable to find any young with either. Black and gray squirrels seem to be coming on nicely, and as there is good prospects for a fair quantity of shuck, may, unless next winter is too severe, make better bags next year than one could hope to do the present season.—CAP LOCK.

ONTARIO LAW ENFORCED.—Windsor, Ontario, August 5, 1882.—*Editor Forest and Stream:* On the 26th ultimo, George Gauthier, "storekeeper, and Wm. Colby, engine driver, both of this town, were fined by Magistrate Bartlett $5 and costs, amounting to $7.72 each, for hunting woodcock during the close season. Mr. J. C. Goodenough made the complaint, and Messrs. James Radcliff and P. C. Ponting were the chief witnesses for the prosecution. Great credit is due these gentlemen for putting this case through, and all true sportsmen in this neighborhood are highly gratified at the result. Your articles on game protection are greatly appreciated by every sportsman who reads your paper in this section. Give us some more.—HOLD UP.

A GROUSE MONUMENT.—The following is the inscription on an obelisk eight feet high, which will be placed on a well-known moor in North Yorkshire, England: "At this stand were shot 191 grouse at a single drive, lasting twenty-eight minutes, by Sir Frederick Milbank, Bart., on the 20th August, 1872, at which time Joseph Collinson was head keeper. Erected by Lady Milbank in commemoration, 1882. Total bag August 20th, 1872, 2,070 grouse (six shooters). Total killed in the season, 17,064 on Wemmergill Moor." "Rational people," says the London *Truth*, "will be disposed to think that the sooner such stupid, unsportsmanlike butchery was forgotten, the better for the credit of all concerned."

SHORE BIRDS.—Lynn, Mass., August 4.—There are a few birds flying, but none of any account. Some summer and a few jack curlew have been shot, but not many. I would like to know where the birds come from that are flooding Boston markets. I would like to have some old gunner in this vicinity tell of the flights of the shore birds in the fall, of about the time due and of the effect of dry or wet weather. Your book on "Shore Birds" should cover that.—S.

CALIFORNIA.—Los Angeles.—The outlook for deer hunting this summer and the quail shooting in the fall is better than usual; there have been some tine strings of trout caught in the San Gabriel. The fishing is very good, indeed, in the streams, and also in the ocean at Santa Monica, Santa Catalina, Bolas, San Pedro, San Juan and Capistrano.—EL CAZADOR.

MASSACHUSETTS.—Haydenville, August.—Game is not very plenty here, though enough for very fair sport.—A. R. T.

Camp Fire Flickerings.

"That reminds me."

ONE of the "Ingle-side Stories" of "Wells" reminds me of what happened down here. Ed F. and John G. went fire-hunting deer on the Yegua. John soon found eyes; and at the crack of "Old Meat-in-the-Pot" there was scuffling in the bushes. Running in to the spot, John suddenly stopped short, and in a hoarse whisper said, "Ed, a horse!" They made a quick trip to camp, hitched up their team, without delay came home and said "nothing to nobody."

The next morning Mr. L., who was going through the bottom looking for cattle, found, lying near an old horse that had been *dead two weeks*, a fine seven-prong buck.

When Ed and John heard of it——well! W. A. L.

BRENHAM, Texas.

To escape a drenching I drove in under a shed. There were two other men in there; one of them a deacon of the Advent church, and the other his son. Now, surely no one would tell a lie under such circumstances, when the artillery of heaven was booming. There being a fearful crash of thunder, the son pointed out the exact spot where he averred he saw the bolt strike. This woke up the old man. "You know that old mare I drove up from Grafton Notch?" said he. "Waal, I kinder thought as how I might get to Captain Brown's place afore dark; and so sorter took it easy, when all of a suddint them are clouds came up like 'a stack o' black cats,' an' I couldn't see a hand afore me; then a streak o' lightnin' come right out of it, an' bit the wagon wheel, an' started to go 'round an' jump off, but I hit the old mare a whack, and you oughter see the fun. But the old mare had the best of it, for the lightnin' was trying to get down on the back side, but couldn't; an' I drove that mile an' a half, an' could see just as good as if it had bin sunshine." Then Chip spoke up, "Well, dad, you knowed the time I come to the house and left the saw a runnin'? Well, I seed a streak hop on the saw, an' I let on full gate, an' you' orter seen her chaw it. I got away an' let her work up that lightnin' 'fore went to cuttin' logs."

The old man was a noted moose hunter in his day, but the "rumatix" have got hold on him, and some time I will tell you how it happened. NED NORTON.

COLEBROOK, N. H.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN AUGUST.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Brook trout, *Salvelinus fontinalis.*
Grayling, *Thymallus tricolor and T. montanus.*
Rainbow trout, *Salmo iridea.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var. *sebago.*
Quinnat salmon, *Oncorhynchus chouycha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca flavitilis.*
Striped bass (Rockfish), *Rocous lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, two species.
War-mouth, *Chænobrytes gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annular.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscyon regalis.*
"Sea trout," *Cynoscyon carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

According to the creed of India, "fish are the emblems of the world's salvation. "In the whole world of creation, none were seen but these sages, Menu and the Fish."—*Blakey, "Angling Literature," London*, 1856.

FISHING IN RICE LAKE.

RICE LAKE, which is probably known to many of my readers, is a beautiful little sheet of water, embedded among hills gleaming in the autumn with yellow patches of matted rice, which lifts its thin stalks through five or six feet of water to a height of two feet perhaps above the surface. Sprinkled with small islands, steep-banked and covered with dark, thick wood, reflected in the sleepy stillness of its glassy surface, the lake seems on a calm summer's morning like a little patch of dreamland dropped into the midst of the woody hills that gird it round.

The sun had risen, and not a breath of wind stirred the magic stillness of the scene. Our boats, provided with the necessary tackle both for trolling and still fishing, shot out from the old wharves below the village of Gore's Landing, over the sleeping waters, as we watched the tangled weeds below us, tall and thick in the shallow bay—hiding place of many a staid saturnine black bass, who swept majestically away as we passed above him, scared by the whirl of the water from the glittering oar blades; or impudent sunfish, swaggering and indifferent, sunning his contented snubface in the morning light; countless perch and minnows, skimming hither and thither, picking up occasional scraps of eatable matter, and often narrowly escaping the yawning jaws of their kingly tyrants, the bass.

There were three of us in the boat—a fat old gentleman in the stern, myself, and a tough denizen of the neighborhood to pull the oars—a noted character, brown, hardened, muscles like wire, a miraculous fisherman, a miraculous duck shooter, thoroughly acquainted with all the best spots for fishing or shooting, and discreetly silent about the same. The old gentleman had command of the trolling line, which was accordingly let out as soon as we had got clear of the bay and into deep water, the brass spoon spinning merrily behind at a distance of perhaps a hundred feet. For some time we kept our course straight out into the lake, then turned and skirted the rice bed between two of the islands, in hopes of alluring from the tangled recesses of the rice shade one of those lounging fellows who are generally loafing lazily about the edges of the bed looking for something worth eating. The maskalonge is a swaggering, violent, greedy fellow, but not very cautious—like some of his avaricious counterparts among men he often snatches at anything that glitters, quite heedless of the uselessness and danger of it.

We had not gone far when we were startled by "Bless my soul," from the fat gentleman who was glaring, purple-faced, behind him and pulling hard at his line. I came to his assistance and as the oarsman pulled on we leisurely drew in the line. Our captive struggled bravely, flinging himself several times out of the water and whirling in wild circles as we got him nearer to our side. At length, tired and weakened, his long striped frame was transferred from his native element to the bottom of our boat, his desperate exertions to escape our grasp nearly terrifying our fat friend out of his wits. A blow on the back of the head from the "headache stick" which we had brought with us, soon, however, convinced the prisoner that a state of complete rest was most conducive to his happiness; though the old gentleman still looked with no very assured glance upon the long rows of sharp vindictive teeth that fortified the jaws of the fallen hero.

As we coasted along the side of one of the islands, a beautiful wooded hillock rising from the placid water, stony-shored with wild creepers and grape vines trailing to the water's edge, we captured another of the bright-eyed tyrants and one or two bass.

After this we resolved to row back again to the mainland, and try our chances at still fishing, for we had taken care to provide ourselves with the necessary tackle. The water was still, glassy, smooth and too clear to afford us much hope of success. However, we dropped anchor a few yards from a stony point, between which and the mainland stretched a reedy swamp, lined with rushes. The great, white water-lilies, opened wide to the sunlight, gleaming here and there through the reeds, two or three dreamy cranes drifting off over the water, casting their long, dark shadows over its sleeping surface. Our anchor rested on a bed of stones and the water was clear, deep and almost free from weeds. It was a favorite place for the black bass, and our rods were quickly adjusted. The unsuspecting crawfish, gathered for us by some village urchin from his rocky habitation, was cautiously extracted from the swarming can, wherein but a moment before he had been lustily clawing his neighbors, and the sharp hook inserted under his tail—that lithe, graceful little tail that had so often aided him in dashing out of danger's reach at a magic speed—and drawn through his

body, out at the throat. Now inert and almost lifeless, the tempting bait was cast into the still water and sank till the float rested upright on the surface.

Some time we waited under the hot sky and with the mirrored water between us, in that dreamy revery which makes the sedate amusement of fishing the philosopher's cherished enjoyment, and recalls to us the figures of genial Izaak Walton and many others whose footsteps will be traced beside these native brooks to the end of time. Presently my float descended to the depths, slowly, majestically, solemnly, evidently borne off by some proud old veteran, too philosophical to make a fuss over any bait however fat and tempting. I tightened my line, and instantly my captive was awakened to the danger of his position, made off for the open lake until he was brought to a halt by the cautious effort of my hand. I found him no compliant prisoner, and it was not without considerable trouble that I laid his black side upon the bottom of the boat. After this we caught several bass of from two to four pounds weight, and lost several, one of which saw fit to go off with the better part of the old gentleman's tackle, causing considerable trouble and a great deal of unnecessary blasphemy.

After this last event we weighed anchor at the intercession of our fat friend—who was convinced that the fish, having now learned the trick, would proceed to further violation of the principles of honor and run off with all the other rods and lines in the boat—and rowed over the rice-beds to the other side of the lake, a distance of about three miles and a half.

Here we found the mouth of the river Ollonabee, flowing through a vast marsh, overgrown with reeds, rushes and wild rice and fringed with stunted trees, the home of the frog and the mosquito. After pulling a few hundred yards up the stream, we cast anchor again in a bend of the river, and here, almost under the shade of the trees, we dropped our lines into the deeps and found better luck than ever. Several magnificent fish were soon stretched stiff and stark on the inhospitable boards of our treacherous craft, and it was not till sunset that our hardy oarsman weighed his anchor and we took our contented way, sun-tanned and ravenously hungry, back to the quiet little village, nestling among its trees on the steep lakeside, where our stomachs were plentifully refreshed and our minds cheered by reflection upon the gratifying success of our day's work. A. L.

THE STREAMS OF WEST VIRGINIA.

I READ in one of your late numbers several letters in regard to trout fishing in West Virginia. One writer bewailed the existence of natives on what were thought to be secluded streams, and decried their primitive modes of pot fishing, while the other was disappointed because after riding all the way from Staunton to Pocahontas county he found no trout in Deer Creek.

Your first correspondent ought to know that natives are pretty much the same all the world over—at any rate all the States over. In ancient days when an Adirondack resident wanted meat he killed a deer, in June or July by floating; or if on a crust in March, by running it down and cutting its throat. When he wanted fish he speared a few hundred pounds of trout on their spawning beds and smoked them for winter use. Nowadays when the West Virginia native wants any beast, bird or fish he goes after it and gets it, if he can, by the shortest and simplest method, utterly regardless of times or seasons. If the West Virginians would pass a law prohibiting the running of deer with dogs, and obey it after it was passed, their State would swarm with deer.

As to their fishing, I have seen the men with nets, and the men and boys building dams and draining pools while they poked about with their hands under the stones, on Pennsylvania streams, but very rarely on those of West Virginia. I never saw a net on a West Virginia trout stream except a landing net, and I never saw any one drain a pool, although I have seen a pool that had been drained. Two years ago I fished a stream in Pennsylvania where twenty-five years ago I saw men netting, damming and draining for trout; nevertheless I caught fifty trout in my morning fishing; evidently the years of native work had not entirely cleared out the stream.

West Virginia is not a large State, and it has been settled a great many years. There is not much room in it for one to get out of reach of natives.

As far as I am concerned, and I have fished for trout in West Virginia more or less since 1870, the natives may fish until they are tired; their efforts affect the supply as the Indians' killing does the buffalo. The white skin-hunters have destroyed the buffalo, and I think "visiting sportsmen," as a rule, generally destroy more trout than the natives do. The latter fish with bait and for eating; the visitors too frequently fish for numbers, and so destroy big and little without reference to waste. Some years ago a party from Lord Milton's place, near Callahan's, on the C. & O. Railroad, the Hon. Mr. Beauclerc and some others, went out to the West Virginia waters, and during their stay caught, I suppose, between 2,000 and 3,000 fish, working only for count. When they could not eat them, and had no one on whom to bestow them, they counted them and threw them away. I reached the same stream, unfortunately, just after they had left, otherwise I would have explained the matter to them.

I made a trip to West Virginia this spring in June, which was too early for that region, as the water was too high and trout were not collected in the pools at all, with three friends. We camped out for twelve nights, fished when we felt like it, and when it rained too hard and the streams were up we stayed at home. Our first rule was, "keep nothing under six inches long." After a day's fishing we made it, "keep nothing under a quarter of a pound," and to that we stuck. Of course, if a trout was hooked in the eye or in such a way as to injure it in extracting the hook, we kept it. Otherwise everything under four ounces went back to the stream. Under this rule we retained and brought to camp 673 fish, all of which, except three bucketsful which we packed in brine and took home, were consumed in our camp by ourselves and hired hands. I was sorry afterward that I went in June. I always prefer fishing there in July; then the chances of high water are less, and the trout are more in the pools and larger fish can be taken. I never fished as early but once in West Virginia, and much prefer the later fishing.

As to Deer Creek, I see no reason why your correspondent should not be disappointed. I should never dream of riding from Staunton to Deer Creek for trout. I have been many a time up and down Deer Creek, for I used to cut pine logs there for our mill, eighty miles below by river, and although there are a few trout there early in the season, say May or thereabouts, I never thought it worth while to fish in it. I have caught trout as heavy as a pound in Stillington's Creek, which is near it. I think if your correspondent had kept the Staunton and Pinkersbury Pike to where it crosses Greenbrier River, he might have found trout up either of the prongs of that stream; or had he kept on to Cheat, have found still more. I never heard any of the natives call Deer Creek a trout stream, nor would I do so in the ordinary sense, although as I say there are a few trout in it.

In order to enjoy fishing one does not need to have a virgin field—a stream where never man fished before—whence to draw out untold numbers. The pleasure is in the fishing itself—in the performance—and sky, mountain, stream, sunshine and shadow, ripple and pool, the loaf during mid day, all the accessories go to swell the pleasure. It is not a mere question of numbers, although of course the size of the fish caught, if satisfactory, adds to the pleasure.

I know a number of trout streams in West Virginia, some good, some poor, some quite inaccessible, I am happy to say, to the "general public," and in one of these I was the first who ever cast a fly. I was also first to catch bass with a fly in the Greenbrier River after it was stocked. The fishing is very good in that stream now—a very pleasant trip could be made by taking a boat at Caldwell, six miles west of the White Sulphur, and at the river, and running the river to Hinton some forty miles below, fishing along the way and taking several days to it. The mountains of West Virginia are quite high and there is an abundance of yew pine as the natives call it, that is to say black spruce and rhododendron or "brick laurel," to obstruct the way to any of the retired streams. Everything has to be done on foot and provisions packed on the back. "Visiting sportsmen" as a rule, don't like to carry forty pounds of traps on their backs when they go fishing. I have fished many a day and all day with my pack on, over that my Winchester and to balance that my creel. Some people call that work; so, they do cutting wood or peeling bark for camp. I call them all accessories, and to me they add to the pleasure of the thing. If I wanted a $1,000 camp I would go to a good hotel and be comfortable, but I doubt whether I should be more so in a good bark shanty.

As to the natives, I say let them fish; certainly they have the most natural right to use the streams. Frequently these run through their own lands; why should we growl because we have come a few hundred miles to fish what they can reach in a few minutes or hours when we find them at work for the pot?

Simply because we object to their method, and even as to that there seems to be doubt. In your last issue comes a man who says by all means let us use heavy rods, kill our fish quickly, and so have time for more. Are we to go back, then, to the cut poles and horsehair lines so that we may "jerk 'em out quick" and dash their brains out against a spruce limb? For my part, I beg leave to halt at eight ounces for trout rods, let the rest of the world and West Virginia do as it will.

Let no Staunton man go to Deer Creek for trout. If he wants points, let him write to me and I will try to enlighten him—possibly to console him. CECIL CLAY.

WASHINGTON, D. C.

A TRIP TO TRAPPER'S LAKE.

HAVING just returned from a most enjoyable and interesting trip to Trapper's Lake, I think that some of your readers may be pleased to read about it even though I may not prove to be wholly equal of doing the subject full justice.

On any map of Colorado in its northwest portion may be seen "White River Agency" now occupied by a small infantry garrison of the U. S. Army, and in a line almost directly east therefrom and about thirty miles in length, "Trapper's Lake." It was from the first-mentioned place that a party of which I was a member consisting of nine persons, including a guide and three men as packers, etc., started to see Trapper's Lake, of which in regard to scenery, game and fish, we had heard such wonderful and extraordinary accounts that they were looked upon by the most sanguine of us as extravagant in the extreme. Our outfit consisted of a saddle animal for each one of the party and four pack-mules, upon whose faithful and sturdy backs we were able to pack everything we needed for proper shelter from the expected mountain rains, an ample supply of bedding for all and rations to last ten days—besides some luxuries not altogether indispensable it is true, but adding greatly to the pleasure and somewhat to the hilarity of the occasion.

I shall not attempt to descant very fully upon the scenery on our route, as it is a little beyond my powers of description. The trail led us through country whose diversity gives a pleasing variety to a ride which might otherwise seem long and tedious, taking us as it did along beautiful grass-covered parks, through thick forests of pine trees, amongst the willows of babbling brooks and across the stony bottoms of rushing streams with mountains always and on every side and affording us frequent views of the four-footed game which abounds, at every step, besides the mountain grouse perching in the trees solicitously watching their young while we passed by.

On account of precaution against over fatigue and some little uncertainty as to distance we did not arrive at our destination until the third day, early enough, however, (about 10 o'clock A. M.) at which time we emerged from a small opening of the woods, and Trapper's Lake burst upon our view like a beautiful picture, a picture to go into ecstacies over. The lake itself is about two miles long and at some parts nearly the same in width, surrounded by mountains clothed with thickly growing pine trees which cover their slopes from the borders of the lake to their summits except at some extreme points where the trees are overlooked by the snow-filled niches below the crests of overhanging rocks, 2,000 feet above the lake, 12,000 above the sea. One of our party who rode around the lake estimates the distance of its circuit at seven or eight miles and describes the scenery upon the south side as grand beyond description in its park-like openings and succession of smaller lakes or snow ponds which he encountered on his way; he also obtained a good view of a black bear, which, however, is not at all an uncommon occurrence about those parts.

After leisurely jointing our rods and preparing our flies and lines for action we each proceeded in a different direction to test the truthfulness of the wonderful accounts we had heard of the trout fishing on Trapper's Lake. I myself, proceeded to the outlet of the lake and after using my tackle for 15 or 20 minutes found that I had captured fifteen fine trout and concluded to cry enough for the time being; two others of the fishermen came back to camp shortly after I did, one having taken 29 the other between 30 and 30, the lot averaging more than half a pound, the largest running about 1¼ pounds. There are three distinct species. I am not sufficiently well up in ichthyology to give them their accurate designation, but they who are may recognize it by my description when I say briefly that one is a slim dark-backed fellow with deep crimson belly, the other is a broader and whiter fish with the belly of a light pink or salmon color, and the third is like the latter but of a yellowish hue, the second mentioned is far the gamiest of all, and we soon learned to know him when hooked before we saw him fairly.

The next day, having found that the catching of fish was too little of an effort to afford a reasonable amount of sport, we constructed a raft, upon which we sailed to the middle of the lake, where, let it be said, that somewhat perhaps to our relief, we found a place where we could not catch fish. We thought it possible that by sinking we might bring some hidden wonders to light, but we were mistaken, and upon returning to shore solaced ourselves with a little more of the lightning fly-fishing with the same success as before.

On the next and last day of our stay it was deemed advisable to take, say fifty fish to each pack-mule to carry home. Two of us went to the mouth of a small creek emptying in the lake, and there, after two hours leisurely fishing, and without moving from our place, we counted one hundred and ten captives, averaging exactly as before, and the fish rising as vigorously and rapidly when we had our quota as when we first began. The other fishermen met with the same success, one having made, as he said, "just for fun," a burlesque of a fly from a feather he picked up, and a piece of thread, with which he had no trouble in landing half a dozen or more. Of course such fishing as this soon palls upon the sportsman—it may be described as unlimited fish and no fishing, but one who is endued with the fine spirit of the fisherman who loves the labor, may, by going a little below the lake into the river, find fishing which is more to his taste, there he will find the riffles and the lovely eddies which will send a thrill of ecstatic expectation through his soul—expectation to be realized in season, unlike the tiresome certainty of the lake—their name there being feebly expressed by legion. Will you be surprised when I say that we shall long remember Trapper's Lake?

To end a letter already too long drawn out I will say that we found it an easy two days' trip returning, and it could as easily have been made in the same time going. If any of your readers should desire further information you may refer them to me and I will answer any questions as to accommodations, etc., with great pleasure. PESCADOR.

WHITE RIVER, Col., July 18.

LIGHT vs. HEAVY RODS.

I HAVE been much interested in the discussion in the columns of the FOREST AND STREAM about weight of rods, and am convinced that the advocates of light and the supporters of heavy rods are equally in the right. This conclusion is sustained by my own observation and experience, as well as by the evidence of such men as Dr Henshall and Mr. Van Sicklen upon one side and the other.

I was once camped with a party of five at the mouth of one of the small streams or "rivers" which enter Lake Superior on the north shore. We needed fish, or, in camp parlance, we wanted "meat." I took my light rod (6½ oz.), and, making a few casts in a deep pool near the mouth of the brook, took one two-pound trout, but could get no further rises. Above the country was rough and covered with a dense undergrowth of spruce and balsam, and the banks of the stream were thickly fringed with alder. It was almost impossible to get along the brook on its sides, or even in it, and as to carrying so flexible a rod through the brush safely, it could not be done. A trial or two at casting, resulting in the loss of flies and the breaking of a tip in the struggle from one point to another not ten feet distant, convinced me that I was in the wrong place, or that I had not the right rod. I went back to camp, took a stubby ten-ounce rod, put a small shot for a "steadier" on the line, discarded the leader, and in half an hour had trout enough for a day's supply. But the work was one of necessity. I could have done as well with a birch or an alder "pole." And this was not an uncommon experience.

I think I have a little skill in fly fishing, not so much in the lengthy casts as in killing trout with light tackle. But I have seen an Indian boy with a birch pole seven or eight feet long weighing a pound and a half at least, with a coarse wigwam-made linen line, and a hook baited with a fishes' eye or strip of pork rind, beat not alone my own score but the united scores of three pretty fair fishermen with approved (*i. e.* "fashionable" or "æsthetic") rods and tackle. But it was upon ground where fly casting could not be indulged in with safety. Yet, under other circumstances, the fine rod would take the most fish. I think Dr. Henshall and some others of your correspondents are clearly right in the proposition that a heavy rod will soonest kill the fish. And those gentlemen who fish for "count" or for weight, or for "meat" will, in a given time, with heavy rods, "beat" the light-rod advocates who fish for recreation, or from the impulse which Mr. Marston would probably term the "æsthetic craze."

I met one of Dr. Henshall's disciples once on the Nepigon River. He discarded a light rod of seven and took up his bass rod of eleven ounces, because, he said, he could kill his fish quicker and also more of them with the latter, and trout were so plenty he didn't have to cast further than the length of his rod. It is fair to add that two days of such "sport" surfeited him, and he left the river preferring, as he expressed it, to take wall-eyed pike in the Kankakee to trout in the Nepigon. It was a matter of taste, of course. He could have done as well, perhaps, with a hand-line and bait, and, in fact, he asserted that his guide killed fourteen fine trout, fishing with a shoestring over the side or end of the canoe.

I am not acquainted with the character of the fishing on Rangeley lakes, and your correspondent, "E. F. W." is probably right in his views of the successful use of heavy rods there, although judgment might turn on the meaning of the word "successful." For my purposes, however, the light rod is good enough generally, although, as I have mentioned, I have occasionally (perhaps Mr. Van Sicken would call it in extremity), found the heavy rod not only useful but convenient. I have never been troubled, however, with losing fish once hooked, on account of the lightness of the rod. I have, it is true, had flies and leaders carried away by fish which no heavy rod could have stopped (with like leaders), and I have occasionally lost a fine fish from surprise or carelessness. With light rod I killed two trout at one cast (in rock fishing) of the united weight of eight pounds, with no loss except a few extra minutes of time. Last season I took two trout at each of three casts, making a united weight of twenty pounds, the smallest of the six fish weighing 2½

pounds. I admit it took time—for two of our party watching the performance announced one take forty-eight, one fifty-two, and the last fifty-seven minutes from the rise, and that I wanted no more fishing that day. But it was in the swift Nepigon, and I stood upon that long and slippery log in Hamilton's Pool (Camp Dufferin), which has caused the loss of many a fish and the getting of many a ducking. Every visitor of the river has some cause to remember it. Probably as a place for fishing it is less difficult than the aprons of the Rangeley dams.

With the same rod I have have taken single trout of 5½ pounds in twenty minutes, and didn't "begrudge" the time. Perhaps I could have taken two fish in less time with a heavier rod, but I was satisfied with what I did.

Of course rods may be too light as well as too heavy. The weight of my favorite is sufficient to weary me in an hour or two, constant casting. I can make a better cast as to distance with a rod an ounce or so heavier and six to ten inches longer, but on the whole I prefer the lighter and shorter one (6¼ oz., 10ft.) But as I intimated in the beginning, as to which rod is best, a light or a heavy one, depends upon what one wishes to use it for. H.

July 29, 1882.

SEA TROUT.

WE take the following extracts from Mr. Geo. Dawson's letters to the Albany *Journal*, dated St. Marguerite River, July 6:

A month's uninterrupted salmon fishing, even where they "take" readily, would be very tiresome if not monotonous. It is our custom, therefore, to vary our pleasure by occasional excursions for brook, river and sea trout. It is a delightful feature of this region that these several game fish are to be had within easy distance. Until my present visit I had never had a favorable opportunity to cast for sea trout in salt water. I have often taken them in the rivers when on their way up to spawn. They are only second to salmon in the play they give the angler when thus met with; but they are found in their full vigor and gamy muscularity in the salt water. The Saguenay, at the mouth of the St. Marguerite, is a noted resort for them during the months of July and early August. The time to fish for them is from half to low tide; and casting from the rocks on the main shore or (better still) from the sand bars exposed at certain stages of the tide at the mouth of the river, the sport is simply superb. The fish ordinarily taken do not average over a pound, but they are sometimes caught from three to seven pounds. Fish of this size afford splendid play, and as the *habitans* near by are glad of any fish given them, as many can be taken without doing violence to a tender conscience as the angler may desire. If some of my friends who still visit the Adirondacks, at great cost and little amusement, would make one visit to this paradise of all game fish, they would be sure to repeat their visit and thank the angler who made the suggestion.

I say this not simply because sea trout are available during several hours of every day in such numbers as would satisfy any one, but also because there are a score of lakes in the neighborhood as full of river and brook trout as they are beautiful in themselves and in their surroundings. I referred, in an early letter of this series, to eight of these lakes which I visited last year. As I write this, I have just returned from two others not then visited. They are both within three miles of our camp. The walk is not hard—as woodsmen count hardness—as the guides find it easy enough to tote their canoes to the point desired. Both of these lakes would excite the admiration of anyone who appreciates beautiful scenery, but one of them (and the largest) is, without exception, the most beautiful bit of water I have ever seen—and I have seen nearly every bit of water that is called beautiful in our own and in several neighboring States. This statement may seem extravagant, but it is simply sober truth. It is about two and a half miles in length, and from one to two miles broad. The water is almost as transparent as the atmosphere, but its clear water is but one of its beauties. It is encircled by verdant slopes, rocky promontories, lofty mountains, shady nooks and quiet covers, each perfect in its own line of beauty. It contains besides several islands clothed in full verdure. Its inlet is a broad mountain stream which brings music with it as it leaps into the lake, and the basin which its rushing waters have formed during the centuries is such a casting place as any appreciative angler would be willing to travel a hundred miles to simply look at.

My purpose in visiting these lakes was less to take fish from them than to see if there were any fish in them to take. It took but a moment to discover that both of them were full of trout. There were six of us to feed—four guides and two visitors—and we resolved to catch just enough for the three meals we were to take upon their borders. This would have been the work of but a few minutes if we had not skillfully abstained from hooking two-thirds of those that rose to our fly. In the smallest of the lakes a good angler could fill a flour barrel in a day. In the largest they were equally abundant. I made the circuit of the lake, a distance of at least five miles. I cast every foot of the way, and at almost every cast started a fish. I have no doubt I could have landed hundreds by careful fishing; but as my purpose was to start the game and not to bag it, I completed the circuit with simply six trout (averaging a pound) in my creel.

If any of my friends (young or old) have a desire to spend a month or a fortnight in this paradise of trout lakes and rivers, I will be glad to point out to them the way. I am aware that conscientious anglers (and all anglers, "born so," are conscientious) will raise the objection that it is wrong to catch more fish than you can use. "And so say we, all of us." But all the fish you may catch in these waters can be utilized. The guides you will be obliged to have with you will accept, thankfully, all the fish you may furnish them. I know a salted trout is not a tid-bit to covet, but it is relished here better than any other salted fish, except salmon, taken from the water during the autumn months. In streams or lakes in the vicinity of a dense population it would be criminal to catch trout to salt; but here, where there are millions of fish to every angler, and where more die every year from old age than would feed an army, it is almost a crime not to bring them into the larder in any eatable condition.

The journey to this region is a long one, but it is not necessarily expensive, and more genuine sport can be had in a fortnight than is available at any point near our own ancient city during the entire summer. I should add, perhaps, that trout fishing is open to any one in these lakes, and in this river also, after the 15th of August—the best sea-trout season. "Permits" are only necessary for those who fish it for salmon in the salmon season. If anyone should conclude to come here he can land at Tadousac, get a schaloupe to bring him up to the mouth of the St. Marguerite, where he will find Johnny Jourdain, who will start him off fully advised where to go and what to do to be virtuous and happy. The time from Albany is: to Montreal nine hours, to Quebec fourteen hours (by steamer), to Tadousac (also by steamer) twelve hours, and to Jourdaine's, by schaloupe, three to ten hours, according to wind and tide. There is, however, a necessary detention at Montreal of seven hours, but there is no other detention until you arrive at Tadousac, if you reach Quebec on the morning the Saguenay boat leaves for that river. The gentlemanly purser of the steamer Saguenay will give visitors all needed information as to the best mode of reaching their destination after leaving the steamer. G. D.

A MASKALONGE GULLER GULLED.

LAST Saturday as our worthy alderman Archy Grant, of the Third Ward, was trolling near the mouth of the Knaw river, a small black gull struck his spoon, as he was in the act of pulling in his line within thirty feet of his boat. Our good-natured alderman, thinking to have some fun, called to his companion, Mr. Will Christian, the well-known and talented musician, telling him he had struck a maskalonge, and asking him to come to his assistance, in the meantime allowing the gull to carry out all of his line.

Christian answered his cry for assistance by pulling rapidly to him. Grant asked him to take the line, as he was tired out, and did not think he could land him. Christian took the line and commenced pulling gull and spoon as rapidly as if life depended upon getting the supposed fish into the boat. Grant settled back in his boat anticipating much fun when the gull would make his appearance, when he was aroused by Christian'sexclaiming, "What a whopper!" and on looking around he saw, to his surprise, not a gull but a maskalonge, and a huge fellow, too, vainly endeavoring to shake the hook from his jaws.

As he sprang nearly clear of the water, Grant could scarcely believe he saw aright. Could it be possible! Had a maskalonge taken the gull? Such was the fact; and Grant was as anxious now to get the line into his hands, as he had been a few moments before to play a practical joke upon his companion, who though a skilled musician, was a poor fisherman. So calling to him he said, "I guess I will take him now; he is a big fellow and I am afraid you will lose him."

To his great disgust, Christian yelled back, "No you don't. I've been fishing for ten years to catch a maskalonge, and this is the first chance I've had."

And despite Grant's prayers and protestations he continued to pull and haul at the line, reminding him, so Grant said, of a "Dutchman pulling a strange dog." At last, finding that Christian was bent on landing or losing his fish, Grant, who is a very skillful fisherman, having fought many a battle with that king of the finny tribe, the salmon, in the waters of his own native land; Scotland, pulled his boat as near as possible to Christian, thinking to aid him with advice. He called to him to "give him line when he rushes."

"Devil a bit," said Christian. "I've had hard work enough to get him as near as he is now, and you bet I'm going to hold him."

"You blank fool, do you expect to pull a maskalonge into your boat as you would a log?" shouted the now exasperated Grant, who could wait no longer, caught the line, and playing his fish with great skill, succeeded in landing, after half an hour's stubborn fight, a thirty-three pound mascalonge, the largest caught here this season. Upon examination it was found that the lower or loose hook had passed entirely through the head of the gull, and the fish must have struck near the surface, as the bird prevented the spoon from sinking, which makes the capture of this fish the more remarkable as, here at least, the maskalonge is only caught by deep fishing.

Grant says he considers himself the only fisherman who ever caught a maskalonge with a gull for bait, but does not care about catching another, as up to date he has had to tell the story and treat not only all of our numerous body of city officials but a large proportion of our voting population. Dr. C. A. Hewers.

Detroit, Mich., July 30.

TENNESSEE NOTES.

ONE of the most prominent evidences of the benefits arising from our lately passed fish protection laws is the quantity of fine fish being taken from the Cumberland River. Twenty-five years ago it was a common occurrence to capture large Jack and bass from the point of either the upper or lower island, and as a boy I have caught beautiful drum and blue cat (the latter a game fish in our waters) at the wharf, and all along the bank of the river within the city limits. As the city began to grow in size, and a consequent demand for fresh fish, the pot-fisher came into existence, bringing along his nets, traps, seines, and other devilish devices for taking fish from the river and its tributaries. With the advent of these monsters the legitimate sportsman was forced from his favorite grounds, and the enjoyment of skillful angling. I say grounds, because the marauders utterly destroyed the fish which ran up Mill, Brown's and White's creeks, as well as the Stone River by blockading their mouths with nets, so that the true disciples had to look for fields so far removed that it became a question of undeniable labor and expense to indulge in their favorite pastime.

Our native citizens submitted to these outrages, and perhaps would have continued to do so had not Col. Geo. F. Akers adopted Nashville as his home. He had imbibed the love of angling at an early day, partly from choice, but more so from necessity; I say necessity, because much of his earlier fishing was done in the streams of Appomatox county, Va., where he lived and had to fish for the meat. After settling down here he saw how the streams around Nashville were being depopulated and began by trying to teach the people to catch the fish in the legitimate way, and to instill in the young folks the pleasures and physical benefits to be derived from fishing excursions and the use of the reel. Finally, as fortune favored him in his commercial pursuits, and he had time to devote to his hobby, the Governor of the State appointed him Fish Commissioner for the Middle Division. Though the office was a thankless and non-paying one, the Colonel accepted, and by perseverance and a considerable outlay of his own private means, paved the way to a final solution of the vexed question by getting the people in favor of it and the Legislature to pass the present law. Many kicked against it at first, but in certain localities where the law was enforced such marked increase in the fish supply was noticed that the malcontents began to see the advantages of it, and now the man who dares seine or trap fish is looked down upon, and in many cases reported to the authorities.

This is the result of the Colonel's unabated efforts during a period of at least fifteen years, and he should feel proud of his success; and although no longer a resident among us, he must read with pleasure of the increase of fish in all the streams of that section he so long represented as commissioner.

Collins River, in Warren county, is said to be teeming with fine large bass and black perch this summer. W. K. McAllister, Esq., a gentleman several years past the three score and ten, lately caught a fine creel from it. The water is very clear and cold (coming as it does from the Cumberland Mountains), and the fish caught from it are of very superior quality.

Three catfish, averaging ten pounds each, were caught near this city last week. Now that the schoolboys have their summer vacation, the river banks are lined with them, angling in all styles; some with the most approved tackle and others with the rudest kind, yet they all seem happy, and bring home quite a lot of nice fish every evening.

J. D. H.

Nashville, July 28.

LABRADOR SALMON FISHING.

THE salmon fishing on the north shore, as here the southern coast of Labrador is called, is now fast expiring. At Gaspé, on the south shore, no very remarkable hauls have been made, and only the Dartmouth has proved productive. Young Mr. Evans, son of our ex-Secretary, succeeded there, in a couple of weeks, to kill, himself, forty-eight salmon, averaging, however, only about sixteen pounds, which low weight has also been the chief source of complaint on the York and St. Johns rivers, both of which empty their waters into Gaspé basin. I could not ascertain exactly the scores made on the Restigouche, but was assured at Cumbellton, by one of the best guides, that one of the parties fishing there killed thirty salmon in one week. It is easy to reach the coast of Labrador, either by the way of Quebec in a small steamer called the Otter, owned by the firm of Frazer & Halliday, or else by the semi-monthly mail schooner from Gaspé, which, upon request, will, on very reasonable terms, land any single passengers at any one desired point. I am stationed now at the mouth of the St. Johns River, with the eastern end of Anticosti Island in full sight. By being the guest of Messrs. Garland and Bland, who are this year again the lessees of the St. Johns, a great many advantages accrue to me in my investigations from which I would have been otherwise debarred.

The height of salmon fishing is here also past, and they report a score of over ninety salmon taken by them since the 15th of June. Sea trout fishing at the mouth of most of the rivers, however, is now immense and large scores may be made even by non-experts in a few hours whenever the tide rises. I saw in two hours no less than two hundred pounds of sea trout taken by the two rods of Messrs. Bland and Garland, who used on this occasion the golden pheasant and dock Scot fly. The weather here is now delightful, ranging between 65 to 72 degrees Fahrenheit, with pleasant, cool nights, although black flies and mosquitoes up the river necessitate comprehensive precautions to render the stay comfortable. It may be worth knowing that by late decision of the courts the right to fish the Mingan and Romaine rivers has been accorded to the signorie of Mingan, for six miles from the mouth, which includes in these two rivers the best fishing, while it hardly affects the rest of water courses.

Whoever delights in excellent sea trout fishing may find plenty of sport here until the beginning of September, at the mouth of all rivers, but the fish commences its ascent after that date. The majority exceed one pound in weight.

C. L.

St. Johns, Labrador, July 25, 1882.

FLY vs. BAIT.

AS this is a sort of "love-feast or experience meeting" I should like to speak. I have no doubt but scientific and sportsmanlike fishing should be done with an elegant ten-foot jointed rod, reel and fly. But is it not the bottom fact that fish are earthy to the extent that they will take a worm any time in preference to a fly? And, furthermore, will they not often take a worm when they will not rise to a fly?

Of course a fisherman does not go fishing simply to get something to eat, but after all I think he may once in a while be justified in slyly putting on a worm, for it is awful dull fishing with no rises.

One day I fished in the Montmorency, eleven miles across the country from Quebec, in the Laval district, and while I caught but a few trout and small at that, casting a fly for miles, a farmer boy who could not "even speak English" hauled in some beautiful trout with a pole which pointed in every direction, coarse line and clumsy hook baited with a worm. Good Izaak fished with a grub.

Next to a young robin I think a fish is the greatest gourmand that exists. I have caught pollock a foot long in the coves on the Maine coast, who were so full of fish offal, which had been thrown overboard from the "pogy" boats, that fish entrails hung from their mouth, yet they would bite with avidity. J. A. H.

Ohio, Aug. 5, 1882.

SILK LINES.

IN a recent letter from my friend, Dr. Ferber, he states that he is salmon fishing in Canada; that he hooked a large fish which parted his line. Upon testing the line he found it very weak. On more than one occasion I have been annoyed by the weakness of silk lines. For surgical purposes I purchased silk braid in hanks, seven hanks of different sizes costing sixty-five cents; each hank contains about twelve yards, and costs about three-quarters of a cent per yard. The question arises why should silk lines be so expensive, and not at all times reliable? I inclose six different sizes for your inspection. Al Fresco.

Jacksonville, Aug. 3, 1882.

[We understand that first-class dealers warrant their silk lines, and, unless a line was old and worn out, we would throw it back on their hands if not perfect. There are many qualities, perhaps, but we do not know the poor ones, as we have always had good lines, a fact that may be attributed to good fortune, if anything, for you can only judge of a line by its appearance, and if hard, even and well finished, many defects might be hidden beneath the coat of water-proofing. In a private note our correspondent wonders at the extravagant cost of first-class silk lines. So do we. We do not

doubt but such a water-proof, braided silk line as we pay five dollars for can be made and sold at a fair profit for one dollar. The samples of surgical silk sent are strong but are not round, nor are they water-proofed. The latter process stiffens a line and keeps it from kinking. The surgical silk will fray easily, but no doubt would be excellent if coated with some sort of water-proof material. Its softness would render it liable not only to kink, but to fray in the rings.]

CAPTURE OF A BIG SHARK OFF FIRE ISLAND.—Mr. W. C. Rogers, of 560 Broadway, and Mr. W. T. Taliaferro, were off Fire Island Light House on Monday comfortably fixed in one of the Wawayanda Club's best yachts, trying rod and reel for bluefish. The sport was poor, and Mr. Rogers, becoming weary of ill-luck, yielded the field to Mr. Taliaferro, who was somewhat annoyed at the indifferent success of his party, especially when observing that his neighbors half a mile off were doing so much better. But the absence of bluefish was soon explained by the presence of a huge shark, a genuine black fellow, measuring ten or twelve feet. All was excitement in a moment; Mr. Rogers arousing himself to action, making preparation for the battle. We soon got our shark tackle in shape, using an empty keg for a float, and a whole mossbunker for bait. The hook was scarcely well in the water before the keg was seen to disappear rapidly, and all hands were promptly at their post to give the important strike, and we soon found we had fastened the monster. For one hour the struggle lasted, during which time our mettle was severely tried, for at close quarters he showed fierce fight, and could only be conquered by the repeated thrusts with an old bayonet, delivered with great force by our captain, into the heart and brain of our foe. Our neighbors seeing something unusual going on in our boat, came alongside, and suggested that we should carry our captive to the hotel wharf, which we did, affording the many guests at Sammis's the first sight of a genuine black shark. His weight was variously estimated at from 450 to 600 pounds. Additional interest was given to the occasion by Dr. Townsend's (of Albany) skillful removal of one of the eyes.—X.

THE SEVEN PONDS.—Rangeley, Me., July 29.—*Editor Forest and Stream:* I notice a slight error concerning these ponds in Samuel Farmer's late communication, and trust he will pardon me for making correction. He refers to Northwest Pond as being on the divide. It is Grant's Pond that is thus situated; the two ponds are less than half a mile apart, however. The ponds are known as Rocky, Big Island, L. Loug, Beaver, Little Island, Grant's and Northwest. These are the principal ones. There are two small ponds lying adjacent to Northwest at the base of the Boundary Ridge, with separate outlets, that converge to a point at, and empty into, the upper end of Northwest Pond. Whitecap Pond is two miles distant from Little Island Pond, and discharges into Kennebago stream a short distance below Long Pond. Thus it will be seen there are eleven ponds in the group, without mentioning one or two smaller beaver ponds. As regards the controversy by interested parties as to the best route, I have nothing to offer, except to coincide with the editorial remarks in last week's issue, although I have decided convictions. But I will add that what has been stated regarding abundance of fish and game is all true, and is under rather than over drawn, as witness the following: A party going to Seven Ponds week before last saw on the stream three moose and seven deer. The following day another party saw one moose and two deer, all between Little Kennebago and Long Pond. Since then as many more have been met with by other parties on the same stream. I state this for the benefit of sportsmen, not for lines and routes of travel and other interested parties; still I am loth to "give it away," as my interest is all in the opposite direction.—WARFIELD.

WOUNDED TROUT.—While reading a late number of FOREST AND STREAM I ran across several incidents regarding trout being hurt by the hook and immediately biting again. While fishing this summer on the Boardman I got into a thicket, and found a deep hole about two feet below a log that had fallen across, leaving about sixteen or eighteen inches of clear water; I took the top joint of my rod with a short line and dropped in. Snap! came a trout to the fly; I hooked him but could not land him and he broke loose. I dropped the fly again and snap! he came up and out, with his mouth bleeding from his former attempt. Early in June I caught a large trout that had two hooks in his mouth, and in trying to get them out they broke like pipe-stems; I cut the pieces out and they crumbled up fine as powder by rubbing them between the thumb and finger. I also took a large one that had a hook and patent sinker in his stomach, with nearly four inches of snell protruding through the vent. I am not troubled as some of your correspondents are, especially some of the Kingfishers, with brush; and right here let me tell all lovers of trout fishing never to go out, especially where the stream is narrow and brushy, as it is in the Boardman or Jordan in places, without a horse-hair line, and you will say less "cuss words." Horse-hair lines never wind up on twigs, limbs, etc., so, but what a little jerk and they are all right again. I, for one, am never without one, and I fish with either fly or bait, as suits the fish. I would like to hear from some of your readers in regard to fin for bait. I have had splendid luck both with fin and gullet, when trout would not touch a fly.—W. E. WINER (Michigan).

BLACK BASS IN NEW HAMPSHIRE.—Claremont, N. H., August 2.—Perhaps it will interest some of the many readers of FOREST AND STREAM to know that we have very good black bass and trout fishing up here in New Hampshire. Sunapee Lake (Sunapee, N. H.) is one of the best fishing grounds in the State. This beautiful sheet of water lies at the base of Mount Sunapee, is nine miles long, studded with beautiful islands and surrounded with magnificent scenery. Its waters are well stocked with trout and black bass. A party of four from Claremont, N. H., caught eighty pounds July 29, some of them the handsomest your correspondent ever saw. A magnificent trout weighing six pounds was recently caught by a party from Ware, N. H., while fishing for bass in this lake. Sunapee Lake is accessible by the Concord and Claremont, N. H., railroad, which leaves Concord and Claremont for the lake, etc., several times each day. Stages connect at Sunapee depot, and the United States mail steamer Lady Woodsum, a staunch and trim steamboat, at Newbury depot, running to Sunapee Harbor, Lake View Runals House, etc., where fishermen can be accommodated at all times. Your correspondent has been there and knows whereof he writes.—BEAU.

MASSACHUSETTS BLACK BASS.—Boston, August 1.—July has not been a favorable month for bass fishing; yet during the first half or coolest part of the month there have been some very good catches taken from all the ponds of this part of the State. Many two-pounders, and so on up to five-pounders, with the usual number of big ones hooked but lost, broken tackle and resolutions, etc. The Plymouth ponds are counted among our best waters for fly-fishing, a circumstance not easily explained; in fact, a great deal of mystery still surrounds the conduct of the fickle fighters anyway, and I reckon will not be cleared up this year. As Uncle Nat says, "You never know what one is going to do; to-day one kind of bait is the best, and to-morrow they won't touch it." The incident that called forth this remark was a five-pound bass taking my fly about noon, under a scorching sun, with the water surface as smooth as a bottle. We expect more and the best results yet to come during August, but the time will now have to be divided between this sport and the woodcock shooting, which opens here to-day. Some few guns are already out prospecting.—M.

FISHING IN A CENTRAL PARK LAKE.—For several weeks the Central Park policemen have been kept busy driving away a gang of between twenty or thirty boys, who had made "a dead set" with lines and hooks on the fishes in the One Hundred and Tenth street lake, near the Fifth avenue. The gang generally appeared as early as 4 o'clock A. M., and when the morning squad came on duty, and approached the lake, the fellows would scatter in all directions. Leading the party was George Manard, aged seventeen years, who has repeatedly assaulted Officer Stone of the Park Police with stones and other missiles because the latter interfered with the sport. Early this morning Officer Stone, in citizen's dress, pounced upon Manard just as the fellow had landed a large, fat perch, and he marched the prisoner, with his string of perch, between eight and ten pounds, before Justice Bixby, at the Yorkville Police Court. Manard was sent to prison for ten days in default of $10, and the mess of fish was confiscated by the prison-keeper.—*Evening Post, Aug.* 2.

ARIZONA FISHES.—Tucson, Ariz.—Arizona cannot boast much of fish, on account of it intermittent streams and intense heat. The Colorado River produces a hump-backed sucker of soft meat and insipid flavor. In the northern tributaries of the Gila speckled mountain trout are found in considerable quantities. In the San Pedro and Santa Cruz some small fry are found, not worth mentioning. Carp are being introduced into the lakes, ponds and cienegas of the Territory, and promise well. Terrapin and frogs are found in great abundance, and are of good quality and flavor. The territorial Legislature established a fish commission by an act approved March 3, 1881, providing three commissioners, who are to report bi-annually before the meeting of the Legislature, and appropriated $500 for expenses of same. An act of February 3, 1881, provides that no fish shall be taken or killed with giant powder, or other explosive material, under penalty of fine of not more than $300 or county jail three months.—CHARLES D. POSTON.

WHITE BASS TAKE THE FLY.—New York, Aug. 5.—I note that "Homo," in speaking of the white bass of the Northern lakes, says that they are taken with minnow bait, and says nothing of their taking a fly. I lived for some years at Niagara, Ont., at the mouth of the Niagara River, and have caught a good many white bass, using nothing but a pure white fly, home made. Lovers of fly-fishing will do well to try this sort of fishing, as these bass are as gamy as their black brothers, and four half-pound white bass will give all the sport one would wish, for we used from three to five flies on the leader at once. I have landed five of them at one cast. One can take from thirty to eighty fish in an evening's fishing. They can be found at the mouth of the Niagara River from June till October. Any one wishing information of the fishing at Niagara can get the same of me or by writing to W. S. Lansing, Esq., Niagara.—L. C. K.

ANGLING IN KENTUCKY.—We are permitted to publish the following letter from a former Fish Commissioner of Tennessee to our correspondent, "J. D. D.":

ROCKCASTLE SPRINGS, Ky., August 1, 1882.—I have reached the "climax" of fishing grounds. This place is certainly properly named. "Jim Crow's" letters in the *Courier-Journal* faintly portray the grandeur of these hills and streams; but read him of the 30th ult. I am sitting in the Grand Piazza, fronting the river, with a party of friends. My No. 3 reel at my side and the hook one hundred feet from me, extends into the deep water in full view. I have had some lively tugs, and have landed several fine fish, "Salmon," jack, bass, channel cat and other game fish fill the waters, and the angler is happy.—GEO. F. AKERS.

MAINE NOTES.—The Orland correspondent of the Ellsworth *American* says sportsmen are taking fine trout from the ponds in that vicinity, and the bass put in the river three years ago by John A. Buck have done well; a large one was caught the other day. The Belfast *Journal* says that Cobbosseecontee Lake is becoming quite a resort for fishermen, and its attractions are drawing people to its shores. Wm. F. Garcelon, Esq., of Lewiston, had the honor of reeling in a bass recently, said by the guide to be the largest one caught in Cobbosseecontee this season.

FIFTY-DOLLAR TROUT.—Boston.—I see in an extract from a Portland, Oregon, paper, that "last Sunday a gentleman from Seabeck, W. T., went out in the canal for the purpose of catching fish, and when a twenty-five pound salmon took his hook it nearly upset him, and in landing his game a $50 watch slipped from his pocket and sank from his sight in the water. This is the most costly fish ever caught, standing the angler $2.50 per pound." Lots of our boys are out more than $50 on one trout weighing less than a pound and never tell of it.—C. E. G.

SIZE OF YELLOW PERCH.—East Douglas, Mass.—Have just finished reading the last number of your unequalled paper, which I found very interesting. In "St. Clair's" letter, of last number, he says he "presumes the perch in the North may weigh as high as a pound." I have caught them weighing three pounds, and have seen them even larger. They are a good table fish, and quite gamy, but not equal to the bass. The latter are quite plenty and of fair size, one being caught by a friend last week weighing four and three-quarter pounds.—AMATEUR.

PHILADELPHIA NOTES.—Aug. 5.—Fishing for sheepshead has been very good since the middle of July on all the bays in the New Jersey coast. Weakfish are now running in goodly numbers, and one cannot fail to find good sport at any point from Cape May to Barnegat. At Betterton, at the mouth of the Sassafras River, Md., white perch have begun to bite, but the fish are small as yet. The run of larger fish is never looked for until the last of August and first of September. Few of our Philadelphia anglers fond of Betterton perch fishing start for these grounds until the first week of the last mentioned month, preferring to wait for the bigger run.—HOMO.

MICHIGAN.—Grand Rapids, June 23.—We have here some very fine black bass fishing, often taking them from three to five pounds weight, and they are gamy, I assure you. Our fall fishing is the best, as log-driving seriously interferes with spring fishing. Messrs. Harrington and Curtis "take the bun" for last fall, taking a magnificent string of bass, and hardly a fish less than three pounds weight. I note in your issue of June 1, W. E. M., under date April 21, speaks of having caught fish in the Boardman. They were not then in season.—ALEX. [The letter of W. E. M. was written May 21, the other date having been wrongly given.]

FLORIDA FISHING.—Large channel bass have entered the river, and I have been informed that a fisherman landed five on Saturday last. Tarpon have appeared, and they are daily seen going through their acrobatic performances. On Saturday last a fisherman hooked a large fellow, but he carried away the line. Sea trout of good size are biting freely on the oyster bank, opposite Pilot Town.—AL FRESCO (Jacksonville Aug. 3, 1882).

STRIPED BASS.—Swampscott, Mass., July 29.—The best bass of the season was taken here this morning by one of our experts, J. Porter Thomas. It was a handsome fish, though small, only weighing sixteen pounds. He was taken off Tinker's Island, and his captor, after taking him, landed thirty as fine tautog as one would wish to see. Mr. Thomas says there are a few bass left marked J. P. T. We shall see.—S. M. S.

BIG BLACK BASS IN GREENWOOD LAKE.—Warwick Woodlands, Aug. 3.—On July 28 Dr. C. A. Olcott, of the club, caught a big mouth, or Oswego bass, weighing six pounds, making him the champion fisherman of the season, he having caught the largest fish.—B. S.

NARROWSBURG, Sullivan Co., N. Y., Aug. 3.—Fishing has been very poor here.—L. B. C.

Fishculture.

INTERNATIONAL FISHERIES EXHIBITION.

CONGRESS having accepted the invitation of the Government of Great Britain to participate in the great International Fisheries Exhibition, to be held at London, in May, 1883, the Commissioner of Fish and Fisheries has been instructed to prepare, under the auspices of the Department of State, a complete and systematic exhibit representative of the fisheries of the United States.

Preparations for the exhibition are already in progress, and there is no reason why it will not be possible during the nine months which remain before the opening of the exhibition to provide for a display which shall do great credit to the extensive fishery industries of this country. In order to accomplish this result it will be necessary to secure the co-operation and aid of all persons interested in fishing, fishculture, the fisheries and the related industries. I cordially invite correspondence, therefore, from any persons having articles suitable for exhibition, or willing to suggest plans by which the display of the United States may be rendered more effective.

Two classes of articles will be carried to London for exhibition, viz:

First—Those which make up the "collective exhibit of the United States," and,

Second—Those which are entered for competition.

In the collective exhibit will be shown, in a systematic and synoptical manner, illustrations of our marine and freshwater animals of economic value, together with the apparatus and methods of their capture and utilization, and the commercial, scientific, social, historical and legislative aspect of the fisheries. It will include the most striking features of similar exhibits made by the Fish Commission in the Philadelphia Exhibition of 1876, and the International Fishery Exhibition, at Berlin, in 1880, together with many additional ones never previously attempted. The major part of this display will be borrowed from the collections of the National Museum in Washington, but it will be necessary to secure a considerable number of new objects. I wish to reserve the right of placing in this department such of the private exhibits as can there be shown to the best advantage, it being understood that these are not to be excluded from competition. When objects are purchased to fill gaps in this exhibit, it will be with the definite understanding that they cannot enter into competition, and the name of the person from whom they were obtained will not be mentioned on the labels or in the catalogue.

It is considered especially desirable that the department of competitive exhibits shall contain a very complete representation of the various food preparations of fish—canned, dried, pickled, smoked, etc.—there being a constantly increasing demand in England for goods of this description, shipments to that country amounting, in 1881, to more than $2,000,000, in addition to the very large exports to other parts of Europe and to the European colonies in the East. Manufacturers of boats and boat-fittings, angling apparatus and costumes, and other similar articles, are also urged to contribute. Medals in gold, silver, bronze, and diplomas of honor will be awarded by a jury of experts.

I am prepared to act, both in this country and London, as the representative of individual exhibitors, and to attend to correspondence relating to applications for space, etc. Goods to be exhibited, if delivered in Washington, Philadelphia or New York, will be carried to London and installed at the expense of the government; special arrangements may be made for the return of articles at the close of the exhibition.

Prospectuses, blank application-forms, blank "lists of exhibits proposed to be shown," and any information desired will be furnished on application. Applications for space for competitive displays should be made before the 1st of September, 1882.

The exhibition—which is under the patronage of the Queen of England and the presidency of the Prince of Wales—will be opened on the 1st of May, 1883, in buildings now being erected in the Horticultural Gardens at South Kensington, and will continue for a period of six months.

SPENCER F. BAIRD,
U. S. Commissioner of Fish and Fisheries.

U. S. Commission Fish and Fisheries, Smithsonian Institution, Washington, July 20, 1882.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 5, 4, 5 and 6, 1892. Western Pennsylvania Poultry Society: Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1892, close December 1, 1891. Chas. Lincoln, Superintendent. I. R. Slayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

September 4.—National American Kennel Club Field Trials on Prairie Chickens, Fairmont, Minn. Entries for the Derby close July 1, for the All-aged, Sept. 4. Jos. H. Dew, Columbia, Tenn., Secretary.

November 17—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 881, New York, Secretary.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials or Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

GORDON AND BLACK AND TAN SETTERS.

Editor Forest and Stream:

The spirit of the times seems to be made up of contradictions and assertions. The great Laverack controversy is just ended in a most unsatisfactory manner, and now "Vitus" wishes to bring an equally hard and unuseful controversy up with regard to the origin of the present Gordon setter. "Vitus" may write many volumes on the subject, and in the end what good can he do for a breed which has no "warmer friend" than himself? If he really is such, why does he persist in throwing mud, when by doing so he is only detracting from his warm friends?

If he cannot see any advantage the black and tan Gordon setter has over the English or Irish setter, why should he pretend to be so greatly in its favor?

May I ask "Vitus"—and I expect, as he has made setters a study—to mention an instance of a black and tan setter ever having been either bred or shown as an English setter. What chances would an Irish setter have if he was black and tan? Why, red is his color as much as black and tan or black, white and tan is the Gordon setter color. Why should not Auld Reekie have a setter as well as England or "the Old Soil"?

"Vitus" does out of his way to prove that the Gordon setter is a mongrel, and by so doing he detracts from one of his warmest friends—not a pleasant sort of friend to have, I should say—and takes the ground that Stonehenge says so. All Stonehenge gives is heresay evidence, which nowadays will not be accepted. Another writer says that collie blood was infused by the Duke of Gordon into his breed. Be these assertions as they may, we have now got a breed of dogs whose pedigree we can trace as accurately as any English or Irish setter. These pedigrees would be worthless if their representatives did not show certain distinctive marks of breeding. "Vitus" cannot deny that the original setters bred at Gordon Castle were for the most part black, and Lord Lovat, who purchased the strain when the Gordon Castle kennel was broken up, bred black, white and tan Gordon setters. Why should "Vitus" deny them a name? The black and tan setter was bred from dogs of this strain, and the color was got by selection, as the pure black was also considered a more beautiful dog than the black, white and tan.

All this is beside the subject matter that all lovers of the Gordon setter have at heart, and that is how is he to be improved. Mr. Laverack improved the English setter by breeding up to a certain standard which he considered the proper one, and Mr. Llewellin seeing certain faults in the Lavericks, has endeavored by his breeding of English setters to overcome these, and has to a certain extent succeeded, and I have no doubt but some other enthusiast will improve on the Llewellin setter. So I hope it will be with the Gordon. Mr. Dixon has his ideas of what they should be, Mr. Malcolm has his, and as both these gentlemen have the true love of the Gordon setter in them, I have not the least doubt but that they will succeed in making great improvement on the breed, as they both have the same idea that the modern Gordon setter has been bred a too heavily made animal. No one reading the article of "Vitus," just published, but must consider him an enemy of the noble dog of which he has the foolhardiness to call himself the warm friend.

He must have had very little experience of the Gordon setter and less of the Irish when he says that the Gordon setter is indebted to the Irish for all his good qualities.

I don't at all wish to be like "Vitus," a warm friend of the Irish and thus run him down, but I will say this of the Gordon setter, that he beats the Irish in nose and tractableness, two most important considerations in a dog that has to be used for the purpose that setters generally are used for—*i. e.*, finding game birds for the sportsman to shoot. Let all lovers of the Gordon setter bury the hatchet and use every means in their power to improve him and get back his lost prestige in the field.

What we want to do was very ably stated by a friend of mine the other day. He said "he liked a dog with a big heart for his work, always ready to respond to the encouraging voice of his master. This is what is principally wanted. Get a properly proportioned body, be it big or little, and put a "big heart" in it. This, with the inherited characteristics of the breed, is all that is necessary to bring the Gordon forward as the *ne plus ultra* of a sporting dog. M. B.

Editor Forest and Stream:

In your issue of the 27th July, an article written under the initial "V.," and in a previous issue in May he writes under the *nom de plume* of "Vitus." As your correspondent replies to me, please permit me to say to him, where he states many persons are of the opinion that the Duke of Gordon was the originator of the Gordon setter, and he presumes, he says, from the tone of my letter, I am one of these, I will state in reply to this assertion that I have never yet seen or read evidence to convince me as to where this noble strain of setters did originate, but am sufficiently satisfied to give the Duke of Gordon the glory of calling them after him, as has been done for sixty years or more, for you cannot doubt, I hope, that had it not been for the Duke of Gordon we probably never would have known and been able to perpetuate this *ne plus ultra* of setters, and as they certainly were first brought prominently before the public by the Gordon family, I think, with that well-known authority Idstone to bear me out, I am safe in what I say. Idstone classifies the setter as English, Irish and Gordon, and we lovers of the Gordon setter will do the same, and I claim, judging from what has been handed down to us for ages back, that we have a more legitimate right to call them the Gordon setter than either the Lewellin or Lavericks have. Now this, I think, will be the decision of all admirers of the Gordon setter.

Mr. Editor, if your correspondent will read in your issue of the 27th of July an article on the Gordon setter, he will see my ideas from a practical standpoint as to how I think this dog should be bred for utility. Why, Mr. Editor, even Vero Shaw, the book from whom "V." quotes, tells us "The value of dogs from the Duke's kennel was far higher than of those coming from other quarters, and a genuine importation from Gordon Castle was always looked upon as possessed of no impurity of blood."

Now, it is surprising to me that one whose knowledge of the Gordon setter seems to be made up from books alone should have neglected to tell us what Idstone says about this grand field dog, the Gordon setter; but as your correspondent "V." has not done so, I will. Idstone, in speaking of the Gordon setter, says: "Much has been written as to their quality, and dogs with any trace of descent from the Duke's blood command the highest prices." To trace to his Regent, Old Bangs, Old Dan, or to Mr. Cook's Pan, or Fan, for Mr. Cook and the Duke bred from the same stock is ample warrant for purity of lineage. Idstone further states, "he has been assured by gentlemen still living, and who have been to the Duke, that there were numbers of black and tan setters at Gordon Castle, but that he also possessed prized breed, and shot over black, white and tans. He gives the list of dogs sold at the Duke's sale, and states further, and says "without doubt, these formed only a part of the kennel, for I have heard that a race of black and tans with white frills went to the Duke of Abercorn, and that nine others went to the Duke of Argyle and Viscount Bolingbroke, the latter of whom received one which was given to the Duke of Argyle as a present just at or before the Duke of Gordon's death." He further states "he has seen better setters of the black and tan than any other breed."

In speaking of Kent, he says: "He won the grand gold medal in France. He was fine in his day, but he probably imposed upon many judges by his rich color and large stature," which imposition, I claim, has caused all this immense size to-day, by breeders always looking after these prize winners on the bench, and seeking them for stud purposes and perpetuating these red destructives, which "V." would have us believe were caused by bloodhound cross. Idstone further says "he has often wondered what the public would have thought if they had seen Lord Bolingbroke's Argyle." He tells us "he was a narrow, deep made, racy looking dog, of true pure Gordon blood." (Now here is an entirely different style dog, and he in Kent's day was in form, and from all one can learn from books, what I have been pleased to term the light-weight Gordon setter, and of the style of those shot over by Duke of Gordon, as nearly all the authorities except Stonehenge prove this conclusively to my mind.) Now, Mr. Editor, I would like to ask your correspondent if he ever attended a bench show, and if so, did he attend the first one held in New York, at Gilmore's Garden? If he did, I would like to call to his mind some of my style Gordons, or, in other words, what I call light weights; prominent among them were Mr. Coopeland's Shot, Mr. Munn's Duke of Gordon, Mr. Marble's Glouse, and Mr. Tilley's Dream I., and several others which I fail to call to mind at present. In all this lot he did not see a heavy one like those we see on the bench to-day. These dogs were kept for field work, and have left sons and daughters behind them as grand as their illustrious sires in the field. This style dog you never see at the bench show, now the Stonehenge standard has driven them off, and their heavy relatives, bred for bench show business, allowed wrongfully to take their place.

Your correspondent seems to question my having pure bred Gordons of light weight. Evidently he has seen but few of any kind. After reading the above, and I tell him my light-weight beauties trace directly back to the dogs spoken of by Idstone, and mentioned by me in this letter, he will then find his assertion is not true, for in their veins he will find runs as pure Gordon setter blood as is known. And to the assertion he makes that I want a standard to suit my kennel, is as false as it is mean, for I never have shown my dogs on the bench, nor do I ever expect to, at least for several years to come, if ever. What I have been writing for has been for the good of the Gordon setter owned by all, and which is being ruined for field use by breeding him to the immense size that we see him of to-day. But, Mr. Editor, I am getting a little too far off the book learning that V. is more familiar with, so I will give him a few more lines from Idstone that I hope will help to show him that I am correct in my views as regards the Gordon setter provided to touch shows. Idstone says, "The Rev. Mr. Hawker, a Wiltshire clergyman, who writes under the name of Sixty-one, has some good ones, especially as regards frame, speed; and the Marquis of Huntly who never passes by a good one if it is to be obtained, he has Silk and young Kent, both bred by Idstone. The latter except that he has not tip-top speed, is one of the best dogs to hunt, find and quarter his ground which I ever broke, but he is not so narrow and deep as I like a field dog, in my opinion." In speaking of Deady owned by Sir Fleming, of Killkerran House, he says he was a grand one, making ninety or one hundred points at the first field trial ever held, at which, he says, he was one of the judges. Mr. Editor, I will have to ask you to please pardon me for making this article of much more length than I at first intended, but when one has to deal with one whom he presumes, from his writing, to be a book-worm and not a practical sportsman, fond of following good Gordon setters in quest of game, you will probably understand this article was due his unawares. I will close it at once by saying I will not answer V. or Vitus, as he styles himself, unless he treats me, as I have him, by writing over his own signature. HARRY MALCOLM.

BALTIMORE, Aug. 4.

In this connection we publish the following, which will at least prove new to the friends of the Gordon. It is written by "Strathbogie" to our London contemporary, the *Stock-Keeper*. He says: "It may interest some of the *Stock-Keeper* readers to know how the black white and tan setters were first bred, but I do not give it as authentic, but as the tale was told me by an old man long manager at Kinnivie, and who was intimate with Jubb, the late Duke of Gordon's head keeper. On my return to dear Aberdeen two weeks ago, I chanced to come across the old person referred to, and he assured me that the 'white' color was produced by crossing with the Spanish pointer, and the said Spaniards came from Mr. Horatio Ross to Gordon Castle. Should any of your readers wish to hear what Mr. Ross has to say on the subject, I shall write him for the necessary information. I know he has sported with the late duke, and there is not a better shot, a truer sportsman, or a better judge of Gordons in all the highlands of Scotland than Major Ross. Being personally known to him, I feel sure I shall get the fullest information.'

Editor Forest and Stream:

In your issue of July 27 appears an article from "Vitus," on Gordons and black and tans. As my name is brought up in connection with it I will very briefly make a few comments thereon. He claims the Gordon to be a mongrel, and gives Stonehenge as his authority in proof of it. Stonehenge certainly proves no such thing in the quotation he makes use of, unless a person is silly enough to accept, "it is said," or that he thought probably it was so, as proof; the intelligent sportsman of to-day cannot be satisfied with proof of such weakness. The coat of a Gordon in nothing whatever resembles a bloodhound, and the excellence of his nose, "if he really possesses the excellence attributed to him," can readily be traced to another source. He takes exception to my comparison of black and tan setters which I made for the Gordons, in your issue of May 25. I merely made the comparison to show the similarity of black and tans, other than Gordons, with the direct descendants of Old Kent, which he claims to have been the great Gordon, and to have done more for that breed than any other dog, and also to show the absurdity of classing dogs at our bench shows as Gordons instead of as simply black and tans. He states that every good quality the black and tan possesses came from the Irish, and then goes on to say this being the case, and we have the strongest evidence to prove it. Where is his evidence; is his mere assertion the strong proof he speaks of? I fail to see it in that light, or as proof of anything but egotism.

He further states that I do not want the rules changed as they suit my own kennel, and that I want to keep up the name of the Scotch or Gordon setter at the expense of the Irish.

There has not been a black and tan setter in my kennel for years past, but as selfish men are ever ready to impute to others their own selfish notions, I will pass that over by saying that in my experience with Irish setters, many of them had nothing to spare toward the improvement of any other breed. In regard to the origin of the term Gordon, if he will show one instance where a setter was known as a Gordon setter previous to 1590 I will acknowledge my error in supposing that it originated at Gordon Castle. So far as changing the scale of points for judging setters at bench shows is concerned I care but little. I have always bred them to suit my own fancy, so near as I could get them, and will continue to do so let the changes be what they may, or if there should be no scale at all. Believing there are as good judges of setters to-day, and as good setters to be judged as at any former period of the world's history, and among them the bold and slashing black-and-tan stands pre-eminent and uncontaminated by a drop of Irish or bloodhound blood in his veins.

JOHN DAVIDSON.

MONROE, Aug. 1, 1892.

THE COCKER SPANIEL.

Editor Forest and Stream:

I wish to thank Mr. Kirk for his very courteous reply to my letter of inquiry of June 20. I should have made the acknowledgment sooner, but have been absent. For the same reason I have not carefully analyzed the standard of the A. C. S. Club, and am not prepared to criticise it. Mr. Kirk says that I am "apparently a disappointed exhibitor." This is hardly a proper classification, for the term as commonly accepted implies more than I am willing to plead guilty to. My motive in writing to you was solely for the purpose of obtaining information, and not to impugn the motives of the judge or to hold him up to the public gaze as ignorant, stupid and dishonest, which appears to be the orthodox method of the disappointed exhibitor. No, I have too much respect for myself to charge such base feelings of this kind, especially toward so capable a judge as I believe Mr. Kirk to be. As soon as I have the leisure time I shall carefully go over the standard of the A. C. S. Club and may jot down some of the ideas that occur to me should I deem them of importance. I also wish to thank M. B., whose letter appears in the same number, and to say to him that the length of my favorite cocker is almost three times his height at the shoulder. The exact figures are 19½ inches at the shoulder and 56 inches from nose to root of tail. His coat is decidedly wavy; and, my dear M. B., allow me to say, with all deference to your opinion, I consider it his chief beauty, and would not part with a single wave, not even to secure a prize. There is not the suspicion of a curl in a single hair of his body, only waves, and Stonehenge says that the coat should be "slightly wavy." Possibly I have got things mixed, as I have not Stonehenge at hand, but as M. B. seems to have about the same idea of his points for the cocker that I entertain, perhaps he will do me the favor to give "Spaniel" chapter and verse. COCKER.

TORONTO, Aug. 7, 1892.

Editor Forest and Stream:

Breeders and lovers of the sporting cocker will read with much interest the following letter from "Stonehenge," who occupies the undisputed position in England and America, indeed wherever dogs are intelligently bred and used, of being the greatest living authority on the dog.

No one, I feel well assured, will have the hardihood to pit his individual opinion against that of "Stonehenge," and I think the American Cocker Spaniel Club can point with pardonable pride to such a complete indorsation of its "standard" by the great author.

To my fellow-members or the "Cocker Club," including "Senex," I take this opportunity of saying that instead of our standard being a "false and pernicious one," causing "foul and wicked injustice, and a blot, a scandal and a burning disgrace to the name of the cocker spaniel," it has obtained the proud distinction of being thoroughly supported by the highest possible authority in the canine world, the famous "Stonehenge." I may say that I have his courteous permission to publish his letter; and in view of the extraordinary recent conduct of your correspondent "Senex," I take the earliest opportunity of showing how mistaken he is in the opinion he has expressed regarding our standard, and which in his heart of hearts he must feel rather ashamed of. Remembering the very friendly feelings quite recently expressed by him in correspondence with me regarding the Cocker Club, I can only think that he must have allowed the wrath engendered by a dyspeptic attack to overmaster his better judgment. I would like to see his pen better employed than in throwing mud at the club of which he was so recently an enthusiastic member. Yours truly, J. F. KIRK.

COPY OF LETTER FROM "STONEHENGE."

"THE FIELD," 346 STRAND,
LONDON, W. C., July 27, 1892.

Dear Sir—I have read with pleasure your letter in FOREST AND STREAM of the 15th inst, and am quite with you as to the desirable size of the cocker. You will notice that your highest weight is only two pounds less than I have given, viz. "thirty pounds at the least," and that I expressly state that the increased size "militates against their use in some coverts."

In "Dogs of the British Islands" I have described dogs as they are, and not as I think they ought to be. My own opinion is quite in accordance with your standard, and indeed I can fully indorse the views of your club on all points. It must, however, be remembered that in these days of thin hedgerows a bigger dog can work than in former times, when he would have been quite unable to force his way through the small rabbit runs which are now done away with. Sincerely yours, J. H. WALSH.

J. F. Kirk, Esq.

COLOR OF BULL TERRIERS.

Editor Forest and Stream:

In last week's issue "Brindle," in writing about the color of bull terriers, asks, Why is white to be preferred to other colors? In No. 5 of Vero Shaw's Illustrated Book of the Dog, "Brindle" will find his question answered, and the matter of color fully gone into. Also by referring to the number of the New York *Country*, issued January 19, 1878, I find that "Stonehenge" says: "The color for show purposes must be pure white."

The bull terrier is purely a fancy breed, and for several years past white has been the fancy color. Of course there are many good dogs of other colors than white, and for my own part, if I wanted a good, plucky dog as a companion only, and not for the show bench, I would as soon have a brindle as a white, for the brindles very seldom want courage, and a well-marked brindle is a handsome color.

While on this subject I will say a few words about bulldogs. I find that of late years there is a tendency to make white the fancy color for this breed also. Now I think this is wrong, as the real old-fashioned color for bulldogs was brindle, and as a rule I think the brindle dogs show the true bulldog disposition oftener than the white. In judging bulldogs I think the colors should stand in the following order, viz.: All brindle, whole white, brindle and white, white and brindle. Is this correct? I should like to hear what others think on this subject. By the by, when are we to see a bulldog club formed? No time like the present, or in a few years our bulldogs will have degenerated into big, thick-headed, clumsy terriers. Let us keep the breeds distinct.

HEMLOCK.

ST. LEONARD, P. Q.

MR. J. H. GOODSELL'S ENGLISH SETTER DOG "RACKET."

RACKET.

RACKET is a white black and tan English setter of medium size, owned by Mr. J. H. Goodsell, of New York. He will be four years old next month. He is by Rattler (Rob-Roy—Pickles), out of Leda (Leicester—Rose). Racket won third at New York in 1881 and second at the same place in 1882. He is a good-looking animal, and is the sire of quite a number of good ones, notably a litter of six that were exhibited at Pittsburg last March, as fine and even a litter as we ever saw, and, although only ten months old, they all received ribbons, the four dogs winning first, second, and two vhcs in their class, while the two bitches were placed second and vhc. They were also winners in the special classes against older dogs. Mr. Goodsell has bred his Laverack bitches, Carlina and Petrel III., to Racket, and will, doubtless, be able to show something fine in the progeny. The cut is by Harry Tallman.

BUYING AND SELLING DOGS.

Editor Forest and Stream:

In a recent number of FOREST AND STREAM I was very much interested in Col. Tucker's remarks on parties failing to respond to orders. Requesting orders to be cancelled is certainly very annoying to breeders, who have perhaps refused to book other orders, thinking they had all they could fill, and then at the last moment, when stock is ready to ship, be informed by the party that ordered, "that owing to change of circumstances they did not want the stock," as if the breeder could shoulder all the responsibilities of his supposed patrons; and I will here say that I do not want to book any orders from this class. When a party orders stock from me I want and expect to have it taken, and have sometimes thought I would not book any orders unaccompanied with cash.

Another point I wish to take is this: Many, after I have offered to give them unexceptionable reference, request stock to be sent C. O. D., evidently thinking breeder is safe in so doing, which he is not. The party ordering may not know what points a good dog ought to have, and if stock does not look as he expected, he refuses to receive first-class specimens, and the breeder is out express charges both ways and expense while at express office; and very likely if stock is young it will die from double journey and want of proper care, and the breeder loses stock in addition to express charges. The party ordering may have money when he orders, but go "on a bust" and be penniless when stock arrives, and not in condition to receive it, and, as in the other case, the breeder bears the loss.

I have mentioned such cases to show that reliable breeders, whose stock is all right, have good reasons for refusing to ship C. O. D., unless person ordering gives well-known and unexceptionable reference.

I always request to be notified immediately by receiver of condition stock arrives in, and, strange to say, many never respond, and some, weeks after receiving stock, write that pup did not arrive in good condition owing to journey and has just died, and if safe delivery was warranted expect another sent, when pup might have been all right, for all shipper knows, when received, as time enough had elapsed for it to contract and die of consumption; and while in the past I have sent pups to replace such ones, do not intend to in the future, and shall consider that if not immediately notified of stock not being in good condition to consider myself under no obligation to make good the loss in case of death.

I have written these few lines for the benefit of breeders who have some rights that purchasers ought to respect; and the fact of any breeder advertising year after year in a paper of character like FOREST AND STREAM is proof enough that he is reliable and his stock good, and purchasers have little to fear if they will place their orders in regular breeders' hands. They have a reputation at stake and cannot afford to misrepresent their stock or send out poor specimens.

Nine times out of ten it is the breeder who is ill used, and nine times out of ten by the wanting "order cancelled" class, with which I am utterly disgusted. N. ELMORE.

GRANBY, CONN.

THE PRAIRIE CHICKEN TRIALS.

SPORTSMEN generally are interested in the National American Kennel Club Field Trials on Prairie Chickens, to be run at Fairmont, Minn., Sept. 4, and as a great many of them will be present, and some among the number may desire information in reference to the country in which the trial will take place, I last week visited the locality, in the interest of the FOREST AND STREAM, and herewith submit my impressions.

Presuming everybody will make St. Paul their base of operations, the visitor will leave that city by the Chicago, St. Paul, Minneapolis & Omaha Railway, known as the "Omaha Line," for short, at 5:50 P. M., arriving at Fairmount the same evening. This popular road runs splendid coaches and comfortable sleepers, and makes no charge for the transportation of dogs. Its conductors are gentlemen who can tell a gun from a fishing-rod, and its baggagemen have carried so many good dogs among their trunks that they have learned to appreciate their canine passengers and to treat them kindly. It passes its entire length through an elegant chicken country, and the sportsman can hardly hit it amiss by tarrying a few days at any station along its line below Mankato.

Those who have entered their dogs in the trials are probably posted in everything that will appertain thereto, and will not search the FOREST AND STREAM for suggestions as to how their trips to Minnesota may be made pleasant. I write to the now interested (in a proprietary sense) class of sportsmen, and if my suggestions are followed I can assure them a pleasant trip and elegant sport on chickens.

Visit St. Paul first and see its beauties. Then take the Omaha line at 5:30 P. M. and get off at Blue Earth City. Ask for the Constans House and you will be directed to a comfortable hotel where you will have a clean bed and plenty to eat, whose proprietor is a gentleman of the old school, hale and hearty at sixty years of age; who loves his guns and dogs and horses almost as well as he does his wife; who has hunted in this locality for twenty years, and who knows where and when and how to shoot. When you are comfortably settled here you will find that you are in one of the loveliest spots in Minnesota, on the banks of the Blue Earth River, and surrounded on every side by a beautiful rolling prairie dotted with farm houses and cultivated groves of cottonwood and maple. The village contains a fair livery stable, and a drive of from two to three miles will introduce you to a covey of chickens.

The Constans House charges are two dollars per day, dogs free, and a good team and driver can be had for $3.50 per day. Bags of from twenty-five to one hundred birds are the common thing for two guns. Blue Earth City is twenty miles from Fairmont by wagon road, every inch of which can be hunted and game started every half mile. It is distant thirty miles by rail. It is only ten miles distant from the Iowa State line; and as the open season commences in Iowa Aug. 15, those who come early can taste game by driving across the line. A visitor to Blue Earth can take in trials, get his fill of chicken shooting, the birds being very abundant, have some sport on ducks, perhaps bag a sandhill crane or wild goose, and enjoy some fine bass fishing in the river—a combination of delights rarely found in one locality. HUNT.

ST. PAUL, MINN., August, 1882.

THE SMUGGLER'S DOG.—One of those industrious individuals who know how to make a cheldron of coals out of a billet of wood, determined, in extreme poverty, to engage in trade. He preferred that of the merchandise which occupied the least space, and was calculated to yield the most profit. He borrowed a small sum of money from a friend, and repairing to Flanders he there bought pieces of lace, which, without any danger, he smuggled into France in the following manner: He trained an active spaniel to his purpose. He caused him to be shaved, and procured for him the skin of another dog of the same hue and the same shape. He then rolled the lace around the body of his dog, and put over it the garments of the stranger so adroitly that it was impossible to discover the trick. The lace thus arranged in his pedestrian hand-box, he would say to his docile messenger, "Forward, my friend." At these words the dog would start and pass boldly through the gates of Malines or Valenciennes, in the face of the vigilant officers placed there to prevent smuggling. Having passed the bounds, he would wait for his master at a little distance in the open country. There they mutually caressed and feasted, and the merchant placed his packages in a place of security, renewing his occupation as necessity required. Such was the success of the smuggler that in five or six years he amassed a handsome fortune, and kept his coach. Envy pursues the prosperous. A mischievous neighbor betrayed the lace merchant; and notwithstanding his efforts to disguise his dog, he was suspected, watched and discovered. How far does the cunning of some animals extend! Did the spies of the custom-house expect him at one gate, he saw them at a distance, and instantly went toward the other. Were the gates shut against him, he overcame every obstacle—sometimes he leaped over the wall, at others passed secretly behind a carriage, or running between the legs of travelers, he would thus accomplish his aim. One day, however, while swimming in a stream near Malines he was shot, and died in the water. There was then about him five thousand crowns' worth of lace, the loss of which did not affect his master, but he was inconsolable for the loss of his faithful dog.—*Live Stock Journal, July 14.*

COCKER SPANIEL IMPORTATION.—Dr. Niven has just imported from the kennel of P. Bullock, Bilston, Staffordshire, the black cocker Frank. He is by Frank, out of Nell, by old Bob. He is a long, low dog with a splendid head and ears, a most abundant spaniel coat, good straight legs and well-proportioned body; height, 15in.; length, 28in.; weight, 27lbs., in full condition. He took first prize at Wolverhampton last January; only time exhibited. At the same time he imported the cocker bitch Nellie, by Don, out of Saff, by Rawley's Ben. Nellie is a good one all round and has already proved herself a good brood bitch, and it is to be hoped she will continue to do so. With this importation and that of Mr. Fricker, America can now boast of possessing dogs from the best and oldest strains of cockers in England.

THE FOX-HOUND'S SCENT.—Worcester, Mass., July 26.—*Editor Forest and Stream:* Can you, or some of your correspondent who know, or think they know, tell me how it is that fox-hounds, coming to a track that they cannot see, or in the snow so that a man cannot tell which way the fox went, take the track in the right direction, as a good fox-hound will do ninety-nine times out of a hundred, and oblige.—FOX-HUNTER. [In our issue of Feb 16, 1882, may be found an article upon this very interesting subject, wherein we state our inability to fathom the mysterics of the subtle power that enables a dog to perform the wonderful feats we often witness while tracing the footsteps of the game of which he is in pursuit. Who shall define the limits of this marvelous gift, or fix a bound for its scope? Who shall say that the delicate sense that can unerringly follow the trail of the far-away fox to his lair, is not gifted with the power to discriminate the to us almost inconceivable difference between the older and more recent footsteps? Who shall say that the instinct that leads the hound to pursue his prey also inspires him to take the proper direction? or that reason prompts the course? We leave the subject in the hands of our readers, trusting that any of them who may have scented out the explanation will "give tongue."]

THERE WERE PLENTY OF DOGS.—Prince Bismarck owned a dog, a colossal mastiff, so ferocious of habit and demeanor that at the time of the great Congress of 1880 he flew at Prince Gortchakoff, to the grim, though suppressed, enjoyment of his master. All Berlin knew how fond the Chancellor was of the beast. It was his constant companion by day and by night; he was never seen without it, either in the streets or in the gardens of his palace; and it was said that the jealous fidelity of the dog, tried through many years, had endeared him to the Prince to the exclusion of every other favorite. One day the brute died suddenly, they say poisoned. Berlin felt the bereavement of Bismarck as an irretrievable calamity. What would the great man do without his faithful dumb friend? No other could ever replace one so fondly loved. The very next morning another mastiff, equally ferocious, equally attached, equally unapproachable by strangers, inspiring the same reciprocal tenderness, was seen passing the streets by the side of his master, whose hand lay on the collar of the new comer with the same trust in his prowess as it used to lie on that of his predecessor. The hint was efficacious, and watch-dog No. 2 was allowed to live.—*Sun.*

MONUMENT TO EDWARD LAVERACK.—In response to the appeal of Mr. Edward Armstrong for contributions for the purpose of erecting a suitable monument over the remains of Mr. Edward Laverack, in White Church churchyard, many gentlemen in this vicinity, wishing to express the high esteem in which they hold his memory, and desiring to subscribe to the fund, have placed the matter in the hands of Mr. E. A. Herzberg, of 1,401 Pacific street, Brooklyn, N. Y., who will gladly receive and forward to Mr. Armstrong such amounts as may be placed in his hands for the purpose. Mr. Herzberg has already received a number of subscriptions, and many more are promised. Following is the list so far received: Mr. Thomas F. Ryan, New York city, $10; Dr. H. F. Aton, Brooklyn, $5; Dr. S. Fleet Speir, Brooklyn, $5; Maj. Wheeler, Brooklyn, $5; Mr. H. T. Danforth, Brooklyn, $5; Mr. Edmund Cargill, Brooklyn, $5; Mr. Joseph T. Perkins, Brooklyn, $5; Mr. H. E. Hamilton, Jersey City, $5; Edward E. Hardy, Boston, Mass., $5; Forest and Stream Publishing Co., $5.

DOGS LOST.—Mr. C. E. Lewis, of Suspension Bridge, N. Y., has lost his imported smooth-coated St. Bernard bitch. Any one learning of her whereabouts will confer a favor and receive a suitable reward by notifying him. For particulars, see his advertisement.

Mr. J. S. Klein, of 168 Cherry street, New York, has lost his liver and white setter dog, who strayed from Western New Jersey on the 2d of July. He is about three years old, and stands a trifle higher behind than in front. He had on at the time a collar with his owner's address, who will pay a liberal reward for his recovery.

SALE OF POINTERS.—There was a large sale of sporting dogs at Aldridge's repository last week. The kennel of the late Major Vaughan Lee, of Dellington Park, Somerset, attracted the attention of sportsmen, the pointers comprising blood of the famous Edge breed. A brace, Mango and Mus, by Champion Garnet, fetched 60gs.; Milly, 41gs.; Dainty, 34gs.; Main, 25gs.; and the 4½ brace realized 207½gs.; 2½ brace of puppies, whelped last February, brought 52gs.; 2½ brace of pointers, from the kennel of the Hon. T. Fitzwilliam, realized 45½gs.; Buxton, an English setter from the kennel of Mr. James Freeme, fetched 22gs.; and 3½ brace of black spaniels, 30gs.—*Live Stock Journal, July 21.*

SNOWFLAKE—Palo, Mich., July 31.—*Editor Forest and Stream:* I wish to correct an error which I made when I sent you notice of the whelping of my pointer bitch Snowflake, which appeared in your issue of July 27. I gave her pedigree as by Maryland, out of Tell, and it should have been by Glenmark, out of Girl, Maryland and Tell being her grandsire and granddam on her dam's side.—W. J. PERCIVAL.

MONTREAL DOG SHOW.—The Dog Fanciers' Association, of Montreal, Canada, propose holding a bench show in that city next month.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Saddle Dance. By Major Wheeler, New York, for black and white English setter bitch, whelped June 21, 1882, by Emperor Fred out of Polka (Pride of the Border—Kate II.)

Rex and Monarch. By Mr. Charles E. Shaw, Clinton, Mass., for mastiff dogs, whelped July 21, 1882, by his Duke (Buff—Belle) out of his Pride (Duke—Juno).

Reine, Belle, Meg, Duchess, Pride II. and Nita. By Mr. Charles E. Shaw, Clinton, Mass., for mastiff bitches, whelped July 21, 1882, by his Duke (Buff—Belle) out of his Pride (Duke—Juno).

Moonstone. By Mr. A. A. Coster, Flatbush, L. I., for black, white and tan English setter bitch, whelped May 22, 1882, by Gladstone out of Swazo.

Guide. By Mr. F. Battles, Boston, Mass., for liver and white ticked pointer dog, whelped Jan. 24, 1882, by his Dick (Pete, Jr.—Kate) out of Leonard's Daisy (Bob—Nellie).

Raleigh. By Mr. O. W. Rogers, Billerica, Mass., for white, fawn and chestnut beagle dog, whelped June 17, 1882, by Mr. N. Elmore's King (Victor—Lucy) out of his imported Music (Rockwood—Faithful).

BRED.

☞ *See instructions at head of this column.*

Rose—Sensation. The Westminster Kennel Club's lemon and white pointer bitch Rose (Snapshot—Gypsy) to their champion Sensation.

Nell—Dash—Salisbury. Mr. J. Farmer Brayton's (New York) brindle greyhound bitch to his Dick Salisbury, July 9.

Eileen—Rab. The Borstall Kennel's (Morristown, N. J.) liver and white pointer bitch Eileen (Sensation—Daisy) to their Rab, July 31.

Lady May—Don. The Borstall Kennel's (Morristown, N. J.) lemon and white pointer bitch Lady May (Gumbo—Imported Fan) to their Don (Sensation—Psyche II.), July 31.

Lassie—Sensation. The Westminster Kennel Club's liver and white ticked pointer bitch Lassie (Bang—Leech's Belle) to their champion Sensation, Aug. 1.

Daisy—Dandy. Mr. W. J. Percival's black, white and tan beagle bitch Daisy (Rattler—Fan) to his Dandy (Rattler—Sill), July 31.

WHELPS.

☞ *See instructions at head of this column.*

Norah. Dr. J. S. Niven's (London, Ont.) Irish terrier bitch Norah (Spring—Nettle) five (three dogs), by Mr. L. Timpson's Rock.

Fan. Dr. J. S. Niven's (London, Ont.) Irish terrier bitch Fan (Splinter—Norah), four (one dog), by Mr. L. Timpson's Rock.

Fan. Mr. F. Battles's (Boston, Mass.) pointer bitch Fan (Rob—Nellie), July 30, seven (six dogs), by his Dick (Allen's Pete, Jr.—Sloeum's Kate).

Novice. Mr. Fred. W. Rothera's (Simcoe, Ont.) imported rough-coated St. Bernard bitch Novice, July 29, four (three dogs), by his Priam; the bitch since dead.

Tailfield. Mr. H. Bailey Harrison's black, blue and tan English setter bitch Twilight (Gladstone—Mersey), ten (three dogs), by his Dick Laverack (Thunder—Peeress).

Juno. Mr. A. S. Apgar's (New York) imported collie bitch Juno (Hob—Lass), July 31, seven, by his champion Marcus (F. K. C. S. B. 7326).

SALES.

☞ *See instructions at head of this column.*

Random—Romp II. whelp. Pointer dog puppy, by Mr. Edmund Orgill, Brooklyn, N. Y., to Mr. J. A. Wright, Austin, Nevada.

Bush—Juno whelp. Pointer bitch puppy, by Mr. Edmund Orgill, Brooklyn, N. Y., to Mr. J. A. Wright, Austin, Nevada.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Juno. Lemon and white pointer bitch (Sensation—Schlefflin's Juno), by Mr. Charles M. Schlefflin, Mount Vernon, N. Y., to Mr. Edmund Orgill, Brooklyn, N. Y.

DEATHS.

☞ *See instructions at head of this column.*

Dash of Locust Valley—Lou whelp. Gordon setter dog, whelped May 12, 1882, owned by Mr. W. M. Tileston, Babylon, L. I., July 20.

Rifle and Trap Shooting.

RANGE AND GALLERY.

FORT KEOGH, M. T., July 23, 1882.

Editor Forest and Stream:

The following are the best scores at Fort Keogh, M. T., by members of the Regular Army, for quota of Department of Dakota Rifle Team:

	Lieut. J. M. T. Partelle, 5th Infantry.

THE ELCHO SHIELD MATCH.

THE 23d annual contest for the Elcho Shield was held at Wimbledon on the 23d ult., and for the eleventh time England was victorious. The weather was beautiful, but with a strong breeze. The scores were as under;

ENGLAND—Sir Henry Wilmot, Capt.	800	900	1000	
Capt Godsal (Sharp)	66	63	67—201	
Lieut Whitehead (Met)	67	68	65—200	
Pte Gibbs (do)	65	65	62—194	
Sir H Halford (do)	59	69	65—193	
Maj Young (Gibbs Far Met)	67	60	61—187	
Capt Mellish (Met)	65	58	66—189	
Lieut Edge (Sharp)	63	61	61—185	
Major Humphry (Met)	64	58	62—184	
Totals	519	508	509 1536	
IRELAND—The Duke of Abercorn, Capt.				
H Coghlan (Rigby)	69	64	68—201	
D Ganby (Sharp)	67	55	71—193	
Capt Maxwell (Rigby)	68	59	64—189	
Maj Young (Gibbs Far Met)	67	59	61—187	
W Rigby (Rigby)	63	58	64—185	
R W Barnett (D E Met)	66	58	60—184	
J Rigby (Rigby)	63	55	66—183	
W Brailhwaite (D E Met)	63	62	58—183	
Totals	525	470	510 1505	
SCOTLAND—Col. A. Wilson, Capt.				
D Fraser (Fraser)	69	61	67—197	
M Boyd (Fraser)	70	64	58—191	
T Caldwell (Rigby)	66	62	66—194	
Capt Thorburn (Rigby)	65	64	65—194	
R M'Vittie (Fraser)	67	65	65—187	
Maj M'Kerrell (Fraser)	52	58	67—177	
Capt Shiels (Rigby)	61	55	58—174	
G E Murray (Rigby)	60	53	51—174	
Totals	510	485	499 1494	

On the conclusion of the match, shortly after 7 o'clock, Scotland and England finishing a few minutes before Ireland. Col. Wilson mounted a chair, and said it devolved upon him, as the happy possessor of the "wooden spoon," to announce the scores. He asked the members of his team to give three hearty cheers for their English friends who had defeated them. Sir Henry Wilmot said that when he came on the ground he was rather in fear of the result, and particularly at the end of the first range, when the English were behind. He had three new members in the team, who made him more nervous, but they had shot up like bricks, and it had been a good stand-up fight. Sir Henry proposed three cheers for the winners of the "wooden spoon," and also for the Irish team, which, he said, had made a grand fight.

Mr. Doyle responded for the Irish team, in the absence of the captain, and the proceedings terminated.

In the evening a meeting of the Scottish Eight was held, when Colonel Wilson was unanimously elected Captain of the team for next year.

During the day Colonel Wilson wore for the first time a series of silver clasps on his left sleeve, showing that since 1862 the captains of the Scottish Eight have been—1862-73, Captain Horatio Ross; 1874-75, R. H. W. Dunlop; 1876-80, Col. J. Wingfield Malcolm; 1881, Earl of Kintore; 1882, Colonel Wilson. Mr. Whitelaw wore similar clasps, containing the names of the adjutants, viz.—1862-3, Captain G. Mackenzie; 1864-66, Mr. John McGregor; 1867-79, Captain N. J. Sutherland, of the London Scottish; 1880, Major Menzies; 1881-82, Mr. Whitelaw.

In the evening Major Waller was presented by the members of the English Eight Club with a silver flagon, in recognition of his services as hon. secretary of the club and adjutant of the team.

CREEDMOOR, Aug. 2.—"August International Military Practice" Match.—Open to everybody. 200, 500, 600, 800, 900 and 1,000 yards, seven shots at each distance. Standing at 200, prone (i. e., lying "head pointing to the target") at 500 and 600 yards. Any position at 800, 900 and 1,000 yards. Any military breech-loading rifle. Cleaning of rifles not allowed, except between distances. No wind gauge or lateral motion to sights permitted.

	200	500	600	Total.	800	900	1,000	Total.	Aggregate.
J L Paulding	30	32	29	91	32	23	21	76	167
J McNevin	29	29	30	88	27	24	22	73	161
T Wilson	29	30	33	92	27	24	17	69	161
T J Dolan	28	31	28	87	26	28	19	73	160
S A Day	29	31	31	91	31	17	17	65	156
Fred Alter	29	27	25	81	21	25	19	65	146

N D Ward	25	23	27	81	22	20	14	56	137

Same day.—The "Rapidity" match.—Open to all comers. 200 yards, any rifle with open sights, magazine guns to be used as single loaders. At sound of the bugle each competitor opens fire at his own target, and continues loading and firing until the bugle again sounds (sixty seconds after first signal).

G E Albee (Hotchkiss)	50
M W Bull (Hotchkiss)	48
R T Hore (Hotchkiss)	45

Aug. 5.—The "Qualification" Match of 1882.—Open to members N. G. S. N. Y. and N. R. A., the former being in uniform (jacket, cap and belt) may count scores made as partially qualifying them to shoot for the New York State Marksman's Badge, provided that they use the Sharp's creedmoor rifle. 100 and 200yds., standing; 500, kneeling at 300yds. Five shots at each distance with any military rifle.

	Regt.	100	300
J S Shepherd	23d	22	23—47
J L Price	7th	22	23—45
W Munson	7th	24	21—45
C F Robbins	7th	21	21—42
T T Hayden	13th	20	17—37

Same Day.—The "Champion Marksman's Badge" Match of 1882.—Open to all members of the N. G. S. N. Y. and N. R. A., the latter, however, not being eligible to win the regimental prizes. Distances, 200 and 500yds., 5 shots at each distance. Weapon, the Remington rifle, N. Y. S. model. Position, standing at 200yds.; any, with head to the target, at 500yds.:

	Regt.	200	500
W E Taylor	14th	19	22—41
H B Thompson	7th	20	21—41

C Shumway	60	43	67	43	127	86
H Heywood	50	45	55	41	124	86
C Merritt	54	41	56	43	110	84
Fred Parser	40	39	58	38	98	65
C Sumner	42	39	52	41	94	80

ALBANY, August 4.—The riflemen were out in full force, yesterday afternoon, the special attraction being the fifth competition in the Captain John Daly Match. The thermometer stood nearly ninety, and the sun's rays were scorching, while not a breath of air stirred the flags, and the smoke hung heavy in front of the firing points. In the previous competitions five-class scores have been made, consisting of that the ordinary military position is required. Yesterday was no exception to the rule, and 48, 49 and 50 were recorded. The leading scores were as follows:

Captain John Daly Match—500yds.

William E Fitch, R.C.	5	5	5	5	5	5	5	5	5	5	50
Charles H Gaus, Bal B	4	5	5	5	5	5	5	5	5	5	49
W T Miles, S C	5	5	5	5	5	5	4	5	5	5	49
B R Spelman, Jr, S M	*4	5	5	5	5	4	4	4	3	5	48
William J Reinick, Bal B	5	5	4	5	5	4	4	4	5	3	44
N C Waring, R M	*4	2	3	4	2	3	3	4	4	2	4—35

*Allowance to military rifles.

Following the Daly match, the third competition in the military match was called. This match was specially made for the members of the National Guard, to give them a chance to make qualification scores as marksmen, outside of the regular practice. It was supposed that many of them would be glad to avail themselves of the opportunity which is quite popular with the men of the State, and it always has a sufficient number to fill it, and it never goes begging. The scores made were good, the first place going to James I. Miles, with the fine score of 47 out of a possible 50. Scores were made as follows:

Military Match—200 and 500 yds.

James I Miles R M	200yds	4	5	5	5	4—23
	500yds	5	5	5	5	4—24—47
Charles Keller R M	200yds	4	4	4	4	4—20
	500yds	5	5	4	4	5—23—43
W T Miles R M	200yds	4	4	4	4	5—20
	500yds	4	3	4	5	5—21—41
B R Spelman, Jr R M	200yds	5	5	4	4	4—22
	500yds	5	3	4	4	2—18—40
William E Fitch R M	200yds	5	4	4	4	4—21
	500yds	5	3	5	4	0—17—38
J P Burdick R M	200yds	3	2	4	4	4—17
	500yds	3	4	3	3	3—17—34
E V Denison R M	200yds	4	3	4	4	4—19
	500yds	0	3	4	3	2—12—31

Three competitors withdrew.

An attractive programme for the competition during the rest of the month has been adopted, and from now until the fall meeting at Creedmoor, the practice will be steady, and we hope the improvement will be made manifest when pitted against the experts of the land.

BRINTON, N. J.—The Brooklyn Amateurs held the regular semi-monthly competition in their champion's Match, July 26, Mr. White winning the fifth time, with the splendid score of 49. The following were the leading scores of the day:

T P White	45555	45553—49	A H Anderson 45444 45434—44
Geo Joiner	45555	45555—49	D Trotter 44445 45454—43
J B Hazleton	54444	45545—44	J R James 44444 45444—41

The Brooklyn Amateurs held their fifth competition in their "Consolation" Match on Aug. 1. The following were the leading scores:

Geo Joiner	45555	55545—49	T P White 44554 54455—45
J S Case	54545	55544—45	

WORCESTER, Aug. 3.—While many of our business men, who were unfortunate enough not to be at the mountains or sea shore, were sitting in their places of business panting with the depressive heat, waiting for customers that did not put in an appearance, others, members of the Rifle Association, spent the afternoon at Pine Grove Range, communing with nature, and enjoying the fresh, cool breeze, impregnated with the aroma from the pines, together with the manly and exhilarating work of manipulating the rifle, and came back to the city much refreshed by the afternoon's sport.

The Moss target was used. Distance 100yds., off-hand out of a possible 120. The following scores were made:

Carter	11	9	11	11	10	11	11	10	10	11	
	10	12	11	12	10	12	8	8	11	9	—208
Clark	10	10	11	7	11	12	12	7	12	11	
	11	8	11	9	11	10	9	10	8	7	—200
Rice	11	11	11	9	10	10	7	10	8	11	
	8	9	10	12	10	7	11	5	10	12	—192
Farrar	11	8	8	10	10	10	11	10	10	11	
	9	10	11	8	10	7	10	6	11	8	—189

The Worcester Rifle Association have a meeting called the 5th inst., for the purpose of getting up a series of prize matches.

NEWPORT, R. I.—The Newport Rifle Club, last week, held the first shoot in several weeks at Paradise Range, when the following scores were made, distance 200yds.:

W M Farrow	5	4	4	5	5	5	4	5	4	5	46
C H Burnham	5	5	5	4	4	5	4	5	4	4	45
W B Knight	5	5	5	3	5	4	5	4	4	5	45
G S Slocum	4	3	4	4	5	5	5	5	4	3	42
W S Bryer	4	4	4	4	5	4	4	4	4	4	41
G Wyatt	5	3	4	4	3	3	4	5	5	4	40
C Hay	4	4	3	3	3	4	4	4	4	4	38

Farrow used his new military gun, which would be allowed two points in a match. He will begin practice for a place on the American team in International military match. The first clay pigeon shoot ever held in Newport took place at the same time. Owing to the wind and the soft kind of shot used, the scores were not very good. The pigeons are so hard that many, though hit, escaped without being broken. The score:

J Storer	00	11	00	11	11	01	01	11	10	10	—12
C De Bildt	10	11	00	10	00	11	11	10	00	10	—10

PISTOL AMMUNITION.—Ithaca, N. Y.—I have experienced the same difficulty in reloading shells as "Medicus." I have overcome the difficulty by removing with a knife the inside corner of the mouth of the shell, sufficient to allow the ball to enter the same without turning up a burr on the ball. By this means the cartridges enter the pistol easily and work all right. The balls pass through the loader rather hard, but this I consider no serious objection.—C. C. C.

FORESTER CLUB.—The annual meeting of the Long Island Forester Club was held at their club rooms, corner of Downing street and Putnam avenue, Brooklyn, Tuesday evening, August 8. A handsome gold badge was ordered to be shot for during the ensuing year, and other important business was transacted. The following officers were elected: Henry Thorpe, President; Charles Edwards, Vice-President; W. T. Hawkes, Treasurer; and T. C. Banks, Jr., Secretary.

THE TRAP.

PLYMOUTH vs. SOUTH ABINGTON.

IN response to an invitation from the Plymouth Glass Ball Club, a team from the South Abington Sportsman's Club visited Plymouth on Saturday, July 29, for the purpose of indulging in a friendly game at glass balls. After a three-quarters of an hour's ride through the magnificent scenery of South Hanson and Halifax, with an occasional view of the sea as we near Plymouth, the train at last rolls into the station and we are met with a hearty welcome by the Plymouth boys. Coaches are in waiting to convey us to the shooting ground, and as we ride through the streets of the ancient town, places of interest are pointed out for the benefit of the strangers in our party.

As an engine company from Provincetown, together with a party from Boston on the steamer Stamford, were enjoying the hospitality of the town, the ladies in their red shirts, together with the excursionists, made the scene on the wharf a quite exciting. On arriving at the shooting ground, which, by the way, is one of the pleasantest ever visited by the writer, the glass ball smashers spread themselves on the ground under the trees and tried to take things cool. Coats and outside apparel are hung on the fences as the boys get ready to start the sport commences. The shoot is twenty balls per man; and after ten apiece have been fired at, a truce is called, and the company are invited to partake of a substantial lunch; and it was surprising to see how some of the South Abington boys made such large scores on sandwiches and other edibles. This was especially the case with two brothers, who, had they been reinforced by their little brother, who was absent, would have made carriers of the good things. After a social chat, cigars were lighted and the remaining ten balls disposed of, and South Abington declared the winner.

The Holden trap was then put out and sweepstake shooting indulged in the remainder of the afternoon. At three o'clock the shooters took a reluctant departure, not, however, without contracting a promise from the Plymouth Club to return the visit at an early date. One painful feature of the day was the misfortune of a brother sportsman in missing the train to Plymouth, being at times very absent-minded, he arose the morning of the shoot, and forgetting all plans of the day before, took his fishing tackle and went off on a hunt after pickerel. During the whole day not a thought of shooting at Plymouth entered his head. He was really touching to see the expression on his countenance when taken to task by his comrades for his non-appearance. "By George! boys, I forgot all about it; how did you come out?" The excursion was voted by all to have been a most enjoyable affair, and to use a forcible, but not over elegant phrase, it will be a cold day when the South Abington boys forget the courtesy shown them by the Plymouth Club.—SASSACUS.

One of the party supplies the score, which is as follows

Plymouth Club.		So. Abington Club.	
W H Drew	13	E Bates	17
J M Jackson	13	J E Whidder	20
W T Whitman	11	L W Farrar	17

C Wood	17	C F Cook	11
E D Hill	16	W H Cook	13
W H Hathaway	16	A H Wright	15
H W Gammon	15	W Wilder	15
	13	F W Bryant	15
	12	Geo Edson	18
	161		208

WARWICK WOODLANDS, Aug. 3.—The rule of the Warwick Woodlands' Gun Club is that the member making the best individual score at the regular Saturday afternoon shoot becomes President and holds the Presidency only until the next Woodlands at the regular Saturday afternoon meeting by having the highest personal score. Mr. W. O. McDowell won the Presidency. If defeated or absent the member having the best score succeeds to his place.

On Tuesday, Aug. 1, the club shot a match with the Joseph Jefferson Camping Club, three entries from each side, glass balls, revolving trap. The score is as follows:

Warwick Woodlands' Gun Club.			
L B Wheeler	01101	10110	10001 11111—13
P O Dickinson	11111	01111	11111 11111—19
Geo H Brandon	10111	10001	10000 11111—13—44
Joseph Jefferson Camping Club.

HAYDENVILLE, Mass., August 5.—Our Red and Gun Club have just closed shooting glass balls for the season in favor of woodcock. Our club has been organized for three years, but we are strictly amateurs in every sense of the word, and our scores have not been of the best; still we have improved some this year and hope to do better in the future. Below is compiled the scores of the season's shooting. We shoot twenty-three times, ten balls each man, single revolving trap, Bogardus rules, twenty-one yards rise:

	No. Broke.	Average
J Courtwright	8878810887797596866979679	173	7½
Ed McCaffrey	8978898899797108354887	163	7 2-5
L Watling	559797596856099388870	153	7¼
Ed Larkin	747078788779396867779	147	7
Hunyon	8587758944878799	129	6¾

R Neal	4338445344143810	45	3

A. R. T.

CARTHAGE, Mo.—A recent shooting match was participated in by two teams of Carthage and one from Webb City. The boys first indulged in pigeon shooting, five shots each, which resulted as follows: Ashcraft 4, Parker 3, Howlett 3, China 4, Johnson 1, Sombart 5, Allen 4, Shaw 4, Andrews 3, Stebbins 2, Roessler 2, Hickey 5, Karr 4, and

Sanderson 3. A belt was then shot for among the teams, glass balls being used, ten shots each. The following was the result: Carthage Club, No. 1.—H. Cran ball 10, G. Stebbins 6, H. Armstrong 3, Dr. Sombart 7, George Karr 5; total, 31. Carthage Club, No. 2.—Ben Allen 3, J. Roessler 6, H. Shaw 7, H. C. Johnson 2, Sam Sanderson 5; total 23. Webb City Club.—G. P. Ashcraft 8, A. A. Hewiett 9, Mr. Hickey 9, C. A. Parker 6, W. S. Chinn 4; total, 35. The Webb City Club, having shot the most number of balls, was entitled to the belt. The Carthage Club No. 1 did splendidly, and but for one member falling far short of the average, would have carried off the belt. Mr. Armstrong is a good shot, but for some reason he missed every ball except two. The boys will try it again. The Avilla team did not arrive.

TORONTO GUN CLUB.—August 5.—Score of the T. G. C. last shoot at pigeons; and as it was raining all day this accounts for such a small number in attendance. There were two prizes in each class, consisting of four cases of stuffed birds, set up by the club taxidermist, Mr. S. Herring. The following is the score:

	FIRST CLASS.	
E Perryman	11111 11111—10	John Webster	11111 01110—8
Jos Taylor	11111 11111—10	Wm Smith	10111 11111—9
C C Small	01101 11111—8	Wm McDowall	10010 10111—6
Geo Smith	00101 11111—7	Geo Pearsall	11111 01110—8
W Villiers	00101 01111—6	T Taylor	11010 01011—6
W R Evans	11101 10111—8	S Staneland	11011 01111—8
Chas Ayre	10010 01011—5	J R Mills	11111 01111—9
B Pearsall	11101 11111—9	Jas Foreman	01110 11111—8
John James	11111 11111—10	Jas Douglas	10111 11101—8
Wm Dixon	11011 11010—7	Geo Leslie, Jr	11101 11101—8

Ties will be shot at some future time.

	SECOND CLASS.	
Dr Wm Smith	11101 11101—8	John Ayre 10001 10111—6
Chas Kemp	11111 01101—8	J Werden 00111 10100—5
J W Millar	00010 10011—4	R Wilson 01111 00001—6

Dr. Wm. Smith takes the first prize, Chas. Kemp the second.

NATCHEZ, Miss., July 27, 1882.—Scores of a glass-ball match shot July 26, at Vidalia, La. (opposite Natchez), between the Vidalia Gun Club and the R. E. Lee, and the Gaillard clubs, of Natchez, Miss., for a silver cup and the championship. Conditions: Ten balls each, from Card trap, screened, 18yds. rise. You will observe the contest was close and the shooting good:

Vidalia.

FALL RIVER, Mass., Aug. 3.—The Fall River Gun Club held its 10th competition for silver cup this afternoon, which was won for the third time by J. B. Valentine. The following are the scores:

	Balls.	Clay Pigeons.
Valentine	11001 11111	11110 11111—17
Hall	10111 11111	01101 11110—16
Sheldon	10111 11101	10111 10011—15
Buffington	11111 11100	11111 100 w—14
Jackson	11001 11111	01100 01001—13

The names of the winners and numbers of times won are as follows:

Valentine 3 times, Buffington twice, Sheldon twice, Crandall once, Braley once, Hall once. T. S. H.

DAVENPORT, July 27.—Shoot for the championship gold badge of Delaware county. This is the second time it has been contested for, having been won by L. A. Davenport the first time and also this time. Value of the badge is $50; was issued under the auspices of the Oleout Sportsman's Club of Franklin, N. Y. Conditions: 25 balls per man, 18yds., Davenport trap, swift—40yds. Few entries on account of harvesting:

M P McRoon	1 0 1 1 1 0 1 0 1 1 0 1 1 1 0 1 1 0 1 1 0 0 1—17	
John Davenport, Jr.	0 0 0 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1—20	
L A Davenport	1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1—23	
C E Fuller	1 1 1 0 1 0 0 1 0 1 1 1 1 1 0 1 1 0 1 1 0 0 w—14	L.

FALL RIVER, Mass.—The ninth competition for silver cup, at 10 glass balls and 10 clay pigeons, took place July 20, and resulted in W. H. Sheldon winning the cup for the second time. The following scores were made:

	Balls.	Clay Pigeons.
Sheldon	1 1 1 1 1 1 0 1 1 1	1 1 1 1 1 1 1 1 1 0—18
Jackson	1 1 0 1 1 0 1 1 1 1	1 0 1 1 1 1 0 1 1 1—16
Valentine	1 1 1 1 1 1 1 1 1 1	1 1 1 1 1 0 1 1 1 1—19
Cornell	1 1 1 1 1 1 0 0 1 1	1 1 0 1 0 1 0 1 1 1—15

Yachting and Canoeing.

FIXTURES.

Aug. 10—Southern Y. C., Annual Sweepstakes.
Aug. 8-19—Quaker City Y. C., Annual Cruise.
Aug. 8-12—American Canoe Association Regatta, Lake George.
Aug. 12—Hull Y. C., Second Club Matches.
Aug. 12—Merrimack Y. C., Club Match.
Aug. 12—Toronto Y. C., $250 Cup.
Aug. 14—Royal Nova Scotia Y. S., Ocean Match to Chester, 1 prize.
Aug. 16—Royal Nova Scotia Y. S., Chester Town Cup, 2d prize. All Comers.
Aug. 18—Royal Nova Scotia Y. S., Ocean Match to Halifax, 1 prize.
Aug. 19—Beverly Y. C., Open Races.
Aug. 19—Jeffries Y. C., Club Match.
Aug. 22—Jersey City Y. C., Ladies' Day.
Aug. 23—Oswego Y. C., Annual Matches.
Aug. 23—Dorchester Y. C., Second Championship Race, Cat-Rigs.
Aug. 23—Quincy Y. C., Fourth Club Match.
Aug. —Southern Y. C., Inter-State Regatta.
Aug. 23—Hull Y. C., Club Championship Match.
Aug. 24—New Bedford Y. C., 2d Class Schooners, 1st Class Sloops. $100, $75. Principal Clubs.
Aug. 26—Beverly Y. C., Open Regatta, Marblehead.
Aug. 29—Salem Bay Y. C., Championship Sail-off.
Aug. 30—Hull Y. C., Club Championship Match.
Sept. 1—Beverly Y. C., Third Championship Match, Marblehead.
Sept. 2—Jeffries Y. C., Club Match.
Sept. 2—Royal Nova Scotia Y. S., Mayor's Cup and third prize.
Sept. 4—East River Y. C., Fall Matches.
Sept. 5—Dorchester Y. C., Third Championship Race, Cat-Rigs.
Sept. —Hull Y. C., Club Championship Sail-off.
Sept. 4—Quincy Y. C., Fifth Club Match.
Sept. 5—Jersey City Y. C., Ladies' Day.
Sept. 9—Merrimack Y. C., Open to All Match.
Sept. 10—Quaker City Y. C., Harbor Cruise.
Sept. 16—Dorchester Y. C., Open Races, Cat-Rigs.
Sept. 16—Royal Nova Scotia Y. S., Three Classes, one prize each.
Sept. —Royal Nova Scotia Y. S., Yachts dinghies, sailing race.
Sept. —Royal Nova Scotia Y. S., Charlottetown, P. E. I.
Sept. 19—Jersey City Y. C., Ladies' Day.
Sept. 24—Quaker City Y. C., Harbor Cruise.
Oct. 1—Quaker City Y. C., Closing Cruise.
Oct. 3—Jersey City Y. C., Ladies' Day.

SPORTSMAN'S CANVAS CANOE.

A SPORTSMAN'S CANVAS CANOE.

Editor Forest and Stream:

Some of your correspondents inquire about ducking boats. I send you a plan of canvas canoe which I never have seen except two that I have made like this, and I think it an improvement over the common canvas canoe. I use mine here in the Missouri River and in the lakes about here, and have shot many a duck and goose from it. I never saw one so steady and staunch. I was over to Red Lake a short time ago with Mr. Spalding, and we both shot from her, and while in the weeds, in the center of the lake, Mr. Spalding's large greyhound bitch Eve came swimming out and was nearly drowned in the weeds, and Mr. Spalding took her on deck, while I paddled all ashore, more than half a mile—quite a load, two men, two guns and ammunition, about twenty-five mallard ducks, and a greyhound bitch standing on the forward deck. With the sail I have on her I stem the current of the Missouri River. I intend to put another such sail on her, as she will carry it without any trouble, for she does not mind the single one in the least. I have crossed the river in the heaviest kind of a blow and not taken a teacupful of water aboard. Being made so low forward and aft, she does not catch the wind near as bad, and the decks keep out the water.

I have just come back from a trip of ten miles down the river, and could approach flocks of mallard, and all the screen I had was to put a few willow twigs in the mast hole, and they made a blind to cover me, sitting in the bottom. I use a double blade paddle, jointed, and use it single when I get near ducks. I have her painted the color of the water for a drift log, and the ducks do not seem to care for it at all. Description of construction as follows: The ribs and long strips are made of oak ⅜ by scant ¾in.; the ribs are placed 5in. apart, and there are six long strips on each side, and two more 8ft. long to fill up the larger space in the middle. Where each strip and rib cross they are cleated together with a copper nail. The gunwale and quisare ⅜ square, and each rib is let into them and nailed with two copper nails. I use just 4yds. of 52-in. canvas, and the pieces taken off each end make the deck. I bring the canvas over the dado in the stem and stern, and put in a spline; then put on a keel made of oak outside of the canvas and screw it to the center keelson. The cockpit is made of half-inch black walnut screwed to the gunwale strips, and has a piece ⅛ by 1in. screwed on top on the sides and back, so that it leaves ¼in. projection. In front I use a piece ¼in by 3in.

The seat is made of two ⅞in. pine pieces, 3in. wide, screwed to the ribs, and the top is rabbeted ½x½, and the top is made of 2in. by ⅛in. pine strips placed 1in. apart, and cleated together.

The deck is raised 1in. in center of boat, so that it sheds the water, both sideways and endways.

I bring the canvas around the boat and nail it on top of gunwale, and the deck the same, and then put a neat ¼in. half-round molding on top of the tacks, so that it makes a neat job. FAR WEST.

LOWER BRULE, Dakota.

CANOEISTS ON A CRUISE.

REMEMBER to keep the internal machinery in working order by partaking of laxatives, or a whole cruise may become an affliction. Figs are good, so is syrup, stewed prunes, apple sauce and fruit. Never indulge in spirits in the sun unless in case of last extremity. Soft linen helmets, the brim to turn up or down, are the best and most convenient headgear. In hot weather moisten the hair or helmet, or put damp cloth inside. Wear smoked goggles in a bright sun. Carry along a little salve for sunburn if not already hardened by exposure. Blisters on the hands should be pricked with a needle at night, the water gently squeezed out, and a bit of sticking plaster put on next morning to keep from chafe.

Before starting be sure you have fresh water along. This should be replaced whenever there is an opportunity. Also look to your matches. If you are a smoker and cannot get a light, the pleasures of canoeing turn into gall. We have been there for a whole day with three prime Havanas mutely appealing for sacrifice from the breast pocket. Carry as little as you can possibly get along with. Trust to finding on the way what you may want, rather than paddle 100 pounds of duffle about for a week with no use for anything but a tack, or a pin or a few inches of twine. Outfit should consist of stove, with one pot and one pan only. Comb, soap, matches, glass, toothbrush, clothes brush, sewing gear, and even blacking brush we have packed in a box 5¾x1½in., by selecting diminutive articles of each kind. One towel, soft rubber drinking cup, court-plaster, knife, and no forks, spoons nor teacups and saucers. A stick will stir the bacon, a knife will cut it, and there is no danger but what it will find its way into the mouth without implements. A combination knife, fork, scissors and spoon is an excellent article, nevertheless.

An ax may be useful, but it should be the smallest size in the market. A pocket compass, a $4 Waterbury watch, quinine, such fishing and gunning gear as your sporting inclinations dictate, the ammunition kept dry and safe, lantern, light tent with steep pitch, rubber blanket, writing and sketching materials, for all good canoeists should learn to jot down their adventures at night, and if they will acquire common sketching they will find themselves amply repaid by the opportunities a cruise affords for its application. Provisions mainly of canned goods and Brunswick soups, eggs, and perhaps a little bacon with a tin of good crackers. Learn to take coffee or tea without sugar or milk and forget all about butter and you will save any amount of annoyance trying to keep such trifles of an effeminate civilization in stock.

For clothing, flannel is the safest and the most convenient to wear. One suit is enough, but two shifts of underclothing should be taken along. Shoes of soft canvas, with a stout pair for shore. A blanket for the night and a rubber suit for the rain. Accustom yourself to change position occasionally in the canoe; have a sponge at hand for bailing. Keep the seat raised a couple of inches or else the floor paddle steadily, and not by spurts. Do not camp near marshy ground. In doubtful places sleep in the canoe. Binoculars and charts add to the interest of a cruise. If you cannot swim you have no business in a canoe. See that everything is in working order, in good condition, and that you have a place for everything before starting and save many a delay and spoiling things for want of proper condition. Keep blocks, leaders and hoops slushed enough to depend upon the gear rendering through and sails coming down in an instant. Treat the natives in a conciliatory manner, and appear duly impressed with what you see in rustic latitudes.

NEW YORK Y. C.—ANNUAL CRUISE.

IT might be supposed that owners of grand vessels ranging one hundred tons and upward, would seek something more ambitious than a languishing drift in a broiling hot sun, interspersed with "receptions, "clambakes," and other equally irrelevant devices for killing time and filling up the inner man. If social enjoyment is the object of a cruise, all hands aboard a steamer to Coney Island or stowed in a long tow of palace cars bound for the Rockies would seem to afford a far more satisfactory solution to the longings of the pseudo yachting tars composing the majority of the New York Y. C. For that matter, the attractions of the corporation's bar-room and card-tables in the heart of the city would supply all that is needed, and the elaborate firewood hung about the walls would be quite as suggestive of the real thing as the picayune imitation of a sailor's life, the annual lily pond drifting offers. Considering that the small clubs and even open boats make no bones about a run to the Vineyard and the beat home, it looks like a very paltry spirited affair that huge schooners, almost too large to fill away in some of the harbors without going ashore, should rest content with the idle, pointless dawdle dignified in the lay press as a "cruise," and believed by the members of the club to be an event of such magnitude as to compel the attention of the nautical world, when that world quietly smiles at the sight of a fleet of great yachts starting out to do wonders and putting back for sheltered waters ere the open has fairly been reached. Many fine schooners of the Royal Thames, for example, making preparations for weeks, and unreeling more red tape than the men-of-war off Alexandria, and all for a bit of a turn down the Swin and home, with half the crowd putting up helms for shelter in the Greenwich reach after barely fetching down to the Nore!

A performance of the kind would be received with ridicule throughout Great Britain, and the club and its yachts relegated to oblivion. Yet it is just about such an undertaking which is yearly dignified into an adventurous voyage of magnitude and danger by the columns of attention bestowed upon the affair in the local press, and we regret to say that the glamor of noise and fireworks and that serene contentment arising from bountiful feasts and liberal potations free of expense to the partaker has likewise reduced sundry sporting contemporaries to a dutiful state of subsidence and puffery of the chrome sport and counterfeit sailorizing indulged in from year to year by the New York Y. C. It has been proposed in some quarters that the owners and "guests" get out and walk while the yachts drift along and that the interesting and exceedingly nautical pastimes so destructive to the innocent cram and productive of coin to fireworks professors be varied by needlework in the evening, combining the useful and ornamental in decorating the sails in allegorical delineations worked in silk, commemorative of captures made among the fair at the various fandangos attended. But the owners are not altogether to blame for their preferences, for duck-puddle driftings in many cases emanate from a secret misgiving about the seaworthiness of their over-rigged vessels for aught else.

Propose, for example, a cruise in squadron to Bermuda, and whew! what a whistle would be passed around. The mere mention there of seems ridiculous enough, for to ask the New York squadron to venture upon such a thing would be much like requesting a consumptive to meet the eminent artist Mr. Johnny Sullivan without gloves, and apt to end in the same result, being incontinentally knocked out of time. But if such a proposition brings a shudder to the gentle sailors of a society club, it is by no means an unreasonable one, nor yet a motion which cannot readily be carried through by any prominent club abroad. There are some few schooners in our home organization tolerably well fitted for regular cruising, though even they would first have to go into the rigger's hands and have their sticks docked, a good piece and sundry extra shrouds, backstays, bobstays and preventers supplied to make up the deficiency between a regular sea-going craft and the provisional makeshifts for light weather still generally followed. Huge hatches would have to be closed up, Bahama screened, boats fit for service supplied in place of the cranky "White Hall" nondescripts, and a thousand and one odds and ends attended to, to say nothing about a more judicious distribution of the sail to bring it under control of the crew, general refastening of the hull and an overhaul of nautical instruments.

The general run of yachts, including the large ones, are, however, manifestly unfit to venture beyond the ready reach of a port for refuge. It is not expecting anything unusual of a British fleet that they should be found prepared for a sea voyage or for a run along the coast, and why it should be of an American fleet we have never been able to comprehend, unless there is something still wanting in the make-up of our yachtsmen themselves, which is reflected in the vessels they sail. If the New York Y. C. squadron is to be excused from an ocean voyage on the plea that drifting along shore is more interesting work, owing to the proximity of shelter, summer hotels, festivities and rambles ashore, it is at once a confession of the very charge we are making, that yachting is not yet pursued as a sport, resting for pastime upon its own merits, but rather as a means of accomplishing very different ends. The yacht is not sailed for the pleasurable exercise of body and mind in her management, but only as a tool set to carrying owner and "guests" from place to place, the object in view being to exhaust the attractions of one particular town, get out of it by a luxurious method of conveyance to take you into the next place with the least possible delay, the passage being looked upon as a necessary evil accompanying the ownership of a palace afloat. In this light, a voyage to Bermuda, to Halifax, Mount Dessart or even to Boston, seems a ridiculous proposition indeed. But if the sport is followed with the idea of gaining as an amateur, the life, adventures, trials and experiences of a seafaring man, it is perfectly incomprehensible how any one with ambition in that direction can find his thirst quenched by such a very diluted dose of the real

thing as served out in the New York squadron's periodical lily pond drills. This is at least the aspect affairs take when viewed from the standpoint of a professional critical enough to insist upon a difference between the social and the sailor features of a cruise. As long as the majority of the New York Y. C. place a higher equivalent upon festivities and diversions to be found in watering towns than upon the seagoing worth of themselves and their boats, so long, we suppose, the present mild mannered quality of yachting will continue to be the policy of those directing its affairs. We look into the future, though, and see bright pictures take where viewings of mud at the helm, men with whom the ship carries fore and aft everything else after. In those halcyon days when society members have graduated into sailor members, the picture shows a fleet close reefed standing with the gale, the land hull down, heroes at the wheel masters of the tempest, their yachts their very life and soul, nor shore attractions powerful enough to lure the mind from a manly, instructive, a bold and noble occupation to the insipid trifling of the devotees of fashion. That day is unfortunately not yet, but it is approaching.

The fleet of the squadron gathered in Glen Cove harbor during the day, August 2, made sail for New London Thursday morning, arrived in struggling order next day, after a very tiresome passage. The races for the Cook cup, value $1,000 and $500, were drifted off last Saturday, with Montauk and Fanny, the winners, and on Sunday half the fleet got underway for Newport. A moderate southeast breeze took them inside the breakwater, where they were joined by the remaining vessels on Monday. Tuesday the Goelet cups were won after a magnificent race by schooner Montauk and the sloop Oliva or the sloop Fanny. The details of the sailing will be given in our next issue.

HULL Y. C.—AUG. 5.

THE sweepstakes, open to squadron yachts under 38ft. sailing length, brought out a nice lot of well-known racers, including the ever active Heroine, and such fast boats as Sea Bird and Allie, and among the small fry such well-known boats as Wave Crest, Amy, Rubio, Wildfire and others. Entrance fees ranged from $5 to $2. An excellent rule announcing no postponement on account of weather insured a good meet. It would be well if other clubs adopted a similar decisive course. Measurement, load line, plus one-third yearling salt, and club allowances. Five classes—26 to 36ft., 21 to 26ft., cats 30 to 36ft., cats 18 to 30ft., and cats under 18ft. Winner to take all entrance fees in the class. No restriction as to sails and number of crew. Shifting ballast prohibited. Flying start. Time to be taken from final gun. *No period of grace to laggards.* The directions for the start were clear and effective. We believe the one-gun start is sure to become popular in the East when once understood, and that unnecessary complication of various periods of grace and multitudinous "times" will become a thing of the past. There seems no reason why smartly handled craft should be robbed of the fruits of a live start for the benefit of the stragglers who go chasing at high tide at the end of the line, and that though a half a mile away from where they ought to be when the lock string is pulled or the whistle toots. What we need to encourage, if our crews are ever to equal the English in saltorizing, are all the features of a race contributing to its attractiveness to the sailor. *Let qui vive* ready to dash for the line is not only conducive to alertness and masterly tactics, but infuses life and snap into the opening of the match, which, by the charity of ten-minute periods, is otherwise reduced to a slovenly job of humdrum life, complicating the duties of the judges, and mixing up the relative positions of the yachts in the minds of the spectators. Time limits for second class five hours, for the rest three hours.

Courses: For the Second Class—From Judges' line, passing Barrel buoy on the port, to Yellow Barrel off Strawberry Hill, thence starboard to Yellow Barrel N. W. of Bumkin Island, on starboard, out Hull Gut, leaving Toddy Rocks buoy and Point Allerton buoy on starboard to Bell buoy on Harding's Ledge, rounding and leaving it on the port. Returning, leaving Point Allerton and Toddy Rocks buoy on port, through Hull Gut to Judges' boat, twelve nautical miles. For the Third and Fourth Classes—From Judges' line to West Gut, passing out and leaving Pettick's Island on starboard, thence N. E. by N. ¾ mile to Black Buoy on Wilson Ledge, leaving it on starboard, thence to Hunt's Ledge buoy, off Toddy Rocks buoy, rounding and leaving it on starboard; through Hull Gut, to the Judges' boat, seven nautical miles. For the Fifth and Sixth Classes—From Judges' line, passing Barrel buoy, leaving it on port, to Yellow Barrel off Strawberry Hill, leaving it on starboard, passing Yellow Barrel, N. W. of Bumkin Island, leaving it on port, to Barrel buoy off Great Hill, on starboard, to Yellow Barrel off Pettick's Island, rounding and leaving it on starboard, to Judges' boat, six nautical miles. Judges, T. F. Patterson, J. H. Southard, T. O. Loveland, J. H. Conant and Pelog Aborn. Wind light and fitful from southwest. Here went away without a competitor, and finding nather too little of the needful to finish in the five hours allowed, withdrew. In third class Wanda rushed second again in his handsome little Sea Bird after giving way twice to Allie, though the starboard tack, and a third time to avoid threatened collision. The owner of Allie was not on board at the time but his skipper needs disciplining. Had she crossed in the lead she would have been ruled out on protest and there was neither excuse or time for such unconcerning. Ibis, Amy and Thisbe made pretty close work, with Ibis a minute the best, but Wave Crest crossed with a long lead in the class. Janet won with plenty to spare and Seamew just as she liked. Summary:

THIRD CLASS.

	Ft. in.	Actual. H. M. S.	Corrected. H. M. S.
Sea Bird, Geo. S. Forbush	28 01	2 21 24	1 57 22

NEW JERSEY Y. C.

A VERY praiseworthy attempt is under way to bring about an open race under sensible regulations as to ballast and crews. If there is any grit left among small boat owners about New York the list will be filled with a rush. By limiting the crews and keeping fast ballast, the expenses to owners are materially reduced and the race a test of boats and seamanship and not a mere wager as to who will exhibit the most foolhardy carrying on in overspanned machines. It may seem very strange that while a hundred small yachts are brought to the line several times in the season in Boston waters, and from thirty to fifty is a common occurrence, we in New York find it impossible to bring about anything to compare with Dyckers snap and we have no hesitation in saying that the baneful influence sand-bags have exercised in this vicinity. Legitimate yachts under 20ft. are very scarce, and hardly any of them with protestions or records as racers, rivalry among owners and builders has not existed. There are only a matter of a few dozen of half a dozen schooners and big sloops, of all tonnages and types, in the large clubs, or else a handful of bag-tossers from the water front, in which no one but the hangers-on of corner stores take a particle of interest. The sloop classes of the Atlantic Y. C. are the only ones that fill and in which anything like a good match can be witnessed, and of late the Larchmont Y. C. has exhibited some fair gatherings of similar boats. Outside of these, match sailing and records are a farce in New York.

The large clubs seem to regard rather than sport and smother small tonnage as beneath their dignity because the members of those clubs are mostly content to remain owners merely and appreciate nothing about the sport but gorgeously furnished accommodations, a big wine locker, and the flimsy excuse for sail. The small clubs have degenerated into bag-tossers, and between the two the thoroughbred of 5 to 20 tons has ceased to exist, at all events as a class, while they flourish in constantly increasing numbers all along the Eastern coast where sensible regulations keep to the front of the club and the pride of all its members. Tonnage does not make the man there, his boat's record gives him his place. That is as it ought to be in New York. The effort in this direction undertaken by the New Jersey Y. C. has therefore our best wishes for success. We are it as a test of what there is in us hereaway, and if the proposed races fail to bring out a fair muster, we may rightfully conclude that the sport of yacht racing has collapsed in New York and that fandangoes, ladies' days, picnics up the Sound and swagger in international conditences are the features indicating the low ebb to which seamanship as a sport has fallen in these latitudes. The N. J. Y. C. has addressed the following circular to the public:

To the Yacht Clubs in the Vicinity of New York:

The N. J. Y. C. will hold a regatta, on Thursday, September 7th prox., open to all sloop yachts not over thirty-five feet in length, starting at 10 A. M. of that day from the Elysian Fields to and around Robbins' Reef buoy, thence to and around Buoy No. 13 off Dick's Island in the lower bay, leaving same on port hand, thence back around buoy on Robbins' Reef to a stake boat off Communipaw dock, Jersey City, where, crossing a line, the time will be taken. There will be one class with an allowance of two minutes to the foot of water line. Main sail and jib only to be carried, no shifting of ballast, and one man to each five feet of water line and fractions thereof. The Regatta Committee having the right to place one of the crew on each or any boat if they desire so to do. All boats to be entered at or before 8 o'clock of the morning of the race, with the Regatta Committee. The Club will present a Challenge Pennant to the winning yacht, together with a cash prize of not less than twenty-five dollars ($25.00).

Should the pennant be won by a boat of the club, the same may be competed for by any boat sailing in the race after thirty days, the challenge to be made in writing, and sent through the Regatta Committee, and the match to be sailed under their direction. In like manner, the winning boat in the second race shall be liable to a challenge on the same conditions. Any boat winning it three times in succession shall be entitled to the Pennant. Any refusal to compete will forfeit the Pennant to the Club.

You are invited to send at least one boat to represent your club in this regatta.

E. W. KETCHAM,
T. H. ROGERS,
E. W. KETCHAM, JR. } Regatta Committee.

CLUB HOUSE, foot 10th street, Hoboken.

NICE INTERNATIONAL.

FRENCHMEN are not naturally of nautical proclivities, and especially not that class whiling away pleasant days at a fashionable watering place. The Nice regatta has been something of a fixture for several years, and large sums have annually been appropriated for purposes of encouraging the sport, but yachts of any class, that were obliged to rely upon British vessels present in the Mediterranean to fill the entry, so that the prize might be given to somebody; and so it came that the race was in reality becoming a British feast for which the Frenchman paid the piper. Anyway their own yachts, a rather sad mixture of all sorts from the flattest machine, built in imitation of New York traps, down to sharpies and dug-outs, rigged in fantastic and exuberant style, failed to make a mark, the British visitor carrying off the honors in the end. The latest management of French committees and peculiar judicial renderings in view of protests were entered. The inhabitants and contributors to the prizes naturally began grumbling, and failed to see why they should collect such a great sum to see a few British yachts sail round the corner and come back after dark, when the Nice International Regatta Association was instituted. Their avowed intent to be put to more interesting use by instituting races on the turf, the Frenchman's inclinations being decidedly in favor of shore diversions. It seemed as though a revolt had been organized, and that the Nice International Regatta might become a thing of the past. This would be very bad, for Cetonia and Gertrude, who have been growing fat on the good things captured in the Mediterranean.

From the announcement we publish below, it seems, however, that the regatta and the banking house have been asleep, and intend to discount the murmurings of revolution by a manifesto issued bright and early, and also to give notice to any American schooner which may be capable of going to sea to take a peep inside the Rock, fetching up off Nice in the latter part of March, when so much the British schooners we have excluded from our own waters by the shameful prejudice shown in the rules governing challenges for the America Cup. We have now Actea, Wanderer and Faustine as our representatives abroad, and the tanning they would get from Cetonia turning to windward is quite certain to keep them far away from Nice. We condense from the circular as under:

Prix de Nice, for yacht of thirty tons and over, 6,000f. and a gold medal to first; 2,000f. and a gold medal to second; 1,000f. and a medal to third, and 500f. and a medal to fourth.

Prix du Y. C. de France, for yachts of fifteen tons and under thirty tons, 5,000f., divided into four prizes, with a medal accompanying each.

Prix de la Baie des Anges, for yachts of five tons and under fifteen tons, 2,000f., divided into four prizes, with medals.

Prix des Alpes Maritimes, for yachts of two tons and under five tons, 1,000f., divided into four prizes, with medals.

Prix the Monte Carlo, for steam yachts of thirty tons, register tonnage, course thirty miles. Prizes the same as offered for the Prix de Nice.

There are also valuable cash and art prizes offered for rowing races, for boats of the French Navy, pilots' gigs, steam launches and festivities in general. Entries close March 15, with M. Andrior Saetone, Secretary. We believe the Y. R. A. rules will be in force next year, so that something like order and system may be looked for. The Prince of Wales is the Honorary President, but he has any thing to say in the matter, it will be in favor of recognized sporting usage rather than for anything striking in the way of novelty or the picturesque.

FLYING STARTS.

SEVERAL clubs have this year conceded the necessity of reforming our slothful methods of starting by shortening the periods of grace to one minute. There can hardly have been the opinion the period has been reduced to five as a first step, and in the East anchor starts are becoming the rule to put more life and smartness in the initial portion of the race. Quite a number of slow skippers have found themselves handicapped by the change to five minutes, and some are inclined to lay the blame to the limited period. It is, however, due to the want of tact displayed, for most yachts are in the habit of knocking about without aim before the start and without knowledge of what is in store. Naturally they get "left." It is just this kind of baby's play we wish to see brought to a stop by the flying start to one gun after a preparatory signal has given all hands a warning to look out for a position. There is no reason why yachts should be excused from keeping the same amount of acumen at the start as in any other portion of the race, or it might appear to be asked that bad seamanship at any time in the race should be met with the same tender consideration shown at the start.

Our present methods do not fit the rest of the race. If seamanship and judgment enter into the result in one part of the match, they should in another, and it is a sop to the clumsy and slothful that an excuse is made for them at the start. The only time a one-gun start can work really unfairly is when the elements step in to mar the skippers' calculations. But a flaw or too light air will just the same harm throughout the race, and no legitimate ground exists for exempting the start from accidents to which the whole course is liable and yet receives no such exemption. A yacht becalmed five minutes after five miles have been sailed receives no allowance, yet the damage to her chances are not a bit different than if becalmed the same after the gun has been given to start. This is a very plain matter and we have no doubt that in time our starts will partake of the life and snap to be witnessed in match sailing abroad. Cutting down to five minutes is a step in the right direction and anchor starts are much to be preferred to the unfair and slipshod ten minutes hitherto observed by the slow fashion set by one of the older clubs in which smart seamanship has ever been held too lightly.

THE OLD CLOVEN HOOF AGAIN.

A CORRESPONDENT, having seen in one of the minor yachting journals a statement that measuring bulk cannot be fair, since a barn so measured ought to be faster than a yacht, and the barn would undoubtedly not be, writes: "Is an equally logical as this exceedingly stupid simile has often been laid bare in these columns, we gratify his wish once again. If bulk measurement is unsound because a barn so measured cannot beat a yacht, let him apply the same reasoning to displacement measurement. A sixty-foot boat by that rule ought to be able to beat a thirty-foot sloop, but it cannot; hence length measurement is absurd. How does he like that sort of reasoning? It seems quite profound enough for a certain class of half-educated individuals. Now a barn as a barn is quite logical as to about measuring the bulk of the barn. When put into competition with a yacht, it is for determining which shape is superior, and how much so. How much would a yacht-like shape beat the same mass put into a barn-like shape? To that we desire an answer through the means of a match between the two. We are not asking for *more of form*, all natural outside influences contributing to speed to be nullified by time allowance in order that the yacht and the barn may be on an equal footing with respect to those influences. If the barn is beaten 15m. by the yacht, it means that the form of the yacht is 15m. inferior over the given course, and that is no reason at all why the barn should be indulged in the use of additional power and momentum derived from sails any more than the yacht.

A close form of water-lines is a superior form of the same bulk has no just claim for an allowance, since the amount she is beaten is due to her form; and the value of her form of speed is exactly what we are seeking. To give an allowance for her cleanliness, even if practicable, would manifestly be introducing the luminous and fulness of the verdict of the race. But if the clumsy form happens to be larger than the yacht, the latter has a perfectly sound claim in equity against the former, for the result of a race has not in such a case proven the relative superiority of the yacht's form over the clumsy form, but only her actual superiority over a mass possessing certain innate advantages due to excess of size. Type out or neutralize those advantages by a grant of time, determined from experience, to the smaller competitor, and add this grant to the amount of her form, and only then have we obtained the true gauge of the two forms for speed devoid of irrelevant influences. Bulk improperly placed does not contribute to speed, though it does to "power," while length improperly used contributes to neither, as shown in the example of the log. Whether beneficial to speed or not is the problem for the designer to solve, and to reach an answer thereto we must match different forms of like bulk in a race, or allow properly for the differences in bulk, owing to the "power" accompanying it, but which does not necessarily accompany an increase in length. Under no circumstances either can the stale comparisons between the barn and yacht to disprove the soundness of measuring bulk is an exhibition of the most profound stupidity, and proof that the individual making use of such an argument is altogether too shallow-brained to give an opinion on the question one way or the other.

LUBBERS AT THE HELM.

Editor Forest and Stream:

A few days ago the cabin yachts Aldine, of Camden, and Norcross, besides a sloop, ran into a schooner while at anchor and literally tore their canvas into ribbons. Seeing this was done in broad day, and a nice breeze, it is rather remarkable, inasmuch as they all struck the same schooner and inside of an hour. There was plenty of sea room. Such bribberly work is not the business of even a Cooper's Creek flatboat man. I am astonished that men calling themselves experts should be guilty of such utter carelessness. I record this circumstance in the hope that yachtsmen, for their credit, will do more than say, I am sorry to say. This is not an isolated case, and the many lives that have so recklessly been thrown away is fast bringing boating into bad repute. Youngsters of the present day who make up in "dash" what they have failed to learn by experience. A command of a yacht at the helm, and reading, without even knowing that hencoop means starboard and water barrel port, be damned.

PHILADELPHIA, Pa. R. G. W.

The above grown from an old hand covers something to be witnessed too often. Only recently a yacht lying off shore with ample berth had her topmast taken out of her by a lot of lubbers getting out from the Sandy Hook wharf with a free sheet. The lubbers would have been indignant if told they had anything to learn in the way of seamanship. A similar set of louts dragged their anchor and swept slowly the foul of another, without a rope's end on board, the topmast and bowsprit out of her, in the blight at Tomkinsville landing. They then shifted the small yacht's moorings, and escaped paying damages for want of witnesses. If less attentive were paid to the "nice points" and fireworks and more to the creditable handling of some yachts many heavy fines for rule-breaking might be saved.)

CAPE ANN Y. C.—The open regatta of the Cape Ann Y. C. was sailed in the outer harbor of Gloucester August 2. Open to all comers. Four classes, over 22ft., 18 to 22ft., 15 to 18ft., and under 15ft. Course 12 miles for first and second class, and 6 miles for the rest. Wind light from southwest. A large number came to the line, the first class showing especially well, and a pretty yellow-hulls battle between Lafayette, Muriel and Raven, and a close race was made among the leaders. Two cash prizes in each class. Judges, H. F. Sanford, G. W. Pattersond and Ben. R. Wonson. Summary as under, Bannerette and Raven making a tie, requiring remeasurement of the boats for decision:

FIRST CLASS.

Name.	Length. Ft. In.	Actual. H. M. S.	Corrected. H. M. S.

Ethel, Brooks	14 2	1 58 03	1 33 32

NEW SCHOONER.—The fine new schooner built by D. J. Lawlor, of Chelsea, Mass., for Mr. Wm. F. Weld, was launched Aug. 5. The Gilmore, already referred to in these columns, we believe to be the best built schooner ever launched in America, and a much nearer approach to Lloyds and foreign standards than anything of large tonnage which has gone before her. In model she represents a radical departure from the old school, dispensing as she has been given less beam and greater depth than her predecessors, and in rig, the English custom of a running bowsprit with jib set flying has been adopted, a material improvement over the coaster's arrangement of revolting, two article fleet. Length over all 100ft., on line 94ft., 5in.; beam, 20ft., 6in.; depth of hold, 10ft., and 11ft. draught. Keel of white oak 10in., sided at center, tapering to 6in. at stem and 8in. at keel. Width across bottom amidships 6in., with slight taper towards ends, frames spaced 20in., floor timbers, sided at ends 7in., and 5in. at head, molded 10in. at floors, 7in. at first futtock and 4in. at head. Keelson of oak, sided 16in. in center, tapering to 8in. at ends, and secured with 1½in. composition bolts. Clamps are 6½ long, 6in. sided, 3 and 3½in. thick, bolted with ⅝in. yellow metal. Garboards and lower strakes of oak, 8in., tapering up to 2in. and at hoodends 8in. thick. The frame is thoroughly kneed throughout, all fastenings of copper and composition, no iron being used for that purpose in the hull. Ceiling of selected yellow pine 3in thick amidships tapering to 2in. at ends. Plank in long lengths of 27ft. Wales of oak 5x8in., bottom plank of oak 2½in. thick, and deck 2½in. square white pine. Stanchions of locust, rail of white oak and fittings of mahogany. The schooner carries 60 tons of load ballast, 15 of which are outside on the keel. Accommodations consist of ladies saloon aft 14x14ft., finished in oak and cherry, Queen Anne style, with berths for six. Forward of this the companion way, then the main saloon, 18ft. square, finished in solid mahogany and supplied with Ilic Bros.' two article fleet. Hanging and grand piano. Aft and leads to Mr. Weld's private room, 18x10ft., finished in polished ash and cherry, with bathroom and conveniences attached. On the port han t opening into the main saloon, is the passageway forward, leading to the owner's room, stateroom for two passengers, pantry and galley and pantry. The forecastle contains eleven berths and is neatly furnished throughout. Eight tanks for water, holding 2,200 gallons for a long cruise.

LYNN Y. C.—The second championship race was sailed August 5, in Lynn harbor. Course from club house to stake boat off Point of Pines, down to lobster rock buoy and home, five miles. Wind light. Judges, C. H. Clifford, C. H. Russell and W. Cross. Jennie L. fouled the Lobster mark and was protested by Ruth and declared disqualified in consequence. Ruth and Sadie were the winners. The third match is fixed for August 19, to decide. Summary:

SECOND CLASS.

	Length. Ft. In.	Actual. H. M. S.	Corrected. H. M. S.
Jennie L., C. H. Lockhart	31 11	1 20 22	1 31 13
Ruth, W. Bassett, Jr.	31 10	1 25 10	1 37 52
Pearl, J. F. Lee	32 4	1 31 20	1 44 32
THIRD CLASS.			
Daisy D., W. D. Wooldredge	18 5	2 03 43	1 [illegible] 18
Sadie, E. L. Taylor	17 5	2 10 33	1 [illegible] 13
Muriel, W. Newhall	15 6	Not taken.	

HULL Y. C.—The annual open races are fixed for Saturday, Aug. 19, and a vast deal is expected to come to the start. If the weather is favorable, this and the Beverly races, Aug. 26, promise to eclipse in point of numbers all previous races in history. Nearly $1,000 are offered by the Hull authorities. The evening will see a grand illumination of the fleet, fireworks and music ashore. Entries should be made to Vice-Commodore Perkins, 533 Washington street, Boston, before noon, Aug. 13. Competitors will do well to comply with all the formalities, to study up the courses and starting signals and keep clear of fouling each other. It is a wrong plan to leave such things to the last moment.

CHICAGO Y. C.—The new club book has been issued. It shows three schooners and sixteen sloops, with 101 members. Commodore's pennant, a pointed burgee, blue ground with thirteen white stars; Vice Com., same in red; Rear Com., same, white field and red stars, with narrow red border. Acting Com., plain blue pennant. The measurement rule is based on length and beam, though the bylaws fail to specify in what manner. Allowance among schooners 1sec. per mile for each foot of measurement. Schooners from 100 to 125ft. are exempted from giving time to other rigs coming within those dimensions. Allowances among sloops, 2sec. per mile for each foot of measurement. Drews limited to one hand for crew. 4ft., a rule not specific enough, as the status of steward, cook, pilot and passengers is not defined. We believe one working hand, including skipper, to every five feet of load line length quite enough, especially for sloops and small schooners. No shifting of ballast allowed in cabin yachts, or in partially decked or open yachts competing with them. The sailing directions are very incomplete and would not cover disputes likely to arise. We commend the rules of the Y. R. A. of Great Britain to the club's consideration as the most perfect code in existence. The Chicago Y. C. was established in 1876 and received its charter January 7, 1882, the incorporators being C. J. Duggan, W. D. Payne, Jacob Wilder, A. W. Cleaver, P. F. Pettibone, C. E. Kromer and H. F. Griswold.

CUTTERS.—The *Herald* makes the following observations in a recent issue. They are the same as made in FOREST AND STREAM on several years, and which seem at last to be telling on all sides: "Next came the races with the recently imported Maggie in Boston waters, the Maggie being a narrow, deep cutter. She beat all comers on a length of measurement, and, *notable fact*, in smooth water and light puffing wind. This was a most remarkable performance, and though it is in accordance with the discoveries in fluid resistance, it was opposed to all the ideas of the old school of builders, who held that resistance increased with the depth of immersion. The time is near at hand when something like this may come—i. e., when a boat of the Maggie's type sufficiently large to challenge for the America's Cup may arrive in our waters. Under these circumstances, it is well for American yachtsmen to look about and inquire if they have learned anything. Really, have American yachtsmen learned anything of late? No! Are the yachts lately built any better in rig or outfit than the old boats? Very little, must be the answer. Yachts can and should be built to face any weather; but to do this they must be cutter rigged, if with one mast, with jibs set flying, runners and all outsides. Maggie's performances, together with those of the Undine, the Madge, have shown this to be a fact beyond dispute, and it remains to be seen how much the yachtsmen of this section will profit thereby."

MAGGIE'S RACES.—The 15-ton Maggie made an exhibition of the Dorchester Y. C. fleet, Boston, on Monday, July 3. Thirty-six boats started in the different classes. The weather was terribly paltry, however. Observers of them sailing out and coming in the race for following, but no doubt all the American sporting journals but FOREST AND STREAM will give a garbled account of the sailing, and engineer the business into a substantial native victory.—*London Yachting Gazette.* The surmise of our London contemporary is not far from right. One turf journal, a second rate one only. The same amusing dishonest enough to credit Maggie with two races only so far in place of three. Maggie has won three races in succession: Dorchester Y. C., July 3; Boston city regatta, July 4, and Eastern Y. C., July 22. Her first match in American waters was sailed in the Eastern Y. C. regatta, June 21, when Maggie was well within her time from Undine, and would have scored but for splitting the jaws of her gaff. An attempt to belittle her victories is made in some quarters by calculating the Boston race as second rate only. The same amusing claim was set up in Boston last year concerning the New York sloops beaten by the Madge. The Undine of Boston, however, is originally a New York sloop, and has a record second to none, and the cutter has disposed of her every time they met.

A BEAUTIFUL MODEL.—The handsomest and most perfect model yacht, technically considered, is now on exhibition at Manning's factory, 32 Dey street. The yacht is built to an order by an amateur, who has certainly reached more than professional proficiency, as exhibited in the close familiarity with details and the cabinet finish of the smallest articles. The model is 61in. long, equal to 61ft. by the scale. She is a perfect representative of the modern British yawl, and it needs but a single examination to convince the spectator with such a thorough little seagoing ship. Her draft is 9ft.; tonnage about 30. Flush deck, with hatches and skylights, bits, windlass, winches, hawse pipes, chains, patent anchors, binnacle with gimbals, compass, and in short everything to make her complete, and to scale down to the smallest item of outfit. Sails, gear, serving, splicing of wire, block straps, deadeyes and lanyards all worked in detail the same as on a large vessel. Bowsprit to rig in with power and a trifle more than 40ft. long, 33in. diameter at heel, 9in. at end, with 22ft. hoist to sail. The hull is regularly built and very handsome and fair in finish. Frames of oak, planks of pine, with oak garboards and sheer strake, and deck of holly. But to be appreciated this handsome piece of work should be seen. If she makes no converts to modern ideas of what a yacht should be we are much mistaken.

STOVE FOR CANOEISTS.—When traveling by river with the beach handy, it is often preferred to camp by pitching the tent, starting a fire and preparing for the evening meal, perhaps the principal one of the day. Several of the cooking utensils for this operation are good enough in their way, but for camping, especially if cruising in fleet where one stove is made to do duty for the crowd, a sheet-iron contrivance is effective as well as cheap and handy. Commodore Chase, in his extensive Western voyaging by river and lake, made use of the following arrangement at a cost of less than $2. The stove was made with an elliptic base of sheet-iron. 12 inches high and 14 long and 7 inches wide. It had no bottom, the fire being built on the ground. The stove set over it as soon as fairly ignited. In front a 5-inch door allowed for feeding and draft. On top had a 6-inch hole to receive kettle or pan, and a funnel 12 inches high and 3½ in diameter at the rear conducted off the smoke. The outfit consisted of a 3 or 4-quart camp kettle with copper bottom, a tea kettle and a frying pan with an oven added for baking. Each article fitted all stow one within another, the whole affair weighing 3 to 4 pounds. A rousing fire can be quickly got up in wind or rain in this or a similar arrangement.

HULL Y. C.—The fifth class yachts, whose match was declared off, owing to misunderstanding at start in the races July 22, resailed Aug. 3. Course from judges' boat, leaving to starboard buoy on Strawberry Hill, thence to flag off Bumkin Island, thence to Pig Rock beacon, thence to flag off Pettick's Island, and home; five and a half miles. Wind light S. E. Six boats were sent away at 3 P. M., with Joker leading, and Janet and Wildfire close aboard. Janet gradually ran the rest and spun out a lead nearing Bumkin mark, which she retained all day. Janet takes first regular and Wildfire second regular prize. She also takes first Corinthian and Joker second Corinthian prize. Judges, J. H. Conant, S. Soudgrs, A. Rand and M. J. Kiley, aboard the Commodore's sloop Anna. Summary:

	Length.	Actual.	Corrected.
	FT. IN.	H. M. S.	H. M. S.
Janet, W. L. Phinney	18 11	2 00 30	1 58 00
Wildfire, N. H. Keith	18 01	2 01 19	1 39 27
Isis, J. T. Souther	20 06	2 03 06	1 40 29
Joker, George Coffin	20 08	2 06 48	1 44 20
Myrtle, C. H. Poor et al	19 06	Time not taken.	
Gisela, S. G. King	25 11		

NEW BEDFORD YACHT CLUB.—The race open to second-class sloops of the club sailed August 3, 10 A. M., and variable southwest winds. Course fifteen miles, triangular, in Buzzards Bay. One prize of $30. The wind failed entirely toward the close. Summary as under:

	Load Line.	Actual.	Corrected.
	Ft. In.	H. M. S.	H. M. S.
Imperia, J. L. Stackpole	41 11	2 30 37	2 30 37
Ariel, F. E. Bacon	33 4	2 40 50	2 39 10
Whistler, J. A. Hawes	33 0	2 47 19	2 37 31
Nixie, N. H. Emmons	29 4	2 52 10	2 37 20
Peri, Sands	37 0	2 45 18	2 40 39
Kismet, W. A. Abbe	39 4	2 54 57	2 42 21
Isabel, Chapman	33 0	2 51 03	2 42 48
Pointer, D. L. Parker	38 8	2 58 52	2 43 37

The match for the Commodore's Challenge Cup, open to principal clubs, was sailed the next day in light southwest wind over fifteen mile course. Pointer, 38 8, D. L. Parker, won in 4 5 33, beating Elstrina, R. H. Morgan, 4 12 34, and Josie, 21 3, Horace Wood, 4 12 46. The Glimpse withdrew.

TORONTO CANOE CLUB.—The sailing challenge cup was put up Saturday, July 29, and brought out six canoes—Isabel, double centerboard Pearl, Robert Tyson; Boreas, same, Com. Neilson; Nautilus, one board, A. B. Eadie; Elma, steel fanboard, R. A. Coleman; Shadow, iron keel, J. L. Kerr, and Sadie N., iron keel Shadow model, F. M. Nicholson. Course a leg of the earth, its size not stated, in the triangle. Wind very light. Only two canoes finished, both of them the Pearl models—Isabel and Boreas. Capt. Tyson showed a huge sail over Isabel with a new-fangled rolling reefing gear, winding the sail about the mast; while Boreas had two smaller but well-fitting lateens. The latter held the lead, but Isabel's big sail told in the light wind and landed her the cup. The second class, comprising Shadow and Sadie N., agreed to go over the triangle only once to decide ownership to the cup for their lot. Won by Shadow with a large balance to

ROYAL CANADIAN Y. C.—The club has been presented with a $100 challenge cup by Messrs. J. W. and A. Anderson, to be sailed for in the September races. The match for the Prince of Wales Cup is fixed for Sept. 7, and if the Anderson Cup is raced for the day previous or succeeding, there will be a regular "Cowes week" on a small scale in Toronto harbor. The championship pennant will be put up this fall also, but is open to the club only, money prizes going to foreign yachts. We would like to see some American representatives in these races open to lake yachts.

NEW HAVEN Y. C.—The yachts returned from their annual cruise in straggling order, Ripple, last Sunday; Vixen, Vice-Com. J. G. Beecher, anchored in Harbor Aug. 1, after a passage of fifteen hours from Newport in a southwest wind, a point or so free; the Defiance made port the same afternoon; Endeavor, Zephyr, Propero, Lorelei and the Ferguson are still to the eastward. Endeavor has gone to Block Island, and the Ferguson is in Sag Harbor. The cruise was very much enjoyed by all hands, and is certain to become a permanent institution in the club fixtures.

BEVERLY Y. C.—Prizes for the sixty-ninth championship race, held in abeyance for want of correct measurements, were awarded as follows: Cutter Beetle in first class, Holden in second and Dandelion in third take first money. Mosquito in second class and Psyche in third take second money. Beetle and Holden take and hold champion pennants, having won in two races. Dandelion and Psyche tie. Beetle measures 27.3, sailing length, and Mavis 27.5.

GLEAM.—The cable brings the news that Mr. F. Gomer's Rhode Island catboat Gleam won first prize at the Cowes, England, town regatta, August 4, beating Mr. Loper's Daisy and Mr. Eagar's Wave. What this portends can be judged better upon receipt of details by mail. The Gleam probably used shifting ballast, a custom not in vogue among small boats in English waters, and against which no rules were enforced.

KESTRAL.—This is the name of the new cutter recently launched from Driscoll's yard, at Greenpoint, for Mr. S. M. Fox, of Philadelphia. Her owner has put her into commission and expects to do some sailing in the lower Delaware. The cutter is 47ft. on deck, 36ft. load line, 13ft. 8in. beam, draws 6ft. has lead on the keel, and a small centerboard 11ft. long. Full cutter rig.

HULL Y. C.—Extract from the by-laws. "No water shall be started from, or taken into the tanks, after the signal to start has been given. Only the usual anchors and chains shall be carried during a race, and they must not be used as shifting ballast, nor for altering the trim of the yacht. Ballast shall not be shifted or trimmed in any way whatever during a race."

AMERICA.—General Butler and party left Boston, August 5, for a cruise to Halifax and the Gulf of St. Lawrence. The schooner had previously indulged in the freak of racing the clipper ship North America a distance to sea on her voyage outward to San Francisco. Owing to this the schooner was beaten in a walk.

JEFFRIES Y. C.—The third championship match was sailed Aug. 5, in a light southwest wind, a very close race being the result. Sloop Lizzie, 18.0, Silas Porter, Jr., won in 2:15:20, beating Belle, 19.9, A. H. Thompson, by 34, only, though 45s. later on actual time, and Undine, Raven and the cat rig Sallie R.

COWES REGATTA.—Later advices state that Mr. Gower's catboat Gleam sailed in the Cowes, England, regatta against open boats, fishing boats and some cruisers much smaller than the catboat. It would have been strange had she not won in such scrub company, the local craft not shifting ballast.

GEM.—Mr. H. O. West, of the Knickerbocker Y. C., has sold the keel sloop Gem to Mr. J. A. Osgood, of Boston, and the sloop will therefore return to her original hailing port, where we hope to see her figure again in the hard-fought battles of her class the other side of the Cod.

CUTTER RIG.—The Sylvia, of Belleville, Ont., will be altered to cutter rig and receive four tons of lead on the keel. This should much improve the Sylvia, as she is a fine boat, with much dead rise. With canvas increased in proportion, the cutter ought to be hard to beat.

MADGE.—This cutter still lies at Newport in her old berth, and will rapidly deteriorate unless more care is bestowed upon her keep. Her friends are much given out in the recording suit. It appears that her sale to Toronto parties has fallen through.

AILEEN WINS AGAIN.—The new 30-ton cutter Aileen and the 57-ton schooner Oriole, of Toronto, sailed a private match of forty miles, July 31. Course same as in the recent sweepstakes of the Royal Canadian. Aileen won by an hour.

AILEEN.—From the *Canadian Sportsman*: "The result of the Royal Canadian Y. C. sweepstakes proved conclusively the superiority of the deep draught cutter over the centerboards."

TORONTO Y. C.—Now has three regular challenge cups, the Murray Cup, Cosgrave Cup and the Commodore's Cup, all of which will be sailed for in the matches to-morrow.

New Publications.

NUTTALL BULLETIN.

Mr. Jeffries's article in the last number of the *Bulletin*, on "The Colors of Feathers," is very interesting, the more so because it takes up a subject which has hitherto been quite out of the way of American ornithologists, or, for the matter of that, in any other in any department of science, five are not mistaken. The hint having been given by Mr. Jeffries, it may be hoped that the subject will now receive the attention of students on this side the Atlantic. Great interest naturally attaches to Mr. Brewster's paper on the "Birds taken in Arizona," by Mr. Stephens, for it includes many species that are known to most collectors only from descriptions. The author's notes on the species referred to are usually full. In the present number Mr. Charles F. Batchelder concludes his long paper on the "Summer Birds of the Upper St. John," 103 species being enumerated. Mr. Bicknell gives us, in a very charmingly written paper, "A Sketch of the Home of *Hylocichla aliciæ* Bicknelli Kidway, with some Critical Remarks on the Allies of this New Race." The facts which the author has gathered in relation to this new form, lead him to consider it beyond a doubt, what has hitherto been questioned, that *Hylocichla aliciæ* and *H. ustulata swainsoni* are quite distinct. His short notes on the "Birds of Bayou Sara, La." are continued by Mr. Charles Wickliffe Beckham, as is also Mr. Nehring's "List of Birds" observed at Houston and in some of the other counties of Texas. There is much that is of interest in Recent Literature and General Notes.

AMERICAN GAME-BIRD SHOOTING.

Mr. John Mortimer Murphy, the author of the present work, is sufficiently well known to most sportsmen as a very prolific, if not very exact, writer on the birds and mammals of Western America. The volume under consideration contains descriptions of our game birds and water-fowl, treats of their haunts and habits, and also of the various modes employed in their capture; there are at least many things in its pages which it may be worth while for the tyro to know.

It is in all its essential features a compilation from the writings of other authors, but there are, interwoven among these facts, numerous stories and out of the way bits of personal experience, which are not without interest. Some of these will slightly tax the credulity of the reader, but those who listen to the tales of the hunter or angler must expect this. The book treats of our game from the wild turkey down to the rail, and includes fully with the grouse, with most species of which the author seems to have had considerable experience. Numerous English shooting terms are used throughout the volume, terms which will never be employed in this country, and some of which sound absurdly enough to the American ear. Thus, to speak of a "herd" of curlew would seem to be quite misused on this side of the water very ridiculous. The book is handsomely printed on tinted paper, and has a number of wood cuts, some of which are very good. 12mo., pp. 347. Orange Judd Company.

SCIENCE LADDERS.

In issuing N. D'Anvers' "Science Ladders." Messrs. G. P. Putnam's Sons are doing good work. These little works are a series of Readers in Natural History, in which a number of leading facts are given in very clear, simple language. The story is told, in fact, so plainly that a child of ten can understand it all. Technical terms are never employed, and names which might be unusual to children's eyes are sufficiently clearly explained for the purposes of the books. It is a grand thing to have elementary facts set forth so that they can be well understood, and this appears to have been successfully done here. We have before us Nos. I. and III. of these Ladders, "Forms of Land and Water," and "Vegetable Life." The first tells in thirteen lessons, or chapters, of the earth, its size, its surface, its oceans, of seas, rivers, lakes, evaporation, the atmosphere and its motion, and of ice and its work. "Vegetable Life," treating of a more complicated subject, or, at least of one which at first glance would appear so, is somewhat larger, and takes up the plant, passes through its development to its fruiting, describing all the parts in some detail. The subject is well handled, and is treated with great simplicity. Both these little volumes are illustrated with a great number of wood cuts, which are more than ever valuable in works of just this kind. The more of these simple elementary books we can have the better, for he who is grounded in just such facts as are here given is well equipped for the intelligent study of Nature. The motto chosen for these little books is a happy one—

"The great thing is to get your foot on the first rung of the ladder."

WORMS AND CRUSTACEA.

Of the Guides for Science Teaching, published by the Boston Society of Natural History, Number VII., by Professor Alpheus Hyatt, treats of "Worms and Crustacea." As might be imagined from the position of the author, the little work is not only very clear and simple, but it is also complete. With this work before him, and a common earth worm, lobster or crab in hand, there is no reason why any man should not gain a perfectly clear idea of the structure of any worm or crustacean. Just such a work as this should form the basis of science-teaching in all our common schools, and it is a pity that short courses of instruction in zoology with such a work as this for a text-book cannot be established in every school in the land. The portion of the book devoted to worms treats of the common earth worm and of the marine Nereis. The lobster forms the text for the description of the Crustacea, but there are so many subdivisions of this group which differ very widely from the Macroura, that the Isapods, Amphipods and typical forms of Anomoura, Brachyura, Cirripedia, Copepoda and Epizoa are described, while the Branchiopoda and Ostracoda are alluded to. The work is one which deserves the highest commendation. 12mo. 63 pp. Ginn, Heath & Co., Boston.

Answers to Correspondents.

H. B., Glasco.—Yes, the arm is all right and the firm highly responsible.

T. J.—We can supply Dr. Henshall's "Book of the Black Bass." Price, postpaid, $3.

F. E. W., South Manchester.—Get Farrar's and Hubbard's guides to Moosehead Lake.

C. W.—The articles on camping out were published in issues of May 11, June 29 and July 13, 1882.

S. D.—See current letters from West Virginia printed in this paper. No shooting in that State before Sept. 1st.

J. G. B.—For a book on the care and management of dogs, try Dinks, Mayhew and Hutchinson; we can supply it.

R.—The head of fish sent by you from Lake Champlain is that of the fresh water sheepshead, *Haplodonotus grunniens*.

R. E. B., Cincinnati, O.—You can travel from twenty to forty miles per day on horseback, depending upon the country. We cannot give you an estimate of expenses.

J. C. H., New York.—You will be directed to the exact fishing spots at the Kineo House, Moosehead Lake, Me. The guides and hotel keepers thereabouts can post you fully.

D. B., Falls City, Nebraska.—1. You cannot remove the rust indentations. They will not hurt the shooting qualities of the gun. 2. The barrels are practically as good as "Damascus."

E. G., Galveston, Texas.—Take your rubber boots to a shoemaker to be mended; or send to one of the rubber firms advertising with us for a bottle of their preparation for mending rubber articles. The directions accompany the bottle.

L. A. H., Aurora, Ill.—1. Have there ever been any game birds imported to the United States from China? 2. Is there a law against carrying loaded cartridges in a trunk to be conveyed on a railroad? Ans.—Yes; pheasants were imported into Oregon and California 2. No.

SPORTSMAN OF SEVENTY-ONE YEARS.—If a farmer living in New York State owns ten or fifteen acres of woods lying along the highway, can he by sign prohibit persons from hunting in those woods? Ans. Ye See also the text of the trespass law, quoted in our issue of July 1 page 476.

F. B.—You could use oilcloth for small single camp tents, but would prove very heavy and inconvenient. A canvas tent, if fitte with a "fly," will shed the rain. The "fly" is an extra piece of clot so stretched across the top of the tent as to shed the rain out beyon the tent proper.

J. W. B.—Books on pigeons are: 1. "Illustrated Book of Pigeons," by L. Wright. Has colored plates and is the best. Price $12.50. 2. "Practical Pigeon Keeper," by same author. Illustrated. Price $1.50. 3. Mr. Tegetmeir's book, illustrated with colored plates. Price $5. We can supply any one of the three.

A. I. H., Canada.—A bets B that in the election P would defeat M. In explanation; P, after canvassing through the riding for several days, resigned. B was afterwards nominated over M and defeated. Who wins? Ans. We are not authority on betting nor on Canadian politics; but if the conditions were "play or pay," B wins; if otherwise, it was a draw.

RATTLESNAKES WANTED.—Museum of Natural History, Buffalo, N. Y.—Could you possibly give me the names of persons who would be willing to procure for me three or four rattlesnakes with poison fangs? I want to make some experiments with the poison.—JULIUS POHLMAN. Ans. Perhaps some of our readers may have the knowledge required and will communicate with our correspondent.

"BIRCH CANOE."—Calais, July 2.—If "Birch Canoe," Hartford, Conn., would like to know where he can get a canoe, I can give him the desired information. Would be pleased to hear from him. Why is not some one of the A. C. A. fleets in New England cruises this year? Here is a grand field for the canoeist. Give them a hint and I will gladly give all the information in my power.—HERBERT B. MASON.

SUBSCRIBER, Springfield, Mass.—In a match at glass balls where 18 yards is the distance for a No. 12-bore, what distance should the men stand, using a 10, 14, 16 or 20-bore gun? Ans. There is no established rule in regard to the matter. Some of the leading clubs adopted rule allowing one yard for each unit of difference in the gauge in favor of the smaller bore. Other clubs adopted the English rule, which is only one-half that.

J. R. E.—Would like to know where to get information of character of, cost and style of travel, expenses, and such other information as one ought to have before starting on a trip for Wyoming Territory, with view to finding suitable place for location or investment in farming lands. Ans. Write to the Governor at Cheyenne. Read the letters of Mr. Lloyd Brown in FOREST AND STREAM, and other documents which you will obtain upon application as above.

KILLYFISH.—The name of killyfish is a local one used only about New York, where the Dutch settlers left many of their names. It is literally creekfish, for the Dutch "kill" meant creek. At the East the fish are called by the Indian name of "mummichog," or shortened into "mummy." They are of the family *Cyprinodontidæ*, or eyprinoids which have teeth. The family is a large one, and some of its members are viviparous. The most common species about New York is the *Fundulus pisculentis*.

J. C. P., Washington, D. C.—1. What ought to be the color of a well-bred Irish setter at the age of two months? Ans. Where can I find any law or laws concerning the season for shooting game to be found on the Upper Chesapeake and smaller streams flowing into the Upper Chesapeake—game such as ducks, reed birds, ortolan, etc.? 3. Where can I obtain a good book on dog breaking? Ans. 1. At this age they are generally of a faded yellowish red. 2. Consult the table of open seasons in FOREST AND STREAM of July 20. 3. We can send you Training vs. Breaking; price, $1.00.

PUBLISHER'S DEPARTMENT.

SEE advertisement of Shelton's Challenge Gun.

The most exaggerated dispatches come by the fish line.—*Memphis Avalanche.*

In Greenland the natives call a dog a "kingunk," but if you want to say "I would like to buy a dog," you express your desire in the one single word "*Kingunkarpaksik*." A poundman would be a blessing.—*Sacramento Bee.*

A Jerseyman went to Mauch Chunk, Pa., to spend his vacation and during the first night three old hens which had gone to roost on a tree outside his bedroom window, were disturbed by a cat and flew into the apartment. The Jerseyman awakened and slashed a pillow around until the bewildered fowls found their way out. The next morning he told his host that he should come there every summer, for during the whole night he had seen but three mosquitoes.—*Philadelphia News.*

NEW YACHT GUN.—Some time ago we had occasion to caution the public against pot-metal guns sold by ship chandlers, junk dealers and the like. For reliable as well as stylish guns we can refer to G. E. Osborn's make, of New Haven. These guns are very handy, being breechloaders, and not attended by accidents due to loading at the muzzle. The gun is a self-cocker, ready for firing by the closing of the breech. The carriages are of mahogany with brass mountings, and taken as a whole these guns, known as "The Commodore," will recommend themselves to yachtsmen upon their real merits.

Loaded to Order.

Price per 100, from $2.90 up.

The Shells will not deteriorate with age, and may be put in water for hours without swelling.

Clay Pigeons & Traps, Belcher's Flying Birds & Traps, Glass Balls & Traps, Etc.

CRUTTENDEN FLY ROD.

This cut is an exact representation of this rod, which

CANNOT BE EQUALED FOR THE MONEY.

It has Nickle Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of Rod. Tull Nickle Plated. Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tennons which never allow the joints to get stuck together by swelling of same if they should get wet. Butt stained dark, polished and wound with cane and silk, giving it that desirable appearance and the feeling of the high priced rods. The middle joints and tips are made from fine lancewood, left natural color, varnished and polished. This makes a handsome contrast to butt, and gives the entire rod a look of beauty which is a joy to every fisherman's heart while using it. The rod is well ringed throughout. Length ten and one-half feet, weight from nine to ten ounces. This is the best made, best finished rod for the money in the United States, and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning rod to be repaired. With short tip it makes an excellent Bass Rod.

Sent to any part of United States, prepaid, with one Trout or one Bass Tip for $5.00. Trout Tips, each, $1.00, Bass Tips, each, 75cts., Trout Tips, one-half Bamboo, each, $1.25.

SIMPSON'S NEW FISHING TACKLE CASE.

A want long felt for by sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his Spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material, and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors, who have investigated its perfections. Size—Box: Length 12, width 7½, depth 4¼ inches: trays (4): Length 7¼, width 4, depth 1 to 1¼ inches. top tray: Length 11¾, width 7, depth 1¼ inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-book, and each case packed in a neat box and sent on receipt of $4.50. To Clubs taking six at one time, $24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

NEW ORLEANS AGENTS: A. BALDWIN & CO.
NEW ENGLAND AGENTS FOR SHOT SHELLS: JOHN P. LOVELL & SON, Boston, Mass.

Enos James & Co.'s Hard-Hitting Guns.

The above cut represents the

James "Triumph" Gun.

The demand for the James Breech-Loaders in 1881 was so great that we had great difficulty in filling all our orders. This means that Americans appreciate a good honest gun when they see it. Why pay a fancy price for a gun made by some old maker, when you can buy a beautiful James complete gun equally as good for half the money? Or why buy a gun upon which the maker is ashamed to put his own name, when a good, reliable James gun can be had at the same price? In American products we are agents for COLT, PARKER, HARRINGTON & RICHARDSON, and FOREHAND and WADSWORTH. Dealers needing any of these brands should order direct from us to avoid commissions.

DOG TRAINING;

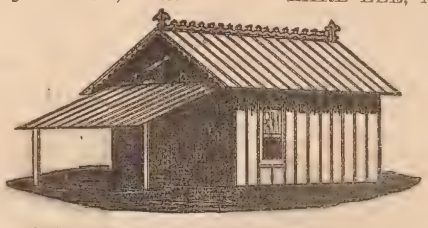
—BY—

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

FOR SALE AT THIS OFFICE. PRICE $1.00.

The Parker Gun.

Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.



THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

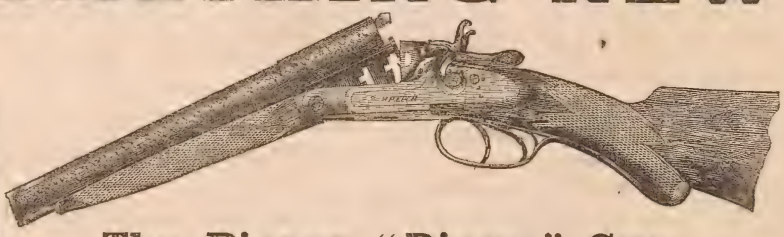
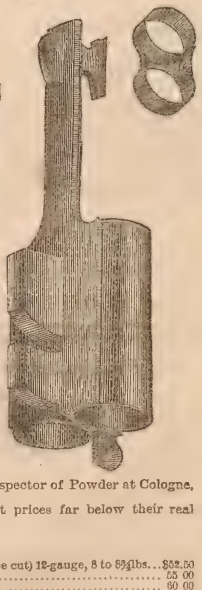
Two persons can put it up in one hour. No Nails or Screws required.

Price $60. With two Cots and Table, $5 extra.



This Company manufacture, for portable and permanent use, Depots for Railroads, Sheds for Steamships, Churches, Hotels, Dwellings, Schools, Boating, Boat and Club Houses; also Summer Cottages, Farm and Out Buildings of every style. Suitable for all sections of country and climates, at moderate cost, within the means of all. Warm in winter—cool in summer—ventilation perfect.



For further particulars see illustrated circular, or apply to the office of the Company,

31 Wall Street, New York City, N. Y.

SOMETHING NEW!

The Pieper "Diana" Gun.

This is the only gun of European manufacture made entirely by machinery. The system is entirely new, and actual tests have shown that for accuracy and strength it has no superior.

The reinforce lumps and bolt loop are of one piece of wrought steel. The tubes are finished to gauge and are put together *without heat* so that they are perfectly straight and always shoot to center. This is only found in very high cost guns made on the ordinary system, as the best barrel filers are necessary. The locks are finely finished and of the best steel, and all the joints are closely fitted; all the parts are interchangable.

A public trial was made in Cleve, Prussia, in August, 1881, to which the best continental makers sent their finest guns. The trial was for closeness and penetration. 4 is excellent, 3 is good, 2 is fair, 1 ordinary. The gun of Mr. Roedel, of Prague, was made on the Pieper system. The result was as follows:

	30yds.	45yds.	60yds. Total.
Size of shot..	2 4 6 8	2 4 6 8	2 4 6 8
H. Pieper, Liege	3 3 4 4	4 4 4 3	4 4 4 4—45
Roedel, Prague	3 8 3 3	4 4 4 4	3 5 4 4—42
W.W.Greener, Birmingham	4 4 4 3	4 4 3 3	3 2 3 3—40
N. Bodsen, Liege	3 4 2 4	4 3 3 4	1 1 3 1—38
C. Bartels, Wiesbaden	3 3 3 4	4 3 4 4	1 3 2 3—37
Sackreuter, Frankfort	2 3 3 4	4 4 3 3	3 3 1 3—36
Camphausen, Crefeld	1 4 2 3	3 3 4 2	3 3 3 3—31

	30yds.	45yds.	60yds. Total.
Size of shot..	2 4 6 8	2 4 6 8	2 4 6 8
A. Jannsen, Liege	2 3 3 3	4 4 3 3	1 3 2 1—32
Beermann, Munster	3 2 1 2	4 4 2 4	2 2 3 2—31
Brunn, Birmingham	3 3 2 2	3 3 4 4	2 3 2 3—30
Witte, Zutphen	3 4 3 3	1 1 1 1	3 2 3 2—27
H. Jansen, Wesel	1 2 1 2	4 3 2 2	2 1 2 3—25
Heuse-Lemoine, Nessouvaux	2 3 1 4	1 2 3 2	1 2 2 2—25
Cordes, Bremerhaven	2 1 1 1	3 3 2 1	1 2 2 1—20

Attested by the Jury, Klimm, Royal Inspector of Forests, Keyssler, Royal Inspector of Forests, Heise, Inspector of Powder at Cologne, G. Hahn, record keeper. It will be noticed that the Pieper guns are especially effective at long range.

Mr. H. Pieper has appointed the undersigned sole agent for the United States and Canada, and offers the goods at prices far below their real worth, in order to speedily introduce them into this market.

For Sale.

TO SPORTSMEN.—FOR SALE.—A HANDsome farm and country seat, in Cecil County, Maryland, containing 115 acres, fronting on the Bohemia River, near its junction with the Elk River, with good fencing. The buildings consist of a large modern double-walled brick mansion, thirteen rooms with bath room; hot and cold water in bath and kitchen. The whole farm supplied with water by a first-class windmill. The other buildings consist of a stallion room, ice house, two tenant houses, granary, two large barns, carriage house, sheds, corn crib, etc. The house is elegantly furnished throughout. There is also a Rumsey deep well pump in summer kitchen, water good. Ducks in abundance when in season, and perch fishing excellent. The buildings are all in first-class order, so is the farm, plenty of fruit and grapes, &c. It will be sold with the furniture, stock, produce and farming implements, also decoys, sink box, &c. Any gentlemen or club desiring a handsome shooting box the above is one of the most desirable in the State. The location of the mansion is near 100 feet above low water mark, and the view very fine. Access by rail or Erricsson steamers. Photographic views of buildings.

THE ANGLER'S

AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

THE OLIMAX PATENT GUN CLEANER

Is the most practical cleaner and oiler for breech-loading arms ever invented.

It operates on an entirely new principle, and it is astonishing how quick and well it will clean and oil a gun. Each cleaner is packed in a neat box with full directions for use, and will be sent to any address, postage paid, on receipt of $1.50.

Illustrated Circular sent free on application.

In ordering give calibre of gun. All orders and inquiries to be addressed

Hotels and Routes for Sportsmen.

OLD DOMINION LINE.

The Steamers of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Kittyhawk Club Grounds, Van Slyck's, etc., etc. These points can now be reached by rail and stage from Norfolk. Norfolk steamers sail Tuesday, Thursday, Friday and Saturday. Lewes, Del., daily except Saturday at 4 P. M.

Full information given at office, 197 Greenwich street, New York.

KENEBAGO LAKE HOUSE.

This justly-famed sportsmen's resort is situated in the heart of the best fish and game region accessible in the State. Trout always plenty and take the fly, and deer, moose and caribou have here their favorite haunts. The Seven Ponds are easily reached from the house, most of the route by boat, where are established fine camps and boats by the undersigned, who were pioneers in opening up the country for sportsmen. The scenery around the lake is lovely beyond description. Distance from Rangeley City ten miles, by carriage and horseback. Mail service tri-weekly. Rates reasonable. Address GRANT & RICHARDSON, Proprietors, Kenebago Lake, Franklin Co., Me. July 12,'82.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kenawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

THE ROUTE OF THE TOURIST,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, V., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL."

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. V., between the mouth of Chesapeake Bay and the Pacific Ocean.

KAY'S CHIP.

—OR—

EXPANSIVE SHOT CONCENTRATOR,

with Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg, coarse, FFFg, fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

THE MATCH PREPARATION.

WITH the past week the period for private practice and preparation on the part of American riflemen for places on the team to represent this country closed. There has been ample time and notice to enable a thorough personal drill in each case. The officers of the National Rifle Association have placed the time for presentation of candidates as late as could safely be done, and at Creedmoor, at least, there have been plenty of matches in which military marksmen could secure drill over the many ranges included in the international match conditions.

It is fair to say that the opportunities for preparation have not been neglected. While there is no great furore over the coming contest either on the part of the National Guard or of the public at large, there is an appreciation of the difficulties of the fight which keep triflers out, and those who have signified their intention of competing as candidates are thoroughly in earnest, and are industrious in picking up and applying the thousand and one precautions which go into the making of a good score.

The prospect is an encouraging one. In many of the States there have been active measures on the part of the authorities towards urging the men to take part in the preliminary trials. There is a disposition on the part of the military managers of such of the States as have a uniformed force to get some of their men as representatives on the team. Without inquiring into the chances of success or failure the feeling is in favor of making a good fight and showing the strength of our marksmen. If that strength should turn out to be weakness in comparison with the ability of the Britishers, we may look for some sharp criticisms into the tinsel and ginger bread which makes up much of our civilian military establishments. Indeed we are not quite certain but that a defeat of the home team is to be wished for if we are to reap the full benefit of the contest in directing attention to what our militia really is and what it is not from a military point of view. However, it is certain that our team will fight to win, and comparison of scores with English records are almost useless in any forecasting of the result, for not only are the targets different, but the weather conditions under our dry, clear perhaps, toasting hot sky will puzzle the visitors in no small degree.

So far as rifles go there does not seem to be even the ground to doubt but that our team will go into the fight with a weapon in no way inferior to the Metford special rifle, which has been so successfully used abroad. The Remington establishment has turned out a rifle which falls in every particular within the conditions which curiously enough presented a weapon which is neither an "army rifle" nor is it a weapon which has ever been or ever will be issued to a body of troops. It is neither fish nor fowl, neither a match rifle nor a service rifle. Still, such as it is, the Remingtons have given it every appliance which will enable fine work to be accomplished.

Careful selections and judicious practice for the period remaining before the match ought to give the American team the odds in favor. There is much work to be compressed into the next month, but, fair luck and no blundering, there is no reason why an American military team should not add another to the long series of victories which the American small bore men have won.

CORRECT FISH NOMENCLATURE.

THE New York Fish Commission has claimed to have introduced into the State two species of trout from the Pacific coast. With characteristic indifference to correct nomenclature the Superintendent of the Commission has taken the liberty of rechristening his supposed different species with names of his own coining. One he has called "California mountain trout." We have doubted the possession of two species by the Commission for the reason that all the Western trout which we have seen sent out by them, or by the United States Fish Commission, have been the rainbow trout, *Salmo iridea*, and no one who is competent to decide has identified two species. We have said that if they had a second species it was probably the *S. clarkii*, and might properly be called "Clark's trout." Both fish are found in the McCloud River, therefore one is as much entitled to be named from it as the other. As well might some Californian tack on some new names to the striped bass, or rockfish, just taken over by Mr. Woodbury, and call part of them "New Jersey bass" and, if he thought he saw a shade difference in color, the others "Shrewsbury River bass."

We have striven hard toward a universal nomenclature, believing in one name for one fish and one fish for one name, and have objected to some Western Fish Commissioners, who know better, calling the pike-perch a "salmon," in their reports. We hold that it counts for nothing that the majority of their readers call the fish "salmon" and will continue to do so. It is their business to lead the public in the right direction, not to follow it. The name of salmon has been applied to a certain fish for centuries in many parts of the world and it is as much entitled to it as a cow is to her name, and no people have a right to apply it to a fish not remotely related to it.

The great confusion in common names of fish and game in America has arisen from the fact that the country was settled in different parts by Europeans who brought their names with them and applied them to the first fish or bird which bore a fancied resemblance to those at home. Hence, as they had the name of salmon, and no fish in the Susquehanna, Mississippi and Ohio rivers to match it, they applied the name to perch. So in the South the names of trout, chub, and bream, all well-known fishes of England, and all of which have fins with soft rays, have been applied to entirely different fish, and, strangely enough, all to *acanthopterygian* fishes, or those which have fins with spinous rays. In Virginia the name "chub" is applied to the black bass, while in Georgia and Florida the same fish becomes a "trout." In Georgia the name of "bream" is used to designate a fish which is one of the *Centrarchids*, a family which includes the black bass and the sunfishes. In Massachusetts a little spiny sunfish is also called "bream."

Commissioners of Fisheries should see to it that local misnomers should not be perpetuated, and it should be one of their first qualifications for the office to know what are the proper names, or as least an approximation to a proper name, for their fishes. In that case a commissioner would blush to call a bass "trout," a lamprey a "lamper eel," a pike-perch a "salmon," nor would he coin confusing names for new Pacific coast fishes which have been previously named, and if he thought he had two species of fish in his ponds he would submit them to some competent ichthyologist and not only be certain that they were distinct but would learn their correct names.

We are now interested to know what common name, which can be employed at the East, will be attached to another species of Pacific trout, which will soon be brought here, if not here already. We allude to the fish which we have called *S. clarkii* above, but which a better authority, Prof. Jordan, now calls *S. purpuratus*, it having been described by Richardson by the first name and by Pallas by the last, now decided to be one and the same species. It has been called "Oregon brook trout," a name not descriptive because Oregon has several brook trout; "salmon trout," not good because preoccupied; "lake trout," ditto, and "steel head." The latter name is also used for *S. gairdneri*. The scientific nomenclature of the Pacific *Salmonidæ* has been much mixed, and is now only being cleared up, and the common names are even more mixed. We think "Clark's trout" a good one because it applies to no other, but we do not care to become godfather to it, and only ask that it have a good common name that our friends on the Pacific coast use, and that a fair number of them will understand. On this fish Prof. Jordan writes us as follows:

BLOOMINGTON, Ind., Aug. 9.

In regard to an editorial note appended to a communication from Mr. C. J. Smith, in a former issue, I think that you are right in saying that all the black spotted trout introduced East are *S. irideus*. I believe the *purpuratus* (*clarkii*) to be the better fish for introduction. It grows larger, is more gamy and flourishes in a far greater variety of waters, and does especially well in lakes. I have known them to reach a weight of twenty-five to thirty pounds, more than three times the size of the largest *irideus* I have seen. D. S. JORDAN.

We hope that it will prove a better fish than the much vaunted rainbow trout for we have a poor opinion of the merits of the latter as either a table or an ornamental fish. Its chief merit seems to consist in rapid growth and alleged gaminess. Mr. Annin, and other anglers, dispute its possessing the latter quality in a great degree, and any one who sees it perceives that it does not compare with the *fontinalis* for beauty.

In importing a fish let us import its proper name if it has one, so that those who knew it in its original habitat will recognize it when we have occasion to speak of it. What would we think if the Californians should call the eels which they have recently taken from New York by some new and absurd name?

NORTH POND ASSOCIATION.—North Pond is an isolated mountain loch, lying in a basin, snugly shelved under the Percy Peaks, in Coos county, New Hampshire. The waters are well-stocked with fine trout, and there is a variety of game in the vicinity. An association has been formed, which has secured by purchase the entire shore of North Pond and its inlet. It is proposed to provide suitable camp accommodations, and to maintain a private summer resort. The gentlemen composing the club are Messrs. George P. Rowell, Prospect Farm, Lancaster, N. H., of the well-known New York advertising agency; S. H. Kauffmann, of the *Star* office, Washington, D. C.; William D. Wilson, of W. D. Wilson & Co., New York; Francis H. Leggett, of Francis H. Leggett & Co., New York; Isaac W. England, publisher of the *Sun*, New York; Charles N. Kent, of Geo. P. Rowell & Co., 10 Spruce street, New York; Ossian Ray, M. C., Washington, D. C., or Lancaster, N. H. We understand that the membership list is already filled.

WHERE WILL YOU FIND ITS EQUAL?—With this issue we present the index of the eighteenth volume of the FOREST AND STREAM. What wonderful stores of good things are there enumerated! It is a medley of grave and gay—instruction and amusement, culled from a thousand and one sources, and reflecting the best and truest type of American sportsmanship. Accounts of shooting and angling excursions, studies of nature's ways, animated discussions of the ethics of sport, practical hints and helps, stories and incidents—are there combined to fill the pages of the twenty-six numbers making a semi-annual volume. Most heartily acknowledging our obligations to the hosts of correspondents who have thus contributed to the entertainment of the fraternity, we respectfully bespeak from them, as from the public, a continued support; and we beg to express (somewhat needlessly, perhaps,) our determination to maintain in the future the high standard and worth of the paper.

THE AMERICAN WOOD POWDER COMPANY.—This company, recently organized, is composed of the following gentlemen: Elliot Smith, president; Edmund C. Stanton, secretary and treasurer; J. O. Donner, Paul L. Thebaud and Geo. De Forest Grant, trustees; and Geo. T. Leach, Daniel G. Elliott, Robert C. Cornell, and others. Several of these

names are well known in business and professional circles, and the character of the company is such as to bespeak for it the respect and confidence of the public. It is the purpose of the company to manufacture a wood powder for use in shotguns. The past experience of American sportsmen with wood powders has not been such as to cause them to look with much favor upon new explosives of this character. The manufacturers, however, represent to us that in composition and explosive qualities their compound will so radically differ from the Dittmar powder, whose true character was exposed by us, as to be free from the dangerous nature which was the distinguishing characteristic of that explosive. None of this wood powder has yet been given to the public, and we have, therefore, not had an opportunity of testing it with respect to its safety. So soon as it comes into our hands we shall subject it to a searching analysis by a competent chemist and report the result. Pending that examination we have, upon the representations of the manufacturers as above, admitted their advertisement to our columns.

PACIFIC SALMON FISHERIES.—Unless our friends on the Pacific coast are careful, they will find their streams needing restocking in a few years. The fact that the products of their salmon fisheries have increased more than twenty fold within ten years points to the danger they are in of overfishing them. It means the killing of the goose. Already the southern and more accessible rivers are nearly cleaned out by the greed of the fishermen for present gain, not enough fish being left each year for seed. The Sacramento is far from being the salmon stream it was, and even the seemingly inexhaustible Columbia is beginning to feel the heavy drain that has been put upon it. When these rivers are exhausted the canners will seek new fields in British Columbia, and even in Alaska; but something should be done to so adjust the yearly catch to the annual production that the rivers will be in as good salmon bearing condition fifty years from now as they are at present.

FOR THE LONDON FISHERIES EXHIBITION.—Capt. Joseph W. Collins, of the United States Fish Commission, has gone to Gloucester, Mass., to collect models of all boats, vessels, and apparatus used in the fisheries, to be used at the coming International Fisheries Exhibition in London, next year. Captain Collins is a practical fisherman, and had charge of the fishing models and apparatus at the similar exhibition in Berlin, in 1880, and therefore knows exactly what is wanted in order to creditably represent the means employed in our deep sea fisheries.

ADIRONDACK SURVEY NOTES.

V.—GAME AND OTHER LIFE.

IN no forest that I have seen has there been such an absence of life as in the Adirondacks. True, deer are quite plenty, and so are some other large animals, but I refer to the smaller life which is not classed as game. There is an entire absence of squirrels, except the little red one and the smaller "chipmunk," or ground squirrel; birds are comparatively scarce, and reptiles are only represented by one or two harmless snakes and one turtle. Toads are the most frequent thing met on the carries and frogs are fairly numerous. Few wading birds are seen and even woodpeckers are scarce. It comes as near being a lifeless wilderness as one can imagine, due, no doubt, to the short season and severe winters. The game of this season has no migratory members except ducks, which are extremely scarce on the frequented water-courses.

Under the head of "Mammals Seen" my note book contains the following: "Red squirrel, plenty; chipmunk, occasional; muskrat, scarce, saw two. Rabbit, one, dead on trail, been killed by hawk, owl, or some animal. Mink, one. Porcupine, one. Bats frequent on Long Lake, but observed nowhere else. Deer, plenty, saw six, and many tracks. Bear, tracks of one. Saw five fine otter skins in possession of Alvah Dunning on Raquette Lake. Wolves are extinct. Moose ditto, not over four killed since Dunning killed his last one about twenty years ago. He tells me that he killed his last beaver over thirty years ago, the last one about Lake Pleseo, and the only one he ever took in his nearly fifty years' residence in the woods. They were plenty formerly, his father was a beaver trapper. He says there is a beaver dam on the Saranac now."

Under "Reptiles and Batrachians" the note book says: "Frogs abundant in the marshes and small ones in the springs. Toads of many colors frequent in the woods, especially on the carries. Snapping turtles, one in Big Moose Lake, would probably weigh twelve pounds. Garter snakes, two. Newts, three."

Birds appear in the note book as follows: "Robins, plenty near the settlements and quite frequent along the lakes; saw none far from water. Wood thrush, occasional. Catbird, rare. Kingbird, occasional. Song sparrow, a few. Yellow-bird, not seen since leaving Cedar River, east of Blue Mountain. 'All-day-piddley bird,' plenty. Crow, six on Raquette, and but few elsewhere. Raven, one; said to be scarcer now since crows have come in. Kingfisher, scarce. Blackbirds, plenty in swamps and along overflowed inlets. Crossbill, five on Seventh Lake. Woodpeckers, many, but not so plenty as expected, mostly the smaller kinds; only three golden-wings or 'high-holes' seen; found pair of three-toed woodpeckers with nest of young. Cedar birds, one flock. Nuthatch, rare. Olive-sided flycatcher, rare. Blue-jay, common. Canada jay, a few. Humming-bird, one on Fourth Lake. Small sandpiper, one. Woodcock, one, at Forge House. Loon, one. Black duck and brood, one. Shelldrakes and brood, three (this bird is common). Wood ducks, two; quite rare. Blue heron, two. Bittern, heard four. Hen hawk, three. Osprey or fish hawk and nests, two. Gulls, common on all lakes. Owls, heard seven. Ruffed grouse or partridge, plenty." These notes may be wide of the mark in some cases, but were taken as they occurred to me in June and the first of July.

Many broods of grouse were seen, and often the little fellows would take to a tree when they did not appear to be but a few days old. Frequently the mother bird fluttered ahead of me, apparently sorely wounded, along the trail until it suited her view of things to skim away to her brood. Once I beat her at her own game. It was my habit to shoulder my pack and get as far ahead of the guide as possible, so that the creaking of his boat could not be heard, and with careful step I kept on the lookout for life. Near a fallen tree an old grouse started in distress with drooping wings and crying almost like a dog. Knowing that her young were hidden near, I stopped, hoping to see them, and the mother fluttered around and came back coaxing me to follow. I waited until the guide came past and saw her lead the way for him down the path, while I hid behind a stump. She evidently did not count us, for she came back, and after considerable calling gathered her family, and gave me the treat of seeing her march close by with her treasures. This took all of half an hour, but it was time well spent to see the little downy beauties picking at occasional insects as they ran along. On another occasion I went so still as to surprise a hen and brood behind a log, and in her alarm at finding danger so near, she approached me in so threatening a manner, with wings down and head erect, that I expected her to strike my boot. I could easily have struck her with the handle of the landing-net at any time for three or four minutes. Her courage was admirable, and had she chosen to strike me it would have been charming. After holding me at bay until her jewels were safely hidden she changed her tactics and tried the lame device and finally flew away, well satisfied that her bravery had saved her brood from a monster.

Panthers are getting scarce in these woods and but few are seen. In my opinion it would be well to remove the bounty on them and let them take their chances. This view has these reasons to support it. If the bounty were removed no one would hunt them for profit, and they might increase to a limited extent and afford some sport. For my part I would give three times the bounty for the chance of killing a panther, and not ask the State to assume any portion of the cost, nor would I give up the ears for the $20 or $30, or whatever the bounty is. The panther is the only animal which eats and keeps down the porcupine, and the latter are increasing since the former became scarce. The porcupine is a bigger evil than the panther, as any man who has a dog in the woods soon finds out, and a dog somehow never learns not to worry a porkey, no matter how terribly he suffers from a mouth full of quills.

Bears are quite plenty and mischievous, tearing up whatever you may hide in the woods. I have taken the bear fever badly, and it will be necessary for me to kill one in order to be supremely happy. On this subject I held the following conversation with my guide, the noted "Jack" Sheppard:

"How can I work it to kill a bear?"

"That's hard to tell; you might come up here and find one in a week and again you might be in the woods a year and not see one."

"What I mean is, can't I get a man, yourself for instance, who will let me know in the proper season where a bear is likely to be found so that I could leave New York city and be with him in twenty-four or thirty hours, and then spend a week perhaps in finding a bear? I can't get away for a long time, a week or two at most is all that I could spare to interview brute."

"I don't see how it is to be done. In the first place you can't still hunt a bear in these woods very well, because he will go ten miles to your one, and dogs are no use in these mountains, as a bear will know of a leaning tree which will take him to a ledge on the rock above and be miles away while your dogs are howling at the foot of the tree. If you happen to come on a bear you can kill it, but that is something you can never calculate upon, at least, not in the way you want to."

"It seems as if it might be arranged somehow."

"I don't see what you want to kill a bear for anyhow. The skin ain't worth more than ten or fifteen dollars, and the meat is worth all it will bring to get it out of the woods. I've killed bears and let the meat lay because it couldn't be got out without a hundred dollars worth of work. Then see what it would cost you. You get me to go in to telegraph you and you come up and we go into the woods for a fortnight, provisions and all it would cost you seventy-five dollars at the least calculation. It seems a foolish piece of business to me."

"There you go again, Jack! You are one of the most calculating and mercenary fellows; you look at it from the paying side. Why, Jack, I wouldn't sell the hide of a bear that I killed for a hundred dollars. It would have a place of honor in the room known as my 'den.' I only want to kill it to brag about, for I feel like very small potatoes here among you men who talk of killing bears and panthers as I do of taking trout and bass. Mr. Colvin has killed his panther and perhaps a dozen bears, and here I am a fellow who has no such record to point to. Why, if I had a bear-skin on the floor which I killed in the Adirondacks, an alligator head shot in Florida, a tiger skin which, with a pair of elephant tusks, fell to my rifle in India, and perhaps a dozen more such trophies, I would swell up big when I entered FOREST AND STREAM office and make 'em all do me proper honor. Never mind the cost (mentally, if it isn't too much); but I say, Jack, can't this be done on my fall visit, or next spring?"

"I'll tell you how you can do it. I sometimes trap a bear, and I might hold him until you come up, and then you could kill him in the trap."

"Jack Sheppard! don't talk bears to me any more. If that is a joke I will forgive it, but if you mean it, which I refuse to believe, that thing would work my everlasting ruin. I would be guyed to death if it got out, and if it didn't I could never look an honest bear in the face in the Central Park menagerie. Let us talk about trout for a while."

I afterward found a guide, Will Ballard, who tells me that in the spring, when the suckers are spawning, the bears are on the stream and feeding on the fish. He gives me hope that my serious attack of bear fever may be allayed at that season.

F. M.

The Sportsman Tourist.

A SWAMP EPISODE.

BY A. MULE.

THE most beautiful part of Mississippi is in its northeastern prairies. From the right bank of the Tom-bigbee the country begins to open—a series of rolling glades and groves stretching westward—the swelling bosoms of the open sward resting in the embrace of the groups of trees like a pouting beauty in the arms of her lover.

After a few miles of this the openings get larger and the trees scarcer until finally there opens to the view one of the sights no one ever fails to appreciate—the fresh, green open prairie extending for miles, without a break in the expanse of living verdure until lost in the blue haze of the distant horizon. This gem of prairie extends from South Alabama almost continuously to North Mississippi, and varies from ten to fifty miles in width. It is evidently the bed of some ancient lake or sea—the soil is a black, rich loam on limestone, and if was the granary of the Confederacy.

Time and again did the shattered and wearied troopers of Forest ride down here to recover themselves and recruit their bony horses, among the open-armed planters and their swollen corn-cribs, and as often were they sent back fresh and all ready for another six months' hard work. Of course the devilish cotton has its strangling arms around the neck of the lovely country yet, but the time will come when grass and cattle will make it again a Paradise.

The land lies high, being on the great watershed between the Tombigbee, the Yazoo and the Pearl rivers, and for the same season is naturally well drained.

The western part of the prairie is for a considerable extent bounded by the Suquetonsha creek and swamp. This creek drains an immense section of country and in consequence varies from the proportions of a petty brook to those of a great river. It overflows miles of swamp when in flood and is a nasty little stream meandering through a wide margin of swamp when in its tamer mood.

Of course the swamp is fertile and of course the hot sun water and rich soil have together made a tremendous morass. Not so large in limits as those of the Father of Waters, but still large enough to present all the peculiar features of a bottom in a form rather concentrated than diminished. Able woodsmen have been known to become lost for days in its recesses, and those who hunt there and know it best are the most careful to keep to their landmarks and speak of its dangers with the most respect.

Before the Rebellion it was the refuge of all runaway niggers in the country. Many of them, after running off from a mere impulse, would have their hearts fail when they reached the gloomy shadows of the swamp, and so be found skulking along its edge. Some, however, there were, worthy of the name of man, into whose soul the accursed lash of slavery had entered like iron, strengthening and supporting them as they plunged into the deepest recesses of the mysterious swamp, often disappearing forever from human eyes, or only flitting like ghosts in the darkness around some isolated negro quarters.

But for those who knew how to hunt in it the swamp was full of attraction. The bayous and lakes were full of fishes, wildfowl and all sorts of vermin, while the groves were filled with deer, turkeys, squirrels and other sorts of game in profusion. Some became so fond of it that they pursued sport in the swamp as a passion, and every day sought its limits either to shoot or fish or hunt.

One boy I knew, and I was not on speaking terms with him, who was always going into the swamp. The little devil seemed to have a natural taste for whatever he "oughtenter." From his earliest age he developed this trait. He would ride off any visitor's mule or horse hitched before the house, kill sheep and camp by the carcass till hunted up by agonized relatives, and his stomach was a mere junk-shop for the reception of stolen goods. That boy was myself.

In a moment of inexcusable kindness a friend took me behind on his horse to shoot squirrels in the swamp. It was enough. I never abandoned it.

My gun was an old percussion musket whose daily taking supplied a most convenient excuse for those general and inquisitorial sorts of threshings we got in those days. But she was a darling to shoot. With a handful of powder out of a bottle, half of my mother's unread *Christian Advocate* for wadding, and another handful of shot out of a pocket, the old Harper gave a pattern and penetration no modern gun can equal. I've seen her shoot so as to make Herron's old bull actually jump out of a thirty feet circle of rails, and every mule in the lot commenced to buck when he saw her nose poked through the fence.

However, thus equipped, from an early age I sought the

swamp. Fools rush in where angels fear to tread, and in a few years I knew a great deal more than anybody in my neighborhood about the hidden places in the Bottom. There were many curious holes there, but on one occasion I stumbled on one with results, and all this preliminary is for the sole purpose of telling you about it.

One day I found myself on the edge of the very worst brake there. To get where I stood was a feat of pathfinding worthy of history, but I had been there several times and knew my way. But before me stretched the worst brake any man ever saw. Mud, water, vines, cane, fallen timber and green, had done all that was possible to make a prize morass. To get into it seemed impossible; to get out of it, worse than that, and perfect madness to think of going through. Therefore I was crazy to explore it.

A sort of bayou I found ran into the edge of the thicket, but so far as I could see was soon spread and lost among the cypresses. However, I tried to follow the nearly level bank. Clouds of insects on my hot face and plenty of scratched nose rewarded my efforts. I sat down to think and blow. By Jove! Sometimes these bayous have a sort of bottom hard and firm. "Fresh vigor with the hope returned," and I was soon walking in the bayou in water about a foot deep with a fine, hard bottom.

After following the bayou for about half a mile or so through an awful thicket, dense and gloomy as night, I came to a sort of pond or lake, about 200 yards wide and circular in shape. The fiercest sun that ever shone could not reach the swamp I had just passed, but here the bright, blessed light fell in a perfect flood. I walked up to the bank and sat down beside an enormous sycamore that grew quite close to the water. I could not but observe the magnificent tree, though I had often seen fine ones before. This must have been ten feet in diameter at least near the ground, though a little way up it divided into two separate branches.

For some moments I had been listening to a queer sort of noise, like somebody breathing with difficulty, but was unable to locate the sound. Just then it came clearer perhaps or louder, and I fairly jumped. The noise certainly came out of the tree!

I at once ran around to the other side. All great sycamores are hollow and this was no exception. About a yard from the ground there was a hole some two feet long and giving a view of the interior of the tree.

I looked in and saw a gigantic negro lying on a bed of leaves, evidently sick, and panting for breath. As my face darkened the hole he turned his yellow eyes and greasy face toward me and feebly lifted his hand as if for pity. The wasted features and lonely fate were too much for me, and the tears rolled down my face. Poor fellow; I could divine it all. Runaway from home and friends and slavery, living here alone until want and disease had overpowered him.

I got into the hole and at once gave him some water from the lake, which he drank eagerly, and then fell back with a deep sigh. There was no sign of food about the place, but fortunately I had a good lunch, and gave him that. He was very hungry and ate it all, though feebly.

In about half an hour he revived enough to talk a little, and told me his name—"Henry Bunch—runaway—Mars B——"

This was the worst master in the whole country around. On my part, I said slowly and distinctly to him;

"I will not betray you, Henry; but I will bring you some medicine and grub and help you all I can."

This was evidently a great relief to him. He brightened up, seized my hand and shed a tear or two.

As this was in October, the air was much fresher than in the close weather of summer, so I had hopes of bringing my patient through. For that night I broiled a few birds, and left them with him, while I sought my home to lay in better supplies.

Well, "to cut it short," he got as well as ever in a couple of weeks on plenty of quinine and whisky and good food. My heavens, what a thief I was! Nothing but the loose and careless Southern housekeeping ever saved me.

But we became great friends at the Big Tree and spent hours in discussion of everything that we did know or didn't. Henry was most anxious for fish hooks. With plenty of these he declared he was always certain of a living. You may be sure I supplied him with enough for a brigade of niggers. I also gave him an axe—some big knives—and what he valued most of all, some tobacco seed. He intended to raise enough to supply himself. A gun he would not have, even though I offered him my nonpareil Harper's Ferry musket.

"No, Mars G—," he said, "no sah—don't hab no use here for gun. Mek too much noise for nigger to shoot game, and too much fur tote when gwine to run. Dis no place for fighten. No, sah—gib me 'bacca seeds, an' a axe, an' plenty fish hook an' I do well ez any nigger."

"But how will you get game when the fish don't bite?"

"Is'e got a bow an' arrer and kin shoot some little wid it," said he. "And done sot traps all around here ontwell there ain't much chance uv my starvin' to death nohow."

Henry's outfit and home were great curiosities. Just fancy an ignorant man going into the swamp without a tool, weapon or utensil other than a Barlow knife, for this was all the nigger had the day he ran off. Of course it was summer for a nigger, can neither plan nor execute anything during cold weather. And so for a few days he lived on berries and roots while he steadily pushed into the depths of the swamp. By mere luck he discovered an old log afire and so carried along a "chunk" and kept a light after a well known fashion. For awhile he lived in the open woods, as he said, "jess like a wild hog," but after the discovery of the Big Tree he had been glad to indulge in the comfort of a tight house and fixed habitation. His little fire was built inside of the tree so that the smoke was scattered through the hollow limbs and made no mark on the sky. Pawpaw bark supplied him with materials for baskets in which to store pecans and other nuts, as well as strings for fishing lines. A hook gave him more trouble than anything else. After trying all sorts of plans with wood, he finally made a very rough one out of the back spring of his knife which he altered by the aid of fire for the purpose. Traps and snares he multiplied indefinitely, and I was astonished to learn how much meat he had been able to secure in this way, rather varied in description, but all better than starvation.

This all sounds much better though than the actual reality. Bread of course was absent, and the badly broiled flesh had to be eaten without salt. I had thought these would be his greatest wants, but he declared with earnestness that he wanted "bacca fust and den some fat meat, jess so 'twould run down bof side de mouf and grease up all de innards. Nebber mind the salt, Mass G., you jess fotch me piece fat bacon ef you want see nigger chaw wid bof side he mouf."

Anyhow I managed to get quite a bag of salt for him as well as the piece of bacon. His clothes had long since disappeared in a mass of rags, but soon after his recovery he rigged himself out in a new suit made of all sorts of squirrel, rabbit and 'coon skins, sewed together with strings made of their dried entrails, using thorns for an awl. These skins were the gatherings of a year. In spite of myself I find the details of such a life still to possess a certain attraction. Yet it was the life literally of a wild beast, and required a tremendous vitality to endure it. Had Henry not been the giant in size and constitution that he was, he would have died long before. To the man of average health and strength such a life would be slow, sure death.

Inside the Big Tree there was quite a comfortable lodge. By scraping the dead wood from the sides, packing the floor with fresh, clean earth, and making a ceiling of cane, Henry had made a neat, tight room nearly eight feet in diameter. The fire was built to one side in a hole, and using only the dryest wood, there was but little smoke, and that escaped through the top of the tree. Cooking with him was a simple affair of broiling, as he had no pots nor pans to cook in.

Henry had tried making vessels for water out of bark, but had to give it up. No doubt some persons can do these things, but it requires more skill than the average man possesses. His dishes were the shells of terrapins only.

In the seasons he gathered great quantities of the pecan and shellbark hickory nuts for use during the winter. These he saved in baskets and hung over the smoke of his fire to keep out the worms. Some of his game he dried in the same manner, but he said it was poor stuff and not fit to eat.

Of all the men I ever knew this nigger seems yet to be the simplest and most honest. He had but one "strong weakness," and that was his fear of recapture. Without either wife or children he had bent all the energies of a powerful mind upon one plain problem—"how to escape the white men."

To avoid these he remained constantly in the deepest recesses of the swamp, rarely leaving the brake in which his "house" was situated. "I'se safe in here, Mass George," he said, "but ef I go squandering all about the woods fust thing I know some dese nigger dogs he done got my track and den whar is poor nigger gone!"

And so by keeping to his fastness he expected to defeat the schemes which he well enough knew were laid for his capture.

At last I went off to college and Henry was again alone. When I returned two years after there was news indeed. It seems that B., his owner, had never relinquished the belief that Henry was still alive in the swamp. After many failures he succeeded in catching the poor fellow and took him, torn, bloody, half crazed with fear, to his plantation. Acquaintances offered to buy the nigger of him at great prices for the sake of pity, but the besotted brute swore he would not take a thousand dollars apiece for the whippings he intended to give him.

B. was found dead in bed one morning, having been smothered to death, and Henry confessed that he was one of the three who did it. None of them tried to escape, but all were hung by the neighbors at once, for such were the necessities of the Institution.

KINGFISHER AND THE SCRIBE.—Cincinnati, O.—*Editor Forest and Stream:* In your issue of Aug. 3, "The Scribe" has fairly earned his cognomen of "Old Knots and Knarls" by the broadside he pours into the writer (between wind and water) anent the frequent mention of cold springs, brooks, and water in general, in "Camps of the Kingfishers." But as a scaling from an old friend don't hurt much, I won't "holler" loud enough to disturb the camp. He surges around, too, in a very aimless and promiscuous sort of way among a most terrifying array of big words not often dragged forth to public gaze; but this may be accounted for by his having not long since read "Trouting on the Brulé River," by John Lyle King, and it would appear he has not yet recovered from the effects of its perusal. His aversion to water—except as a medium by which he is enabled to pursue his favorite sport—is well known to his angling friends, and it is safe to say that this particular fluid will never cause a "dropsical sensation" to pervade "Old Knots." The "imaginary episodes" he speaks of have at least the merit of being more truthful than his intimation that I consumed his quart of "old crow." I "fess up," however, that appearances were all against me; and but for the fact that the bottle was empty when Old Dan and I got back to camp on the day in question—Frank, the cook, will bear us out in this—I would acknowledge the corn (juice), and, like Captain Scott's coon say "Hold on; I'll come down without shootin'."—KINGFISHER.

MAINE ROUTES.—In my article of June 29 it was only by the solicitation of "Warefield," who, as well as the writer, wished to impart information to brother sportsmen in regard to the famous hunting and fishing grounds in the vicinity of Seven Ponds, Massachusetts Bog, etc., that we contributed the article to FOREST AND STREAM, not for a moment thinking to arouse a lionup in the backwoods of Maine. We do not propose under any circumstances to enter into a controversy in regard to the routes to our Maine woods in the columns of your worthy paper. Inasmuch as statements are made in an article of July 27, 1882, and signed "Backwoodsman," reflecting, as we understand it, upon the truthfulness of the writer, under these circumstances it seems but just that we have the privilege of giving the reasons for our assertions, and to say that we would not write anything to induce sportsmen and tourists to take any route into the Maine woods other than for their own special ease and comfort, regardless of hotels, stages, guides, etc.—SAMUEL FARMER (Phillips, Maine, Aug. 10). In my article, in place of "Dirigo House, $3.50 for tickets," read "Dirigo House, and $13.50 for tickets."—J. W. T.

"CAMPS OF THE KINGFISHERS."—Permit me through the medium of your "twenty-eight" ever-welcome pages, to express to the cheery "Kingfisher" my thanks for the enjoyment I have had in following his wandering ripples on the Intermediate Lakes. The pleasure has been doubly realistic from the fact that within the past month I have fished the same beautiful waters from the Six Mile to the mouth of Clam River and with the most gratifying success. On my return I have eagerly followed his ready pen pictures in your valuable journal, and lived over again the rare sport to be enjoyed on those lovely lakes. Should it ever be my lot to make a cast in sight of the "Kingfishers' Camp," I shall "reel in" and pull for shore in hopes of thanking "Old Hickory" for the laughs I have had through him.—CAPT. "DORSAL FINN."—(Chicago, Ill.)

Natural History.

THE CHESAPEAKE SHORE.

I HAVE referred in previous articles to a yacht cruise in the waters of the Chesapeake and its tributary streams. I would like to give to your readers the result of my observations and describe a few of the incidents which attended that cruise.

We spent the months of March, April, May, June and July below the mouth of the Potomac, along the shores and among the creeks and ponds of tide-water Virginia. My brother Phil and myself found amusement in making additions to our oölogical collection and observing the habits of such birds, animals and fishes as came under our notice. The inhabitants also came in for a large share of our attention, and the many acts of kindness which we received from their hands will never be effaced from our memories.

There is quite a fishing industry on these shores, and several kinds of fishermen attracted our attention. I do not think we had ever before realized the extent to which fish are levied upon, nor the amount which they contribute towards the support of life.

Poor fishes! Not one instant of your lives but is fraught with danger. From the great basking shark (*Selache maxima*) to the tiny minnow (*Cyprinus phoxinus*)—all are pursued by relentless foes. They have many enemies in their natural element. An endless chain of destruction follows the shoals of herring, shad and menhaden from the depths of the Atlantic to the head waters of every stream which they visit. What they suffer in the deep I can only imagine; what they meet with along the shores I have seen.

Toward the last of February the enterprising Chesapeake fisherman wakes from his winter's rest and overhauls his pound net, prepares his set stakes, and gets things in good order generally. On some mild morning in March he loads his canoe with long poles made from the stems of slender spruce pines; with a companion to help set them, he sculls his boat down the creek and around the point into a larger river or the bay itself. Probably he has picked out his site and located it by sticking down a single large pole with a bush tied to it. This is their mode of pre-emption, and I think it is always respected. On arriving at the chosen spot the labor commences; one by one the stakes are to be driven solidly. There are to be set the stakes for the pound itself—which is square in form—the false pound, and the fence, which extends directly toward the shore, and varies in length with the distance from shore, depth of water, etc. They are commonly several hundred feet long. After the stakes are set the net is put up; this has first to be well tarred to preserve it. The true pound is a square net with wall sides. Each corner is provided with a set stake and a large iron ring which is slipped on to a permanent stake and pushed down to the bottom; then the two stakes are tied together at the top. In the side toward the shore is an opening just wide enough to admit a canoe; this is provided with similar stakes. The false pound is made in the form of a heart, the point facing the opening in the true pound and made fast to the permanent stakes. The fence is set in a line with this opening, extending directly back. The object of the fence is to intercept the fish and direct them into the false pound. On meeting with an obstruction fish naturally turn toward deeper water; having entered the false pound, they are bewildered by the returning curve of its sides, and on finding the opening to the true pound, at once pass in; they may stray out again, but soon return.

I went with a friend—Mr. J. C. Haynie—to see him "fish" his "trap." We got off before sunrise, and getting on board his canoe proceeded down Cockley's Creek. It was a beautiful morning, I laid back in the canoe and enjoyed first the song of a mocking bird, then the beautiful whistle of the cardinal grosbeak. At this early hour the whippoorwill could be heard and also the call of the chuck-wills-widow, the largest of the *Caprimulgidæ*. Singularly enough, the inhabitants do not distinguish between the two, and no one that I saw there knew of the bird other than as whippoorwill. It was broad day when we reached the Wicomico, and setting our sails, for there was a breeze, we soon rounded Old Field Point, and glided out on the Chesapeake. Others were astir, and when we reached the "trap," canoes could be seen up and down shore from Smith's Point to the Dammaron marshes. We pushed into the pound, and quickly untying the stakes pulled the net up from the bottom, and fastened it above water. As yet, I had seen no fish, but Haynie said they were at the bottom of the net. We loosened the other stakes, hauled up the net, and hooked it on to the top of the permanent stakes, proceeded to pull it up on one edge. We kept all the fish before us, and soon cornered them into a small space. The net that now contained them resembled a hammock in form. I held on to the inner edge and Haynie began to dip them into the canoe. We had a variety, skates, stingrays, toadfish, crabs and jellyfish, formed the bulk of the useless ones, while herring, menhaden, bluefish, called taylor, and squeteague, called trout, made up the balance of useful ones. While all this was going on, I noticed that my hands and arms began to sting, and soon my eyes were smarting fearfully, this was accounted for by the presence of so many jellyfish, or sea nettles. Of so caustic a nature are they, that I have seen an old net that was stored in a loft, which on being struck emitted a dust, producing the same effect.

We threw away the useless fish, a barrel or more. Many kinds are caught during the season. Turtles and loons sometimes get in; and now and then a shark; sometimes to the fisherman's regret, as it may cost him the loss of fish by the breaking of his net. A fish which they call "bo-nee-ta" or "bull nigger"—bonito I think it may be—is sometime taken. I have eaten them, they are fine, and resemble the swordfish. Sturgeon are also taken, and after herrings and shad are done, come Spanish mackerel and sheepshead. We set our stakes and started back towards Cockley's Creek again. On our way we stopped at Reed's wharf, where Haynie delivered his fish, which were all taken at a stated price by contract for the season.

Several parties buy fish at this place, and all the eatable ones are sent to Baltimore, while the rest are made into oil and guano, for several fish works are in operation here, and at times the atmosphere is fragrant with the odors from "chum" heaps.

A piscivorous race of birds as well as men inhabit these shores. It was during our stay at Cockley's Creek that we first made the acquaintance of the fish hawk in its breeding place. Fish hawks are not to be classed with those I have before mentioned. They belong to the highest type and are fly fishermen *par excellence*; their cast exceeds in length that

of any expert with the split bamboo, and is fully as accurate. The bird is greatly aided by the distinctness with which fish can be seen from an elevation. From our yacht's cross-trees I could plainly see a shoal of fish not one of which could be discovered from the deck. I am inclined to think from my own observations that the hawk strikes the fish from behind, as they seem when held in its talons to be headed the same way as the bird. I have noticed that the hawk always gives a vigorous shake when fairly up from the water whether it caught a fish or not. I have never seen one strike a fish which it could not lift from the water, but have heard of such instances.

The white-headed eagle often robs the fish hawk. I have seen him do it a number of times, and rarely does he miss his object. I never saw one miss but once, a d then the hawk was so near the treetops that the eagle did not have time to secure the fish before it fell among the trees. The pursuit and robbery afford an interesting sight to the beholder. One instance of this occurred while our yacht lay in the Wicomico River. We were anchored in the bend off the mouth of Ball's Creek. A fish hawk had been seen for some time flying about over the river, and soon we saw him poised over some unsuspecting fish, and in an instant his wings closed and he darted diagonally down with a splash into the mirror-like surface. Then he rose, dripping, with a fish in his talons, and after giving the customary shake started off up the river. A minute afterward an eagle, which I had not before seen, sailed out from among some pines which stood on the opposite side of the river. It at once started in full chase after the flying hawk, which was now a fleeing hawk as well. On they went, up and up, in wide circles. The hawk screamed as he flew; the eagle follow silent, but determined. His gaze was on that herring, and he seemed to see nothing else. Soon the hawk began to pitch and dodge from side to side. They were at such a height that they looked but a few feet apart. The hawk was evidently wearied with his exertions, and in another instant he dropped the fish. The eagle, with half-folded wings, seemed to rather fall after it than anything else. He caught it in a few yards descent and flew off in triumph.

I visited several hawks' nests and secured several specimens of their eggs for my collection. I recollect that one nest we climbed up to was so broad on top that, lying at full length, my whole person rested on the nest. I wish no one to misunderstand the lying—for that nest was fully six feet across the top, and I measure but five feet eight inches. I had been told by persons residing in that vicinity that it was dangerous to climb to the nest unarmed, and I was once driven out of a tree by the angry birds. I once found a nest in the top of a chestnut stub; and I am told that on the Island of Nantucket they built on top of a wind mill; generally they build in pines, often dead ones; and year after year in the same one, if undisturbed. About the shores of one pond I counted fifteen of their nests, and in July the young were screaming incessantly.

At the same point where hawks were so abundant several pair of wood ducks had settled for the season. They nested in the hollow trees, so many of which are to be found in Virginia woods.

Once we were walking along a narrow strip of beach between this pond and the Chesapeake; it was a beautiful day in June, a soft breeze from the south fanned our faces as we looked off on the blue waters. The shores on the south side of the Potomac are low, and at this point were bordered by a growth of small pines which extended back to the pond. While making our way through these trees—which were quite thick and tangled—we heard the call of a wood duck; not loud, but a very distinct queet, queet, quit. We instantly suspected that there was a brood of young with her, and at once decided to capture some of them, if possible. Creeping cautiously through the underbrush, we saw them across the pond, making their way up a branch on the other side. We quickly and quietly retraced our steps along shore, and stole down on a point which projected into the pond. Peering through the brush, we saw them feeding along up into a deep arm of the pond, which lay between the point we were upon and a similar one opposite. It was arranged that my brother should go around to the other point, while I was to stand guard at the mouth and keep them from coming out of the cove. After I had waited some time I saw him creeping through the brush on the other side.

We were separated by about one hundred and fifty feet of water. The pond was shoal and the bottom very muddy, and the water was thick with living and decaying vegetation; rushes, reeds and grass flourished amid a perfect maze of lily roots and pads. The shores were covered with prostrate logs in all stages of decay, from one blown down by a recent gale to those of some cyclone in the Indian age. The water was full of living organisms; approach the margin, and from every log and stump off would go in the greatest haste, numbers of "skilipots," "red harrys," snappers and frogs and lizards of all sizes. Besides the fish—its regular denizens—there was an abundance of eels and aquatic insects. But worse than any of the above, the pond was the parent, cradle, nursery and home of one of mankind's most insidious foes—the ague and fever. Although every clear space of water sparkled and danced in the sunlight, the miasma hung over its bosom like a nightmare.

Without heeding the dangers I have just enumerated, we decided that the only way to catch a young duck was to swim or wade up the branch and drive them ashore, if possible.

We both undressed and retaining only our hats, plunged into the mire. What a sensation we experienced, the surface was very warm, the middle zone was comfortable, while our feet were imbedded in a mud as cold as a northern spring hole. To walk erect was impossible, swimming was out of the question; the only way we could make any progress was by drawing ourselves by the grass and lily pads. The ducks were greatly frightened at our sudden appearance, and seeing at once that their retreat to the main pond was cut off, they all started up the branch and near the end they hid under a thick growth of bushes, which at this point overhung the water. When we got quite near, they all at once took to the woods, which were here composed of large trees with but little under brush. The old duck flew and fluttered about over the ground, much in the same manner as a ruffed grouse would under similar circumstances. We paid no attention to her, but tried to catch some of the little ones, which were running about in all directions. As we were unincumbered with clothing our motions suffered no hindrance on that score.

Never have I seen a thing so hard to catch as these little ducks were. I saw one squatted under some dry chestnut leaves; getting between him and the pond, I tried to grab him with both hands—didn't though; then I tried to keep in his way as he put for the water; 'twas no use; he dodged so fast that I was kept vibrating like a pendulum, from one side to the other, and he finally got by and into the water. While I stopped to gain my breath, I saw my brother going through a similar acrobatic performance. They every one escaped to the pond, and we followed them into it again. Here we were more successful; the rank growth of grass and other aquatic plants impeded their progress more than ours, and we forced them to dive; then when one's head appeared through the grassy surface, we would steal up slowly behind it, with arms outstretched, and then suddenly seize grass and all. In this manner we secured six, and putting them into one of our coats, we dressed and started for the yacht, which was anchored in a creek about a mile away. We left six or eight ducks in the pool, and afterwards saw them with their mother. As we had no room on shipboard, we left them with friend Haynie, on the shore. We built a pen and put them into it, and turned them over to Mrs. Haynie's care. Five escaped within an hour and we never saw them again; as the branch was near, and as they from the first get their own living, we had no fears for them. The sixth one—with two others which we afterward caught—we carefully looked after, and they soon began to grow as fast as any ducks. They were never tame, but would eat corn meal dough when not watched. They were very fond of soft crabs, and would eat them in preference to any other food. Two lived until they were full grown, and were finally killed by a couple of pups which belonged to the family.

East Wareham, Mass., July, 1882. Mergus.

SOMETHING ABOUT WASPS.

The Newark *Advertiser* contains the following account: "A big blue-bottle fly came buzzing into the house of a resident on Pennsylvania avenue yesterday afternoon, and, after a pretty thorough investigation of all the nooks and corners of the apartment, directed its attention toward a spider web in a corner of one of the windows. For a moment it reconnoitered about the web, now soaring from one side to the other, and again poising almost motionless in mid-air, while it peered under the ingeniously woven structure. Finally, to the astonishment of the lady who had been watching its manœuvres, it made a sudden charge upon the under part of the web, and breaking through the flimsy netting, seized the occupant, a good-sized spider, and backing out of the entangling network, soared away with the struggling spider in its grip, like a chicken in the talons of a hawk."

The story is a very good one, but it would be no less so if it were somewhat more accurate. Of course, the captor of the spider was not a fly at all, and equally of course, it was one of the wasps commonly known as mud wasps, and, in the South, "mud daubers," from the material of which their nests are formed. It is, of course, impossible to say to just what species, or even to what family, the pirate belonged, but it is not difficult to conjecture what he, or rather she, was going to do with the spider. The solitary wasps provision their nests with insects of various descriptions, such as spiders, caterpillars, aphids and grasshoppers, which they paralyze by stinging, and on which the larvæ, when hatched, feed. This whole subject is so interesting, and at the same time so little is known about it, except among naturalists, that no apology is needed for reproducing some remarks upon this group from our issue of December 12, 1878.

The common blue, or mud wasp, as any one may learn by an inspection of one of the nests so plentifully distributed on the inside boarding of hay-lofts, garrets and other similar places, supplies its young with spiders; other genera draw their supplies from other sources.

All the wasps and hornets are ferocious and predatory in their habits, and most of them feed to a considerable extent on other insects. So much is this the case that in some parts of Europe butchers are glad to have them about their shops on account of the great number of flies which they devour, and a certain species in Mauritius which feeds wholly on cockroaches is on that account held in high esteem by the natives. Some of the social wasps, however, lay up honey, like the bees.

The wasps are divided into two groups, the social and the solitary. Of the former, the common brown wasp, the "white-tailed hornet" and "yellow jacket" are good examples, while the mud wasp may stand, as being so familiar to all, as a type of the latter. It is with the solitary wasp that we have to do at present. These insects are provided with a poison which stupefies or paralyzes the insects upon which they prey and which of course they secure by stinging them. The female blue wasp—for there are no workers (neuters) in this genus—having partially completed her nest of mud, deposits an egg, and in the same cell with it places a number of small spiders which it has stung, and which, although paralyzed and quite incapable of motion, still retain life. The cell is then walled up and another one built adjoining it, in which the same thing takes place; this is continued until several eggs have been deposited, when the last cell is finally walled up and the nest completed. A similar nest is constructed for each set of eggs which the female deposits. When the grub appears, it feeds on the spiders prepared for it, until ready to undergo its transformation, and finally, when it becomes a perfect insect, gnaws its way out through the wall of clay.

Another large wasp, somewhat similar in general aspect to the blue wasp, but larger, is common in our latitude; but as it does not appear about the dwellings of man it is seldom observed, except by those who are on the lookout for insects. It belongs to the genus *Sphex* (*S. ichneumon*), and its nests are placed in holes in the ground, which it excavates with much care and patience. It feeds its offspring on crickets, grasshoppers, etc., and an incident which once came under our observation well illustrates the power and perseverance of these little creatures. While walking one day in mid-summer along a well-beaten path we noticed several small but deep holes, which we rightly attributed to these insects, and at length, just after passing one of these excavations, we came upon a large *Sphex* which was at that moment engaged in transporting its prey to its nest. But for the fact that the insect was directly in our path and we were looking for it we should have missed a very interesting scene. The burden with which our *Sphex* was struggling consisted of two of the large black and yellow-winged "grasshoppers" whose sharp and loud crepitations are so frequently heard during the scorching days of July and August. The two orthopters were firmly fastened together, one clasping the other by the back and each of them was half as long again as their captor. Poor *Sphex* was really in great trouble. She would seize her burden by the head, and by great exertion drag it along the smooth path for about six inches, when her strength would give out and she would fly off to a little distance and rest for a minute or two, walking briskly about in the sun the while, then she would return to the spot and renew her efforts. Had the journey been through the grass, it seems as if it would have been impossible for the wasp to drag her load, but the path, worn smooth by constant travel, offered no impediment to her progress. The distance from the spot where she was working to the hole which she desired to reach was perhaps twenty feet, and though her advance was slow it was steady. At times she would fly off to quite a distance, fifty feet or more, but her absences were never long continued, and when we were obliged to leave her she had transported her burden to within three feet of the hole. We greatly regret that we were unable to witness the close of the scene and watch the method by which the "grasshoppers" were introduced into the hole, for they were certainly too large to enter it without being considerably reduced in size. Here then was a very considerable provision for the expected larvæ, and we thus see that even in our own latitude there are examples showing that different genera of solitary wasps feed their young on different insects. A European genus, *Ammophilus*, employs the larvæ of moths for this purpose, while *Chlorion* of Mauritius, as has been said, feeds its young on cockroaches.

It might be supposed that the wasps secure their prey by hawking about over the ground, trusting to chance to throw the insects they need in their way, but we have some evidence that these little creatures possess special senses which enable them to follow the objects of their search when not visible, perhaps somewhat as the hound follows the fox. In a recent number of *Nature* we find a letter from Mr. C. L. W. Merlin to Henry Cecil, Esq., narrating a curious occurrence to which the former was witness, and from which we may quote, in closing, an extract or two. Mr. Merlin's account is as follows:

"I was sitting one summer's afternoon at an open window (my bed-room) looking into the garden, when I was surprised to observe a large and rare species of spider run across the window-sill in a crouching attitude. It struck me the spider was evidently alarmed or it would not have so fearlessly approached me. It hastened to conceal itself under the projecting edge of the window-sill inside the room, and had hardly done so when a very fine large hunting wasp buzzed in at the open window and flew about the room, evidently in search of something. Finding nothing, the wasp returned to the open window and settled on the window-sill, running backward and forward as a dog does when looking or searching for a lost scent. It soon alighted on the track of the poor spider and in a moment it discovered its hiding-place, darted down on it, and no doubt inflicted a wound with its sting. The spider rushed off again, and this time took refuge under the bed, trying to conceal itself under the framework, or planks which supported the mattress. The same scene occurred here; the wasp never appeared to follow the spider by sight, but ran backward and forward in large circles like a hound. The moment the trail of the spider was found the wasp followed all the turns it had made till it came on it again. The poor spider was chased from hiding-place to hiding place—out of the bed-room, across a passage and into the middle of another large room, where it finally succumbed to the repeated stings inflicted by the wasp Rolling it up into a ball the wasp then took possession of its prey and, after ascertaining it could make no resistance, tucked it up under its very long hind legs, just as hawks or eagles carry off their quarry, and was just flying off to its nest when I interposed and secured both for my collection.

* * * * * * * * * * *

"I am certain the spider left no web behind it. I cannot be sure, however, that, as it had evidently been attacked by the wasp before entering my room, a small quantity of liquid may not have exuded from its wounds, which may have helped the wasp in tracking it. I have no doubt myself that insects have the sense of smell, and probably much more developed than our own. No one * * * who has sugared for moths, or seen the largest *Sphingidæ* hovering over the strongest scented flower at night, or employed a caged female moth as a lure to her male admirers can, I think, doubt this. If so, let them put a saucerful of honey in a corner of a room opening into a garden, throw open the window and see how soon the bees, wasps, etc., will be attracted to the honey.

"There is a tradition in the East that one of the tests by which the Queen of Sheba tried to prove the wisdom of Solomon was placing on a table before him two bouquets, one of artificial and the other of natural flowers, and requiring that he should say which were the real and which the artificial, without moving from his throne. Solomon ordered the windows to be thrown open, and in flew the bees, etc., which went at once to the real flowers.

"Whether the senses of insects, birds, and what we call the lower creation, are similar to ours in every respect it is very difficult to say. No doubt a dog, if he could speak, would say a man had not the sense of smell, and would prove that his nose was worse than useless to him. An eagle or hawk would say that men and moles, etc., have only the rudiments of eyes, and so on.

"Man, with five very imperfectly developed senses (who can say that there are not twenty senses?) is the only animal that is dogmatical, and denies all he cannot understand. The oracle of Delphi said, 'Socrates was the wisest man in Greece, because he was the only man who knew he knew nothing.'"

Swallow-Tailed Kite in Ohio.—North Bloomfield, O., August 3, 1882. Last June a hawk, different from any I had ever seen, was killed on my farm; it weighed 15 ounces, and measured from tip to tip 49½ inches. On examination of "Webster's Unabridged," I found a very fair likeness of the bird, called the "swallow-tailed hawk"—rightly so named, I thought, for it had a decidedly swallow tail. I immediately sent it to the Kirtland Society of Natural Sciences at Cleveland, and it is now set up in their museum. The gentleman who acknowledged the receipt of the bird, wrote for further particulars concerning the "capture of this extremely rare bird in this locality," etc., as he wished to make mention of it in the Forest and Stream. I could tell him but little about it, and as I see no mention made of it in the paper, I send this, hoping to elicit such knowledge of this *rara avis* as the contributors to your Natural History department may be able to give. My correspondent says: "The bird's habitat is Central America, ranging south as far as Bolivia, and north into Mexico. It has rarely been observed in Texas and Arizona. I know of but one other instance where it has been seen so far north as the specimen sent by you—it was by Audubon in Indiana, in the year 1820. This hawk feeds almost entirely on snakes, lizards and insects, which it devours while flying, similarly to the swallow, which in many other respects it so much resembles."—E. A. Brown.

THE FLORIDA "THUNDER WORM."

Editor Forest and Stream:

In my haste to answer your correspondent, S., regarding the Florida worm-snake he inquired about, I neglected to say that it is not a true serpent at all, but a lizard-like snake, which, so far as I know, has been found in Florida only. According to Professor Baird, who described the species, calling it *Lepidosternum floridanum*, it is common in Florida, emerging from its subterranean retreats after thunder showers, hence its vernacular name—"Thunder Worm." Prof. Cope proposed to substitute the generic name *Rhineura* for that of *Lepidosternum*, and this name is clearly more appropriate, and now holds.

This curious species is not to be confounded with what is commonly known as the "worm" snake of the Eastern, Western, Northern and Southern sections of the United States, which belongs to the genus *Carphophiops*. In Massachusetts the species found is *C. amœnus*, in Southern Illinois and Mississippi, *C. helenæ*, and in Missouri and Kansas, *C. vermis*. These are all distinct species, and are known as "ground-snakes," "worm-snakes," etc., and are true serpents. The following is the description of *Rhineura floridana*, from proceedings of the Academy of Natural Sciences of Philadelphia, 1861, page 75.

"The specific characters were as follows: A broad crescentic nostril plate immediately posterior to this on the median line are an oblong frontal, broader than long, and a large irregularly pentagonal vertical, with its posterior angle prolonged between two small occipital; three small plates on each side of the vertical. Four superior labials on each side, the last three times the size of the third. The first separated from that of the other side by a trapezoid inferior rostral, and bounded above by a transversely elliptical nasal, which is pierced by the nostril above its center. Three loral plates in a series behind the nasal and above the labials, the first much the longest. Superior maxillary teeth, five on each side, the anterior pair longest; inter-maxillary one; mandibular, each ramus, six. Inferior labials, three or four; one symphyseal, one pair gonials, one mento-labial on each side. Sternal plates, small, irregular, about twelve in number. Vent very crescentic, three pairs of preanal plates in a longitudinal series. Fourteen rings upon the tail, all more or less tuberculous superiorly except the two basal ones. Color dirty white, upper surface of the head yellowish."

To this may be added, that the "thunder worm" of Florida has no visible eyes, while the "worm snake" of Massachusetts is well provided in that respect.

It is a matter of wonder, considering how attractive snakes are to the general public, and how eagerly facts are noticed regarding their habits, that there is still so much ignorance about them, and I have long had in mind a desire (if time permits) to publish a paper, which shall be called: "Popular delusions regarding American Reptiles." In this, perhaps, we may be able to dispose of the "hoop snake" myth, and other like fables. H. C. YARROW, H. C. D. R.

UNITED STATES NATIONAL MUSEUM, Washington, D. C., August, 1882.

THE GASPER-GOU.—Austin, Tex.—I notice a communication from "Byrne" in your issue of July 27 on "The Monsters of White River, Ark.," and your editorial comments thereon regarding the identity of this fish. In May last I sent to Prof. Baird several "gasper-gou," and under date of July 17 he writes me that "one of them is still alive in our aquarium, and is an object of great interest." Prof. Baird calls the fish *Amblodon grunniens*.—R. R. ROBERTSON. [In the note to "Byrne's" communication, to which Mr. Robertson refers, we said that we were in doubt what fish bore this name, but thought it likely to be *Aonia oxtra* or *Haploidonotus grunniens*. It has proved to be the latter, for *Amblodon* and *Haploidonotus* are the same. This adds another to the local names of this fish which are: "sheepshead," Great Lakes and Lake Champlain; "white perch," Upper Mississippi; "grunter" and "grunting perch," Ohio(?); "drum," occasionally; "bubbler," Jordan; "gasper-gou," Arkansas, Texas and Louisiana. The fish from the great lakes is too tough to eat, but the flesh is reported to be good in some other waters.]

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—2 gray parrots, *Psittacus erithacus*; 2 brown-headed parrots, *Pæocephalus senegalus*; 1 two-toed sloth, *Cholœpus didactylus*; 2 fox squirrels, *Sciurus niger*; 2 Australian cranes, *Grus australasiana*; 2 crowned cranes, *Balearica regulorum*; 1 flamingo, *Phœnicopterus ruber*; 6 ruffs, *Machetes pugnax*; 1 lapwing, *Vanellus cristatus*; and 5 white-fronted geese, *Chenalitta leucocephalus*; received by purchase. 1 great horned owl, *Bubo virginianus*; 2 bald eagles, *Haliætus leucocephalus*; 2 diamond rattlesnakes, *Crotalus adamanteus*; 4 pea-fowls, *Pavo cristata*; 5 alligators, *Alligator mississippiensis*; 1 mocking bird, *Turdus polyglottus*; 2 opossums, *Didelphys virginiana*; 2 sparrow hawks, *Falco sparverius*; 2 horned lizards, *Phrynosoma cornuta*; 1 chain snake, *Ophibolus doliatus triangulus*; 1 red fox, *Vulpes fulvus*; 1 swamp sparrow, *Melospiza palustris*; 1 long-billed marsh wren, *Telmatodytes palustris*; 2 Carolina doves, *Zenaidura carolinensis*; 1 ring dove, *Turtur risorius*; 1 common skunk, *Conepatus mapurito*; and 1 prong-horned antelope, *Antilocapra americana*; received by presentation. 2 Virginia deer, *Cervus virginianus*; and 1 Macaque monkey, *Macacus cynomolgus*, born in the Garden.

PUBLISHER'S DEPARTMENT.

Captain Murray calls his steamship Alaska "the greyhound of the Atlantic." She is probably bark-rigged.—*Boston Transcript.*

Anecdotes of Stonewall Jackson—At a council of officers, early in the war, it was remarked that Major —— was wounded, and would be unable to do the duty assigned him. "Wounded," said Jackson, "if it really is so, I think it must have been by an accidental discharge of duty."—*Evening Post.*

By thrift he had become a millionaire, and he had a splendid St. Bernard dog which he was very proud of. One day the servant came to him, terror-stricken. "Master, master, Cæsar is——" "Is what?" "Mad, I'm afraid. He won't touch water any more than if he were a crude apostle of temperance, and there's as much foam about his mouth as if he were the sea in one of Swinburne's poems." "Great heavens, it is lucky you have discovered it in time. We must not lose a minute. Take the animal at once before he has bitten any one——" "Yes, sir." "And sell him!"—*Germantown Telegraph.*

ANOTHER USE FOR A DOG.—The humane and manly sportsman is always kind to his dogs, but there are many gunners who are prone to chastise their canine assistants in the field for no fault whatever, but simply to relieve the pent-up wrath caused by poor shooting or want of success in finding birds. It was a Nimrod of this description, who, on boasting that he never failed to bring down his bird, was met with the query: "Suppose your gun misses fire?" "Why, in that case I'd bring down my bird with the other barrel," said he. "But if that should miss fire, what then?" persisted his companion. "If that failed, why—deuce take it, I'd whale my dog!"—*Toronto Globe.*

A Quitman darkey went to sleep one night while fishing recently and tumbled off into deep water. He sank and rose a couple of times, when his companion, old Uncle Dick Lewis, seeing that he had made no effort to save himself, got hold of him and succeeded in drawing him to the bank. It was then discovered that the negro was still asleep, his cold bath having no effect on him whatever. Uncle Dick managed to awaken him by rolling him in the mud and wearing out two or three lightwood knots over his head. When the darkey awoke he expressed much surprise to find his clothes wet, and he asked Uncle Dick to explain. We think that Brooks County is entitled to the medal for having the drowsiest darkey in America.—*Quitman, (Ga.) Press.*

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN AUGUST.

THE following schedule exhibits the game now in season. (Also, in parentheses, seasons which open during the month.):

Alabama—Doves.
California—Deer, doves.
Dakota—(Aug. 15, grouse, quail, snipe, curlew, plover).
Delaware—Woodcock.
District of Columbia—Woodcock, ruffed grouse; (Aug. 15, deer).
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo.
Illinois—Woodcock; (Aug. 15, wildfowl, pinnated grouse).
Indiana—Woodcock.
Iowa—Woodcock; (Aug. 15, wildfowl, pinnated grouse).
Kentucky—Woodcock.
Louisiana—Deer.
Maine—Plover.
Maryland—Woodcock; (Aug. 15, ruffed grouse).
Massachusetts—Woodcock, doves.
Michigan—Woodcock.
Minnesota—Woodcock.
Missouri—Elk, antelope, mountain sheep and goat, sage grouse; (Aug. 14, deer).
New Brunswick—Woodcock, wildfowl, snipe.
New Hampshire—Woodcock, plover, wildfowl, rail.
New Jersey—(Aug. 25, reed birds).
New York—Woodcock (except Dutchess, Herkimer and Oneida cos.), squirrels, deer. (Hounding season opens Aug. 15; forbidden in St. Lawrence co.)
North Carolina—(Aug. 15, deer).
Nova Scotia—Woodcock, wildfowl, snipe.
Ohio—Woodcock.
Oregon—Grouse, wildfowl.
Ontario—Woodcock; (Aug. 15, wildfowl, snipe).
Pennsylvania—Woodcock, plover.
Rhode Island—Woodcock, plover.
Texas—Deer, pinnated grouse.
Utah—Elk, deer, antelope, mountain sheep; (Aug. 15, grouse, quail, wildfowl).
Virginia—Ruffed grouse, woodcock
Washington Territory—(Aug. 15, deer, elk, antelope, mountain sheep, grouse).
Wisconsin—Woodcock; (Aug. 15, grouse, quail).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp-tail grouse; (Aug. 15, ruffed grouse, wildfowl, plover, curlew, snipe).

RAMBLES THROUGH NEWFOUNDLAND.

PART THREE.

CAPE St. Mary's, you will see, by looking at the map of Newfoundland, is the termination of the strip of land which separates Placentia Bay from the Bay of St. Mary's. Turning this cape to the south, one mile distant, stands an island, known locally as the "Bird Island." This island is detached from the mainland, distant about forty yards from two of its sides. It is about 400 feet high, and three of its sides are smooth, perpendicular rock walls, like the iron-bound cliffs of the mainland. The fourth side is sloping, and from the base up to the summit there are alternating rock shelves and slopes which are covered with wild grasses, ivy and moss. How the separation of the island from the mainland came about it is impossible to tell, for the floor of the chasm which separates both is solid rock, level as if shaped by human hands, while the walls of both cliff and island are clean cut as if from the chisel. Round about the island are clean cut as if from the chisel. Round about the base of the island runs a wide rock platform, which slopes seaward and descends into the mystic depths of the wild ocean. A wilder, grander spot I have never seen.

But the chief attraction lies not in the naked majesty of the towering rocky walls, or the thunder of the ocean in its fury lashing itself against their base. When the surly storms of the late autumn come on, myriads of the numerous species of sea birds that feed around the naked headlands through the summer months, seek food and shelter from the tempests, in the numberless quiet nooks and coves in the many bays which indent the island coast all along. In the early spring from all these places come these birds in thousands, yea hundreds of thousands, back again. I have often seen of a bright spring day, from a headland commanding a distant view of the sea, as many as a dozen huge icebergs grounded in fully sixty fathoms (360 feet) of water, their summits bathed in sunlight, and basking in this light innumerable flocks of sea birds returning from their winter abodes.

To the island I have above described come one class of such sea birds in myriads every spring, and their coming is hailed by the fishermen who live all around the adjacent coasts as a harbinger of the genial season. When they come the owner of a skiff, living among the rocks, thinks "it is time now to begin to repair the skiff, to patch the sails, and get the fishing gear in order;" and he likewise examines his stock of powder and shot, as he knows he will soon have need for both. "The murs have come" is told with joy from the inhabitant of one cove to another. It is generally first announced by the light-keepers at the Cape to the people in Lear's Cove, thence to the folk in Golden Bay, and so passed on.

The "murs," so called, belong to the alcidæ—Auks, and comprise the razor-bill (*Alca torda*) or "tinker," as it is locally called, the common guillemot (*Uria lomvia*), or "murr" and "tur," as the people call them. Sometimes as early as the latter part of March, but usually through the early part of April, the murr wings its way now, again swims along, fishing the while from the various bays, reaches and arms, out toward the Bird Island. In the evening you see not a bird within miles of the island, nor will the best glass show you one anywhere within reach of the aided eye. But in the morning the entire bight outside of the island is one black mass of birds that it would take one years to count. They generally remain in this bight, perched upon the water for three or four days, not a single bird flying about or alighting upon the island; but when one rises to alight there—and that is not till the birds have assured themselves that the fine weather has set in—the whole myriad mass arises from the face of the sea, and spreads like dense clouds around and above the island, circling far inland and around the light-house in hundreds of thousands. The rising invariably takes place between dawn and sunrise, and I have myself, from the airy top of the cliff on an April morning, seen the black mass arise, circle around as I have described for about an hour, and finally settle upon the top and shelves of the island, and in the crevices; on the tops of the pinnacles, and along the shelves of the cliffs and crags adjoining, as a swarm of bees settles upon and covers a tree.

Once settled upon the island, the sport commences. Lying to the southwest of the island and toward the promontory known as False Cape, the cliff slopes, and alternates between steep, grass-covered descents and shelves like huge stair-steps, under perpendicular abutments of rock, down to within thirty or forty feet of the rock platform below, which portion of the cliff is perpendicular. It is on this slope that the sportsman reaps his harvest. Near the top of the slope, on one of the shelves mentioned, is the "Upper Firing Place;" midway between this and the lower part of the slope is the "Middle Firing Place," and the "Lower Firing Place" is at the foot of the grass and immediately above the perpendicular cliff. Now the island is covered, and the cliffs round about it swarm with "murrs." The birds are unceasingly rising from the cliffs and island and alighting again, and in their flying observe a system of regularity—flying out about a quarter of a mile from the island in black clouds, circling around, and on their return to the island, or while finishing the circle described by each flight, flying over the grassy slope I have described. If it be calm the birds describe their circle, but only a few on the return, comparatively, pass over the slope. Therefore the condition of successful shooting sought by the sportsman is, that there be a strong breeze of northwest, westerly, or southwesterly winds. These winds each presses the birds in flying well in over the slope, and in the local language the birds are then said to "fly well." Therefore, with a good breeze of one of the winds indicated, the sportsman takes his seat at the Upper Firing Place. The noise of the birds' wings upon the gale as they press toward the island is inconceivable, unless to him who has heard it. The strong wind not alone makes the birds fly well in, but makes them fly low, also, so that rarely does the sportsman lose a bird he shoots. When the wind is not strong, position is taken at the Middle Firing Place, where a bird frequently is lost by falling over the cliff; while on a calm day it is necessary to fire from the lowest station, and here you are well off if you get one bird for every three you kill. They fall on the rock platform below, and it is annoying to look down, as your head pains you from the excess of your firing, to see a score or so of your birds lying upon the unapproachable rock; but more annoying still is it to see a small boat put off from one of the numbers of large fishing craft at anchor outside, pull in under the island, and coolly pick up every bird you lose.

It was at these firing places that I learned what I know of the art of shooting. I have sat there for three, four and five hours firing continually, and only ceasing when obliged to do so by sheer headache as the result of my firing. Among the local sportsmen, many of whom still fire out of flint muskets, to kill a bird for every two shots on an average is considered good work, but before I was long on the slope I could do very much better than this.

When I was about seventeen years old I remember I had a very desirable and neat single barrel. The birds "flew poorly," and a number of the fishermen who lived in the adjacent coves were there with their flint muskets. They do not care to waste ammunition, so they rarely go to the lower firing place, waiting for a stray bird to fly higher up. But I betook me to the lower firing place, and out of some sixty shots I think I only missed two or three. "How the young beggar hits 'em, doesn't he?" I could hear them say up at ove me, as after each crack a bird fell. I had likewise a pretty good dog, and he was on the alert after each bird fell, so that I got I think nearly thirty birds before they rolled over the cliff.

I have frequently seen as many as sixty in a pile before me after two hours' shooting, when the wind blew and the birds flew well. I have, I must confess, killed the birds frequently for the delightful pastime, and in very wantonness.

One day, I remember, in the middle of April, the captain of a vessel engaged in coasting was on his return to St. Johns, the capital, and in passing the cape it occurred to him that he would go and shoot some "murrs" to take to the city with him. He brought a good stock of ammunition and an exquisite little double barrel. When he reached the firing slope I, as was my wont, for days at a time during the early spring, was there.

I had been indulging in miscellaneous shooting, for it must be remembered that "murrs" are not the only inhabitants of this island and its vicinity. Cormorants by thousands had taken up their abodes, in latter years, on the wide shelves in the adjoining crags; and on the top of the island was a patch of these birds—called "shags" by the inhabitants—numbering perhaps six or seven hundred. In addition to these as many as half a dozen different species of sea gull built their nests about here in summer, and flocks of birds of what species I do not know inhabit there also. I had amused myself picking off any cormorant that betrayed an inch of his person over the land in flying from the sea up to his crag, or down again, or around to the false cape, where a large community of his brethren sentinel the boldest peaks, overlooking the ocean, during the summer. I had also brought down a number of gulls, especially the species locally known as "ticklace," properly the Kittiwake gull (*Rissa tridactyla*). This seems to be a very foolish creature, whose chief fault is its fatal curiosity. Wherever the sportsman is firing there is the "ticklace" sure to be, wheeling and circling about in dozens, with its long, slate-colored back and pinions, and yellow legs and beak, singing eternally, and to confuse the strongest head, "Little too late," "Little too late." No parrot that I have ever heard can articulate anything so plainly as can the "ticklace" these words. The stranger standing among these wild crags might, if he were superstitious at all, and not knowing the cause, think that the myriad repetition of the words "Little too late," in the air, and up the crags, and down by the sea, were the wild words of mountain elves or some other genii dwelling in this lonely and savage spot. Frighten them with a gun-shot and they cry out "Little too late;" fire at one—and miss it—and it cries out "Little too late," so that many a time I have seen the sportsman put up his gun, and as the garralous bird cried "Little too late," reply as he fired and brought down the curious babbler, "You're time enough."

But I am digressing, not like the author of Childe Harolde, in my story to moralize, but to state the many scenes I have seen, and which press in upon me as I write, like old and dear acquaintances. When the captain reached the slope the shots now and again told him some one was there, and he found me surrounded by several cormorants, three or four different species of gull—the "saddle back," (*Larus marinus*) the arctic skua, (*Stercorarius parasiticus*) the "blue gull" or herring gull I think (*Larus argentatus*) and the "ticklace"—and of the "ticklace" variety not less than twenty, a few "murrs" and "tinkers," making in all about fifty birds. The captain was astounded at my luck, and then told me he wanted to kill a lot of murrs to bring to St. Johns. I conducted him to the upper firing place and told him to blaze away. The birds flew well, for a strong breeze blew from the northwest. The captain, indeed, did begin to blaze away, but he set out with this fatal error. He thought by firing blankly at the cloud of birds that flew in an unceasing stream, possibly forty birds over his head at once, towards the island, that he couldn't miss hitting a bird or two. Indeed he thought before he fired that he could perhaps take down a half a dozen at a shot, and thought I saw a contemptuous smile on his lip when I said, "Captain, if you get one

at a shot, you bring no discredit upon yourself as a sportsman." So, although he had fired half a dozen shots, blank at the cloud of birds, not one did he get. I went over to him, and saw his gun go up for the seventh time, and go off; and more than this I saw—I saw that the good captain shut two eyes instead of one as he leveled his piece, but as he pulled the trigger he opened both eyes. I told him that either was a bad way to take aim, and he looked very sheepish, and I likewise in a quiet tone, in which there was a substratum of venom, told him again, "Captain, if you get one at a shot, you bring no discredit upon yourself as a sportsman!" I was then revenged for the sneer of contempt—as I thought—which had preceded his failure.

"Now," I said, "Captain, if you want to get birds, you will have to get somebody to kill them for you. If you do not mind," said I, "I will lend my poor services." The captain was a humbled man, and he said, "I will thank you to shoot me some." I said, "Then hand me over your ammunition, since I would not mind trying your piece." I found the latter had the effect of making me miss two shots out of the first four, in consequence of being so much lighter than my own. I resumed my own gun again, and fired continuously till my head became numbed and I had to stop. During this time the poor captain had kept up a desultory fire, getting off about twenty shots, but doing no execution further than striking a gull that was lazily flying along through the swift-winged "murrs." Of course he did not fire at the gull, though when the poor creature with one leg hanging awkwardly down flew away, and lit with a flash in the sea, the captain by such muttering as "I didn't kill him quite dead," and "I did not allow for the distance, it was a long shot," and sundry other observations, endeavored to convince me that he did fire at the gull. I took no notice of him for some time but I said at last, "How is it that you did not come to see the gull before you fired? You ought to be careful always. You might as well have hit me as the gull had I been a little way distant from you. Don't fire with your eyes shut; you don't know what you may strike."

The captain reloaded in silence. "I will fire these two shots," he said, "and go." He did fire them, and I heard him mutter bitterly as his last barrel went off, "Devil a touch," and then forgetting his own failure and pique he came to congratulate me on what I had killed. My dog lay blinking before the pile of black and white birds, but keeping a jealous guard the while, and would only in sullen mood submit to the captain counting them. I had about seventy "murrs", and in addition to these I handed over my miscellaneous pile which I had killed before the captain came, to the master of the coaster. Three of the captain's men had been lying up in the cross while the shooting went on, and at a signal came and took the birds upon their backs, each taking about thirty, which would make a load of nearly ninety pounds, the captain taking the remainder. As the weather was cool and the wind fair, the captain, I afterwards learned, got his birds to St. Johns quite fresh.

A good dog is indispensable on the slope. The dog lies below where you take your position, and when you fire marks where the bird falls. Very often a wing only is broken, and without the dog the bird runs over a precipice. The first dog I ever took to the slope was impulsive, and blindly darted after a bird with a broken wing over the cliff, and was killed upon the rock below. My next dog I brought with me up and down the slopes and shelves, familiarizing him with the dangers to be avoided.

The "murr" weighs about two and a-half or three pounds, and after being soaked twenty-four hours to take away the "strong" or fishy flavor, makes excellent pie, stew or soup; and when properly grilled or fried is delicious. From the time it makes its appearance about the 1st of April, till June, it is the chief fresh meat found upon the tables of the coast fishermen, near the island, and is considered the daintiest of a dish on board the large fishing craft which come from distant points of the colony and anchor for the season's cod-fishing near the Cape. Like most other sea birds, its feathers are excellent, and the fisherman who has shot sea ducks around the coast I am describing, has always returned telling of the superior quality of the fishermen's feather beds.

Towards the last of April, on an occasion not yet referred to, a party of sportsmen came from a long distance, I with them, to have a few days' shooting on Bird Island Slope. Early in the forenoon, four in number, we arrived at the Bird Island. It was the first visit of the others, so the party was under my direction. When we set out there was a nice fresh westerly breeze blowing, but it had fallen calm before we reached the island. One of the party was a young clergyman, just raw from Trinity College, Dublin. He had read of such things in books, but muttered as he stood within fifty paces of the island covered with its myriads, and heard the din of cries about us—so bewildering that you could scarce hear each other speak:

> * * * * "I might not this believe
> Without the sensible and true avouch
> Of mine own eyes."

Though, locally, it is considered murder to fire from the mainland out upon the island, for there are hundreds of birds waddling about there always within range, yet we could not restrain the good clergyman. He fired out into a thick bunch, killing one bird and wounding several others. Then a "ticklace," silly and curious as ever, circled and shook itself over our heads. His reverence wanted that bird so much "to stuff and take home." I fired and the silly thing fell at our feet. The clergyman was enraptured and insisted on decorating our hats with the slate-colored feathers, as "trophies of our luck." I told him if we were to take feathers as "trophies of our luck" from all the birds I expected we would get before the party returned, I thought he would have nearly enough for a feather bed.

We then passed over to the slope along a path about a foot wide only, and from which one blind step would precipitate you into the yawning chasm below. No one speaks in passing round this giddy path, and indeed the more timorous take a roundabout way, nearly a mile, to reach the firing place. When we got upon the slope there was not a breath stirring, and the good clergyman again thought of his books and said it was a pity we had not "an Ariel to raise the storm" and send the birds now flying with easy motion in from the sea. I saw little hope for either a breeze or an Ariel to pipe us one, so I suggested another plan. Therefore we proceeded around the hills about two miles, then descending a ragged cliff went to a fishing station inhabited in the summer months. There we got a small boat, and, hoisting our sails, with the little breeze and the help of our oars made around for the island.

But we had only reached the "Bill of the Cape" when it was certain that we could have had all the sport we wanted without going to the island at all. Flocks of sea birds of twenty different names crossed us on the wing before and astern, and flew over our heads. We took in our oars, and while myself and another prepared for shooting, the clergyman and the other threw out their lines. The lines were scarce out when there came a tug at each, enough almost to pull the unguarded fishermen overboard, and after some hard pulling, in which the skin of the unprotected hands of the two tyro fisherman suffered not a little, the clergyman hauled a pair of fine cod to the surface, and the other had a monster of the same species, nigh as large as the clergyman's pair. I seized a gaff and hooked the three fish, directing the jubilant pair to go on and help themselves now, as we had other work. Bang, bang, bang, spoke our two pieces, and two fine "shell birds" redbreasted merganser (*Mergus serrator*) fell to leeward. I had killed one and S. the other, he having fired two barrels, missing one. The shots brought myriads of birds from their dreamy repose on the glassy sea, and they circled out around our boat, and shoreward again, giving us opportunity for good shots almost as rapidly as we could load and fire. When we put out the oars again to pull for the island, the clergyman and D. had taken about fifteen fine cod, and the former had likewise succeeded in getting his hand badly torn by injudiciously thrusting it into the gaping mouth of a large cod to take the hook out of its gill. The fish closed its mouth, and the result may be judged. I do not remember having heard the excruciating pain of the hand subsequently bring forth psalms or anything of that class from the clergyman.

We had got about fifteen birds, these being with two exceptions (which were murrs) sea ducks of various kinds. When we reached the False Cape Cove, the bight in which Bird Island is situated, we again took the "spreads" out of our sails and prepared for several "beds" of "bottle-nose divers"—surf duck (*Pelionetta perspicillata*)—which were fishing all along in the surf. We pulled in toward the bottom of the cove, where we got several shots, procuring about a half dozen of the coveted divers, the other two flying their lines but failing to get any cod. The preacher got a skulpin (one of the hateful *dracunculi*), and he had to beat the abominable creature to jelly before he could get it off his hook. While you try to get this creature off your hook you are in danger of getting the horns that grow upon its back and head into your hands.

Then we pulled up under the shadow of the Bird Island, its perpendicular walls rising far up into the blue, and ran our boat's prow upon the slanting rocky platform. Here where so many echoes were at work, sending back the screams of the birds, it was impossible to hear each other speaking. All four began a general fire. The clergyman fired at a pair of "tinkers" about sixty feet up the cliff. The "kick" of the gun bruised his shoulder terribly; and we all observed that firing the slightest of charges blank against the rocky wall caused the gun to kick so fiercely as to make it necessary to desist firing in that direction.

But this did not limit our shooting operations much, for the birds flew up to and down from the island and the surrounding crags and cliffs in clouds, keeping up a continuous roar, "Turr-r-r, turr-r-r-r," rolling the letter r in a more approved way than any Scotchman I have ever heard. Some of our birds fell upon the rock platform and some fell upon the water; and after we had fired there for about an hour, the number of birds lying at our feet and those floating along the cove was by no means uncomplimentary to our skill as shots. S. did pretty fairly, getting on on average a bird for every two shots, while D. and the clergyman contributed between them only a gull and two sea pigeons; and they wrangled for a long time as to who shot the gull, for both had shot at it simultaneously as it sat upon a pinnacle of rock.

There now appeared signs that a breeze of wind was coming up, and knowing the danger of an "in-wind" to a small boat like ours at this early season, we hurriedly picked up our floating birds and pulled—and a hard pull it was against the increasing wind and "lop"—around the cape, when we hoisted sail, having the wind on our beam, and steered for Briley Point. White-caps appeared before we reached the point, and it took the steadiest skill to keep our skiff from filling, it being necessary frequently to "bring her head to the sea" to keep from being filled by wash over the quarter. As it was, we twice shipped water, once nearly filling. We had a bail-bucket, and the man of God assisted frantically with his hat. We were all four sea-sick, I may remark.

But—

> * * * "The storm grew loud apace,
> The water-wraith was shrieking,
> And in the scowl of heaven each face
> Grew darkas we were speaking."

We weathered Briley Point—and only that—and as our boat rounded in under the shoulder of the sheltering land, and we knew we were safe, and heard the angry turmoil of the billows outside, I could hear, in fancy, two of our party who were Benedicts say, what Canada's gifted poet, Mr. Roberts, has since given us in poesy and rhyme:

> "O'er the waste, warm reaches drives our prow sea-cleaving
> Past the luring death, into the falling night;
> Home shall hold us yet and cease our wives from grieving,
> Safe from storm, and toil, and flame, and clanging fight."

It may be stated that the prime object of the visit of the guillemot to the island is to lay its eggs and bring forth its young. The eggs are laid on the bare rocks, no attempt being made at nest building. When the fledgeling is about ten days old, its mother bears it on her back down from the dizzy heights into the sea; and I have sat many times upon the cliff, toward the last of June, almost suffocated by the stench arising from the guano on the island and the remains of fishes left there by the birds, and seen mothers leave the crags and shelves and the island top by hundreds, bearing their fledgelings upon their backs. When plumped into the water, the little fellows swim briskly around, and whistle so vigorously that you might hear their shrilling more than a mile distant.

One spring morning, I have been told not many years ago, a ship of war sailing from St. John's to one of the bays to capture two or three outlaws, before whom local authority had paled, slacked steam and stopped when off the Bird Island. Then there was a puff of smoke, and a loud boom, and the birds were seen rising from the island in thousands. The ship had in wantonness fired at the mass of birds, to be seen from her decks. The first shot missed, but a second and a third were fired, and eventually a bomb was thrown, but exploded and fell spluttering in the sea short of the island. If I am not mistaken, the war ship, I am told, was the gunboat Lily.

It is twenty years ago since the first foolhardy adventurer, a fisherman, climbed up the dangerous, part-sloping side of the island to the top. He killed numbers of birds with his climbing gaff, and then began his descent. A fourth of the way down his heart failed him, and yielding his hold he fell a jelly mass upon the rock below.

Within the past few years the experiment was repeated by a tar from a war ship, who, heedless of the fate of his predecessor, climbed to the top. In his descent his courage lasted him well, but when a little over half the distance down he cried out that he could descend no further. And he began to make the re-ascent. But neither muscle nor nerve could long sustain such tension, and the poor fellow, clinging wildly at the frail mosses and grass, fell down crushed and dead—dead if he had had a hundred lives—upon the rocky platform.

I learn from my brother, a frequent visitor to the island, that within the past two years the cormorant has increased prodigiously, and has driven the guillemot almost entirely from the top of the island. The sport there, however, is undiminished, as the displaced "murrs" have betaken themselves to the adjoining cliffs and crags. J. E. Collins.

Toronto, Canada.

"FAR FROM THE MADDING CROWD."

THERE come days in the life of any business man when the worries and perplexities of daily work seem almost unbearable, when he is sick of the treadmill walk, when he longs to throw from him the interests of his patrons, customers and clients and live for a few blissful moments for himself alone. Take from him the possibility of doing this and you shorten his life and depreciate his usefulness. Any machine is better for rest. A razor cuts better from rest.

This desire for rest is gratified in various ways; but there is no more natural or effective way, even for the non-sporting man, than to merge for a time the artificial man into the natural; to sink civilized training in the instincts given us by our fathers, the savages, and rest for a little while near to nature's heart.

Now, there are many men who long with a great longing for a few days' outing in the woods or on the streams, who suddenly become possessed to renew some of the innocent pleasures of their youth, but who are deterred by motives of economy, or by a lack of the experience which would make them "handy" in going at it. To these, for whom we have every sympathy, we beg leave to speak a few words. The trouble is, we are too ambitious. We want to go to the Adirondacks, or the lakes, or the Rockies and the Yellowstone country. The kind of a trip we want will cost from $50 to $500, and take a month of time. Now, this is fine, but not needful. Rest and enjoyment can be found closer at home.

Suppose we have it arranged so that we can take two weeks in the middle of summer, and can afford $10 for the trip. Give us these data and we will assure you a pleasant time, no matter who you are or where you live.

Associate with yourself three or four tried and true friends, like-minded with yourself to "have a trip." Be careful in your choice, for on this depends more than on all else. Now look around, all of you, and upon your honor declare if there is not within two hundred miles of you some lake, some mountain, stream, or wood where you can pitch your canvas house, and hunt, and fish, and live, and rest. Now can not one of you get a team? And can not another find some sort of a wagon? No need of a livery rig. It is utility, not style, we are after. Very well. Now, can you not find a tent somewhere? Perhaps not. Well, an 8x11 wall tent, of 10-ounce duck; can be laid down without poles or pins, 300 miles from Chicago, for $7.00 (for 1882). This will amply accommodate six persons. A 7x7 wedge tent will do for four, and will cost $5.00. Either tent, properly pitched, will stand any weather you will meet. If you get a wall-tent, practice till you get the proper distance for your pins, then measure the distance out on a tent pole; and when you set up your tent after that, lay off your ground and drive all your pins the first thing; attach your corner ropes loosely; put in your ridge-pole; put a man at each end of it and set up the end-poles; tighten up the guys all round, and you have it done, the blankets unrolled, and are ready for supper in less than five minutes.

Two guns will be enough for a party of five, and you ought to have one dog; Also fishing-tackle for two. If you want a stove, dig a trench in the ground, put a flat-topped arch of sheet-iron over it, and you have a stove good-enough for a king. Take five pounds of crackers. Oatmeal is also good, cheap and handy for a camping trip. Your bread and butter you can get along the road; you are not going to the Yellowstone country, you know. Take some salt pork and plenty of sugar and coffee. A skillet will cost you nothing, a coffee pot no more, and tin plates and spoons are cheap. Now hold up your right hand, every one of you, and under oath answer if you altogether have spent over $20. Very well. There is little more to spend. You will not need any camp cot, nor camp stool, and you might as well leave your cow and your piano. You have what you need, and do not need an extra wagon to carry your traps, nor an extra man to do your cooking.

Now, suppose you live in the middle of the prairie, State of Iowa, for instance, where the midsummer sun blazes hot and fierce, and the long, dry reaches of unprotected ground would seem to offer the least possible attractions to pleasure seekers. Even here you can have a pleasant trip. If you don't believe it, we will tell you of one of several we have made there ourselves, being no better equipped than as we have described.

The "chicken" season of '81 opened hot and dry; and as we started out for a trip to one of the so-called wall lakes of Central Iowa, our friends assured us we should roast. But out on the road the August breeze seemed all at once refreshing. The breath we breathed was all our own, the time we spent we did not count by the hour, and life again seemed worth the living.

The first night out it rained. The rain was wet. Our trusty old tent sprung a leak; water stood in pools upon the blankets, and trickled in streams through our beds of straw. In the morning the Professor wanted to go home. He said he was going to die, and wanted to perish in the bosom of his family. We built a fire, hung him over a rail, and dried him out. A little later I saw him with an expression of wonder on his face, carefully feeling himself all over. Said he: "Heretofore no one could have persuaded me that so much moisture could be absorbed by the human tissues without producing serious complications. Yet I experience no ill effects. Hurrah! I'm prouder of myself than I was when I took the valedictory!" And he jumped up and began to harness a mule. He was a cured man. We passed on our way under the overhanging willow hedges of Storey

county. At noon we would halt and unsling the "grub-box," and the Judge would make the coffee. No matter how hot the weather, we had coffee three times a day.

The Judge was famous for his coffee. He would build the tiniest, hottest fire, and in less than no time have the water boiling; then he put in a double handful of coffee, set it back, and forthwith there arose a delicious fragrance, and with a musical gurgle the little black sheet-iron coffee pot announced itself "All ready!" God bless thee, little coffee pot! Foul fall the hand would mar the symmetry! Across the plains in '61, through the Gunnison country in '80, along many a wooded stream, by many a reedy lake in Iowa has thy voice murmured sympathy. A woman would despise thee; a hired girl would crush thee; but we tired men adore thee, and again exclaim, "All hail!"

We usually traveled about thirty miles a day, though on the level prairies we could have made fifty. We were in no hurry, and found as much pleasure in gypsying along the roadside as in the more exciting sport of hunting and fishing. The gentle Iowa scenery was soothing and restful.

At night we would select some high and breezy point for our camp, being too wise to camp near the streams, where mosquitoes, malaria and much oppressiveness do abound. While one tended to the team, another brought wood and water and helped with the tent and bedding, while two were detailed to "get something for supper." Old Rex, noblest of a noble strain of setters, could right easily in that country find a covey of "chickens," and enough were soon secured for all our needs. We never killed a bird we did not eat, and allowed just one bird per meal to each man. That made fifteen a day; we could easily have killed a hundred. I have often left a covey in the grass after bagging what I wanted.

Then at night about the camp-fire the Judge would tell us of the Sioux massacre at Spirit Lake in '57, or of deer hunting in New York, or of fishing in the South, or would nudge Ned and ask him if he remembered his first night out on the skunk bottoms, when he thought the big owl was a wolf. I remember that night myself. We did not foresee in the blue-eyed six-year old who "wanted to go home," the self-reliant youth who before he was twenty, would foot it across the range from Leadville, shoot deer in the Rockies, and in his lonely camp never be frightened by the panther's scream. Steady as a veteran, modest as a girl, dead shot, expert fisherman, perfect horseman, with a heart as big as all out-doors and a politeness that is not of the house. Tell me it is wasting time to camp out!

Can I ever forget those days? Can I ever forget the evening when the Judge and I threw down our game-bags (tell it not in Gath! his was full of half-grown teal), and went down to the lake-shore to watch the "old gentleman" play the big pike which rose to the spoon from below the lily-pads? Do we not often catch that pike again? And will we not some time catch his mate? Ay, that we will, God willing. And you, men of toils and weariness, will you not come with us, and be strengthened so that you will go back to work rejoicing as a strong man to run a race?

The old heathen god could not be killed while his feet were on the ground, which means that Mother Nature is kind to those who bring their troubles to her—which means that it will pay you to go.

And lest we be accused of digression from our original topic, let us add that for the eight days out on this trip, our expenses, above those to which we have alluded as preliminary, amounted for each man to just 55 cents. And this is true.

E. HOUGH.

GAME IN SOUTH CAROLINA.

FOR these latitudes the summer has been all that could be desired. Some few days of the regular 120 degrees in the shade have smiled on us, but they have been comparatively few and far between. Though no rain storms of two days' or more duration have visited us, yet we have had plentiful showers and all nature is as green as early spring. The water courses have suffered somewhat, but not enough to cause embarrassment to man, bird or fish. A year ago all nature was wrinkled and parched, whole broods of young quail perished for want of water near their nestings. Now Bob W. smirks and smiles. He has increased and multiplied. I look forward to a good season of fine sport when the glorious November and December days come, when, after the covey is well scattered, the birds lie like stones on the hillsides, in the old fields and in the pine woods. Hie on, Rex, old chap, go steady and get the wire edge off. Now to your single work for which you are famous. There you are, glaring at that bunch of brier and brown grass, and

> The merry tail for once is still
> And something wrinkles the sunny face.

Buzzzzzm—quarterer to the left mayhap, and echoing the whir of busy wings, the 12-bore cracks, three drams of good powder and one ounce of No. 8 or 10 have stopped those industrious wings. He pitches down to earth an inert mass. Steady Rex, fetch! Behold now that face which a moment since wore so solemn appearance, beaming with joy, and that tail may fly off into space if he continues to wag at that rate. The bird is laid in my hand, not a feather ruffled. Rex, if I could always do as well as you, my work will be well done surely.

Oh what a calamity to see a dog break shot and then chase or find the dead bird and "chaw it up," his master the meantime yelling until his face looks like a boiled lobster, and his throat feels like a first-class Rothery rasp. And yet there be men, and I know them well, and they, having the gait and accent of men and Christians, pride themselves on their dogs, shooting and field performances generally, call themselves sportsmen, do this thing, blame the poor dog always, and stand there with smoking gun, and blank-blank, blanketyblank that blank dog. My real pride in and for such men (?) can be measured by my affection for a hand organ or my delight in the young man who serenades his sweetheart next door at 11 P. M. with an accordeon. In the latter case my charity is not as big as a cove oyster, and some these you know would rattle in a hollow watermelon seed.

Steadily and slowly the appreciation for good dogs, and the desire to know how to train them right, is making its way. Mr. A. R. Heyward is the pioneer in the kennel business in these parts. No better stock anywhere than owned by him. I have sent to his kennel for a young dog to be worked this season.

Not many weeks and we will be stalking the turkey, "or a scatterin' of um with that little yaller dog." Soon thereafter, ensconced in the blind, we can gobble them up. Now is it not a beautiful and even a thrilling sight when the first turkey steps in the arena? And if it be a big gobbler—oh, lor'! see his stately neck and head, as poised on one foot he gazes suspiciously around. Now don't wink your eye even,—he will see it and "put." A low, soft, very soft call has brought him within forty yards; the Damascus tube speaks; put—put, here, there, yonder, flashes, reports, smoke, as the breech-loaders do their work. We did not see those birds—only one? Thunder! the whole gang were here. Glorious sport. Nothing like it, save quail, snipe, woodcock and grouse shooting. Friends and brethren, it's all good, as poor Tom Moore said of rye, corn, potato and apple whisky; he could not choose, he would taste the whole thing, and there would be no jealousy.

I have participated in all shooting but chicken shooting. It would be a red letter day, the day I could join some brother sportsman on the prairies. What a delight to watch those chicken dogs range, draw and point. How much good golden time moneyed men waste, and how dull and cobweby their brains become by not participating in these glorious life-giving sports and recreations so bountifully provided by nature. When that ship of mine comes in, what an armory and kennel I will have, what a big open house I will keep, what a good fellow I will be, what a—

DICK SWIVELLER.

GRANITEVILLE, S. C., August, 1882.

COBB'S ISLAND.

THERE are about twenty-five sportsmen upon the island, mostly hailing from Baltimore and Virginia. It has been very warm, and to those enthusiastic Nimrods who have sat for five hours in the blinding glare of an August sun waiting for birds to circle around the decoys, they ought to know what hot weather means. In such a sun the mercury must bubble and the glass become malliable, and certainly the gun barrel gets so hot that one has to use a handkerchief when clasping it, and there seems a positive danger in the premature explosion of the cartridge by the hot barrels.

Well, about the luck, the islanders say it's "middling," but the truth is it is a failure, and there are but few birds; the willet, curlew and yellow legs are not one-fourth what they were in years past. For example, a dozen sportsmen go out, and the bag will average as follows: One will have twenty birds, five will have ten, four will have a half dozen apiece, and one will not have fired off his gun, and each one waiting over his decoys half the day.

Thinking that the incessant fusilade around Cobb's Island had driven off the birds from this immediate vicinity, I in company with Mr. Sanford Spady and Captain George Hopkins, of the coast guard, both good men and true, went over to Cape Charles or Smith Island, as it is called, about twenty miles from here, where there has been no shooting this summer and we had the whole field to ourselves, and the result was that we did not get thirty birds. They are scarce, very scarce, and what the reason is I cannot tell unless it is the deadly powers of the breech-loader that is thinning them out rapidly.

Mr. Goffigon, the keeper of the lighthouse, reports but few birds.

This much I can say about Smith's Island. If the birds are as plentiful as the mosquitoes, there would be the finest bird shooting in the world. Talk about Jersey mosquitoes, why they can't hold a candle to their Cape Charles relatives, who are as large as humming birds and have feathers in their tails. Bite! I should think so. They can reach the meat through thick corduroy breeches. Captain Hitchings had two pair of Boyton's india-rubber suits hanging in the station house, and the mosquitoes, thinking there was a man inside, literally perforated them, and the inspectors condemned them the other day as being utterly unfit for wear. They have to rub the house pigs with pennyroyal oil every evening to keep them from being eaten up alive, and dare not shear the sheep for fear of the same fate.

Common netting is no protection, but iron wire is used instead, and in the night time the noise of their teeth against this netting sounds like the knawing of thousands of rats, and, by the way, there isn't a rodent on the island; the mosquitoes have eaten them all up. They come out so heavy some evenings that all hands on the island climb to the top of the light house for protection, and manage to fight the night through.

Mosquitoes! Well, send your enemy to Cape Charles for summer shooting, and then remember him in your prayers.

CHASSEUR.

COBB'S ISLAND, Va., Aug. 8, 1882.

WOODCOCK ABOUT ROCHESTER.—Mr. Edmund Redmond reports in his *Journal* that "our daily contemporaries, in reporting that the season opened badly for woodcock shooting, were quite wide of the mark, for the truth is that several parties had rather better sport than usual. Some ground that in previous seasons contained a good supply of woodcock, was found barren, but the cause was the prevailing drouth; and where sufficient moisture was found, with other necessary conditions, there the brownies were congregated and in good condition. The knowing ones who went prospecting before the first of the month, and knew where game was located, had no trouble in filling their bags. The largest number shot that we have heard of fell to Scot Hartman and William Wallace, who bagged thirty-six. They found the birds in marshy ground near the lake shore in Parma. Abraham Geis and Louis Schultz knocked down twenty-nine; Ray Felt and George H. Jones brought in nineteen; Thomas and John Morris picked up seventeen; H. H. Congdon got twelve; I. H. Andrews and friends shot thirteen; a party of Frankfort men got nine, and John Reisenger bagged six. Doubtless other shooters were more or less successful, but the above cases are enough to prove that the opening day was by no means a failure."

TEXAS GAME NOTES.—Indianola, Texas, August 8.—The weather in this section has been very dry and hot this summer up to the last few days, since which time we have had fine rains, filling the ponds and putting the prairie in fine condition for birds, of which there are an unusual quantity, both quail and prairie chickens. The game laws have been revised this year, and the season opens for chickens on August 1, and for quail September 1, a month later for both than on previous years, and so far as I have seen has been pretty fairly observed, except in places where they were not advised of the change in the law. A friend and myself took a short trip up the railroad to the town of Laraca, twelve miles from here, leaving at noon, hunted a little in the evening on arrival and next morning, arriving home next day at 11:30 A. M., and got in all thirty fine chickens. I have hunted over the same ground many times in years gone by, and I have never seen as many quail (all very large coveys), in fact they are innumerable. Papabottes, since the rain, are beginning to arrive, and when the weather gets cooler sport will be splendid.—G. A.

EL CAZADOR IN SAN FRANCISCO.

Editor of Forest and Stream:

I declar to goodness it is purfekly astonishin the nos of strangers in this place; to me ennyhow. 'f I never had bin heer befour I wooden't be surprised at being surprised, but I have you kno, and I air. I wur heer quite frequent befour the war, and knoed quite a passel ov peepel. War is they now? Ekker answers, war? Blame my skin f yore paper ain't the only frenly face I has seen this day—except some strange ladys; but let that pass.

Yesterday war powerful hot. I went to a large church and heerd a prechur say his "hart panted arter the water brooks" (put that in with them litter dots). I simperthised with him, you bet! I farly pusspired for um, I thort ov sum I knoed, cold, cleer, shady, full of fish; an I wur homesick to the quick, but I cant go there, not till I git thru bin a witness fur sellin likker to Injens.

Say! I like them sizabul lies about bare. Nothin' is more soshobul roun a camp fier than lies. They peals to the feelins powerful, but ov course they aint tru; 'f they was this wirl wood be a strange place to live in, I reckon. I knowed a Ingen wonct who thort that all the biggest fish, whats never kort, an the biggest and fattest meat, whats never shot, wer saved up by providence for the other side ov sundown. May be it is so. Nobody ever catches nur shoots the biggest he sees in this wirl, not even the lyars can do this.

EL CAZADOR.

(Who lives at Los Angeles ur tharabouts when he's at home.)

AT SAN FRANCISCO, Month ov August.

NEW YORK ASSOCIATION.—The following circular has been sent out by Mr. Sage: "The New York Association for the Protection of Fish and Game. Buffalo, August, 1882. My Dear Sir: At the recent convention of the above association at Niagara Falls, a special committee of five was appointed to revise the game laws of the State and endeavor to secure the enactment of a simple, efficient and sensible bill at the session of the next Legislature. You are requested to render such assistance as may be in your power and to that end fill up the inclosed blank, and return it at an early date to the chairman, Abel Crook, 93 Nassau street, New York city. Please consult the practical sportsmen of your vicinity and urge your local clubs to take action in the present movement. A copy of the proposed law will be mailed to each correspondent before its presentation to the Legislature. Yours truly, John B. Sage, Recording secretary." Expressions of opinion are invited on the following points: "Periods for killing game and catching fish. 1. Deer generally? 2. Deer hounding? 3. Deer jacking or floating? 4. Ducks, geese or brant? 5. Should use of swivel or punt gun be allowed? 6. Should floating battery be allowed? 7. Should sailing for wild fowl be allowed? 8. Quail? 9. Hare or rabbit? 10. Woodcock? 11. Squirrels? 12. Grouse or partridge? 13. Should snares be allowed? 14. What other birds should be protected and what provisions are recommended? 15. Speckled trout? 16. California trout? 17. Salmon trout or lake trout? 18. Black bass? 19. What other fish should be protected? What protection is needed? 20. Should size or weight of any fish be limited—if so what should be limit? 21. When should nets be allowed, and what should be size of mesh when measured from knot to knot, on the square? 22. What waters in the county need special mention, and what exceptional legislation is desired? 23. What penalty should be imposed for unlawful killing or possession of birds, game or fish? 24. What penalty should be imposed for unlawful use of nets? 25. What protective officers are necessary? 26. How should they be selected and for what term of office? 27. How should they be compensated and what should be the amount thereof? 28. What power of legislation should be conferred upon boards of supervisors? 29. Suggestions generally?"

PHILADELPHIA NOTES.—Shore birds are showing themselves on the New Jersey coast in considerable numbers. A flight of short-billed curlers appeared at Little Egg Harbor last week and took up their quarters on the extensive meadows in the neighborhood of "Little Sheepshead." The ponds in the vicinity being low on account of the dry weather, afforded good feeding grounds. Willows are plentiful all along the coast, but the greater part of them appear to have passed south of Great Egg Harbor and have taken up their quarters between Corsen's and the inlet below it. This I learn from the fishing parties returning from the coast. Brown backs began to come the first of the month and continue to appear in fresh quantities. The flocks are numerous but not large, and seem to be covering a greater period of time in their coming than for several seasons. This is owing to the late variable and cold spring we had and the late departure of the birds for the North. We expect a good crop of seed this year and consequently a corresponding quantity of rail. We had but few reed birds last season. I am told by residents of Lehighton, Pa., that the good effect of planting sixty pair of quail in that neighborhood is showing itself. Many broods have been found this summer and great care has been observed by the farmers when mowing their wheat not to disturb the nests found in the fields. Your correspondent can speak from personal knowledge of this sportsmanlike action of those who shoot at Lehighton, Pa. Every year fifty to one hundred pair of birds are let out by these gentlemen.—HOMO.

HOBOKEN, N. J., Aug. 7.—The Forest and Stream Sporting Club, of Hoboken, N. J., was organized June 2, its object being the enforcement of the State laws for the protection of game and fish and the encouragement of gentlemanly sport. The following officers were elected: President, Chas. F. Hahr; Vice-President, Oscar W. Jaeger; Secretary, A. Fuller Munroe; Treasurer, Robert H. Alberts, Jr.; Captain, Oscar R. Claus.

CHATHAM, CAPE COD, Aug. 13.—Not many birds yet, but the early stragglers are killed daily by the dozen only and are quite fat. Bluefish not very plenty. Five of us caught 43 yesterday, quite large, running from 8 to 10lbs., caught inside of an hour. All empty as a drum save one, which contained a herring over seven inches long, as well as a quantity of small bait.—F. R. S.

IOWA GAME.—The following is a copy of letter received from a friend in Osage, Iowa: "Chickens are more plentiful than for five years past, with quail in almost every acre of stubble. If you can come here next month I promise you better shooting than you ever saw in this State."—S. D. B.

MARYLAND.—Gaithersburgh, Montgomery County. Have not been able to find a woodcock around here, nor have we seen a sign of quail. Seven batteries of regiment encamped here for summer.—S.

No Shore, Birds Yet.—Quogue, L. I., Aug. 12.—Very few beach birds have as yet made their appearance along the Long Island shore. The shooting is confined almost entirely to ring plover, with a very few piping plover and sanderlings. We do not hope for any shooting until after the next heavy storm, when the birds may be expected to appear in goodly numbers. One or two small bunches of brant birds have been seen, but no large birds.—B.

Georgia.—Bainbridge, August 6.—Quail are plentiful this year. In truth the country is full of them. One cannot travel in any direction without encountering "Bob White," his active little mate and her cunning young flock. The weather this year has been highly favorable to their propagation, and large small-grain crops have furnished ample food. The young are now nearly large enough to shoot.—O. G. G.

A CHIP OF THE OLD BLOCK.

Editor Forest and Stream:

I saw in the Forest and Stream a few days ago a description of the alligator gar of White River. Father says they are the only things of all the animal creation that could stand the convulsions of nature and live through the boiling, mashing and other stirrings up they were made to undergo, as they belong to a very remote period of the world's creation. I send you an outline drawing of the head to the eyes, and bill of one of them. I clasped his jaws together on the sheet of paper so as to show you his teeth. He was over four feet long—not a very big one. We have a beautiful litter of Llewellin pups. The mother is Phoebe III., and the father is Belton II. He is brother to Nelly. I saw her at the Junction, at the dog show, when they had the field trials. Old Kate, our pointer, did not have any pups, but she must be part Jersey, as she has lots of milk and helps Phoebe suckle the pups. There are six, and they are all taken. We will call ours Nellie Belton. There are lots of young quails, and papa has sent to England for a gun for me. I can shoot his twelve-bores, but they are most too heavy for me, and he is going to get a sixteen. This fall we are going to Grand Prairie after prairie chickens, and then to Bayou Meta after deer. I have caught many fish, because the river has been high and muddy all the summer. Such peaches and watermelons as you never saw, and fine corn, and oats, and millet, but the cotton is little and too thin. Lots of hickory nuts, and beech nuts, and acorns, and we will have lots of squirrels this fall. Charlie Young ("Gilyon," Jr.).

Corinth, Miss., Aug. 1, 1882.

Camp Fire Flickerings.

"That reminds me."

On Burrard Inlet, in British Columbia, dwells one logging camp boss, known far and wide by the name of Lev. He is a hunter of some importance, and a rifle shot of more than ordinary skill. One rainy day Lev took his gun and sallied forth for a deer hunt but was overtaken by darkness, while a long way from the camp; and forced to remain in the woods all night. On searching his pockets he found he was without matches. The logging crew blew horns, fired guns, etc., to guide him home, but without avail. Morning returned, and Lev made his way home just as the crew were turning out for breakfast. Hungry, wet and tired, he sat down in front of the big camp-fire, rested his face on his hands, his hands on his knees, looked vacantly at the blaze, and for about ten minutes appeared lost in contemplation. He then spoke, "Boys, did you ever hear of a person making a fire by rubbing two sticks together?"

"Oh, yes," replied several, "easy enough to do. Common thing," etc., etc.

Lev waited patiently till they all got through, and then exclaimed, "It may be easy enough to do, and perhaps has been done, but I'll be eaten alive if ever anybody did it in one night." Mowitch.

New Westminster, British Columbia.

Gen. H. lives in Kentucky. He is a whole-souled sportsman. Duck-shooting is his forte, or was before he had so much avoirdupois. He shoots a heavy gun, and rejoices in the roar of five drams of powder. He went to Florida some years since to help a friend out of a legal scrape, and right royally he helped him. (The General has hob-nobbed with Coke and Blackstone.) Well, his friend, Dr. M., who is as beautiful a shot as I ever saw or expect to see, and our hero had been out in search of game, and were on their way home behind an old sorrel mare, a first-class case of balk on the slightest provocation. They were riding in a buckboard, in which were sundry quail and accoutrements. Joe, the pointer, ranged at his own sweet will. The quartet were within a mile of home. Just in front was a stream that headed in a bay to the right of the road. Suddenly the General ejaculated, "Hold on, Doc., Joe's got 'em!" And sure enough off to the right the old dog was on a dead stand.

They got down, put in shells, and leaving the old mare in the road walked around behind the dog, facing the team.

"Look out where you shoot now," said Doc.

The General retorted with a sort of contemptuous snort as who should say, "That caution is entirely unnecessary, sir."

They kicked the quail up, which sailed almost directly for the team. Bang, went one barrel of the Dougall; bang, went the other. Away went the birds; away went the shot and struck the old mare, patiently waiting on the road, and as a direct sequence, away she went, scattering impedimenta along the way recklessly, her tail flying vigorously.

"Whoa!" shouted the General. "What's the matter with the wench, Doc.?"

But Doc., who knew what the matter was, was already on the wing. Down the road and into the creek went the old mare and her pursuer, while the water flew, for the stream was knee-deep and fifteen or twenty yards wide. The stern chase was not a very long chase that time, and in a little while back came Doc. grinning. The General was awaiting him in the road.

"What tickles you so? What made her light out in that reprehensible manner?"

"Well, I guess you'd light out, too, if you had your hide full of No. 8 shot," answered Doc., shaking.

"Don't tell me I shot that mare. It's no such thing."

Quoth Doc.: "Just pass your hand along the mare's side and your eye over the harness."

The General approached cautiously, the mare eyeing him suspiciously. After a satisfactory examination, which I never considered wholly necessary, said the General: "Doc., if you ever breathe this to a single soul I'll skin you, sure."

Doc still wears his cuticle. S.

Florida.

[Our camp fires are kindled all along the line. Last week it was New Hampshire and Texas; this week, British Columbia and Florida.]

Sea and River Fishing.

Open Seasons.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN AUGUST.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Brook trout, *Salvelinus fontinalis.*
Grayling, *Thymallus tricolor and T. montanus.*
Rainbow trout, *Salmo iridea.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var, *sebago.*
Quinnat salmon, *Oncorhynchus chouicha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca flavitilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, two species.
War-mouth, *Chænobryttus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys sicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscion regalis.*
"Sea trout," *Cynoscyon carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Lostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

How in youth I used to gallop to the glens, over a hundred healthery hills; how leaped my heart to hear the thunder of the waterfall, and, at last, the dim, shallow line of music, teeming with swift-shooting, silver-shining, scaly life, most beauteous to behold, at every soft alighting of the deceptive line.—*Christopher North.*

WITH HACKLES AND GENTLES.

THIRD PAPER.

"Of all the sports and pastimes
Which happen in the year,
With angling there are none, sure,
That ever can compare.

"Through meadows, by a river,
From place to place we roam,
And when we are a-weary
We go a-jogging home.

"At night we take a—'night-cap,'
We prattle, laugh and sing;
We drink a health unto our friends,
A bumper to the King."

One of the characteristics of angling is its hearty good-fellowship, and there is a mystic bond of union and mutual interest between the disciples of Walton to be found among no other class of sportsmen. The true spirit of angling is born in a man—or woman—and though an indifferent angler may be made by fostering care and apt following of a tidy example, the difference between the "noscitur" and the "fit"—like the poet's fire—may be easily distinguished. The true angler is a lover of his craft and of all things thereto pertaining; he must be a keen observer of nature to be successful, and looking her so often, and so fairly, in the face, he bears upon his own a "counterfeit presentment" of her beauties and her peace.

What, in the realm of nature, is more peaceful than a green meadow through which a clear stream glides? I know no more contemplative scene, and to all anglers some such holds a cherished place in the memory.

To such an one let us go, with rod in hand and creel on hip, and try a few "deeps," o'ershadowed by alders, and with just swirl enough to give a life-like energy to the fly we may cast thereon. Father Walton—God rest his soul!—would have gloried in this stretch of gently brawling water, just deep enough, just wide enough, and just clear enough to make it a pleasant and perfect haunt for brook trout and the brook trout fisher. It is a typical trout stream, as yet in virgin purity, and far from the noxious overflows from factories and civilization. To see it is gladsome; to walk by it and to think of its possibilities in trout-life is a restful pleasure; but to fish it is a joy the deft fly-fisher alone can know or appreciate!

With past experience as a guide I advise you to try a sober-colored fly and to be wary in casting; the water is so clear and the day so bright that utmost precaution is a *sine qua non* to measurable success. Your finest tackle may be used here, and I prefer, alway and everywhere, the finest tackle that is warrantable, whatever I fish for. Ah! that was a fine rise, and had you struck less nervously you might have landed a goodly fish. Try again and be cool—the angler must be as dispassionate as the Sphinx in some of the crises of his craft, or victory will never perch upon his rod. This time, my friend, you have life securely fastened to your leader, and you shall be left in peace to land the fish while I go yonder and try my luck. An hour hence we will meet, compare our creels, and take such refreshment as may be at hand. Meanwhile, if we kill few fish, we can feast our eyes and cast the demons of unrest and care from our hearts.

"Milky kine around me grazing,
Woolly flocks on yonder hills,
Join their notes with mine in praising
Him whose hand all creatures fills."

How pretty looks a goodly trout, fresh from the stream, outstretched upon a daisy-dappled meadow, after a sturdy fight with steady nerve and staunch tackle! A few brace enhance the loveliness of the sight, however, and behold! prone at our feet they lie. Here are no "fingerlings," but honest-sized fish, and in good condition for the table and palate of the most exacting epicure.

Seven brace of trout to our two rods and of an average weight of three-quarters of a pound to the fish ought to satisfy any one, not a butcher; and as we go "a-jogging home," we will talk of our modest sport and anticipate more to come. It is not the heaviest creel that represents the greatest sport, nor, in trout-fishing, is quantity to be balanced against quality. A few good runs and a few good fish are to be preferred rather than indifferent gaminess and wholesale slaughter of small and ill-conditioned fish.

The best of fishing, however, may be spoiled by an uncongenial companion—one who is "out of sorts" and not in sympathy with the occasion and the surroundings, or one who has no real, honest love for the sport. Better by far fish alone than with such—their presence sours everything. The wanderer a-field, whatever his quest, can brook no distracting influences, and "boon," in every sense of the word, must the angler's comrades be when the rod and creel are "to the fore." Looking back on the low-lying meadow and the bonnie stream runs like a gloaming reverie, so fair, so peaceful and so entrancing is it all.

The refrain of an old angling song comes to mind, and seems to describe what we now look upon as if written here and now:

"Vale of bliss, what joy to wander
Where thy glittering waters flow!
Here o'en Guilt in peace may ponder,
Here Despair forget his woe."

O. W. R.

SURF FISHING.

In the months of April and May one can enjoy on the east coast of Florida the combined pleasures of bathing and fishing.

The air is warm, the sun is bright, and the ocean waves break clear and green, at a temperature of about seventy-five degrees, on a wide and smooth beach of hard sand. One can stay in such water waist deep for hours, without danger.

On this first of May low tide will occur about 9 A. M. So after breakfast we leave Coquina landing in our boat; Bartolo, the boy Gomez, and I, and drop down toward the inlet with the tide.

We beach our skiff in a still cove, and set out seaward across the extensive sand flats which lie inside the beach. This region often suffers a sea change in the great equinoctial storms, so that what was dry land last year may be six feet under water this, but a wide margin remains permanent, and becomes in May the breeding ground of many species of water birds. Plovers, willets, oyster catchers, marsh hens, stilts, gulls, sanderlings, etc., lay their eggs in a shallow cavity in the sand, leaving them to be hatched by the heat of the sun. The color of these eggs so much resembles that of the sand, that it takes a practiced eye to distinguish them. This is the protective system of nature, which assimilates all wild creatures to their proper background—the tawny lion to the desert sand, and the spotted panther to the withered leaves of the thicket.

The sharp eyes of young Gomez led him straight to the nests, and he soon has a basket full of eggs; some to be blown, some to be eaten.

Great numbers of sea shells are scattered about: conchs, mussels, sea oysters, cockles, ark shells, scallops, quahaugs, pyrulas, etc., not of the gay colors of tropical species, but brighter than those of more Northern shores. After a storm, shells of a paper nautilus are sometimes found here, but from the delicacy of the shell usually are somewhat damaged. One was found containing the animal, a species of cuttle or octopos. Dr. Stimpson, who studied these shells, states that those of the west coast of Florida have a more tropical character than those of the east coast.

The last week of May brings the sea turtles ashore to lay their eggs in the sand at night; the green turtles and the loggerheads, some hawks' bills also, from which the tortoise shell of commerce is taken. Each nest will contain from 120 to 160 eggs, about the size of those of a hen, but rounder in form, and with a tough skin like parchment. The people who live near the beach subsist at this season in great part on turtle eggs, as do the bears, hogs, raccoons and possums. They furnish a rich and wholesome food, and can be cooked in various ways.

Do you see that mast sticking out of the sand? It belonged to a fine steamer that came ashore here four years ago in the night. All hands were saved, also the furniture and stores of the ship; she had no cargo, being bound to Mexico in ballast. Many other wrecks have occurred near this inlet, which has a dangerous bar, without a lighthouse; and the channel shifts so often that only a person living in sight of the inlet can safely act as pilot.

Along the shore, about 100 feet outside low water mark, runs a slough or depression in the beach where the water is four or five feet deep at low tide. I have observed the same formation on the west shore of Lake Michigan, perhaps caused in both cases by shore currents. Here we often find the bass or redfish (*Sciænops ocellatus* Gill), salt water trout (*Cynoscion regalis* Gill), and cavalli (*Trachynotus carolinus* Gill) feeding on the mollusks out of the reach of sharks, which do not often venture so near shore. It may seem pedantic to use these scientific names, but as all these fishes are called by various names from Virginia to Florida, it can hardly be avoided.

Bartolo wades in with his cast net, and with a few casts gets a couple of dozen four-once mullets for bait. Each of these cut squarely across makes three or four bait. Bartolo uses a heavy hand-line, with four ounces of lead and a cod hook, the usual tackle of a Florida fisherman, who swings the sinker round his head and casts as far as possible seaward. When he hooks a fish, he gives it very little play, but hauls it ashore by main strength. If the fish is very large and strong, the hook or line often parts and the fish is lost. Compared with playing a heavy fish with light tackle, this process is rude and inartistic, but more fish are taken in a given time, probably. An agreeable writer in Forest and Stream describes this method as practiced by him at the mouth of the St. John's River, where he makes heavy catches of bass. Every one to his taste—to me one thirty-pound bass taken with rod and reel is worth a wagon load hauled out *viet armis*. I use the bamboo rod, and multiplying reel carrying 100 yards of cuttyhunk line, and hook of same pattern. One ounce of lead is enough for casting from the reel in still water. In a heavy current two or three ounces is necessary.

Bartolo has hitched a bass, which he drags ashore promptly, a six-pounder. I hook one from the same school, but larger. It runs up and down the slough, taking out forty yards of line. Then I turn it and recover the line—this for about ten minutes, before the bass surrenders and is towed to the shore, exhausted. Eight pounds is its weight.

But what ails Gomez? who seems to be going to sea, dragged by a big fish. His father hastens to the assistance of the boy and a lively contest ensues, ending in landing a twenty-five pound bass after a struggle of fifteen minutes length. Then I capture three of five pounds each, and Bartolo hauls out a six-pound salt water trout, a beautiful silvery-sided fish with black spots, similar in appearance to the lake trout of Northern New York, save that it wants the adipose fin which distinguishes the Salmonidæ. I now hook a strong fighting fish, different rather in its play from a bass; like that it makes long runs, but also bores to the bottom like a sheepshead. It comes ashore at last and proves to be a sea

catfish (*Ariopsis milberti* Gill), a handsome fish, with game qualities, which abounds in these waters in April and May, weight about six pounds. It is covered with a disagreeable slime, and is armed with sharp and barbed spines on the pectoral fins, so that it is dangerous to handle; the flesh is white and firm, and in the absence of better fish would be eaten, no doubt. Sharks are very fond of them, but reject the upper portion.

Now Bartolo hooks a shark, which cuts off his hook, and as we see the dorsal fins of several others in the surf, we change our ground and go to the wreck where the tides have worn a deep hole in the sand.

Here we find a school of cavalli, which give us fine sport. This is one of the most active and vigorous fishes in these waters. It is very voracious and will take almost any bait, either at the surface or bottom. I have taken them with a spoon, and have heard of their being killed with a fly. They are taken in these waters from one to twelve pounds in weight. As a food fish they are by no means equal to the pompano, which they much resemble in appearance, being rather coarse and oily. We got ten from that school about as fast as they could be pulled ashore; average weight three pounds.

This was very pleasant fishing, wading to the waist in the warm gulf water, with the surf breaking about us; but we were getting more fish than we needed, so turning loose our most recent captives we retraced our steps up the beach. When we came to the place where we had left our first fish we found a couple of beach ponies eating them.

"That is the first time, Bartolo, that I ever saw a horse eat fish; are those ponies yours?"

"They are, and they are very fond of fish, and often follow me when I am using a net so as to get my mullets."

"Where do you keep them?"

"They live on the marsh and come up to the house for fresh water sometimes. I've broken the mare to the saddle, and often use her to bring home turtle eggs." S. C. C.

A LONE FISHERMAN IN CANADA.

AS the date fixed for vacation approached this year, the undersigned, like many another of your readers, as I doubt not, found himself to be aweary of the fished-out fishing "resorts" within a hundred miles or so of this metropolis. The memory of the 7x9 lakes, crowded with boats, and of the hotels infested with the checky and extortionate "guide," who sold you bait to-day for which you had paid him twice its value yesterday, smoked your cigars and drank your paregoric, returning the favor by doing as little rowing as possible, volunteering contemptuous criticism of your methods of angling, hinting at the prodigal liberality of his last employer, and instructing you when to go home—made me resolve to forswear these delights and pass my play-time this year beyond the borders of the States.

And so (the friend who had agreed to accompany me having been prevented from so doing by illness in his family) I withdrew my nose from the business grindstone, bundled up my rods, packed my trunk and tackle-box and started on my lonely way to Kingston, Ontario, where I was met by a team from Battersea, on Loughborough Lake, which point was reached after a drive of sixteen miles.

Regard for truth compels me to say just here that Battersea by no means resembles "sweet Auburn, loveliest village of the plain," or any other place of which loveliness is a prominent characteristic. In fact, its candid inhabitants do not hesitate to indorse the most unfavorable criticisms, from an æsthetic standpoint, upon which the visitor may venture in their hearing, and cheerfully waive all claims of the village to beauty. But there is a plain, comfortable and quiet hotel, and the citizens are courteous and accommodating, while for the undeniable ugliness of the hamlet compensation tenfold is awarded when the angler, having paddled a few hundred yards through a shallow creek, emerges upon the lake. I can make no better comparison for the contrast than that of the passage from purgatory to paradise. Well-wooded shores, islands innumerable, of all shapes and dimensions—from "Griffin's," a mile in length, to those covering but a few square yards—all rising from clear, cold water, and not one of them disfigured by a villa-nous architectural nightmare in the shape of a cottage ornée—form a scene with which many a "show place" that I have seen, thick set with summer hotels, can bear no comparison.

Gliding through the channels between the islets, some new beauty is developed at every turn. Sheltered bays, shady nooks apparently designed expressly for camping purposes, rocky heights crowned with pines and cedars, abound; and the comparatively narrow channels are varied by broad, unbroken stretches, miles long, of deep, sparkling water. In short, Loughborough Lake is a gem of as pure and serene a ray as ever gladened the eyes of a searcher for the picturesque, and as well worth visiting for that reason alone.

But about the fish?

That's so; I forgot to remember to whom I was talking, though I am sure that to all true anglers the lovely scenes among which they practice their art furnish no small part of its delights. Well, I don't esteem myself worthy of a place in the front rank of fly-fishermen, but even I made scores of which an expert need not have been ashamed; and I didn't "fish for count" either, but piously returned all fish not fatally injured, and that were under three-quarters of a pound in weight.

The wind was every day unusually high for the season, so that for some entire days and portions of others during my stay the swell was too heavy for comfortable fishing. Nevertheless, there fell to my inexperienced hand, in twelve full days' fishing (resting from noon until about 3 P. M.), 416 good bass, nearly all of the small-mouth species. I used the fly alone—casting and trolling—scorning the ignoble "spoon" with which I could doubtless have doubled my catch, as I certainly could have done with a gill-net and a shovel. Standing in the boat while my agile young oarsman (aged 76) was killing and disposing of a single three-pounder, I made a cast of twenty feet, and in a moment had struck a pair of twins—one on each of my two flies—and after netting them took two other pairs in succession, all within ten minutes. Trolling over the same ground a day or two afterwards I captured eleven within twenty minutes—five pairs and an odd one. Judge, then, what a practiced angler might have done.

It is probably needless for me to say that Loughborough is not a fishing "resort." Before wetting my line I was obliged to assure a number of anxious inquirers that my fragile split bamboo was not intended for catching bait, and that I did not calculate that the first bass I encountered would reduce it to splinters; but it was not until I had returned with a goodly heap of fish with my rod intact, and my statements had been confirmed by the oarsman, that doubt gave way to hesitating belief. No other light rod had been used there within their knowledge, and their ideas of the nature of an artificial fly were of the vaguest. "Yanking" a cedar "pole," and hand-over-hand hauling with a spoon-hook, are considered good enough treatment there for the "coming game fish of America;" and even a gentleman from Kingston who came up for a day's "sport" felt himself justified in chaffing me for taking but twenty-three on my fly while he was jerking thirty-two into his boat by main strength before they had recovered from their astonishment at the prickly nature of the glittering morsel they had attempted to swallow.

"Pike" (our pickerel, as I believe) are scarce, I am glad to say, though they are reported to abound in some other lakes in the vicinity, of which there are many. Round Lake, full of large-mouth bass (which for some occult reason will seldom bite), is but two miles distant, its waters clear as crystal and presenting a curious appearance as viewed from its high banks, by reason of long bars of white clay projecting from the shores; Dog, Cranberry, Mud (where isn't there a Mud lake?) and Sloat's lakes are not far off; but Loughborough, 32 miles in length, is easily the queen of all, both as regards beauty and the abundance and quality of fish. I hesitate to question any of Dr. Henshall's *ex cathedrâ* statements, but I must say that it did not take me long to discover the difference between the fierce and prolonged struggles of the small-mouth bass and the comparatively sluggish resistance of his large-mouthed brother; and it is certainly a fact that in these waters the game qualities of the former are far superior to those of the latter.

The cost of travel to Battersea from New York is from $10 to $13, and expenses while there are light enough to make one almost ashamed of spending so little on a holiday excursion. One piece of advice I will venture upon: don't go alone. Ye gods! how I did yearn and yawn for a companion in my sport, and how I bored myself after dark until welcome slumber overtook me! And in conclusion I will further advise: if you must carry a flask of cough drops for your stomach's ache, don't let it drop in the creek; and if you take with you a valued and rather valuable field glass, the bottom of the lake is a bad place to leave it in case you want to use it at the opera next winter. To conclude some more, Alex. Van Alstine, of Battersea, will give all further needed particulars on application, as will also, if desired.

NEW YORK, August, 1882. TRUTHFUL JAMES.

WEIGHT OF RODS.

ISN'T it, after all, much the same with the practical angler as with the old girl who kissed the cow—a mere matter of taste? We undergraduates of the backwoods who are not "up to snuff" in the various departments and improvements, and whose impecuniosity precludes frequent excursions beyond our native neighborhoods, derive an immense amount of pleasure and solace from the excellent contributions of the gifted and more fortunate alumni of the guild, but are often left groping in a fog as to important details, from the fact that the writer's familiarity has caused him to omit what he supposes well known by every reader of average intelligence and even limited experience. Experience and experiment are very tedious teachers, and in the absence of standard text books, we students turn eagerly to FOREST AND STREAM for nuggets of wisdom, and most patiently and profitably plod through elaborate minutiæ in quest of items to be added to our limited stock. Hence, let the grayheads not disdain apparent redundancy of details if they would profit the tenderfeet, for the dissemination of standard books of sporting literature is not coextensive with the circulation of our standard paper, and the baldheads will charitably skip what they always knew in view of benefit to us youngsters.

I am not fault-finding. I once heard an orator declare that the most difficult and labored efforts of his life were the preparations of lectures for children—"not to pitch the fodder too high for the lambs." "Butagin," as our old preacher rather numerously remarks in the course of a discourse, I desire to gradually approach the subject to be briefly considered even if FOREST AND STREAM has had a dozen extra columns added to its former very respectable size without corresponding enlargement of type.

We naturally adopt pertinent provincialisms frequently from convenience if not from admiration of their elegance. Our deft veterans are dubbed "professors," and are not slouches with rod and gun. The students are called "slatherers." The term slatherer needs no definition, for any sportsman on first hearing it applied to an individual would expect him to crash around like a hungry steer in a kitchen-garden, in stepping into or from a canoe to put a foot on and into everything on the bottom and tilt out any unsuspecting occupant if the craft chanced too heavy to be upset by his lurches.

I am not a professor, but have been admitted to their councils till from the drippings of their scientific overflows I about have their philosophy "by heart." Pike and bass fishing constitute the cream of our angling, and the best bass tackle is the one thing our professors have worked out to their individual satisfaction. The varieties of weight, size, length, spring, balance and rig, are as diverse as were the linguistic exercises at the time that the workmen got on a strike at Babel.

Am I wrong in the inference that jointed rods of split bamboo and the favorite solid woods are the kind of bass-rods discussed? I think not, as the willowy character attributed to specified light weights is not applicable to our one-piece favorites of same weights. Our professors and advanced slatherers very rarely build jointed rods, unless for convenience in slipping out, unsuspected, Sunday mornings, and it is the current belief that a jointed rod is the invention of some fellow ashamed to be seen going fishing Sunday, but wasn't shrewd enough to send his tackle out by the friend who promised to meet him at a certain spot with a bucket of minnows. Understand that I have long had my heart set on a split bamboo rod and haven't lost hope, but until the very indefinite date of blissful realization a good, cheap rod shall suffice, as I know that vast quantities of glorious fun are derivable from a common Japanese cane properly rigged. Lightness, strength, spring and balance, in order given, are the professor's requirements of a first-class rod, and in what is that combination, par excellence, so satisfactorily found as in the Japanese cane? The bamboo is more elastic, but proportionately heavier. We use "G." braided silk, or smallest sizes of linen, cable laid lines, and find the desired relation between lines and rods in the lightest canes reduced to nine and ten feet length. I was led to select four of my favorite rods, from a dozen collected in the last eight years, and weigh and measure them for the first time.

A description is submitted as showing what meets the approval of professors to whom I'm indebted for nearly all that I know of tackle and angling.

Lengths, 9 to 9½, 6in.; weight, 4¾ to 7oz8.; diameters, 9-16 to 14-16 of an inch at butt, and about 3-32 of an inch at tip. Metal reel seat screwed on 14 to 18 inches from butt end—8 to 10 or 12 guides on each, as necessary to keep the line on the rod, whatever the strain to which it may be subjected. A piece of hard wood is fitted into the butt end of each rod, and trimmed to an edge to facilitate thrusting into the ground or a crevice when desirable to use the landing net or gaff for a companion, or to accommodate him with your judgment as to whether its more water or more sugar that's needed. The capabilities of such rods are adequate to most emergencies, and equal to the capacities of such lines as a professor would select. No. 2 Frankfort-reel is the favorite size, though many professors use No. 3. Ours is all stream-fishing, hence the indispensability of a float, as we rarely find smooth bottoms, and black-bass don't seek such here.

I may be in error, but I think that that "old pelican" of the Kingfishers used a Japanese bass-rod in bringing to gaff that *Esox nobilior* of 40lbs., his description of which produced that peculiar vermicular sensation on my scalp which threatens a "rising of each particular hair on end." If he didn't I know that he could have done it, for I found nothing apocryphal in his inimitable chronicles; they have the odor of true inspiration; and may we all live to enjoy them, at least semi-annually, till the next Yorktown Centennial.

A. SLATHERER.

MILL SPRINGS, Ky.

THE OTSEGO BASS.

IN Otsego Lake, New York, there is a species of *Coregonus*, or whitefish, which is claimed to be of peculiar excellence for food, and it has also been claimed to be a distinct species. This latter claim is not now allowed, and it is at present considered identical with the *C. albus* of the great lakes, or, at the most, merely a variety. This fish, though not at all resembling a perccid, has somehow obtained the local name of "bass," and "Otsego bass" is the name it has rejoiced in for years. It more nearly resembles the "laverct" of English waters, and this name was proposed for it by Frank Forester.

We have recently been fortunate enough to receive, through the courtesy of Mr. James Eddy Mauran, the original description of this fish by De Witt Clinton in pamphlet form, and here give it entire.*

[LETTER.]

ALBANY, May 16, 1822.

SIR—I send you, for your excellent work, an accurate and beautiful delineation of a fish caught in the Otsego Lake, the principal source of the Great Eastern Branch of the Susquehannah River. This painting was executed by Ezra Ames, Esq., an eminent artist, of your city, and the representation of the fish, which is called Otsego Basse, is as large as life. It was seventeen inches in length, five in depth, and one in thickness, and it weighed two pounds six ounces.

The pupil of the eye is black, the iris silvery; the opercula spotted with yellow on a silver ground; the mouth small and exactly like that of a shad, except a little protuberance of the upper lip, which is also bifid. No teeth in the jaws, palate, roof of the mouth, tongue or throat. The lateral line straight and hardly discernable; appearance of lateral stripes, like the *Perca nitechilli*, or rock fish; color silvery white below the linea lateralis—somewhat darkish above it; scales small; back highly curved. The first dorsal fin has nine softish rays, three of which are imperfect; it is about midway in the back, and over the ventral fin. The second dorsal fin is small and filamentous, and directly over the anal fin. The caudal fin is forked—the belly not serrated.

This fish is of the abdominal order, and cannot be satisfactorily arranged under any genus of the Linnæan system. As it is, however, included in Block's description of the salmon, which he represents as an abdominal fish, with an adipose fin on the back and a body covered with scales, I shall, in order to avoid the multiplicity of genera, consider it as a Salmo; and, as it is probably a nondescript, and peculiar to the Otsego Lake, its specific name may, with propriety, be derived from the water which it inhabits. I shall, therefore, call it *Salmo Otsego*.

This fish is nearly equal to any fish that swims for exquisite and delicious food. It is among fishes what the grouse, or canvass-back duck, is among birds. The flesh is fine, white, and delicate.

It sometimes weighs six pounds. It is never found in the neighboring lakes or streams, or in the Susquehannah River. It is not anadromous, and appears to be always stationary in the lake. It appears in shoals every spring and fall, and, at other times retires to the depths of the lake, like the black basse and perch of Lake George, which are only seen periodically. The latter lake has no outlet which can be ascended by fish: This proves, conclusively that their retreat is only into its deepest waters; and as these lakes are very deep, they afford ample space for seclusion. Perhaps the notion of Pennant that the herring proceed from the polar seas is incorrect. I cannot beleive that they extend their migrations beyond the seas in which they periodically appear.

The Otsego basse is very rarely taken by the hook. It was formerly caught in great numbers by the seine—sometimes five thousand at a draught. There is now a comparative scare ty. The diminution of fish, greatly in demand, may be attributed, generally, to the havoc created by the increasing population of the country, and to the destruction of the food of fishes produced by cultivation; but in this case it is ascribed to peculiar causes.

The spring herring, or *Clupea vernalis*, formerly visited this lake in immense multitudes for the purpose of spawning, now their ascent is arrested by the erection of dams. The salmon trout, and other predaceous fishes of the lake, which formerly derived their subsistence from the spawn and young of the herring, being shut out from this source of supply, have turned their attention to the Otsego basse, and have thinned its numbers. The herring formerly reached this lake in the spring, and their young did not leave it until the ensuing autumn. The pickerel, which is the tyrant of the lake, and which drives away and conquers its neighbor and congenor, the white pike, of the Susquehannah River, is considered the principal cause of the diminished numbers of the Otsego basse. But captivity appears to have the same effect on them as on the wolf. Near the place where the fishermen draw the seines there is a capacious fountain in which they deposit their fishes and keep them

*Account of the Salmo Otsego, or the Otsego Basse. In a letter to John W. Francis, M. D., Professor of Obstetrics and the Diseases of Women and Children in the University of New York. From De Witt Clinton, LL. D., Governor of the State of New York. Printed by C. S. Van Winkle, 101 Greenwich St. 1822.

alive. In one of their draughts they took a large pickerel, and put him in the depot. The basse held no communion with him; and they kept apart as far as possible, without experiencing any annoyance from their formidable enemy.

The Otsego basse feeds upon worms, which appear to be abundant, attatching themselves to a concreted ropy substance found mostly in and on the grass at the bottom. It also eats those insects which appear on most waters in the spring of the year; and it probably derives its nutriment in part from aquatic vegetables, fat earth, animal and vegetable mucus, and the power which all fishes posess of decomposing water and converting it into nourishment.

It spawns in water not under twenty-five feet deep, and the season for this purpose is supposed to be exclusively the autumn; but one having been found this spring in roe, and the periodical appearance of this fish being vernal, as well as the periodical appearance of this fish being vernal, as well as autumnal, I should suppose that it spawned in both seasons; for whenever gregarious fishes change their places of habitation at prescribed times, from the depths of the lake or ocean, into shallow waters of the former, or the rivers which run into the latter, it may be considered as the season of production, marked out by Nature. I am, dear sir, with great respect, your most obedient servant, D. W. C.

John W. Francis, M. D.

GEORGIA EDITORS FISHING.

I SEND you the following account from the Atlanta *Constitution* of a trip of Messrs. Grady, Howell, Jackson, and Gordon, all editors of Atlanta, to the shores of North Carolina, and their introduction to the famous fishing to be found there. The letter is written from Morehead City, N. C., July 27:

The day was perfect. A stiff breeze was blowing from the southwest. The sun was just rising and the bay, dimpling before the wind, was as a huge bowl of molten gold, while the rim of white beach shone like silver. A mile or so away the ocean thundered over the bar, and the white-caps dancing along the surf-line flashed like diamonds in the morning sun.

Our boat lay at the wharf—a wicked-looking craft with leg-of-mutton sails—rigged like a felucca and warranted to fly. Captain Pickett, a well-seasoned veteran, was in charge. Lunch was stored aboard, the four of us occupied the cushioned seats, the Lucia shook her sails to the wind and we were off like a shot.

We were looking for Spanish mackerel and bluefish. The first is the finest fish that swims the water. Incomparable on the table—as game as a mountain trout—as handsome as a picture—he is the cavalier of the seas. Slender, gallant and rakish, he gives you all you want when you have him hung on the end of a fifty-foot line; and when, after a struggle you land him in the boat, nothing could be prettier. The bluefish, on the contrary, is a sturdy plebeian—fierce in his greed and the very devil to pull—voracious, lawless, and known of all men as the pirate of the seas.

"Birds to windward," cried the lookout.

"Ha-r-r-d lee," from the captain.

"Hard lee she is."

Why birds if we were fishing? Because the sea-birds hover above the schools of fish, feeding on the offal and the smaller fish—just as certain as fate, beneath the swarm of gulls and curlews that hung like a speck of cloud above the water, pulsing up and down, there were running millions of the fish we were after. In a few moments we had come within a few hundred yards.

"Get your lines out," shouted the captain, "we are nearly on 'em."

Instantly four stout lines of fifty feet were cast over the bow of the boat and spun out till they were tense. There was not a bait used—simply squids of ivory, with hooks at the lower end. The Lucia was flying now, sure enough. Evan Howell was sitting astraddle of a bench by me, when suddenly—

"Honey in the gourd!" he shricked, and began pulling hand over hand like mad.

"I'm with you," said Jackson

"Good," remarked Gordon, and he began to pull.

As for me I felt as if a mule had got his foot tangled in my line and had got to kicking. I yelled something or other and pulled. In an instant I saw a two-foot mackerel winding towards me like a revolving wheel. Jackson's fish flew past the boat like a flash of lightning. Powell's, after fighting every inch of the way to within five feet of the boat, suddenly changed his mind and jumped over the gunwale. In less than ten seconds we had four fine fish boxed. The men shook them off and tossed the squids over the bow. Before thirty feet had spun out every hook is caught again, and there was the same excitement over, only two fish being landed, however. Out they went again, and the third time we had them.

"Hard lee! Hats, gentlemen."

The sails swung over our heads. The boat stopped, turned, poised herself a moment, and then plunged towards the school once more, as a pointer following a covey of birds. Right away we were into them again, and the same wild excitement followed. It was better than a horse race. As fast as the lines were in the water the mackerel caught them. The speed of the boat, the height of the waves, the length of the lines and the gameness of the fish made every pull a struggle full of fun and uncertainty. Usually all of us had a mackerel on at the same time, and it was a question as to which would land him first. We tacked once more and made one more rush. Then the school was lost and we steadied ourselves for repairs. We had eighteen mackerel, were perfectly drenched with spray, our hands were red with the tugging, and, panting and excited, each man declared that no ten minutes of sport was ever before filled with so much zest and enjoyment. It was a simple revelation to a land lubber like myself.

The morning was filled with just such dashes. As soon as we had scattered one "school" of mackerel we would sight another swarm of birds and make for them. A dash of a few miles was nothing to us. Wherever the glimmer of wings showed against the sky, there the Lucia found her way. And at length when Evan Howell was hugging a claret punch for his lunch, and his war-cry of "honey in the gourd" had died out for dinner, we found that we had 112 as fine fish as ever fell to mortal hands.

Just as we had finished dinner, Captain Pickett discovered off a point toward the lighthouse an enormous swarm of birds, and predicted that they were hovering above a school of bluefish. The Lucia was headed toward them and went wing-a-wing before the wind. It was a curious sight as we neared the point. There must have been a million gulls. They dipped into the water constantly, coming up loaded with bits of fish. The bluefish move in great numbers, and cut and slash everything in their way. With one snap of the jaws they bisect a fish, and like the pirates that they are, scuttle and murder for the fun of it. The birds hovering above pick up the leavings of these wanton foragers.

"You'll have it now," said Captain Pickett, as our lines went spinning over the bow. With these words we dashed into the thick of it, and fast and furious fun it was.

"Pull them out quick or they'll pull you in," shouted Evan Howell, and he was just about right.

The fish flew at the squids fiercely, and when hung pulled even stronger than mackerel. As the lines were loosed and thrown over a fish would seize them before they were drawn taut and start off for the Bermudas. And it took muscle to stop them in that rolling sea, from the flying boat. For ten minutes the shouts and struggles were continuous, and the bottom of the boat was covered with fish, and four strained and tired men were content to part company with the school as it wheeled to windward. Finding them near the shore, however, the captain said he would fight them with short tacks. He whirled into them, and we went to work. Then followed the most exciting part of the day's work. The waves were very high, and we were in close quarters, but the boat flew in and out like one possessed. The captain, quite as excited as we were, threw her about as if she were a part of him. At every turn she shipped a sea that drenched and strangled every man in the boat—but the work went on, until the cutting lines had drawn blood from more than one finger, and Jackson, who had put on a pair of kid gloves, had them hanging in shreds. We quit counting after we had reached 208 fish, but could have made it twice as many.

At last the lines were pulled in and wound and the boat headed for home. We then had fifteen miles of the ocean to run through and three miles beyond the bar. We lay down on the cushioned seats, and with every sail set, quartering from the wind, we talked over the exciting events of the day. An ugly cloud showed its head in the southwest, but we ran away from it and crossed the bar just as the sun was setting. From every quarter came the sailboats, sharpie and clinker built, beating into the bay, like great white-winged birds flying homeward. A steam tug or two, puffing and wheezing by our swift and noiseless craft, gave us a hint of what we had happily missed. On the wharf, outlined against the evening sky, stood some rather anxious wives and children awaiting our return—for Harry Jackson is a proverbially daring sailor, and he sustained his reputation on yesterday. As we clambered out of the boat and saw the shiny heaps of fish piled up before the admiring eyes, while the cook hurried kitchenward with a dozen special beauties, I felt that I had finished the wildest ride of one hundred and fifty miles I ever took, and closed the best day of my life, as far as sport was concerned. Even the red and aching fingers, that can scarcely hold the pencil as I write, do not dim the memory of that glorious run after the cavaliers and the pirates.

H. W. G.

TROUT IN A THUNDER STORM.

ONE day in the summer of 1880, Charley P. and I, with our Adirondack guide, Dick Crego, left our camp on Fourth Lake, Fulton chain, for a day's trout fishing in the South branch of Moose River. It was one of those days in July when the dweller in the city would ponder over the question in his philosophical mind as to whether life was worth living or not and decide in the negative, but when Charley and I in our camp in the forest, where the mercury bears an inverse relation to the mountains, and where the fragrant breaths from the hemlocks and the cool zephyrs from the moss-covered and ferny ground give one an exhilaration and exuberant delight in mere existence, would decide that a man could hardly dare ask for a better life.

The day was not a perfect one for trout-fishing, but for us lovers of nature the summer stillness of the deep forest possessed such an enchantment that the prospect of a light creel at evening had no effect on our spirits. Trout were abundant anyway, and we were catching enough every day for camp use.

As Dick quietly paddled us near the spring holes we could see the trout lazily poising themselves on their red and white marginal fins, and slightly stirring the sandy bottom with slow sweeps of their mottled tails, not caring to exert themselves to make a move for the flies which we seductively cast near them.

Once in a while under the low hanging branches of a hemlock or bunch of alders we would find a trout which was anxious to have a wrestle with us, but on the whole we had taken very few up to the middle of the afternoon, when ominous mutterings began to be heard in the south. Great thunder-heads of dark cumulus appeared over the tall pines and hemlocks and rapidly rolled toward us. The forest was wrapped in an awful stillness. Not a sound could be heard near us save an occasional muffled murmur of the water as it whirled in an eddy under some fallen tree trunk.

We had arrived at the "big spring hole" and as Dick cautiously sent the light boat close to the bank Charley and I stepped out, and bending low behind the bushes crept to an open place where we could cast our flies easily. Charley made the first cast. His flies had hardly made a ripple on the water when splash! down went his red ibis. His light rod bent into a half circle, and as I cast a quick glance at the spot I saw half a dozen trout gliding about near his hooked one with the restless eager movements which always mean business. My flies alighted instantly in the same place, and down went my stretcher as though it were a cannon ball. As my trout made a quick turn I saw another calmly fasten himself on one end of the dropper flies. With thumping hearts we led our trout to one side and Dick slipped a landing net under them and threw them, tumbling and squirming, up on the grass. In a moment we had both made another cast and hooked our fish and the rest of the trout in the eddy were excited and angry because they had not got there first. Meanwhile the forest had grown darker and darker. The great banks of inky black clouds were low over our heads. Quivering flashes of lightning lighted up the mountains, and the heavy thunder shook the very ground and reverberated and echoed.

Cast after cast we made, and the trout seemed invigorated by the rigor of the elements. Big, sturdy fellows made the spray fly with their strong tails as they plunged after our flies with might and main. Some in their eagerness dashed clear over the flies and turned double somersaults in the air. At almost every cast a trout was hooked, and a sight of our bent rods and whirring reels would have made the Sphinx arise and shout for joy.

A gale rushed through the tops of the pines, and as they bent before the blast and the wind soughed through their branches the big drops began to fall. Still we fished until Dick fairly dragged us to the boat, which he had pulled up on the bank and turned over. Under the boat we crawled, and as the trout flapped about in the grass near us, and the lightning flashed and the thunder roared, we lit our pipes, and, safe from the storm, enjoyed such pleasure as only the sportsman ever enjoys.

MARK WEST.

FISHING IN GEORGIA.

DETERMINED on a day's sport, I toss aside books and cares. Gather together tackle and rods, get bait, coax a policeman to wake me at peep of day, I bid farewell to the hum of the busy city and woo "tired nature's sweet restorer, balmy sleep." True to his promise, I am awakened just as Aurora, daughter of the Dawn, begins to redden the eastern sky. Partake of a good breakfast, and for the fishing ground in the best of spirits. The day seems propitious; and from the south,

> "Across the fields, through woody ways,
> A faint breeze stirs with listless feet;
> The beetle drones, the rose-bush sways—
> Methinks the summer-time is sweet."

Reach the river in good order. Our rods, tackle, bait, companion and ourself, are soon aboard a trim skiff. The long-bladed oars are dropped into their places, and answering to their measured strokes, our bonny boat dances over the murky waters, as swift as the gleam of a vision of light.

Three miles of Throneteeska's waters are between us and our "home" when we round to, and glide in the run that leads into the Lucas Spring, where we hope to take our fish. What a delicious spot it is, to the angler's eye! A basin of cold lime water, one hundred and fifty yards in circumference by sixty yards in width, and from ten to sixty yards in depth, sleeping in quiet smiles at the base of wood-crowned hills, rising one hundred feet above its level—its deep blue waters darkened by the giant forest trees that dot their crests, it looks like a miniature sky reposing on the bosom of mother earth.

Tall cypress and pines that for a century have defied the storm king, and listened to the murmuring of Throneteeska's waters as they swept onward to the sea, graceful of form, rise in startling beauty from its very edge, and cast their shadows over its blue surface.

> "The golden sunshine over all
> Resplendently is streaming;
> And birds and flowers and grass and trees,
> With happy life are teeming."

Turning reluctantly from the contemplation of the charms with which nature had blessed the spot, I bait hooks and prepare for war on the unsuspecting inhabitants of the spring. Down into its blue depths sinks the treacherous steel and alluring bait until the float rests quietly on the unruffled water. It rests there but a moment, when it is seized by a hungry fish, and, answering to his movements, the float begins to move slowly along the surface, and then disappears under the blue waters. I pull, the hook strikes home, a gallant fight for life ensues, and I pull from his watery home a large bream, his red crests glittering in the rays of the morning sun, as beautiful as the red clouds at evening, when, blushing red from the day god's last beams, they hang in transcendent beauty along the western sky. Our prize secure, again I try. A fine three-pound bass pays the penalty of his young life for meddling with our cruel steel.

Our companion is not idle. As I land my fish he is struggling with a four-pound bass, and lands him in good style. Our hooks are returned to the water, and for an hour we are busy taking in perch and bass, until a thunder-storm breaks upon us and puts an end to our sport.

O. G. G.

TAKING MACKEREL FOR OIL.

FISH Commissioner Eugene G. Blackford, in conversation with a New York *Sun* reporter upon the project of fitting out a steamboat for mackerel catching on the plan resorted to for catching menhaden, lately said:

"It does not appear to me to be a practicable scheme to catch mackerel for the purpose of selling them to the oil factories and fertilizer factories, as is now done with the moss bunkers or menhaden. There is a natural law against it in the price of the fish. Mackerel are worth too much for food to be wasted in the factories. They are only half the size of menhaden. They are sold at such a price that the factories would be required to use material worth $6 a hundred, when menhaden at $3 a hundred would do as well. One of the menhaden steamers on the coast recently fell in with a school of weak fish and took a big load, with which they steamed to market. They disposed of them at from two to four cents a pound. They never thought of taking those weak fish to the factories. The same consideration of self-interest would in my opinion prevent the sale of mackerel to factories. There is always a market for good mackerel. Whatever cannot be disposed of for fresh fish can be easily sold to the packers. Mackerel are caught in large purse nets that stretch along almost half a mile. These purse nets are worked with a boat at each end of the net. The two boats draw closer together until, when the vessel is reached, the purse is closed. The menhaden fishery up to the present time this season has been a failure; but it has been a most successful mackerel season, one of the best ever known. There should be a law against the use of food fish for making oil or fertilizers. The steamers should be compelled to carry ice, so as to be able to send all food fish to market."

Albert E. Cochran, of the Excelsior Fishing Club, said: "The whole business of fishing by pound nets, purses and fykes is barbarous and destructive to fish. We have by hard fighting succeeded in preventing a good deal of the destruction in New York harbor. The Canadians have fought it stubbornly, and one of their chief grievances, on which they got their $5,000,000 award against this country, was on account of the wasteful and extravagant destruction of fish by our fishermen—what Prof. Baird, of the United States Fish Commission, calls 'catching fish without regard to size or season.' If fish are to be preserved as food they ought to be protected everywhere in the spawning season. The project of the wholesale slaughter of mackerel after the fashion of the wholesale destruction of menhaden that has been and is going on, is fraught with danger to fish food. The low yield of menhaden this season shows this. Some idea of the value of the mackerel business may be gathered from the fact that a Massachusetts computation, covering ten years, fixed the value of the mackerel trade to that State at $5,000,000 a year. The whole subject is deserving national and international laws for the protection of fish. This would be, in fact, the protection of fishermen, although most of the fishermen do not seem to perceive it."

THE ENGLISH ANGLERS' TOURNAMENT.

THE second angling tournament, which took place at the Welsh Harp, for the benefit of the Anglers' Benevolent Society, under the auspices of the *Fishing Gazette*, had a heavy rain to contend with, as was the case last year. In consequence of this, the attendance was small. In bait catching, the following awards were made, the catching to be either in the Thames or Nottingham style; with three casts allowed each competitor: First prize, a solid silver cup, value $50, given by the Richmond Piscatorial Society; Mr. Little, who cast in the Nottingham style, as follows: 45yds., 29yds., 44yds., total, 118yds. Second: Mr. Da Costa, $15 cash, cast in the Thames style; his first cast was outside the lines and was not counted. He then cast 39yds., 34yds., total, 73yds.

The amateur trial in Thames style was won by Mr. Hobden, 47½yds. Second: Mr. Powell, 48yds. Third: Mr. Chambers, 42yds.

Amateur casting in Nottingham style (from the reel): First: Mr. Little, 47yds. Second: Mr. Hobden, 46yds. Third: Mr. Gregory, 41yds.

Amateur contest, open for either Thames or the Nottingham style, in casting for accuracy at a mark thirty-five yards distant—First: Mr. Little, Nottingham style, 3ft. 3in. from mark. Second: Mr. Hobden, 4ft. 7in. Third: Mr. Powell, 12ft. 3in.

Professional contest in Thames style. Mr. Plummer, 55 yards.

Professional contest in Nottingham style. Mr. Bailey, 44 yards.

Casting the bait with a forked stick, in the Welsh Harp style. First: Mr. North, 46 yards. Second: Mr. Leland, 45 yards. Third: Mr. Packman, 44½ yards. Fourth: Mr. Sawyer, 42 yards.

Casting with quill float, in Nottingham style, for prize given by Mr. Bailey. First: Mr. Gregory, 25 yards.

Casting with triangle hook with paste or cheese bait, prize by Mr. Malcolm. First: Mr. Hobden, 21 yards.

Fly casting contest with single handed rods, for amateurs. First: Mr. R. B. Marston, 21½ yards. Second: Mr. Murphy, 19 yards. Third: Mr. Adlington, 18½ yards.

After the tournament the party sat down to a dinner and good feeling prevailed. B. R. T.

LONDON, July 9.

WEAKFISHING AT FORKED RIVER, NEW JERSEY.—Weakfishing has never been better than it has been at this place for the past month, and the hotels have been well patronized with the lovers of the sport. It is no unusual thing for the yachts to come in daily with an average catch of five hundred weakfish taken, with shrimp and sheddar crab, off the mouth of the river near the Riverside House. The best average catch in size has been done in the yacht Harriet, by Messrs. Charles J. Bulkley and Henry Elsworth, of New York, whose patience and perseverance in their desire to obtain the largest fish has been rewarded by a goodly number of fish daily that would weigh from three to four pounds each. The Riverside House, owing to its close proximity to the fishing grounds, makes it one of the most desirable points on Barnegat Bay, located as no other hotel on the main shore, close to the water, and being under the direct supervision of the owner. Among the recent arrivals are: Mr. E. E. Smith, S. H. Smith, C. W. Lawrence and wife, Jno. White and family, New York; E. V. Connett, Jas. W. Conrow and Son, Orange, N. J.; Hon. Edward R. Pennington and wife Newark, N. J. —A.

FISHING IN THE NEPIGON.—Charles H. Angal and W. H. Reid returned home last Tuesday from a fishing excursion to the Nepigon River, where they fairly revelled in sport dear to the lover of rod and line. They found the famous river still upholding its old reputation as the home of speckled trout that in average size are unsurpassed by any to be found in waters known to the brotherhood of anglers. It was a common experience to have three trout hooked at once, any one of which would weigh two to three pounds. They made no effort to catch for the pleasure of bragging about the number taken, and limited their catch to 500 or 600. To prove what could be done, they in one hour's fishing caught twenty-nine fish, which weighed 112 pounds. The largest taken weighed six pounds and a half, and was caught by W. H. Reid on a fly made by Robert Tangneuy, of this city, who made all the flies used by the party. The most killing flies were found to be those called Tangneuy and Ellwanger. An imitation of the alewive made by Tangneuy was found very attractive; in fact, all them that were used by the anglers were literally bitten in pieces by the trout.—*Rochester (N. Y.) Journal.*

SEVENTY-THREE TROUT IN ONE HOLE.—Haralson Co., Ga., Aug. 9.—Audubon, in one of his publications, I forget which, mentions a friend insisting on using an artificial fly on a trout stream in a wild forest, and adds that he took but one fish, none of the others would bite thereafter, although he, Audubon, took many with the worm. One of your recent correspondents mentions taking several trout with the fly from one hole, and expresses the opinion that this is rarely done. I once took seventy-three trout from one hole on a Nova Scotia stream, late in the season, entirely with flies, using the gray-winged fly with red body, and the same with yellow body, the red body appearing the favorite. The hole was on a small stream near where it emptied into a larger one, about fifteen by twenty feet in diameter and five or six deep. The day was dark, with just a drip of rain. The summer had been dry, with rather low water in the streams. The gross weight of the fish captured was about one hundred pounds. About three hours were taken in landing the fish.—W. T.

NARROWSBURG, N. Y., Aug. 16.—Bass fishing up here was never better, and in fifty minutes, last Saturday, I landed five fish, weighing eight and a half pounds. A day or two previous we had a fine mess of fish that would not have disgraced poor Sothern, Billy Florence and President Arthur included, for a morning's sport. Now, if any poor city fellow who is fond of fishing will come up here and spend a few days, with John Ruff for a guide, and it does not prove to be as I say, let him call on me and I will foot the bill.—S. H. H.

SALMON AT CAPE BRETON.—Halifax, N. S., papers report the pools at Margaree as swarming with salmon, and that advices from there state that the salmon fishing this month is the best for years. Two gentlemen are reported as having killed eighty salmon within a period of two weeks, while three others took thirty-six. Sea trout are also abundant.

Fishculture.

A LONG JOURNEY WITH BASS AND EELS.

THE following particulars of the trip with striped bass from New York to San Francisco may be of interest. I took twelve 14-gallon cans for the striped bass, and three 10-gallon cans for carrying fresh water. I also prepared some boxes (two of the jackets which encase the cans which the United States Fish Commission use in transportation of shad, sawing them in two making four), which were perforated with holes in the bottom for circulation of air, and covers with holes to occasionally pour water through, and also to place ice upon, for carrying eels. I had engaged 200 eels, averaging twelve inches in length, but just before starting these all died in their cage on account of the high temperature of the water in the Shrewsbury River, N. J., which was as high as 84 degrees Fahrenheit. So I had to go with only ten eels, which were caught the night before we started. These were from 12 in. to 24 in. long. A little grass which grows on the edge of the river (moss grass was to be found where the bass were caught, the eel grass being preferable) was put into the bottom of the box, the eels were then put on this grass, a little water poured on them occasionally to keep them moist, and a small piece of ice put on the cover, to melt and to drop through the holes, to keep them cool. And with a daily bath of a few minutes in clean water, fresh or salt, and washing out of the box, was all the attention the eels had through to the Pacific coast. They arrived in good condition. On being put into the water at Army Point, in the edge of the tules, they bored their way into the sand, straight down, and in less than half a minute were all out of sight.

We had caught about 600 striped bass, but a number died in the cages from the hot water, bruises and consequent fungus.

We started from Red Bank, N. J., about half past 4 P. M. on Monday, July 17. Some of the bass were nine inches long, they would average six and a half inches, none less than five. In six of the cans forty of the smaller bass were put, and thirty-five of the larger ones into each of the other six cans, making in all 450 bass. The water of the Shrewsbury River, with which we filled the cans, to start with was at 84 degrees Fahrenheit, and about four degrees marked on the brass hydrometer. Before we could get this warm water cooled down with ice we lost quite a number, perhaps twenty. Mr. G. H. Wild told me at the station that about a dozen were thrown out of the cans at the river, and at the station in Red Bank as many more were lost, I should think, before getting them on the cars. I had an assistant, who went through to the Pacific coast with me, and we got the water cooled down as soon as possible to about 60 degrees, at about which temperature we kept them all the way across. We lost from Red Bank to Philadelphia fourteen more. Most of these had lost some of their scales, or had contusions—bloody marks—on them; quite a number which died had the "water louse," so-called, a parasite attached to their gills. These parasites were huge fellows, being about ⅜in. long by ⅜in. broad, and would have killed the fish sooner or later anyhow. From Philadelphia we lost no fish for two days, till before entering Council Bluffs the fish were all in splendid condition. We had kept the water salted with a degree by salinometer with Turk Island salt till passing Philadelphia, or during that night, when the salinometer was accidentally broken, when we were obliged to go by our taste. It did not seem to matter whether the bass were in salt or fresh water, for we got out of Turk Island salt, and were obliged to buy some refined well salt or use none at all; this we did not use, fearing it might harm the fish, consequently the water gradually became entirely fresh again, the fish doing as well as in salt water. I think that salt water is an advantage to any kind of fish in that will stand it, for the salt has a tendency to precipitate the organic matter in the water, and which collects in heaps on the bottom of the can, and can be easily drawn off with the syphon. I also think that trout would accommodate themselves to at least 4 degrees of salt, as it is hardly perceptible to the taste, and for a long journey this amount of saline water would keep the water purer than without it.

Some twenty miles before getting to Council Bluffs we examined the cans for dead fish, and found them all lively, except in one can, from which we took sixteen dead. The fish were all taken out of this can and the water pumped out, when at the bottom was found a greenish substance about as big as a lozenge, too big to go through a ⅝-inch syphon, and would break like a bit of cheese. When we arrived at Council Bluffs I had to leave my assistant, Mr. Marks, in charge while I crossed over the Missouri River in the "dummy" train to see about our transportation, and he changed the water. It was said the water was good; it was taken from an artesian well; but the fish soon began to show signs of distress, and with the aerating he could give them ten were thrown out dead and most of the others were lying on their sides at times. Some said afterward that this water was alkaline, and others said that no alkali was in the water, as it had been analyzed and none found. Artesian water is almost entirely deprived of air, as I have known carp to turn over in it in a few minutes, and brought to again by violent agitation of the water.

As soon as the assistant could get over with the fish the water was changed to river water, and by hard work aerating them those still living were brought into a lively condition. At Omaha we lost fifty-eight fish. I thought while here some of them would be saved alive, as all showed signs of distress; many were a good while on their sides. In all we lost something less than one hundred and fifty.

From Omaha we did not lose any through to the Pacific coast, three days and a half. The bass were put into Suisun Bay below the junction of the Sacramento and San Joaquin rivers, about thirty miles from San Francisco, in water a little brackish, and at 60 deg. Fahr. All the bass were very lively and strong, and after being put into a pail of water it was a hard matter to catch them again with a net. Fully three hundred bass, averaging six and a half inches long, some of them nine inches long, were put into the water.

The fish were fed on the way with liver. They were often very hungry. We aerated the water at least every half hour, and most of the time once in twenty minutes; once in a while with a dipper, but most of the time with a long cylinder with handle at top and perforated at the bottom with fine holes, which would give a fine shower of almost perfectly aerated water.

In stopping at a good watering place we would draw down the water from the cans and fill up with fresh, fill our three extra cans and four pails of water. This quantity of water would do for two hundred miles or so, but between Laramie and Humboldt, from fifteen to twenty-one hours' run, I had recourse to a barrel that I found in Cheyenne, filling it up at Laramie with good water, placing it on the platform between the baggage and the postal car, putting a board on the surface of the water and covering it over with a sack to keep out the dirt and cinders. By this little scheme we had all the water we needed, and consequently having no occasion to use any dangerous water.

If it had not been for the Council Bluffs disaster and that mysterious substance found in one can, I judge, by the condition of the fish up to near Council Bluffs, and from a little way this side of them, that we would have lost half a dozen between Philadelphia to San Francisco

J. G. WOODBURY.

SAN FRANCISCO, July 27.

INTERNATIONAL FISHERIES EXHIBITION.—LONDON, 1883.

REGULATIONS.

A GREAT international fisheries exhibition, under the patronage of Her Majesty the Queen and the presidency of H. R. H. the Prince of Wales, will be held in London in 1883.

The exhibition will be opened on the 1st of May, and continue open for a period of not less than six months.

The principal objects to be admitted are comprised in the annexed classification, which is intended to include all kinds of specimens of fish life, and to illustrate all the modes by which the marine and fresh-water animals of economic value are captured and utilized, together with the commercial, scientific, social, historic and legislative aspects of such fisheries.

Medals in gold, silver and bronze, and diplomas of honor, will be awarded by a jury, the composition of which will be settled later.

No charge will be made for space, but exhibitors will have to pay every expense of transit, delivery, fixing and removing their exhibits, and they must, either personally or by their agents, superintend the reception and installation, and at the close of the exhibition, the removal of their goods; in default thereof, the committee reserves to itself the right of doing whatever may be considered necessary, and at the expense of the exhibitor.*

Applications for admission must be made on printed forms, which will be supplied on application; these are to be sent to the general secretary in London on or before Sept. 1, 1882, except under special arrangements or concessions.

The general secretary will, before Oct. 1, 1882, or as soon after as practicable, notify to applicants the decision of the committee, and will indicate the space, if any, which has been accorded to them, and give to each a number.

Contributors to the loan department are requested to communicate with the secretary, who will supply forms to be filled up by them.

All packages containing goods intended for exhibition must have painted on them the distinctive mark (I. F. E.) in red paint, and they must also have painted on them the name and number of the exhibitor.

Packages from foreign countries must likewise have painted on them in distinctive marks the letters (I. F. E.) in red paint. They must be addressed to the exhibitor himself or his agent. They must all be marked in such a way as to show distinctly from whence they come, the name of the country and the number of the exhibitor being painted legibly thereon.

CLASSIFICATION.

CLASS I.—SECTION I.—SEA FISHING.

Gear of every description and of all nations used in trawl, herring, long line, hand line, and every other mode or system of fishing, including all nets, lines, hooks, harpoons, tackle, etc., employed in the same. Oyster dredges, crab, lobster, prawn, etc., pots, and other appliances for catching fish of this description. Fishing craft of all nations; models and representations of the same. Steam fishing vessels and steam carriers. Fishing vessels and boats other than steam vessels. Ropes and canvass suitable to fishing vessels. Steam capstans, compasses, barometers, telescopes, lights, lamps, fog horns, systems of signalling at night for fishing fleets and vessels, electric lights, luminous paint, and other equipment of fishing vessels, charts for fishermen. Models of harbors, piers and slips, for fishing purposes. Fishing tackle and netting in different stages of preparation, and machinery used for working up the raw material. Life boats, their equipment, and life-saving apparatus of every description. Appliances and methods for breaking the force of the sea at the entrance of harbors and elsewhere. Methods of communication from the shore to light-ships and fishing fleets by submarine cables. Methods of protecting submarine cables from injury by fishing operations (illustrated by models and drawings).

SECTION II.—FRESHWATER FISHING.

Salmon nets and fixed appliances for catching salmonidæ in all their varieties. Salmon rods, reels, lines, artificial flies and baits, gaffs, spears, creels, etc. Trout rods, reels, landing nets, lines, artificial flies, baits, baskets, bags, etc. Pike, barbel, and other coarse fish-rods, reels and tackle, artificial spinning baits, etc. Traps, nets, bucks, wheels and all kinds of apparatus for catching eels, lampreys, etc. Hooks, etc. Anglers' apparel of every description. Boats, punts, cobles, collapsible, portable, etc., in models or otherwise. Note.—The above classification is suggested as a convenient one for this class, but it is not intended to exclude any objects which come within the class.

CLASS II.—ECONOMIC CONDITION OF FISHERMEN.

Apparel and personal equipment. Food and medicine chests. Models and plans of dwellings. Contracts of partnerships. Insurances of, life, boats, gear, etc. Benefit societies.

CLASS III.—COMMERCIAL AND ECONOMIC.

Preparation, preservation, and utilization of fish. For edible purposes—Models of fish curing establishments. Methods of, and models and other representations of any appliances for, drying, curing, salting, smoking, tinning, cooking, etc. Fish dried, smoked, cured, salted, tinned or otherwise prepared for food. All products prepared from fish, such as oils, roes, isinglass, etc. Antiseptics suitable for preserving fish for food. For other than edible purposes—Oils, manures, and other products prepared from fish. Methods of, and models, and other representations of appliances for, preparing oils and manures from fish. Sea and fresh water pearl shells; mother of pearl manufactured; pearls sorted. Preparation and application of sponges, corals, pearls, shells, and all parts and products of aquatic animals, etc., to purposes useful and ornamental, with specimens. Transport and sale of fish—Appliances for carrying fish and for preserving fish during transport or otherwise, and models of the same. Models of fish markets, and appliances connected with the same.

CLASS IV.—FISHCULTURE.

Models or drawings of fish hatching, breeding and rearing establishments, including oyster and other shellfish grounds; and all apparatus and implements connected with the same, and for transporting fish and fish ova; food for fry; representations illustrative of the development and progressive growth of fish; models and drawings of fish passes and fish ladders, scientific investigation—Models and drawings of diseases of fish, with special reference to their origin and cure; processes for rendering streams polluted by sewage and chemical and other works innocuous to fish life (illustrated by models and drawings); physico-chemical investigation into those qualities of salt and fresh water which affect aquatic animals; investigation of the bottom of the sea and of lakes, shown by samples; aquatic plants in relation to fishing, etc.; researches into the aquatic fauna (animals of the several classes preserved in alcohol or prepared, etc.); apparatus and implements used in such researches; acclimatization of fish.

CLASS V.—NATURAL HISTORY.—AQUARIA.

Specimens living (marine and fresh water), fresh, stuffed or preserved, casts, drawings and representations of:—Algæ arranged according to their various species and localities; sponges, in their natural state; corals, in their natural state, polyps, jelly-fish, etc.; entozoa; molluscs of all kinds and shells not included in Class III.; starfishes, sea urchins, holothuriæ; worms used for bait, or noxious; leeches, etc.; perfect insects and larvæ of insects which are destroyers of spawn or serve as food for fish; crustacea of all kinds; fish of

* These rules do not apply to exhibits made in the American department, and are intended for those who wish to make an independent exhibition. For space in the American department apply to Prof. S. F. Baird, Washington, D. C

all kinds; reptiles, such as tortoises, turtles, terrapins, lizards, serpents, frogs, newts, etc.; aquatic and other birds hostile to fish or fishing; aquatic and amphibious mammalia (otters, seals, whales, etc.) and others detrimental to fish; works on ichthyology; maps illustrating geographical distribution, migration, etc., of fishes and spawn; specimens and representations illustrative of the relations between extinct and existing fishes.

CLASS VI.—HISTORY AND LITERATURE OF FISHING.—FISHERY LAWS.—FISH COMMERCE.

Ancient fishing implements or their reproductions—Models, pictures, books, emblems, charters and seals of ancient fishermen guilds; fishery laws of different countries; copies of treaties, conventions, etc., dealing with international fishery relations; reports, statistics and literature of fish, fishing and fisheries; reports on acclimatization of fish, and of attempts in this direction.

CLASS VII.—LOAN COLLECTIONS.

Collections within the scope of the foregoing classes.

MONEY PRIZES.

The committee will be prepared to receive and consider the offer of money prizes for any special exhibits or essays connected with the objects of the exhibition.

PRIZE ESSAYS.

1. £100. The Natural History of Commercial Sea Fishes of Great Britain and Ireland, with special reference to such parts of their natural history as bear upon their production and commercial use.

Note.—This would include natural history, food, habits and localities fish frequent at different seasons and artificial propagation. (This will not include the Salmonidæ.) Prize offered by Sir H. Peek, Bart., M. P.

2. £100. The effect of the existing national and international laws for the regulation and protection of deep sea fisheries, with suggestions for improvements in said laws.

3. £100. Relations of the State with fishermen and fisheries, including all matters dealing with their protection and regulation.

Note.—This would relate to home legislation affecting regulations for fishing vessels, protection of spawning beds, close time (if any) for salt water fish.

4. £100. On improved facilities for the capture, economic transmission and distribution of sea fishes.

Note.—On improved nets and modes of catching salt water fish, the application of steam to deep sea fisheries, the advantages of steam carriers, greater facilities to be given by railway companies in regard to rates, refrigerating vans, new and improved fish markets, cold storing rooms for ditto.

5. £100. On improved fishery harbor accommodation for Great Britain and Ireland, indicating the localities most in need of such harbors, the general principles on which they should be constructed and the policy the State should adopt in aiding and encouraging harbor accommodation for fishing purposes.

Note.—The effect of the Passing Tolls Act, 1861, the causes which led to its failure, grants to supplement local efforts, loans at low rate of interest, period to which they should be extended.

Second-class prizes.—(Amount £25 each.)

1. On the legislation at present applicable to the salmon fisheries in Scotland (including the River Tweed), and the best means of improving it.

2. On the legislation at present applicable to the salmon fisheries in England and Wales, and the best means of improving it.

3. On the legislation at present applicable to the salmon fisheries in Ireland, and the best means of improving it.

4. On the introduction and acclimatization of foreign fish.

5. On the propagation of fresh water fish, excluding Salmonidæ.

6. On the propagation of the Salmonidæ.

7. On oyster culture.

8. On the best means of increasing the supply of mussels and other mollusks (oysters excepted) used either for bait or food.

9. £25. On the best system of life insurance for fishermen, and of insuring boats, gear, nets, etc.

10. A descriptive account of the angling societies of the metropolis, showing their origin, extent and constitution; as well as of the benevolent organizations attached to them.

11. On the currents, temperatures, and other physical conditions of the sea in relation to reproduction, growth and migrations of fish.

REGULATIONS.

1. All competitors shall inclose their names and addresses in a cover to the secretary; the subject of their essays and their motto to be clearly written on the outside of such cover.

2. Jurors will be appointed to adjudicate upon the various essays, and where possible it is proposed to secure the aid of foreign experts for this purpose.

3. After the jurors have awarded the prizes the covers above referred to shall be opened in the presence of the chairman of the essay committee and the secretary, who shall declare the names of the successful competitors.

4. The committee of management have power to publish the whole or part of any that may be submitted to competition. Essays not published will be returned on the application of the writers, but the committee of management do not make themselves or any of the officers of the exhibition liable for the loss of any essay or essays.

5. The judges are not bound to award a prize unless they consider one of the essays deserving of it.

6. No prize shall be given for an essay which has already appeared in print.

7. All essays with the motto attached must be addressed to the secretary of the Great International Fisheries Exhibition, 1883, London.

8. Every essay must be written in the English language or must be accompanied by an English translation, and must be sent in so as to arrive at the offices of the exhibition on or before May 1, 1883.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORD-FISH.

BY G. BROWN GOODE.

[CONTINUED.]

PERIODICAL MOVEMENTS OF THE SWORD-FISH—TIMES OF ARRIVAL AND DEPARTURE.

Before entering upon a discussion of the movements of the sword-fish and their causes, it seems desirable to bring together the facts which have been learned, by conversation with fishermen and otherwise, in one group. Each man's views are given in his own style, and as nearly as possible in his own words. There is no attempt at a classification of the facts. This will be made subsequently.

An old swordfisherman at New York informed Mr. Blackford that the season opens in the neighborhood of Sandy Hook about the first of June, and continues along the coast as far east as Martha's Vineyard and Nantucket Shoals until about the middle of September. He has heard of their being caught as far east as Cape Sable. At the first cold winds of September they disappear. They are, like the mackerel, at first very poor and lean, but as the season advances they grow fatter.

Mr. John H. Thomson, of New Bedford, who kindly interviewed some of the local fishermen, writes: "The sword-fish appear on our coast, south of Block Island, about May 25 to June 1. They appear to come from the southwest, or just inside the track of the Gulf Stream. They gradually approach the Vineyard Sound and vicinity during June and until July 10 or 15, then appear to leave, working to the southeast, and are to be found to the southeast of Crab Ledge about the middle of July. This school is composed of comparatively small fish, averaging about 150 pounds gross or about 100 pounds without head and tail, as they are delivered in the market. The smallest are 4 feet long, including the sword, and weigh from 30 to 40 pounds; the largest 8½ feet long, with sword, and weighing 300 pounds gross. These fish are of a light plumbeous hue, darker on the back and white on the belly.

"Of late years another school has appeared southeast of Cape Cod and George's Banks about the 1st of August. These fish are altogether different, being much larger, weighing from 300 to 800 pounds gross, and are entirely black. I have this week conversed with an old smackman, M. C. Tripp, who has all his life been a fisherman, and has this year (1874) captured about ninety fish, and his opinion is that they are not the same school. They appear to be of about the same abundance in average years, the catch depending on weather, fogs, etc. They come and leave in a general school, not in close schools like other fish, but distributed over the surface of the water, the whole being called by the fishermen the 'annual school,' though it cannot strictly be so named."

According to Mr. Willard Nye, sword-fish appear on the coast of Massachusetts from the 8th to the 20th of June, and are first seen southwest of Block Island. They begin to leave in August, but stray ones are sometimes seen as late as the last of October. The usual explanation of their movement is that they are following their food—mackerel and menhaden—which swarm our waters in the season named, and which are of course driven off by the approach of winter and rough weather.

Capt. R. H. Hurlbert took a very large sword-fish on George's Banks, in November, 1875, in a snow-storm.

The first sword-fish of the season of 1875 was taken June 20, southwest of Montauk Point; its weight was 185 pounds.

One taken off Noman's Land, July 20, 1875, weighed when dressed 120 pounds, and measured 7 feet. A cast was taken (No. 260), which was exhibited in the Government Building at Philadelphia.

Capt. Benjamin Ashby, of Noank, Conn., tells me that the New London and Noank vessels leave home on their sword-fishing cruise about the 6th of July. Through July they fish between Noman's Land and the South Shoals Lightship. The fish "strike in" to Block Island and Montauk Point early in June, about the 1st of July. They are first seen twenty to twenty-five miles southeast of Montauk. At the end of August they are most abundant in the South Channel. Captain Ashby never saw them at any time so abundant as August 15, 1859. He was cruising between George's Banks and the South Shoals. It was a calm day, after a fog. He could at any time see twenty-five or thirty from the masthead. They turn South when snow comes.

Capt. George H. Martin, of East Gloucester, tells me that the Gloucester vessels employed in this fishery expect to be on the fishing grounds south of George's Banks by the 10th of June. They almost always find the fish there on their arrival, following the schools of mackerel. They "tend on soundings," like the mackerel. The first sword-fish of 1877 was taken June 10; the first of 1878, June 14.

The statements already quoted, and numerous conversations with fishermen not here recorded, lead me to believe that sword-fish are most abundant on the shoals near the shore and on the banks during the months of July and August; that they make their appearance on the frequented cruising grounds between Montauk Point and the eastern part of George's Banks some time between the 25th of May and the 20th of June, and that they remain until the approach of cold weather in October or early in November. The dates of their capture of the first on the cruising ground referred to are recorded for three years, and are reasonably reliable: 1875, June 20; 1877, June 10; 1878, June 14.

South of the cruising ground the dates of arrival and departure are doubtless farther apart; north and east the season shorter. There are no means of obtaining information, since the men engaged in this fishery are the only ones likely to remember the dates when the fish are seen.

REASONS OF THE COMING OF SWORD-FISH UPON OUR COAST.

The sword-fish comes into our waters in pursuit of its food. At least this is the most probable explanation of their movements, since the duties of reproduction appear to be performed elsewhere. Like the tunny, the bluefish, the bonito, and the spotted cetacæ, they pursue and prey upon the schools of menhaden and mackerel, which are so abundant in the summer months. "When you see sword-fish, you may know that mackerel are about!" said an old fisherman to me. "Where you see the fin-back whale following food, there you find sword-fish!" said another. The sword-fish also feeds upon squid, which are at times abundant on our banks.

THE INFLUENCE OF TEMPERATURE UPON THE MOVEMENTS OF THE SWORD-FISH.

To what extent this fish is amenable to the influences of temperature is an unsolved problem. We are met at the outset by the fact that they are frequently taken on the trawl lines which are set at the depth of 100 fathoms or more on the offshore banks. We know that the temperature of the water at those localities, and at that depth is sure to be less than 40 deg. Fahrenheit. How is this fact to be reconciled with the known habits of the fish, that it prefers the warmest weather of summer and swims at the surface in water of temperature ranging from 55 deg. to 70 deg., sinking when cool winds blow? The problem remained clear enough until the recent discovery was made, that sword-fish are taken on bottom trawl-lines. In other respects their habits agree closely with those of the mackerel tribe, all the members of which seem sensitive to slight changes in temperature, and which, as a rule, prefer temperature in the neighborhood of 50 deg. or more.

There is one theory by which this difficulty may be avoided. We may suppose that the sword-fish take the hooks on their way down to the bottom; struggling in the gear, get entangled in the line and hooks, and when exhausted sink to the bottom. This is not improbable. A conversation with some fishermen who have caught them in this way develops the fact that the fish are usually much tangled in the line, and are nearly lifeless when they are brought to the surface. A confirmation is found in the observations of Captain Baker, of the schooner Peter D. Smith, of Gloucester, who tells me that they often are taken on the hand-lines of the codfishermen on George's Banks. This observation would lead him to believe that they only take the hook when the tide is running very swiftly and the lines are trailing out in the tide-way at a considerable distance from the bottom, and that the sword-fish strike for the bottom as soon as they are hooked. This theory is not improbable, as I have already remarked, but I do not at present advocate it very strongly. I want more facts before making up my own mind. At present the relation of the sword-fish to temperature must be left without being understood.

The appearance of the fish at the surface depends apparently upon temperature. They are seen only upon quiet summer days, in the morning before ten or eleven o'clock and in the afternoon about four o'clock. Old fishermen say that they rise when the mackerel rise, and when the mackerel go down they go down also.

PROBABLE WINTER HABITAT OF THE SWORD-FISH.

Regarding the winter abode of the sword-fish conjecture is useless. I have already discussed this question at length with reference to the menhaden and mackerel. With the sword-fish the conditions are very different. The former are known to spawn in our waters, and the schools of young ones follow the old ones in toward the shores. The latter do not spawn in our waters. We cannot well believe that they hibernate, nor is the hypothesis of a sojourn in the middle strata of mid-ocean exactly tenable. Perhaps they migrate to some distant region, where they spawn. But then the spawning time of this species in the Mediterranean, as is related in a subsequent paragraph, appears to occur in the summer months, at the very time when our sword-fish are thronging our own waters, apparently with no care for the perpetuation of their species.

MOVEMENTS OF INDIVIDUAL SWORD-FISHES.

A sword-fish when swimming near the surface usually allows its dorsal fin and the upper lobe of its caudal fin to be visible, projecting out of the water several inches. It is this habit which enables the fisherman to detect the presence of the fish. It swims slowly along, and the fishing schooner with a light breeze finds no difficulty in overtaking it. When excited its motions are very rapid and nervous. Sword-fish are sometimes seen to leap entirely out of the water. Early writers attributed this habit to the tormenting presence of parasites, but this theory seems hardly necessary, knowing what we do of its violent exertions at other times. The pointed head, the fins of the back and abdomen snugly fitting into grooves, the absence of ventrals, the long, lithe, muscular body, sloping slowly to the tail, fit it for the most rapid and forcible movement through the water. Prof. Richard Owen, testifying in an English court in regard to its power, said:

"It strikes with the accumulated force of fifteen double-handed hammers. Its velocity is equal to that of a swivel-shot, and is as dangerous in its effects as a heavy artillery projectile."

Many very curious instances are on record of the encounters of this fish with other fishes or of their attacks upon ships. What can be the inducement for it to attack objects so much larger than itself it is hard to surmise. Every one knows the couplet from Oppian:

"Nature her bounty to his mouth confined,
Gave him a sword, but left unarmed his mind."

It surely seems as if a temporary insanity sometimes takes possession of the fish. It is not strange that, when harpooned, it should retaliate by attacking its assailant. An old sword-fisherman told Mr. Blackford that his vessel had been struck twenty times. There are, however, many instances of entirely unprovoked assault on vessels at sea. Many of these are recounted in a later portion of this memoir. Their movements when feeding are discussed below, as well as their alleged peculiarities of movement during the breeding season.

It is the universal testimony of our fishermen that two are never seen swimming close together. Captain Ashby says that they are always distant from each other at least thirty or forty feet.

The Kennel.

FIXTURES.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

BENCH SHOWS.

April 3, 4, 5 and 6, 1882. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

September 4.—National American Kennel Club Field Trials on Prairie Chickens, Fairmont, Minn. Entries for the Derby close July 1, for the All-aged, Sept. 4. Jos. H. Dew, Columbia, Tenn., Secretary.

November 17.—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 884, New York, Secretary.

December 4.—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11.—New Orleans (un Club Field Trials or Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

ST. BERNARD AND MASTIFF IMPORTATION.

THURSDAY, August 3, we visited the steamship State of Florida, at the foot of Canal street, and paid our respects to Monarque, one of the best all round St. Bernard dogs that we have seen in a long time. He has a grand head, beautifully marked. His color is a dark orange tawny, slightly brindled, and with considerable white. He stands a trifle over thirty inches at the shoulder, and has a good body, with capital legs and feet. He carries himself royally, and when he is put in good condition we believe that he will prove the peer of any one of the breed in the country. He was imported by Miss Arnold, of New York, who will keep him as a companion and pet, a position for which he is well qualified, as his disposition is of the best. We trust that his fair owner will gratify the lovers of this noble breed of dogs by exhibiting him at the show of the Westminster Kennel Club next spring. Monarque was three years old last month. He was bred by Mr. F. Hodding, and is by Sultan out of Annie. He was exhibited at Belfast in 1880, winning first. On board the same vessel there was a capital mastiff bitch, consigned to Mr. Wylie Lade, of Pittsburgh, Pa. Her name is Dinah II. She is one of Miss Hesketh's breed, and is in whelp to Taurus II. (E. K. C. S. B. 9,339). These were all the particulars that we learned about her. Although rather small she is a rare good one, with immense bone for her size. She shows lots of quality, and her owner may well be proud of her. Both Monarque and Dinah II. were purchased for their owners by Mr. W. Graham, of Belfast, Ireland.

A GHASTLY POINT.—Of all the points made by dogs on Tuesday, when thousands of men were out shooting woodcock, none was of more importance than that made near the Rifle Range by a pointer owned by Thomas Morris, of Irondequoit. The dog found several woodcock, but in one bush he was seen to act strangely, as if something other than a game bird was near. He drew up and pointed, and when his master went forward he found the remains of the Italian Giacomo Antonio Alexandrio, who is supposed to have been murdered. Thomas Morris notified his brother, who was near by, and two other men who were in the vicinity, and then informed Deputy Sheriff Standenmaier, who said the remains were probably those of the missing man. The body had been thrown down beside a hole full of water in the swamp, and if the person who carried it there had taken time to throw it into the water, it would probably never have been found. Mr. Morris will receive the reward of $150 offered for the recovery of the body.—*Rochester Journal.*

DUKE OF BEAUFORT.—Mr. J. H. Goodsell's Duke of Beaufort has arrived home from his visit to England in capital condition and looking better than ever. Accompanying him was a bitch that we will notice more fully next week, as we have been unable to learn any particulars regarding her in season for this issue.

THE LAVERACK MONUMENT.—The following additional amounts to the Laverack monument fund have been received by Mr. Herzberg since our report last week: Previously reported, $55; A. H. Moore, Philadelphia, Pa., $20; W. A. Coster, Flatbush, Pa., $2; J. Von Langerke, $2

MR. J. BAILEY'S ENGLISH SETTER DOG "COUNT PARIS."

COUNT PARIS.

OUR illustration this week is of the blue belton English setter dog Count Paris, owned by Mr. J. Bailey, of Roxbury, Mass. He was bred by Mr. A. M. Tucker of Charlestown, Mass. He is 2½ years old, and is by Royal Blue, out of Modjeska. He won first in the open class for native English setter dogs at Boston last May in a capital class, and was claimed at the catalogue price, $200, by his present owner. Count Paris is a very handsome animal of medium size, remarkably well put together, with lots of quality. He is also possessed of fine field qualities, which will be exhibited at the field trials this fall, as his owner is confident that with proper handling he will acquit himself with honor. The cut is by Harry Tallman.

HOWLS ABOUT THE JUDGES.

AS one of the Field Trials of the National A. K. Club occurs Sept. 3, 1882, which is now only a month distant, we have concluded to take time by the pencil, as it were, and publish the following correspondence in advance. We are induced to this course not only as a matter of convenience to the printers, but as furnishing a model for those deep and able critics who may conclude to reserve their remarks until after the 4th of September. Others may follow the proverbial example and simply refer to the printed letters as "them's my sentiments."

LETTER NO. I.

Editor Forest and Stream:

I would like to know, sir, whether it is the design of the stingy and avaricious persons who have got up the system of field trials to attempt to absorb all the sporting dogs of the country by a base and extravagant use of money, and to keep out the poor but honest hunter, who enjoys shooting just as well as they do. Now, sir, just let me say that when these codfish aristocrats have succeeded in raising the standard so high as to be beyond the reach of the laboring classes, they will find themselves without support or countenance. No, sir, let us at once raise the cry of "Cheap dog, for the people, and by the people." BRUTUS.

LETTER NO. II.

Editor Forest and Stream:

While I dislike exceedingly to trespass upon your valuable space about a personal matter, yet I feel that it is my duty to call attention to the management of the late field trial.

Now, sir, this organization issued prospectuses and circulars inviting sportsmen to show their dogs. Acting upon the supposition that I was dealing with gentlemen, I was one of the unfortunate ones who sent a dog. My dog is well known as the celebrated Bang, out of the wonderful Buster, by Clip, out of Sally Out, and thus has all the blood that can be given a dog. He is known throughout our entire district as a pointer dog, and every friend I have on earth united in assuring me of a prize.

Now, if such a dog as this is to be set aside for the bench-legged, skew-eyed, fiddle-headed, lantern-jawed brute that was elected for the champion, why, then, it is time the rules of such trials were being overhauled and repaired.

I might say more, sir, but I scorn to make insinuations "though such were plenty" about the judges. Doubtless they did the best they knew how, but certainly were better fitted to judge asses than dogs. D. D. F. O. O. L.

LETTER NO. III.

Editor Forest and Stream:

The miserable collection of horse-thieves, liars and scoundrels that attempted last week to hold a field trial for the ostensible improvement of dog-breeding was a fine instance of how a petty malignity will defeat itself.

Of course nobody was fool enough to dream that any dog out of "the Ring" would stand any chance of reward; but such outrageous favoritism was a little too strong. In the red Irish cocker class every disinterested party said that Bullface received the ribbon over Towser, although his tail was fully one-sixth inch longer than his unlucky rival. This could not have escaped notice, even by the idiot judges, but for one of them—*the brother-in-law of the man who sold the dog-meat.* This miscreant, while the dogs were being judged, slipped back of the platform and *bit off the extra tail.* I state this on my personal responsibility, and it was noticed by several—as well as by the dog.

Now, sir, I do not like to fight in the dark; so I will say that I refer to Mr. John Smith, the judge in question, and sign myself Yours, J. S. NAKE.

P. S.—I will match my dog Towser for one hundred thousand dollars a side against any dog in the United States not his match. J. S. N.

LAVERACK IMPORTATION.—There arrived on steamship Helmstedt, August 2, consigned to Mr. E. B. Goldsmith, for Mr. J. J. Snellenburg, of New Brighton, Pa., the Laverack setter bitch Queen Laverack. She is by Tory, out of Meg Merriles, and was whelped May 16, 1881. She was bred by Mr. H. F. Grant, Newport, Isle of Wight. She is handsomely marked, black, white and tan, and looks all over a worker. She is entered in both the Chicken Trials and National Derby, and if her performances equal her good looks she will prove no discredit to her high breeding. On the same vessel were Mr. J. H. Goodsell's Duke of Beaufort and a full sister to Queen Laverack, of a younger litter. Duke of Beaufort arrived from his visit to the land of his forefathers in capital condition and is looking better than we ever saw him. The puppy was presented to Mr. Goodsell by her breeder, Mr. H. F. Grant, of Newport, Isle of Wight. She is a blue belton, with slight tan markings, of capital form, with one of the sweetest heads that we have seen in a long time. She gives promise of great beauty when mature, and should she go all right will prove quite an acquisition to the extensive kennel of her owner.

GLASGOW DOG SHOW.

WE are indebted to the London *Field* for our report of the inaugural dog show of the Scottish Kennel Club, which was held at Glasgow, July 25. We have space only for the comments and awards in the pointer, setter and spaniel classes.

Judges—The Rev. J. C. Macdona, Messrs. Geo. Raper, A. Cameron, J. R. Richardson, Thos. Eaton, J. R. Morrison, and Wm. Duncan.

For some time back there has been a feeling throughout Scotland that the various breeds of dogs have not been so satisfactory or creditable to the country as could be desired, and, with a view to remedy matters, a Scottish kennel club has been formed. At present only Scotchmen are eligible for membership, but not a few are anxious that this restriction should be rescinded. The Highland Agricultural show having been fixed to be held in Glasgow on July 25 to 28, the club saw a favorable opportunity for making its *début*. A satisfactory arrangement was made with the Highland Society, and the dog show was held on the same ground. The show gives every promise of proving a complete success, thanks to the energy of the honorable secretary and his hard-working and obliging committee. A liberal schedule was issued, and has been fairly well responded to (475 entries), taking into consideration that more than one important fixture is being held on the same dates; but the club acted very wisely in arranging that all dogs entered for Darlington show would be allowed to leave Glasgow on the night of the 27th.

Pointer dogs, ten entries: As a lot, only second-class; we did not find one amougst them specially worthy of comment. Bitches, fifteen entries: A great improvement here. Bona Belll honored pen 111 with her presence; but, alas! her winning chance was early gone, for she was one of the first lot who had orders to quit. It was evident to a casual observer that Mr. Cameron was not at home with his work; he appeared to get awfully mixed, and a full hour and a half was spent before his task was finished. It is only fair to add that he did get hold of a good bitch in Forest Lily, a very stylish bitch, with nice head and rare body; she was, however, lucky to win. Heath Belle, a very smart white and black, was quite good enough to get into the money, but she failed to meet with recognition. Lady Fan was extremely lucky, as she is hardly good enough for a commendation here.

Setters (black and tan dogs), twelve entries: Before commencing our criticism upon this breed, we must say Mr. Cameron judged them well, and it must have delighted him, equally as well as ourselves, to see such a grand collection of Gordons benched. It has certainly never been our pleasure to have seen such a lot of clinkers penned together. In dogs, Dash III. won; he is well-known. Harry, a twelve months' youngster, is the holder of second prize; he is already a wee bit heavy in his head and ear, but has a capital body, with good coat and feather. Grouse we liked; and Wallace, the third-prize taker, is well made and full of quality.

Black and tan bitches, ten entries, even better in quality than the dogs. Sarah, the winner, was immensely admired; she is a beauty, beaming full of quality, one, if not the best, we have seen for some time. Dinah, vhc., a smart-made bitch, is wanting in color. Dye III. has a few minor faults; these are counterbalanced by her grand legs and feet, and well-shaped body; her hindquarters are good, the being well bent in the stifle. Perarl III. is excellent in color; it will be remembered she took first prize at the Alexandra Palace in 1882

Field Spaniels, eighteen entries. Although a large class, with a few exceptions the quality was nothing very great. Equal firsts were given Zulu and Calstor. The latter is very deficient in his head. Zulu is now well known. Progress pleases us equally as well as Edith, who is a clumber of just fair pretension.

PRIZE LIST.

POINTERS.—Dogs—1, J. J. Pollock's Bragg; 2, J. W. Galloway's Duke of Ayr; 3, C. W. Eastwood's Ken; v h c, J. A. Gilmour's Grouse; h c, H. E. C. Ewing, M.P.'s, Don, R. Ker's Shot, H. Cook's Whig. Bitches.—1, J. J. Pollock's Forest Lily; equal 2, J. G. A. Baird's Nell, J. Borland's Lady Fan; 3, J. R. Anderson's Heath Belle; v h c, J. W. Galloway's Duchess of Coyle.

SETTERS.—Black-and-tan.—Dogs.—1, M. Macdonald's Dash, III.; 2, R. Chapman's Harry; 3, J. Dryborough, jun.'s Wallace; h c, J. Brand's Grouse, J. Dryborough, jun.'s Druid. Bitches.—1, J. G. A. Baird's Sarah; 2, Captain C. P. Priestley's Pearl III., 3, R. Chapman's Dye III.; v h c, J. Henderson's Dinah. Any other variety.—Equal 1, W. H. Calder's Grouse, J. Shorthose's Royal IV.; v h c, R. Ker's Spot, W. H. Williamson's Rap IV.; h c, Captain Scarlett's Gyle, R. Chapman's, Rollo; c, D. McGibbon's Kate.

FIELD SPANIELS (not including Irish Water Spaniels).—Equal 1, J. J. Pollock's Calstor (late Guess), J. Royle's Zulu; 2, J. Moffat's Edith; v h c, J. McNaughton's Watermark (late Beverley), D. Edgar's Clasher; h c, G. McNish's Roger, J. J. Pollock's Progress.

TRANSPORTATION OF DOGS.—Fond du Lac, Wis., July 31, 1882.—*Editor Forest and Stream:* Referring to recent inquiries from various parts of the country with relation to the railway charges for the transportation of sporting dogs and equipments, it may be of advantage to the numerous readers of FOREST AND STREAM who contemplate a Western trip to know that on all lines of the Chicago & Northwestern Railway no charge is made for such service. Baggagemen are ordered to receive and care for dogs, and they are prohibited from even naming or receiving pay for such service. The extended lines of this road reach all the most desirable grounds, and the equipment is first class in all other respects. From a personal experience that extends over a number of years, and many miles travel on this line, the writer can assure brother sportsmen that their canine friends will receive proper treatment at the hands of the employes, and that the uniform gentlemanly treatment received will leave nothing better to be desired.—MILLS.

THE GORDON SETTER.

Editor Forest and Stream:

I have been greatly interested in the discussion regarding the Gordon setter, as I have long been an ardent admirer of this "best of all setters," and believing them to be as pure bred as their English or Irish cousins, and knowing them to be as good as they are handsome, it was with no small amount of satisfaction that I perused the able replies to the vague assertions, and still more vague conclusions, of Vitus, who is evidently befogged in the labyrinths of the cloudy old-time superstition surrounding the early history of our favorite. M. B. strikes out manfully in defence of his friends and deals some telling blows. Mr. Malcolm also hits hard, and Pearce's the armor of Vitus with his own weapon at every thrust. I am only sorry that Mr. Malcolm did not agree with Vitus on one point, and boldly avow that the standard advocated by him was just what he wanted for his own kennel, and that in accordance with his belief he practiced what he preached, for I know of no surer method for the improvement of the Gordon, or of any other strain for that matter, than for those whom we look upon as authority in the matter to not only "clothe their ideas with words" but to reproduce for our inspection these ideas clothed in living flesh and sinew. Mr. Davidson appears to have a level head upon the question of impure crosses, and I have no doubt will greatly enjoy the sarcastic fling of the uneasy spirit of his loved native valley, who emblazons upon his banner the cross of the pointer.

No, the grand old Gordon blood is free from plebeian taint, and may yet be found in all its old-time purity. Give us a proper standard and in a short time we shall see him as of yore in his rightful place among the best of his fellows, the pride and joy of the sportsman's heart. GORDON.

WORCESTER, Mass., Aug. 14.

THE LANDSEER MEMORIAL.

THROUGH the pious care of the surviving relatives of Sir Edwin Landseer, a worthy memorial of that most distinguished painter has been placed in the Cathedral Church of St. Paul. Hitherto the resting-place of the great artist has been marked only by a plain granite slab over his grave in the crypt where his ashes repose, hard by those of Reynolds and Lawrence, of West and Fuseli, and of George Dawe, the English Academician, who, after the peace of 1815, was commissioned by the Tzar Alexandria I. of Russia to cover the walls of one of the vast saloons in the palace of the Hermitage at St. Petersburg with portraits of European diplomatists and Muscovite generals. The new monument to Edwin Landseer is placed in a bay on the southern side of the metropolitan basilica, near to the tomb of Sir John Rennie, the famous engineer, and next to the place of sepulture of Sir Christopher Wren.

The design consists of a mural tablet of marble, adorned with sculpture from the chisel of Mr. Thomas Woolner, R. A. On the upper part of the tablet is a medallion portrait of Sir Edwin, resting on corbels, on which are carved the heads of the four lions modeled by the deceased master for the base of the Nelson Column, in Trafalgar Square. Above the medallion, amid a trophy of fern leaves, is a painter's palette and brushes, while the lower part of the memorial contains a basso-relievo adapted in plastic design from one of the most pathetic and the most popular of the painter's works, "The Shepherd's Chief Mourner," the beautiful picture of the faithful dog which will not be comforted, and watches with inexpressible love and grief the rough coffin covered by the pall, where sleeps the poor Highland shepherd who was the collie's master. The sculptor, or those who counselled him, could not possibly have selected a more touching or a more appropriate excerpt from Edwin Landseer's life-work than this picture of the "Shepherd's Chief Mourner," strongly illustrative as it is, not only of the painter's sympathy with the brute creation, but also of his earnest and life-long adherence to the simple and beautiful axiom laid down by the illustrious Buffon, "The dog is the friend of man."—*London Daily Telegraph.*

DOG BUYERS—COCKER SPANIELS.—Hornellsville, N. Y., August 15.—*Editor Forest and Stream:* I have been greatly interested in the remarks of Col. Tucker and my friend Elmore in regard to canceled orders, and sending dogs C. O. D. I have had some experience in this line, and while both plans are bad, I regard the C. O. D. the worst, and would not send a pup to the President that way. If the order is canceled the breeder still has the pup, but sent C. O. D. the chances are that it will die if returned for want of proper food and care. Of course the correspondence on the spaniel question going on in your columns has interested me also, though I have taken no part in it; but there is one question I would like to ask Mr. Kirk. In his estimate of Benedict's merits, judged by the Cocker standard, he deducts five for length, that is, takes off ten points in all. Will he please tell me why he does so, and also what he would mark Flirt II, for length under the standard? I am glad to find so good an authority as the secretary of the Cocker Club accords Benedict such high figures for body, legs, coat and ears, and out of a possible sixty makes him score forty-seven and a-half. The idea of the Hornell Spaniel Club in purchasing Benedict" was to cross with our native bitches, for although extra field performers, most of them were weedy and bad coated, and Mr. Kirk has fully indorsed the opinion we then had, and have in our breeding found to be fully carried out. Stonehenge's indorsement of the club standard is the deathknell to all growling at our standard; and now let the growlers, kickers and fault-finders just buckle to with us to bring the cocker to the front, on the show bench as well as in our homes and in the field.—J. OTIS FELLOWS.

NOSE OF IRISH SETTER.—New York, Aug. 14, 1882.—*Editor Forest and Stream:* The other day I looked at some red Irish setter pups, three months old, combining the best blood in the country, and was surprised at their having black noses. Now I am an amateur, and do not consider myself a judge, but if I remember rightly Stonehenge says: "The nose should be a deep mahogany red or very dark flesh color." If he is an authority I should think a black nose would count heavily against a red Irish. How is it? I also saw a dog eighteen months old, same blood I refer to, the sisters mentioned pups, who received in the last show a vhc. and he had a black nose. Could he (the dog) receive a "very highly commend," having a black nose, or isn't that point taken into consideration? Providing Stonehenge points are considered the authority, I should think not.—AMATEUR. [Stonehenge says: "The nose should be of a deep mahogany or very dark fleshy color, not pink nor black." The value he places upon a perfect nose is 5 points, and a faulty nose is at a disadvantage of just so many of those points as the judge may decide, and in order to win over a perfect nose the animal must possess the most merit at other points. The same answer will apply regarding his being entitled to a vhc.]

MERIDEN DOG SHOW.—The Meriden Poultry Association, of Meriden, Conn., will hold a bench show in connection with their poultry show, to be held January 9, 10, and 11, at the Town Hall. Mr. Joshua Shute, 193 Hobart street, secretary.

GORDON PUPPIES.—The Gordon Kennel offer for sale a part of two litters of black and tan puppies that will undoubtedly be soon disposed of as they are well-bred, strong and healthy, and very handsome.

THE PENNSYLVANIA STATE FIELD TRIALS ASSOCIATION will hold their trials in November near Pittsburg. The Members' Stake only will be run.

KENNEL MANAGEMENT.

J. H., Portland, Me.—For canker in the ear take of bromo chloralium and laudanum equal parts and dilute with six times their bulk of water; fill the ear and gently knead the base for a minute or two. Two or three applications twenty-four hours apart should effect a cure.

B. A. M., Austin.—I have recently purchased a fine Gordon setter, which of late has refused to hunt while in the field, keeping always at heel. He is from fine stock and I dislike to discard him. Can you give me any advice that will help me? Ans. Your dog has undoubtedly been cowed by harsh treatment. He may be brought round by kindness, but it generally takes a long time and much patience.

T. S. M., Middletown, Conn.—1. Will you please inform me if a setter dog having his tail slightly docked is barred out of a bench show, and if he were the finest animal there with the exception of having his tail slightly docked, although not noticeable, would the prize be given to the next best dog that had never had his tail docked? 2. Must a setter dog to be of pure blood in every instance have his nose and roof of his mouth black. Ans. 1, Sporting dogs are not penalized for having their tails docked. 2. No.

W. P. B.—I have two valuable fox-terrier pups which seem to twitch and shake a great deal. Is it because they grow so fast, or is it because they are out of condition? They seem to be healthy in every other way. Ans. Your description is rather vague. We presume that they have chorea, which is the consequence of distemper. Give them plenty of exercise in the open air, and see that they have good wholesome food, and plenty of it. Would advise one grain sulphate of zinc and one grain extract of gentian to be given two or three times a day for one week. Should there be no improvement, write again, giving full description of symptoms.

S. C. C. Marietta, Ga.—I have a collie dog, six months old, who is badly troubled with canker in the ears. How should it be treated, and if with external applications how can the dog be prevented from tearing them off? His constant scratching keeps the sores open. Ans. We take it for granted that the canker is external. If so, wash the sores thoroughly with warm water two or three times a day and then bathe in strong alum water to which a few drops of carbolic acid has been added; make an ear cap, something after the pattern of a night cap, using any strong material and tie it securely under his chin.

RAZOR, Wrightsville.—1. Would you advise to breed from a beagle bitch and a foxhound? 2. How would the progeny turn out, and what would they be good for? 3. Where could I get some areca nut for worms in dogs, as advised in your columns? I've been trying to get some in drug stores but without success. 4. What is the proper dose? 5. Which number of powder is best for the field? Ans. 1. We do not care to advise in the case, as this is a matter for you alone to consider. 2. We have seen several animals of this cross, some of them very fair workers, both on foxes and hares. 3. See advertisement in this paper. 4. Two grains for each pound that the dog weighs. 5. No. 3 or 4. We have no copy of the paper you want.

W. V., Washington, D. C.—My setter bitch, now seven months old is sick. Her symptoms are: (1) eyes running; (2) hair falling out in large quantities; (3) coughing and choking spells. She is quite lively during the day, but as night comes on seems languid, and her sleep is disturbed by her moaning. She also has fever. She has a lump about the size of a hen's egg just in front of her hind legs. It does not seem to hurt, as it is movable. By advising me what to do in the above case you will confer a favor. Ans.—Your bitch has distemper, with some bronchial symptoms; the loss of hair is the same as occurs in human beings during fevers. Keep kennel well ventilated but dry, feed liberally upon milk diet; and for medicine, two grains of sulphate of cinchonidia thrice daily would undoubtedly be of benefit. Can say nothing about the lump without seeing it; show it to the doctor.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Colonel Thunder. By Dr. Geo. A. Seaman, Marysville, Kan., for blue belton English setter dog, whelped Jan. 11, 1882, by Thunder out of Moll.

Lustro. By Master Sandford Smith, Mexia, Texas, for Gordon setter bitch, whelped June 24, 1882.

Syl, Shel and Raph. By Mr. M. A. Stearns, Dansville, N. Y., for black and white setter dogs, whelped July 8, 1882, by Dr. E. V. Stoddard's Breeze out of his Pearl.

Maid Jane. By Mr. M. A. Stearns, Dansville, N. Y., for black, white and tan setter dogs, whelped July 8, 1882, by Dr. E. V. Stoddard's Breeze out of his Pearl.

Pearl. By Mr. M. A. Stearns, Dansville, N. Y., for liver and white setter bitch, whelped July 8, 1882, by Dr. E. V. Stoddard's Breeze out of his Pearl.

Vanderbilt. By Mr. Geo. C. Sterling, New York, for lemon and white English setter dog puppy by Dashing Monarch out of Leah (Gladstone—Frost).

Rose Dale. By Mr. H. F. McLaughlin, Boston, Mass., for English setter bitch, whelped July 12, 1882, by Bradstreet's John (Waters's Grouse—Daisy Dale) out of his Leah.

Linda. By Mr. C. V. V. Sewell, Tarrytown, N. Y., for liver and white pointer bitch, whelped March 23, 1882, by Guess out of Lou (Toby—Flirt).

Puck. By Mr. H. Drain, Baltimore, Md., for liver and white English setter dog, whelped June 2, 1882, by Harry Elgin out of Princess Nellie.

Ted. By Mr. C. Macleetor, Philadelphia, Pa., for liver and white pointer dog by Sensation out of Dell II. (Duke—Queen).

Carnation and Courage. By Mr. W. Owens, Bergen Point, N. J., for lemon and white pointer dogs by Sensation out of Dell II. (Duke—Queen).

BRED.

☞ *See instructions at head of this column.*

Druidess—Purk. Mr. Wm. H. Lee's (Boston, Mass.) mastiff bitch Druidess King—Ruth) to his Turk (Rajah—Brenda), Aug. 7.

Kathleen—Berkley. Mr. Thos. H. Terry's (Bernardsville, N. J.) red Irish setter bitch Kathleen (Rufus II.—Colleen) to champion Berkley, Aug. 1.

Belle—Tweed II. Mr. Thos. H. Terry's (Bernardsville, N. J.) collie bitch Belle to his champion Tweed II., July 15.

Fan—Kee. Mr. E. F. Mercilliott's (New York) imported Willoughby pug bitch Fan to his imported Rex.

Little Pet—Rex. Mr. E. F. Mercilliott's (New York) pug bitch Little Pet to his imported Willoughby pug Rex.

Jessie—Dash III. Mr. J. H. Roberts's (Camden, N. J.) black and white English setter bitch Jessie (Dashing Monarch—Blue Belle) to Mr. A. M. Tucker's (Charlestown, Mass.) champion Dash III.

Donna—Dash III. Dr. Chas. A. Packard's (Bath, Me.) black and white English setter bitch Donna (Royal Blue—Dryad) to Mr. A. M. Tucker's champion Dash III.

Sylph—Dash III. Mr. Grimes's (Boston, Mass.) black and white English setter bitch Sylph (Drake—Gypsy) to Mr. A. M. Tucker's champion Dash III.

Blanche—Dash III.—Mr. F. E. Perkins's (Providence, R. I.) black and white imported English setter bitch Blanche to Mr. A. M. Tucker's champion Dash III.

Flora—Faust. Mr. Wm. Loeffler's (Preston, Minn.) dachshund bitch Flora (Waldmann—Waldine) to his Faust (Unser Fritz—Waldine), July 30.

Countess Belle—Emperor Fred. Mr. Edward Lohman's (New York) English setter bitch Countess Belle to champion Emperor Fred, Aug. 13.

Leigh Doane—Chief. Mr. I. H. Roberts's (Camden, N. J.) red Irish setter bitch Leigh Doane (Elcho—Rose) to Mr. Max Wenzel's Chief (Berkley—Dick), Aug. 12.

WHELPS.

☞ *See instructions at head of this column.*

Nell. Mr. Wm. H. Lee's (Boston, Mass.) mastiff bitch Nell (Max—Fawn), July 27, twelve (five dogs), by his Turk (Rajah—Brenda).

Zetta. Mr. Wm H. Rea's (Boston, Mass.) English setter bitch Zetta (Royal Blue—Hardy's Diana), July 18, seven, by his Bertram.

Rhobe. Mr. E. F. Spofforon's (Boston, Mass.) English setter bitch Rhobe (Belton—Dimple), Aug. 3, six, by Mr. Wm. H. Rea's Bertram.

Pearl. Mr. A. S. Bishop's (Pittsburgh, Pa.) blue belton Laverack setter bitch Pearl (Prince—Lill II.), Aug. 7, two, by his Fairy Prince (Pontiac—Fairy II.), one bitch (liver and white) living.

Devonshire Lass. Mr. C. M. Marshall's (Cleveland, Ohio) pointer bitch Devonshire Lass (Don—Lady), Aug. 9, seven (five dogs), all liver and white, by Mr. A. H. Moore's champion Donald.

Pearl. Mr. M. A. Stearns's (Dansville, N. Y.) setter bitch Pearl, July 8, six (five dogs), by Dr. E. V. Stoddard's Breeze.

Chloe II. The Riverside Cocker Spaniel Kennels (Claremont, N. H.) imported black cocker spaniel bitch Chloe II., Aug. 7, four (three dogs), by champion Obo (E. K. C. S. B. 10,452).

Gretchen. Mr. Wm. Loeffler's (Preston, Minn) dachshund bitch Gretchen (Unser Fritz—Waldine), July 29, five (one dog), by his imported Bergmann.

Lassie. Mr. Thos. H. Terry's (Bernardsville, N. J.) champion collie bitch Lassie (Cluanish—Trio), July 30, nine (two dogs), by champion Tweed II., four bitches and one dog dead.

Vic. Mr. Thos. H. Terry's (Bernardsville, N. J.) collie bitch Vic, July 18, five (two dogs) by his champion Tweed II.

Fannie. Mr. G. W. Campbell's (Carter's Creek, Tenn.) white native setter bitch Fannie, Aug. 6, eight (four dogs), by his Joe, Jr.

Feathers. J. H. Forshew's orange and white setter bitch Feathers, July 13, seven (five dogs), by Mr. Waterbury's St. Ives (Maida—St. Elmo).

Ida. Mr. T. C. Faxon's (Boston, Mass.) imported collie bitch Isle (Mac—Rosa), July 28, six (three dogs), by Mr. A. S. Apgar's champion Marcus.

Leah. Mr. H. F. McLaughlin's (Boston, Mass.) English setter bitch Leah, July 8, fourteen (nine dogs), by Bradstreet's John (Waters's Grouse—Daisy Dale).

SALES.

☞ *See instructions at head of this column.*

Colonel Thunder. Blue belton English setter dog, whelped Jan. 11, 1882 (Thunder—Moll), by the Mohawk Kennels to Dr. Geo. A. Seaman, Marysville, Kan.

Vanderbilt. Lemon and white English setter dog puppy (Dashing Monarch—Leah), by Col. W. A. Strother, Lynchburg, Va., to Mr. Geo. C. Sterling, New York.

Puck. Liver and white English setter dog, whelped June 2, 1882 (Harry Elgin—Princess Nellie), by Mr. H. B. Vondersmith, Lancaster, Pa., to Mr. H. Drain, Baltimore, Md.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Lustro. Gordon setter bitch, whelped June 24, 1882, by Mr. Geo. T. Leach, New York, to Master Sandford Smith, Mexia, Texas.

DEATHS.

☞ *See instructions at head of this column.*

Druid. Bloodhound dog, 6mos. old (imported Caradoc—imported Juno), owned by Mr. R. B. Houghton, Boston, Mass., Aug. 9, from paralysis.

Pride of the Border II. Laverack setter dog, whelped 1875 (Blue Prince—Cora) owned by Mrs. E. Milby, Houston, Texas, Aug. 7.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE COMING TEAM.

LETTERS received from the adjutant of the British rifle team, within the past few days, give the personnel of the team with some notes of their intended doings here. The party will be seventeen in all—three members of the committee in charge of the match, the honorary secretary of the committee, the adjutant and twelve men selected to shoot. As all the commiteemen are accomplished shots they take the place of the usual reserve force. If any one of the regular team should be unable to perform his duty one of the other gentlemen can at a moment's notice be put in his place and the match proceed without hitch. The list of the party, together with the volunteer organization to which each belongs, is as follows:

Lieutenant Colonel Sir Henry Halford, First Leicestershire Royal Volunteers, committeeman and captain of the team.

Lieutenant Colonel A. H. Walkond, M. P., First Devonshire, committeeman.

Major A. P. Humphrey, Cambridge University regiment, committeeman.

Private H. Smith, Civil Service regiment, honorary secretary to committee.

Corporal H. Bates, First Warwickshire.

Private G. Boulter, Second Cheshire.

Captain W. Caldwell, First Renfrew.

Sergeant J. W. Dods, First Berwick.

Captain F. I. Godsal, Second Buckinghamshire.

Private J. Gooden, Sixth Lancashire.

Lieutenant J. Heap, Sixth Lancashire.

Private R. McVittie, First Dumfries.

Captain H. Mellish, Second Buckinghamshire.

Sergeant P. Oliver, Second Kent.

Corporal C. J. Parry, Second Cheshire.

Major J. Pearse, Fourth Devonshire.

Major Charles B. Waller, adjutant.

The team will sail from Liverpool by the Alaska on the 26th, and will be due in this port some time on Sunday, September 3. They desire to proceed at once to Garden City, where they are to have their quarters. Major Waller asks that arrangements be made for a team to take them from this city to the range in nine o'clock every day. "I thank you," he says, "for the promise of two targets daily. We shall have but a short time for practice and may want to shoot on every available day up the opening day of the meeting. We propose to shoot at 200 yards before Thanksgiving and long ranges after on every practicing day. I note that you do not consider the block foresight and the anti-recoil pad within the terms of the match, and we agree. We also agree that only black and white pads pure and simple be allowed for coloring sights. As you have set apart two days for the match, I assume you will fire short ranges on the first day and long ranges the second day. This being so, do you not think twenty-one shots per man rather a short allowance for so great a match? * * * We should be pleased to fire ten shots at each distance on both days, if agreeable with the approval of your committee, and indeed should prefer that number. * * * * Every man (of the English team) will be provided with a certificate showing that he is an enrolled volunteer and fulfilled the government conditions of efficiency last year. * * * I am very sorry we could not mokage a Palma team. In the early days of our trials I hoped it would be possible, but there are not sufficient good men with the match rifle in the team to encourage us in trying to take the Palma boys you. The expense entailed in sending a team to make up such a team is more than our friends will afford, so we are reluctantly compelled to forego the pleature and honor of meeting your champions. I beg, however, to acknowledge the great courtesy and kindness with which you received our proposal, and thank you for your willingness to waive formalities for the sake of a struggle. As regards our entering a team far the Hilton trophy, I do not know the conditions, but I presume you will allow our committee to enter a team after their arrival should they find themselves able to do so."

It is not at all probable that this suggestion for an increase of the number, of shots to ten per distance would be agreed to by the American riflemen.

RIFLE GALLERY SCORES.

THE list given below contains about one hundred names, giving the best score made by each gentleman at Conlin's shooting gallery, corner Broadway and Thirty-first street, this city. The shooting was done with 22-100 calibre rifle, off-hand, at 200, 500 and 500yds., Creedmoor targets, reduced proportionately for the ranges of the gallery, Winchester ammunition.

A good marksman will do creditable work whether shooting indoors or in the field. In the list can be seen the names of many riflemen who have made a record for themselves before the butts at Creedmoor and other ranges, of which they can well be proud.

At least two-thirds of the noted long and short-range marksmen of this country were first initiated into the sport through gallery practice. With a few days' drill a fair gallery shot will make a creditable showing outdoors.

The muscles can be trained, a proper position for holding the weapon acquired, the nerves brought into better control, and the eye and hand be educated fully as well in a gallery as at the long outdoor ranges. Thus a majority of the rudiments of the sport can be mastered indoors. The wind-gauge and elevations form the subject of the higher branches of the study, and, of course, can only be learned through practical work outdoors. The gallery records, which date back fifteen years, show a marked improvement of each year's shooting over that of its predecessor; and the scores which now stand high are so near being perfect ones that there is little room for further advancement. But a similar claim was made long ago when the present top scores would have been looked on as impossibilities.

200 Yard Target.

L. V. Sone and D. A. Davis, 42 consecutive bullseyes; Fred Conlin, 41; S. W. Sibley, 39; G. W. Hamilton, Dr. E. T. T. Marsh, Dr. H. G. Piffard, Dr. S. T. G. Dudley, C. A. Cheaver, Dr. J. H. Gardener, L. C. Bruce, Wm. Hayes, P. Fenning, W. M. Farrow, M. B. Engle, Maynard Bixby, F. F. Whiting, J. B. Blydenburgh, C. E. Blydenburgh, H. D. Blydenburgh, Geo. E. Rogers, Capt. Wm. Lindsay, T. Fitz, Lieut. J. Robertson, R. S. Simpson, David Trotter, A. H. Cobb and F. L. Genneburgh, full score; Pierre Lorillard, Jr., J. F. Duckworth, Dr. Thomas Wilcox, Judge H. A. Oldersleeve, Judge S. Smith, A. B. Van Heusen, Wm. Hanlon Lees, J. L. Paulding, Dr. F. F. Brown, T. A. Carmen, T. Loyd, D. S. Banks, A. E. Moore, W. H. Chaduck, N. B. Thuson, J. Roebling, J. F. Murch, F. O. Dowd, 49 out of possible 50; Capt. Jos. Ross, A. Pyle, J. W. Hitchcock, R. S. MacDonald, J. Bullus and A. L. Brennan, 48 out of possible 50; P. Lorillard, Jr., 48 at the word; W. C. Southwick, Peter De Nyse, E. T. Davis, C. H. Jork, P. J. Cullian, J. B. Renard, J. A. Ward, E. J. Moore and Wm. Klein, 47 out of possible 50; J. S. Chase, R. H. A. Jones, J. H. Trotter and E. H. Barker, 46 out of possible 50; J. G. Davis, T. Tice, W. G. Wylie and R. S. Coumbes, 45 out of possible 50

300 Yard Target.

P. Fenning, 123 out of possible 125; Dr. E. T. T. Marsh, 120 out of possible 125; Tim. Tice, Wildes, 119 out of possible 125; C. E. Blydenburg, 99 out of possible 100; S. W. Sibley, 96 consecutive bullseyes; L. V. Sone, D. A. Davis, J. B. Blydenburgh, full score; Pierre Lorillard, Jr., Fred Conlin, E. T. T. Marsh, 49 out of possible 50; C. A. Cheaver, M. L. Riggs, L. C. Bruce, T. Titz, 48 out of possible 50; F. G. Fullgraft, 47 out of possible 50; Wm. Hayes, Fred Kessler, 46 out of possible 50; F. G. Holton, C. G. Panier, E. B. Barker, William G. Foulker, 45 out of possible 50; M. B. Engle, 34 out of possible 35; J. B. Warren, 33 out of possible 35; Wm. M. Farrow, 32 out of possible 35.

500 Yard Target.

David A. Davis, L. V. Sone, full score; Fred Conlin, 49 out of possible 50; H. A. Oldersleeve, 50 out of possible 60; J. F. Duckworth, 46 out of possible 50.

CREEDMOOR, Aug. 9.—The last competition but one in the series of contests designed to afford practice to those who propose to enter the competitions for places on the American rifle team in the international military match was shot under the supervision of Lieut. A. H. Weston. There were 15 entries. Among them were M. D. Hinds, O. A. Morris and D. H. Ogden, of the Twentieth Separate Company, Infantry, Binghamton. At the conclusion of the contest at 600yds. the riflemen decided by a vote of 10 majority not to take a recess for luncheon, but to continue through the recent stage.

The wind blew a "fish tail" breeze from right to left and from the rear of the firing points towards the butts, during the day, the elevations were found essential, and it became necessary to watch the windvery closely, as it frequently changed from "6" to "9" o'clock on the wind dial between the time a marksman took his position and the moment he was ready to fire. Under these conditions the scores were not very high. Following are the scores made, the highest attainable number being 210 points:

	First Stage.	Second Stage.	Total.
Capt T W Wilson	74	92	166
Capt S A Day	86	76	162
Sergt J L Paulding	89	73	162
Sergt A Van Heusen	90	70	160
Col G E P Howard	83	76	159
Sergt T J Dolan	82	75	157
D H Ogden	83	74	157
N D Hinds	91	61	152
Sergt J McNevin	82	59	141
Capt J L Price	78	58	136
Major L E Brown	63	64	127
Sergt N D Ward	75	51	126
O A Morris	89	34	114
Sergt J S Shepherd	73	28	101
H C Broun	68	24	92

The Rapidity match is a novel contest which interested many spectators. When it was first instituted at the beginning of the season there were numerous competitors, but the skill manifested by three regular army officers frightened all the other competitors from the field. The distance covered was 200yds. Each competitor was permitted to fire as many shots as he could at the target in one minute. Each rifleman fired several scores, the best of which are appended: R. T. Hare, 74; Capt. S. A. Day, United States army, 82; Lieut. S. E. Allsee, Springfield Armory, 49; M. W. Bull, 45; Sergt. Thomas J. Dolan, Twelfth Regiment, 34.

Aug. 12.—The principal match was the third competition of the August International Practice Match, which is shot under precisely the same conditions as the great event of September. The distances are 200, 500, 600, 800, 900 and 1,000yds; seven rounds at each without sighting shots; positions standing at 200yds, prone at 500 and 600, any at the others; weapon, any breech-loading military rifle; no cleaning of rifles except between ranges; no wind gauges or lateral motion of sights permitted. There were fifteen entries, the list of competitors including Mr. Lower from Colorado, Mr. Atkinson from Pennsylvania, and Colonel Howard of New Jersey. There was a "six to eight o'clock" wind, tricky and pretty stiff; the light was very good. Altogether the conditions were average, and the record as it stands is highly creditable. The highest possible total for each range was 35 points; for each stage, 105; for the entire match, 210. The scores running:

	First Stage.	Second Stage.	Total.
T J Dolan	91	93	184
T W Wilson	87	87	180
S A Day	97	77	174
S A Day	93	78	171
J McNevin	80	89	169
G A Wells	92	68	160
M D Hinds	81	77	158
J L Paulding	86	71	157
J L Price	86	66	152
D R Atkinson	88	64	152
Col G E P Howard	89	58	147
N D Ward	76	70	146
O A Morris	80	66	146
A B Van Heusen	86	49	135
J N Lower	64	59	123

Under the rules of the series of matches, of which this was the last, the total scores to be credited to the end of the season, as follows: To the competitor making the highest aggregate complete score in any three competitions (determined by adding together the highest complete scores made in any of the three competitions, a gold medal. To the second highest, as above, a silver medal, and to the third highest, as above, a bronze medal. The winners, and their totals out of a possible 630 points are: T. W. Wilson, 509; S. A. Day, 508, and T. J. Dolan, 505.

GARDNER, Mass., Aug. 10.—There was a match at Hackmatack Range, in this town, to-day, between the Massachusetts Rifle Association and the Gardner Rifle Club. The inch ring and Creedmoor target was combined was used; distance, 200yds. The score will tell the story:

The Rifle Association.	R.	C.	R.	C.	R.	C.	Totals.
D M Jewett	91	47	100	38	78	44	279—129
F J Rabbeth	91	47	80	44	84	46	255—137
J B Fellows	88	44	73	42	94	48	255—134
H G Bixby	76	42	79	44	94	48	249—134
L L Hubbard	84	45	86	47	70	45	240—137
W Charles	81	47	83	46	75	44	239—137
R Davis	71	44	78	45	80	44	229—133

Totals							1917 1076

NEW YORK, Aug. 18.—On the 7th and 8th the German-American sharpshooters held their fifth shooting at Union Hill, Schutzen Park. The shooting was at 200yds., German ring target. The following are the prizes won: R. Lettler was crack shot, shooting with a handsome score of 69 to his credit, and was presented with a gold medal and $25 in gold. Target of honor—B. Lettler, 1st prize; G. Meinhardt, 2d prize; H. Oehl, 3d prize; W. Meyer, 4th prize; C. Judson, 5th prize.

NEWARK SHOOTING FESTIVAL.—The Newark Rifle Association will hold their first annual picnic and festival at the Shooting Park, South Orange avenue, on Monday, 21st. There will be a prize shooting match for teams of five from any regular organized rifle association in the State. Teams may re-enter; 5 shots per man; distance, 75ft.; Ballard rifle, cal. 22; shooting to be done on the Zettler ring target; $50 in cash prizes. There will be individual shooting for cash prizes; re-entries allowed; 3 shots per man; all shooting to be done on the Zettler ring target and under rules of the National Rifle Association; distance, 75ft. The shooting will commence at 1 P. M. Committee of arrangement on shooting, S. Simonds, J. K. Walsh and G. M. Townsend. Officers—President, J. H. Huegel; Vice-President, J. K. Walsh; Treasurer, G. M. Townsend, Secretary, A. C. Neumann.

WORCESTER, Aug. 10, 1882.—A lovely day greeted the members of the Worcester Rifle Association on the occasion of opening their matches to-day. A large assembly of members shook hands over the auspicious signs of a heartily interest manifested in their new departure. Rifle shooting is, par excellence, a gentleman's pastime; his habits must be good, or pay the penalty of a low record in the score book. At the meeting for practice, a generous rivalry stimulates each member to do his best "possible," while he is always glad to give a hearty handshake to the fortunate winner. The weather conditions were such as are known as sunshine and clouds, with the former prevailing. The wind blew down the range at from 7 o'clock to 5 o'clock, and was what is called fish-tailed, sometimes blowing quite fresh and then suddenly leaving the flags drooping as if their occupation was gone. This calls for great variations in wind-gauging and is a test of the shooter's judgment.

At 2 P. M., the executive officer called the men to the business before them, and scores were made in the order named:

Creedmoor Match.

A L Rice	45555	54544	—46	C D Eames	54444	44445	—42
V W Eames	54554	44354	44	S B Winchester	44445	44445	—42
Moses Carter	54544	54444	—43	J W Murphy	44443	23445	—88
F Wesson	54554	44344	—42	F Henry	45433	53443	—88

Massachusetts Match.

S B Winchester	9	11	11	11	10	11	10	10	10	—104

H T Farrar	10	7	11	6	7	12	5	10	2	9— 79

VETERANS AT THE RUTTS.—Wadsworth Post 77, G. A. R., held their annual picnic at Lion Park, N. Y., Aug. 8, and the vets passed away the afternoon in practicing at the short-range butts with the following result: The first and second prizes, confined to veterans, were won by Wm. Beebe, Jr., and Fred S. Gibbs, on scores of 51 and 50 out of a possible 54. The following scores were made: Wm. F. Kirchner, of Post 75, 41; Dr. E. T. P. Marsh, of Post 140, 49; John Jenny, of Post 24, 41; Mahnenholy, of Post 32, Zersener, of Post 75, 51; W. F. Phelps, 50; Daniel Rhone, 43; Jas. H. Donovan, 44, S. G. Senlon, 43; John Harrington, 43; Clements Kunzman, 42; Wm. Lobin, 45; Geo. Stewart, 43; J. W. O'Brien, 49; John Beer, 44; Fred W. Bilcke, 45; Anton Muller, 39; Fred Gleason, 39. W. F. Phelps won a tie medal for making the lowest score. Conditions—The 3 balls to hit the target. Score was, 3 1 2—6. The All-Comers match was headed by Zeller with a score of 50, Dr. Brown, 48; Woods, 46; Sergt. Wallace, 40; Beppler, 45; Adler, 41; Mehrenbach, 41. The shooting was in the charge of James S. Conlin.

THE AMATEUR RIFLE CLUB.—At Creedmoor on Aug. 12 a very remarkable long range match, regular sporting rules, was shot by members of the Amateur Club, and four of the six gentlemen who are to shoot the match with the Victoria Rifle Club of Hamilton, Ont., made the remarkable average of 213⅓ out of a possible 225 points. The scores were as follows:

Name	800yds.	900yds.	1,000yds.	Totals.
W. W. De Forest	71	73	73	217
J. W. Todd	74	71	71	216
R. Rathbone	71	67	70	211
J. H. Brown	71	71	68	210
F. H. Holton	72	71	58	201
D. F. Davis	65	61	50	176
L. Weber	79	Retired.		

The match with the Canadians was set down for Wednesday, August 16, with conditions as follows: Teams to consist of six men each; distances, 800, 900 and 1,000 yards, 15 shots by each man at each distance. The members of the club from which the team is to be selected are Ransom Rathbone, W. W. DeForrest, J. H. Brown, L. Weber, Dr. S. T. G. Dudley, Thomas Lamb, D. F. Davids, and J. W. Todd. Mr. Weber will be the Captain and Mr. Todd Adjutant of the team.

IRISH-AMERICAN RIFLEMEN.—The Irish-American Rifle Club, of New York city, and the Irish-American Rifle Association, of New Haven, Conn., are to be represented by teams of nine men each, in a rifle match at New Haven on Wednesday, September 6. The conditions are: Distance 200 yards; 10 shots per man.

LIEUT. PARTELLO.—In the Fort Keogh rifle scores given in our last issue, for "Lieut. J. M. T. Partelle," read Lieut. J. M. T. Partello. Lieut. Partello will be remembered for his Washington record. When a member of the Columbia Rifle Association of that city he made the first 224 with the Remington rifle at 800, 900, and 1,000yds. The competition, of which the scores were given last week, was shot with Springfield rifles, fixed ammunition, open sights, one sighting shot each man. The weather was horrible, and the scores good considering the military rifles and high winds. Lieut. Partello, Sergeants Unger, Pepple, Kuhn, Weeks, Corporals Rogers, McIntyre, Quinn, and Musician Banan are qualified marksmen, and will be sent to Fort Snelling, Minn., for the final competition.

THE TRAP.

ENFIELD, N. C., Aug. 8.—There was shot to-day, under the auspices of the Enfield Gun Club, a very pleasant and interesting match at glass balls, for a handsome side-bar buggy. Mr. E. B. Englehard went down to represent the Raleigh Gun Club.

The conditions of the match were: ten glass balls from a Daveapport revolving screened trap, Bogardus rules; twelve bore-guns to shoot at eighteen yards, ten-bore at twenty-one yards. The score in full stood:

Bullock	1011111100—7	Bellamy, S.C.	1111000111—7
Englehard	1111111111—10*	Hassard-Short.	0111011117—7
Bellamy, S.C.	0111100111—7	De Petway	1011101094—7
Dr Petway	1011011111—8	White	1111011100—7
Reid	1111101100—7	Clark, H J	1110011011—7
Clark, H J	1111011011—7	Engelhard	1111011111—9*
Engelhard	1111111111—10*	Robinson	0111111110—7*
Hunter, E L	1101111111—9	Robinson	0111111110—8
Beal	1100011111—7	Battle, O	1111111110—9
Robinson	0111110111—8	Dr Petway	1110110111—8

*Twenty-one yards rise.

It will be seen from the above that Mr. Engihard won and the Raleigh Gun Club is again victorious. Members from the Tarboro, Scotland Neck, Wilson, Nash county and Enfield gun clubs competed.

WORCESTER, Mass., Aug. 9.—At the Coal Mine Range, to-day, there was a contest for the State badge won a few weeks ago by the Worcester Sportsmen's Club. The visiting club was from Marlborough. Before the shoot a protest was entered against G. N. Smalley and G. W. Clark, of Westborough, shooting with the Marlborough Club. Each man was allowed 20 balls, thrown by a Holden trap, with 18yds. rise. The following was the result:

Marlborough.

G W Clark	11101 11111 11111 11111—19

PROVIDENCE, Aug. 10.—The Narragansett Gun Club held the third competition for badge to-day at the Old Washington Trotting Park, Pawtuxet Pike. We used for the first time a new Cary trap, which threw the balls much swifter than the card trap we had been using, and lower scores were the result, the following being the score made:

W H Sheldon	11101 11111 11110 10111—17
J B Valentine	01011 11111 11111 11110—17
T S Hall	01011 01111 11111 01110—15
E W Tinker	00101 11100 11011 11010—12
P H Baker	11100 01101 11001 01001—11
T W Kelly	01011 11111 11011 10111—16
G W Cary	11011 11101 11011 11011—16
S D Greene, Jr.	0 111 11111 11111 01111—18
E Devolve	01000 01000 10111 01001—8
"J Brown"	10111 10111 11111 11011—15
W G Crandall	10101 11101 11010 11101—14
F W Bufferton	11011 11111 11111 11101—17
L Bennett	01110 00000 00111 00100—7
"W Jackson"	01000 10111 11111 01100—12
G T Crandall	11011 11100 11011 11111—16
W H Waterman	11010 11101 11111 11111—17

Then followed sweepstake shooting. First sweep at balls, W. Sheldon, and W. Crandall 1st; Greene 2d and Hall 3d; second sweep at balls, Sheldon 1st, Valentine 2d and Hall and Brown 3d; third at balls, Waterman 1st, Valentine 2d and Sheldon 3d; fourth at clay pigeons, Sheldon 1st, Valentine 2nd; fifth at clay pigeons, Sheldon 1st, Valentine 2d.

NORTH CAROLINA.—There is to be a State glass ball shooting tournament, at Hendersonville, on August 15, 16 and 17. The following prizes are offered: Citizens' purse, $100 cash. Two-thirds of purse to winning team, balance to be divided between the two teams making next best score. Team match: Purse $50. Two-thirds to winning team, balance divided between the two teams making the next best score. Sweepstakes: Entrance $1. Prize, a round trip ticket from Hendersonville to New York, good till November 1. Team match: Purse $25. Two-thirds to winning team, balance to be divided between the two teams making next best score.

AUBURN, Me., July 20.—A friendly match was shot here, July 25, between the Androscoggin Club, of this city, and the Cushnoc Heights Gun Club, of Augusta, Maine, for a team prize of a split bamboo fly-rod (to be disposed of at a live-bird shoot by the club winning it) and prizes for individual scores, given by the Androscoggin Club. The shooting was very good, as may be seen by the following scores. Conditions, 20 balls each man; Card rotary trap; 18yds.; ties 5 balls; 25yds.

Androscoggin Club.		Cushnoc Heights Club.	
J B Daniels	20	Gen W S Tilton	20
F M Leavitt	19	H A Thorndike	20
C F Nason	19	J E Badges	20
F A Nason	19	C O Tebbets	20
J F Pettingill	19	E W Moore	19
A M Tripp	19	F E Baker	18
M Burleigh	18	De Whitehouse	18
H D Donovan	18	J L Cottrell	18
Geo Gifford	18	W T Tyler	18
Sol Shaw	18	J L Mackie	18
H F Farnham	18	J L Fish	16
G H Randall	16	E G Adams	16
J R Bilcke	15	James Fish	14
J B Littlefield	15	F M Bowman	12
Total	351	Total	347

Ties for individual prizes, 5 balls, 21yds., first prize, silver cup:

Gen. W. Tilton 5, H. A. Thorndike 0, J. E. Badges 5, C. O. Tebbets 5, J. B. Daniels 0.

Second ties on first.—Gen. W. S. Tilton 10, Badges 5, Tebbetts 10, J. Badges wins cup.

Ties for second, ammunition case.—E. M. Leavitt 5, C. F. Nason 5, E. G. Nason 5, J. F. Pettingill 5, E. W. Moore 3, A. M. Tripp 0.

Second ties for second.—E. M. Leavitt 5, C. F. Nason 5, E. G. Nason 5.

Third tie for second.—Leavitt 5, C. F. Mason 1, E. G. Mason 0, J. F. Pettingill 1.

Fourth tie for second.—E. M. Leavitt 1, J. F. Pettingill 5, wins second.

Third prize, Nason's patent landing net.—M. Burleigh 5, H. D. Donovan 1, Geo. Gifford 4, H. F. Farnham 5, Solshaw 5, F. E. Baker 5, Dr. Whitehouse 5, J. L. Colcord 1, W. T. Tyler 0, J. L. Mackie 5. Second tie, third prize.—Burleigh 5, Gifford 0, F. E. Baker 0, Dr. Whitehouse, 5, J. L. Mackie 1. Third tie.—Burleigh 5, Whitehouse 5. Fourth tie.—Burleigh 5, Whitehouse 5. Fifth tie.—Burleigh 5, Whitehouse 5. Sixth tie.—Burleigh 5, Whitehouse 5. Seventh tie.—Burleigh 4, Whitehouse 4. Eighth tie.—Burleigh 5, Whitehouse 0. Burleigh wins third. At the last, Mr. Whitehouse (Old Broadsides), getting out of ammunition, changed guns, or the two might have had quite a shoot before deciding which was the better man. As will be seen by the score, the match was very close, the lead changing several times during the shoot and the ties quite exciting. Mr. Badger shot exceedingly well, shooting all straight without a single miss for the entire day.

An hour's time remaining, a short sweep was indulged in, Card trap, 5 single balls, 18yds.; class shooting, ties, miss and out: Moore 5, Badger 5, Tilton 5, Hodkins 5, Nason 5, Donovan 5, Shaw 5, Colcord 4, Farnham 4, Bowman 4, Adams 4, Littlefield 4, Baker 4.

Ties on first, miss and out: Badger 5, Nason 5, Moore 3, Donovan 24, Shaw 19, Tilton 3, Hodkins 1. Badger and Nason divide.

Ties on second: Baker 0, Littlefield 5, Colcord 0, Farnham 0, Bowman 0, Adams 0. Baker wins.

LONG ISLAND FORESTERS.—Regular monthly shoot of the Long Island Foresters for the club gold medal; seven clay pigeons, handicap rise:

Sabin, 25yds	0010111—4	Field, 21yds	1000111—4
Hawkes, 25yds	0110111—5	Banks, 23yds	0100001—2
Ryan, 25yds	0011000—2	Coulthard, 25yds	0011000 3

Hawkes winning the medal. A sweepstakes at five live pigeons, handicap rise:

Ryan, 25yds	10111—4	Field, 21yds	01110—3
Coulthard, 25yds	01110—3	Hawkes, 25yds	10111—4
Sabin, 25yds	100w	Banks, 23yds	01110—3

In shooting off the tie, "miss and go out," Ryan won.

TORONTO GUN CLUB.—Toronto, Aug. 12, 1882.—The ties of the late shoot were shot off at the Woodbine yesterday, as follows: 5 birds, 29yds. rise:

I Taylor	11111—5	E Perryman	11111—5
I James	11111—5		

As all tied again; the distance was increased to 31yds. rise, 3 birds:

I Taylor	111—3	I James	110—2
E Perryman	111—3		

The ties then shot, miss and go out, 31yds. rise, 3 birds: I. Taylor, 100—1, second prize; E. Perryman, 110—2, first prize.

CLINTON, Mass., Aug. 12, 1882.—The Clinton Sportsman's Club is still in a flourishing condition. We now have over fifty members. Ten of them went to Ayer on Thursday and shot a match with the Union club of Ayer. Score:

Clinton.		Ayer.	
Sampson	5 5 5 4—19	Sawyer	1 5 2 3—11
Harriman	4 5 3 5—17	Wright	3 2 3 3—10
McKay	3 4 3 4—14	Parker	3 5 4 4—16
Gallup	2 2 4 4—12	Jones	3 5 2 4—14
Shedd	3 5 3 3—14	Willard	5 2 3 0—10
Burton	5 1 4 2—12	Haskell	4 5 4 4—17
Carr	3 2 2 5—12	Stone	4 5 5 4—18
Truell	3 4 5 —15	Pierce	1 2 3 4—10
Smith	1 3 2 2— 8	Hartshorn	3 2 5 5—14
Jackson	2 3 4 3—12—136	Bigelow	2 4 3 2—11—131

MOBILE, Ala., August 10.—The regular medal shoot of the Gulf City Gun Club took place yesterday. Handicap, 20 balls. These are the four highest scores: H. P. Vass, 21yds., 20; J. S. Alexander, 21yds., 18; T. W. Williams, 21yds., 16; W. B. Holt, 21yds., 15.—O YES.

New Publications.

ADVENTURES IN THE WILDERNESS.

The book recently published by the well-known guides of the Rangeley Lakes region, Messrs. Baker and Dantforth, entitled "Hunting and Trapping," is a book most interesting to all those who take delight in the pleasures of forest and stream.

The story is founded on a journal kept by them during their first winter's hunting on the waters of the Upper Magalloway and its tributaries, a region at that time unknown, except to the wild beasts which infested the forest, and, perhaps, to the Indians. It is written in a plain, simple style, which renders it the more interesting, and should take the foremost rank among books of outdoor life and sports for boys. It gives in detail all the hardships, pleasures and successes which they encountered during their long separation from the busy world, and shows that they were endowed with that pluck and endurance which has rendered them such faithful and efficient guides.

By those who know them (and they are many) this work will be eagerly sought for and read with pleasure; while those who have not the pleasure of their acquaintance may rest assured that the facts are in the main correct, and will be surprised to learn that the book was written by men who have passed almost all their lives in the woods, far away from civilization, and that their education has been acquired, not at the academy and college, but by contact with men of learning who make the wilderness their summer retreat, by a close observation of what they say and do and by a careful reading of such works as have come into their possession.

This work is the forerunner of another and larger volume, the issue of which will be an additional source of pleasure to the lovers of that romantic region, as it will describe other and later explorations made by them, and supplementary to those described in the volume just issued. It contains many facts of importance to those who intend to make a winter hunting trip into the northern woods, and the careful reader will not only take much pleasure in perusing this book, but will feel, when he has finished, that he has learned many things of value to himself, and which will aid him in his future hunting trips.

Capt. Barker has already given two courses of lectures on woodcraft in Boston, and has always been enthusiastically received by his numerous youthful hearers, while his hearers of riper years have been many and constant in their attendance, and this new effort of his and of his comrade of Parmachenee is already an assured success.

Yachting and Canoeing.

FIXTURES.

Aug. 18—Royal Nova Scotia Y. S., Ocean Match to Halifax, 1 prize
Aug. 19—Beverly Y. C., Open Races.
Aug. 19—Jeffries Y. C., Club Match.
Aug. 22—Jersey City Y. C., Ladies' Day.
Aug. 22—Oswego Y. C., Annual Matches.
Aug. 22—Dorchester Y. C., Second Championship Race, Cat-Rigs.
Aug. 23—Quincy Y. C., Fourth Club Match.
Aug. —Southern Y. C., Interstate Regatta.
Aug. 23—Hull Y. C., Club Championship Match.
Aug. 24—New Bedford Y. C., 2d Class Schooners, 1st Class Sloops. $100, $75. Principal Clubs.
Aug. 26—Beverly Y. C., Open Regatta, Marblehead.
Aug. 28—Bay of Quinte Y. C. Open Matches.
Aug. 29—Salem Bay Y. C., Championship Sail-off.
Aug. 29—Hull Y. C., Club Championship Match.
Sept. 2—Beverly Y. C., Third Championship Match, Marblehead
Sept. 2—Jeffries Y. C., Club Match.
Sept. 2—Royal Nova Scotia Y. S., Mayor's Cup and third prize.
Sept. 4—East River Y. C., Fall Matches.
Sept. 5—Dorchester Y. C., Third Championship Race, Cat-Rigs.
Sept.—Hull Y. C., Club Championship Sail-off.
Sept. 4—Quincy Y. C., Fifth Club Match.
Sept. 5—Jersey City Y. C., Ladies' Day.
Sept. 7—Royal Canadian Y. C. Club Race.
Sept. 8—Royal Canadian Y. C. Open Matches.
Sept. 9—Merrimack Y. C., Open to All Match.
Sept. 10—Quaker City Y. C., Harbor Cruise.
Sept. 16—Dorchester Y. C., Open Races, Cat-Rigs.
Sept. 16—Royal Nova Scotia Y. S., Three Classes, one prize each.
Sept. —Royal Nova Scotia Y. S., Yachts ringhies, sailing race.
Sept. ——Royal Nova Scotia Y. S., Charlottetown, P. E. I.
Sept. 19—Jersey City Y. C., Ladies' Day.
Sept. 24—Quaker City Y. C., Harbor Cruise.
Oct. 1—Quaker City Y. C., Closing Cruise.
Oct. 3—Jersey City Y. C., Ladies' Day.

IN OUR TOW.

WE predicted three years ago that in due course of time, all journals would be found in tow of FOREST AND STREAM. That prediction was refuted time and again as the wildest flight of a person stark mad, and yet that prediction has now come to pass.

Next to the victories of the cutter the submission of our highly esteemed and exceedingly able contemporaries to FOREST AND STREAM doctrines, forced from such unwilling heads by the irresistible logic of events, warms with exceeding joy the innermost cockles of our heart.

We might cite by the column to prove the stultifying, humble pie now being swallowed by those who were loudest in their vicious denunciation of ourselves and the principles we advocate; we might return with compound interest the hard thrusts, the gutter slang, the mud thrown at a subject whose steady aim and only sin has been the improvement of our yachting fleet and the education to a sailor standard of those who sail for sport; we might revel in most damning quotations to prove our erstwhile critics blatherskites and traducers of malignant and incapable stripe; we could strike them with words from their own mouths to bow them down in shame—but in this, the hour of our triumph, FOREST AND STREAM forbears, and extends to all its converts the generous sympathy of a victor in the great battle of type inaugurated in these columns and crowned at last with the confessions of its contemporaries, after one of the most prolonged fights, sustained efforts and complete success witnessed in sporting journalism.

And we are willing that our friends should explain away their discomfiture as best they can, for hedge and qualify as they may, the great public cannot be deceived. The record is written in cold indelible type a thousand times that FOREST AND STREAM stood alone for long years holding at bay the entire yachting press of America, both lay and professional, and fought for the cutter's superiority against odds which would long ago have swamped any pen but the quill engaged on the side of truth and the right.

Nor can we be robbed of the sweets of the cutter's ascendency, nor the credit which is our due in taking the stand we did, *before* the cutter thrashed fresh brains into obtuse heads.

It is the old story of Columbus and his egg over again. *After* the cutters had supplied indisputable evidence of their speed and qualities our highly esteemed and exceedingly able contemporaries, and with them the whole baud of the opposition, swing into line and chant praises to the gods they had formerly kicked from their company with disgust and covered with opprobrious epithets which would have sunk the cutter out of sight for twenty-five years to come but for the protector and champion the sailor's yacht found in these columns. Figuratively the cutter has been crammed down their throats, and FOREST AND STREAM did the cramming, backed more recently by victories now a matter of history.

But in the dawn of the new era let the past sink into oblivion, and with the knowledge of having our contemporaries effectually in tow we congratulate them upon the light at last flickering across their horizon. One great lesson has taught them where to look for the guiding star in the future, and when faint of heart and in backsliding mood let them take courage by a study of the journal which single-handed has brought about a revolution in the model and rig of a nation's pleasure vessels.

Confession and new creed of faith of our highly esteemed and exceedingly able, though a little late, contemporaries, we subjoin for general edification and the substantiation of this journal's claim as the pioneer of reform and leader of yachting thought in America.

[From the New York World, Aug. 9.]

"The race for the cups offered by Mr. Ogden Goelet, the owner of the schooner Norseman, was sailed here to-day and was an extremely successful affair The cutter Oriva has covered herself with glory and has proved conclusively that the cutter model has the most speed. The result of this race will work an entire revolution in American yacht models, the advocates of broad and shallow centerboards being obliged to admit that the day for such models has passed."

[From the Herald, July 15, Aug. 7 and Aug. 9.]

"The cutters were left hull down to fight it out among themselves. It required a great deal of faith to believe that type of vessel capable of speed. * * * * The race also demonstrated that the yachtsmen who have persistently derided the cutter type of vessels must admit that they have been mistaken. The Oriva not only did well, but was the first sloop to pass Fort Adams, and throughout did magnificently. It was a pity that she did not have the Gracie and Fanny to sail against, as it is very certain she would have shown them a trick or two that would have been far from pleasant. In all the runs of the cruise and in the race of Saturday she opened the eyes of those who never would see anything meritorious in this type of craft. * * * * The cutter Oriva now with a name for great speed earned by honest and legitimate hard work and excellent management. * * * * Another surprise was the manner in which the Oriva was sticking to the big sloops—Fanny and Gracie—in fact, the cutter reached the buoy in advance of the Gracie, which was a particularly big feather in the cap of her owner."

[From the Spirit of the Times, Aug. 12.]

"The cutter Oriva proved conclusively that the cutter model has the most speed. This race must create a revolution in American models; the advocates of broad and shallow centerboards, must admit the day for such models has passed."

ORIVA.

WELL done, honest little ship, and well sailed by her gallant owner, too. FOREST AND STREAM extends its starboard flipper with congratulations. Oriva having risen into prominence as a fast vessel, and as the last straw which broke the camel's back of opposition, as the peg so well driven in the rise of cutters in America, has now become an object of national attention, and to her influence in gathering the misguided from the by-paths of darkness and shedding light for their guidance, we doff our cocked-gear in appreciation. Oriva has outdone herself. Though FOREST AND STREAM has insisted this cutter should be given credit for fair average performance at least, we had never expected the display she made of such big sloops as Gracie and Julia, nor yet the manner in which she outpointed and held big Fanny, the fastest smooth-water machine of the first-class ever floated in American waters. Oriva is not an exact reflection of her Harvey design, as her builder failed to take off the after body from the deep sections, as it would have been wise to do. The speed she has developed gives an inkling of what might have happened with absolute fairness and close adherence to original intentions.

From excellent authority we have received an explanation of her apparent lack of speed in her earlier career. Her copper had been thickly oiled with a certain preparation, which stuck to the metal and hardened in the salt water, so that barnacles and slime clung to the mixture like grim death, the fact of her being coppered diverting attention from that cause of retardation until finally a close examination revealed the real state of affairs. We have little doubt but that this is the true explanation of her poor sailing during the Seawanhaka cruise, for of all times, the superiority of the cutter ought to be most manifest in light winds, as FOREST AND STREAM has often sought to impress as conformable to the teachings of naval science. In such weather the speed is so low that wave-making does not yet exist as a factor of resistance, skin friction being the principal hindrance to be overcome. The greater the momentum of displacement in proportion to her wetted skin, the better will she hold the speed once acquired, and the steadier will she forge through fickle spots in the airs. The less her momentum, the sooner will the drag of friction be felt, and a loss of speed the consequence. We have for this reason combatted with much force the old school doctrine that great weight was a hindrance to speed, as it was so much to be "lugged" in "our weather."

The successful boat in paltry weather ought not to be sought in the combination of the least weight and smallest draft, but on the contrary, in the greatest weight clothed in a form having the smallest area of skin in proportion to the weight, exactly the opposite to what has been all along attempted in our sloops, and the secret of Oriva's recent work in light weather, as well as some of the victories won by Madge and Maggie over our crack sloops under like conditions of weather. Appreciating this truth, we have had full confidence in the adaptability of the cutter to "our weather" especially, and have persistently pointed out this quality as one of the merits upon which we have demanded her introduction. As a light-weather flyer the cutter cannot be beaten upon her worth by any sloop of the same grade of perfection, though it is, of course, always possible that a really good sloop should outsail a cutter of inferior quality. Merely dubbing a boat of some depth and a certain rig a cutter, cannot make her fast unless her design is wrought out in adherence to correct principles. With the well-known speed of really good cutters in light winds in mind, we venture the assertion that the handsome little Muriel would astonish all hands, as the Oriva has done, if her best trim and condition were got. We have ourselves sailed her in a circle around a well-known fast sloop on a light day, and there is no reason why she cannot repeat the performance when in proper form. In a breeze she has also given proof of her speed upon several occasions though failing to haul the prize for causes not dependent upon her racing qualities.

Now that the great speed and close windedness of the cutter is frankly conceded on all sides, we believe that upon further acquaintance prejudice against them as cruisers will likewise turn into praise and admiration, for in unprejudiced minds their greater roominess below and on deck as well as the coolness of their cabins and "dryness" in a sea, seem too patent to long pass for the very reverse among those who refuse to view the matter concisely and take up the popular lore and cry instead of considering actual facts. Much is said about their leaders. Practical cutter sailors know that this complaint amounts in experience to much less than appears at first sight. But we may leave all one side to be question. If "fastest type will prevail and the cutter seems to be in the ascendent, as I when once introduced as a racer she will readily enough appeal to the ranks of cruisers on her intrinsic merits. Time is an element necessary to all changes, and FOREST AND STREAM has no fault to find with the pluck which cutters are being introduced, for we had not expected such a ready dropping of the old love and consorting with the new immediately upon introduction through the columns of a single journal in the land.

The design furnished by Harvey & Peter, naval architects, London, shows the peculiarities for which that firm has become so famous in Miranda, Seabelle and others. Midships rather full and bold, with low bilge, fine, long entrance and very sharp run, with the quarters tucked up high and narrowing into a deep floating counter, resulting in a prettily-molded arch-board. There is no deep, plank-like keel, but a wide backbone, with the rabbet near the lower edge, and the lead bolted up outside, forming really a continuation of the midship mold. High in side and elegant in sheer, the Harvey yacht presents a most graceful broadside, giving an impression of power and stability which is not belied in fact. We have before us a sample of Harvey work in a photograph of Seabelle, a schooner who came very near paying us a visit last season, a pleasure we hope to be vouchsafed next year. We pronounce Seabelle the handsomest yacht ever floated, without an exception, both in hull and in rig, and as all the Harvey yachts bear something of the same stamp, they may be set down as beauties whose very traits are so refined that unless carefully watched in the process of building, the ship carpenter is sure to go wrong, for he takes most readily to the way the wood works kindly, and swamps the art displayed in the design as a consequence. We trust that Mr. Harvey will give future yachts built from his lines his personal supervision, so that there may be no variation between the stylish flyer on paper and the actual production in the wood.

In point of construction Oriva is certainly the finest job ever turned out in America, and so much superior in that respect to our customs that comparison between her and a sloop would be much like putting side by side a Jurgensen chronometer balance and escapement and a wooden-gear clocks, warranted to keep within ten minutes of the sun in twenty-four hours. Oriva is built on a plan devised by Mr. Harvey, and used with great success in his racing vessels. The plan combines great strength, freedom from leakage and a high degree of durability and economy in weight and space. It consists essentially of two skins, worked lap-jointed, and thoroughly bolted together, laying over a light set of timbers secured to a stout backbone by metal knees. For this purpose, and to strain, like the Seabelle, the ballasted racer, we consider this plan much preferable to the old-fashioned single skin, inasmuch as you can rely upon the vessel to keep as tight as a bottle down to a very old age, preserving her structure in good condition, saving repairs, and always sweet and clean in the bilge. But it takes a good mechanic to make a nice job of the kind, and ship carpenters equal to the work are very scarce in these days of nautical decay.

Oriva is 62ft. over all, just 50ft. on deck, 50ft. load line, 11ft. 8in. beam and 9ft. 3in. in depth, underside of deck to top of throat of floors amidships. Her fore foot is well rounded up; there is a good deal of drag to the keel and moderate rake only to the post, with the heel dubbed away a little. Keel of white oak, 31x10in. amidships; stem of oak, 8x8in., sided 8in. and molded 14in., with a long scarf. Apron of oak. Sternpost of oak, sided 9in. at head and 3½in. at heel; molded 6½ at head and 10 at heel. Oak, deadwood and frame, the latter 3½x7 at futtocks, and reduced at the head; standards 3x2½in. Keelson, molded 14in., sided 8in., tapering to 5½ at the ends. There is a regular beamshelf in place of merely clamps, and is 4in. square, with strakes of clamps 7in. wide. Beams of oak 4in. square amidships and lighter at ends, spaced 33in. apart. Lodging of hold 4½ square, and molded at the after side of her skin of ⅞ cedar, outer skin of 1⅛in. oak and teak with cleats nearly up to load line. The inner skin is treenailed to the frames and riveted to the best timbers between the frames. It is then carefully caulked and payed with a couple of coats of white lead. The outer planking overlaps the seams of the inner skin, and is thoroughly through riveted. It is 1⅛in. on sides, with 1¾in. wales and solid garboards 2¾in. thick. Sister keelsons and other framing, all of oak. The ceiling is of pine 5in. thick to head of first futtock, the latter being closed up with oak. Hanging knees of galvanized iron 1¼x1¼x3-16in. Spar deck of white pine 2⅜in.; edge fastened; planksheer of oak 3in. thick, bulwarks rail and deck fittings of teak and mahogany.

The accommodations of Oriva are very liberal, and far exceed those to be found in a sloop of her class. A winding companion leads down a little abaft amidships into the "steerage," containing a berth at the side. Abaft this is a ladies' saloon, with large berth, sofa and dressing cases neatly finished in polished pine and cherry. On starboard side aft is the owner's state-room, and forward of the companion the main saloon. Then another state-room, pantry and galley between separate bulkheads and forecastle forward, with about 6ft. head room fore and aft. A sail locker, reached by a circular hatch from deck, occupies the run aft. The ventilation is perfect, and the cabins cool in summer. Ballast on keel, 14 tons, with 11 tons inside.

The rig is that of a full-fledged cutter with running bowsprit, jibs set flying, housing topmast, low hoist, long head and loose foot to mainsail. The sails are from Lapthorn & Ratsey, of Gosport, England. Mast, deck to cap, 48ft.; deck to hounds, 41ft.; topmast, heel to truck, 31ft.; bowsprit, outboard, 20ft.; main boom, 47ft.; gaff, 30ft. The Oriva was built by Henry Piepgrass, of Greenpoint, and launched in midsummer, 1881. She failed to show signal speed at first, though up to the average of her tonnage, as recorded in these columns at the time. This year she appears to be sailing in rather better form, a somewhat dangerous customer in light winds or in heavy weather, but not quite as good in smooth water and wholesail breeze. Her owner, Commodore C. Smith Lee, Seawanhaka Corinthian Y. C., tools the ship himself in a masterly manner, and ranks as one of the best amateur hands in America.

NEW YORK Y. C.—ANNUAL CRUISE.

[CONTINUED.]

LAST year the fleet gathered in New London harbor with the idea of making the cruise one in open waters as far as possible, as a single day would take them through the eastern passage of the Sound on the way to Newport. But for want of numbers and a dark cloud after weighing anchor from Vineyard Haven bound to Boston, nothing came of the proposed voyage around Cape Cod, and much fun has been poked at the club ever since. When, therefore, the start was effected still further to the westward from the old rendezvouz of Glen Cove, we had misgivings about the extent to which the squadron would be tried at sea, and feared that the signal to disband might again be shown from the flagship without an attempt to redeem the club's good name and show the onlooking world that some metropolitan yachtsmen, at least, could trust themselves for more than a hundred miles' run without a port within an hour's distance. The fleet this year, under orders of Commodore Smith, was so large, however, comprising some twenty-five yachts, that nearly a dozen were bound together up to the last, and actually made the trip in company from Vineyard Haven clear up to Marblehead, favored by fine summer weather and an off-shore wind. Whether the same boldness would have been displayed under a less pleasing aspect of sky and water is problematic, but the club could not have found a better day made to order for the occasion, and so full credit for the venture is its due. It was a great relief to the monotony which has characterized the cruises of the New York Y. C., whose only relieving features, in a left-handed way, have been fireworks, hops and crowders.

It is noteworthy that after energetic drumming by the officers in charge, not a teakettle accompanied the fleet, which was just as well, since the wretched apologies for steam yachts, with their low freeboard, flimsy housework and limited coal supply have really no business taking any chances outside a river or quick dodging from port to port in calm weather. With the exception of Corsair, Stranger, Rhada and one or two others, the steam yacht fleet consists of nothing more than a lot of launches of the very worst model, construction and engines that could pass muster in these days of high class engineering. But for the limited cruising indulged in them and the opportunities afforded for quick escape under a lee in the Sound, we should have heard of many cases of swamping ere this. Their absence was a source of relief rather than otherwise, and no one has complained of their failure to appear. Good cruising steamers of moderate engine power and large coal supply and accommodations, such as the Santa Cecilia, not long ago chartered by Mr. C. G. Francklyn for an Eastern fishing cruise, are excellent and wholesome vessels, and, if anything, rather better adapted to distant cruising, with limited time, than sailing yachts, but they are of a different race entirely to the ugly little sausage-shaped, smoky thing which has not even high speed to commend her, and whose popularity is just so much evidence that we have as yet no conception in America of what steam yachting really is.

The squadron had been assembling Wednesday afternoon in Glen Cove harbor, ready for the gun early next morning with the commodore's flag at the masthead of his schooner Estelle. A very fine fleet mustered, the largest, we believe, at all events the most imposing, ever joined under one officer. The vice-commodore was present aboard his handsome Clytie, and so was Rear Com. Brown with the old time Julia, "rigged back" to a centerboard sloop, ready to try on the more new fangled machines in her class. Julia has certainly not come up to the expectations of many who had all along been telling us she was a wonder, without her having any record to prove it. In days gone by this sloop raced with others half her size, or else with that machine of machines, the great flat-floored Maria. To win occasionally in such company was not much to brag about, but in those benighted times the first yacht home was lauded to the skies by the press in its complete ignorance of the value of tonnage in producing speed, and there was no FOREST AND STREAM to judge the racers upon their merits, and set its erring brethren straight. Hence a false reputation was woven about this sloop, and small wonder if now in green hands, cobbled by provincials, canvassed by local talent, and without her best trim either got or understood, she fails to meet the sky-scraping praises of her younger days.

But we are far from believing that Julia is in her proper form, and deem it quite likely that with more intimate acquaintance and further experience she will show more creditably than now with Gracie or Fanny, but these *real bangs* are not clumsy rigs and flat-floored craft going out of favor? If Julia, as a keel schooner, was slow, she was at least reasonably rigged and a stauncher vessel than with the spars of a North River lighter and straining fin in the middle, and now that she is equally as slow as a sloop, shall she be "altered back" to a two-sticker, or a cutter built in her stead? That is the question now agitating a certain circle, and we trust the decision will be for a brand new flyer of the deep heel persuasion. After all, Julia demonstrates that shoal hull and ancient ideas as to rig are not good enough for the day, and they may as well be dropped as superannuated at once as try to get a few inches more out of an old lady belonging to an era whose achievements have been superseded by greater perfection in mechanical methods covering the disposition of lead ballast and modifications thereby permitted in the molding of the hull. Like the reigning belle of an earlier period, Julia, we are afraid, has become a wall flower.

Among the fleet we note likewise the old Alarm, fresh in paint and gold, after a long spell of idleness, moored in Manning's basin, another old timer, built in 1864 and *passe* for racing, though good for many a day's cruising yet if sparred in moderation. Alarm is an illustration of how a keel model fared when intrusted to the chisel of a centerboard man, and if her performance has been indifferent the cause is easily traced to the want of familiarity with the needs of such craft, always displayed by talent warped with light draft theories. Albatross, Mr. E. W. Humphreys, was swinging to her anchor with the rest, much improved in poise and grace since her alterations, a fairly handsome, wholesome-looking ship, and one quite likely to develop more speed in the future. As it is she cannot be beaten for the manner of her keep. She looks smart, taunt and stylish in her rig and fittings, calling to one mind some of the modern British "fast cruisers" in the perfection of her quarterdeck and waists. A yacht skipper in fact as well as in name has charge of that schooner. Then there was Estelle, a peculiar vessel all unto herself, a sort of cross and a rather good one too, between a mackerel fisher and a West India fruiter. The snake-like Tidal Wave, with steamboat bow and a low side, with piratical mien, a goer down the wind, but poor stuff in a nose ender; and Madeleine, of international fame, much overrated in our belief, a sort of fair average all round in looks and qualities, in which moderation rather than excess in any direction seems to have been the result of good luck in her many alterations and gradual steps of development. Big Norseman, much like a coaster resplendent in fresh paint. Ianthe, very niked in her sheer and proportions, the outcome of thumb rule domination. Mr. Maxwell's able Crusader, and besides some others. Last, but not least, Mr. Platt's new Elsworth chipper Montauk.

Concerning this schooner we have had something to say in previous issues, and now that she has been tried to some extent our first impressions are borne out—that she is faster than anything of her size and over in the club or in America is true. By that we mean she may be counted the most likely one in a match. That she is anything of a wonder we can certainly not admit. In getting her gauge, the wretched company she is in should not be overlooked. It is nothing to her gain that Tidal Wave should be put under her lee in a dead beat. It would be a poor vessel, indeed, not capable thereof. Banshee, Scotsman and Alarm are notoriously slow, and out of the question, being nearly twice the size of Mr. Platt's schooner, and in need of more breeze to bring them out at their best. In moderate winds Clytie and Crusader run her very close, and the only two yachts about Montauk's size, Madeleine and Halcyon, gave her about all she wanted upon several occasions during the cruise. In disposing of this couple, the new schooner gave evidence of being about the fastest in the club, though something again should be credited to the hand at the wheel and the racing crew of "sharps" shipped for the occasion, while many other schooners were sailed by their owners or by that odd lot of forlorn looking marines known as "captains" by their brass buttons, but too often easily mistaken for night watchmen, bunkmen or parsonic, boasting foreign lineage, for all their nautica cast and costume would influence an impression to the contrary.

It is a pity that there were so few schooners in the fleet of a standard sufficiently high to form a basis for comparison. Madeleine left the squadron without sailing a race, and only after giving Montauk a brush or two as far as the vacillating winds permitted. Compared to our schooners generally, the palm must be awarded to Montauk, though on an equal footing in respect to condition and crews we do not deem her invincible, but good for the larger share of prizes, which in these days of close competition is honor enough for one ship. Judged inferentially by our acquaintance with foreign schooners, though, we have very serious doubts about Montauk's ability to maintain first place for us as the fastest schooner-building nation, or that our pre-eminence in this respect, won through victories in former

years, is safe in the hands of any centerboard vessel of her type, or fin or other type. It is of little avail to point in confidence to the squandering of the Ashbury schooners, or Sappho's reputation, gained by tackling a much smaller craft than herself, while in British waters in 1870. A great change has been wrought since those times, and the crack British schooner is no more like the old barrel-bottomed Cambria and Livonia than the modern cutter is like the stub-nosed bruisers America found to oppose her thirty years ago. Miranda, Lenore and Scabelle are of a far different stripe, and possess to a greater extent the qualities of a crack cutter than our schooners do those of our sloops.

With foremast in the eyes, mainmast forward of midships, deep draft, outside lead, and fapthorn duds, Miranda and her sisters are so near to cutters that we fear a meet between them and the two-stickers on this side of the water would result in their dismasture. Montauk included. We have seen nothing in the latter's performance to suspect in her the close-windedness of Miranda, nor does she run so much better than many others to make up for the deficiency. Besides we have learnt nothing in the art of sail-making since the advent of the Madge, and it is beyond nonsense to claim our rigs at all equal to those of Gosport manufacture, as a casual inspection of suits from the two sources will convince on the spot. In addition to this we find the rustic preference for a single bag of a jib still flourishing aboard the Montauk, and her heavy weather qualities yet very much of an open question. To suppose, then, that the latest addition to the N. Y. squadron in any way absolves us from seeking further improvement, or that her comparative success indicates the superiority of the principles on which her captives upon which she is built, is accepting a risk greater than we think the yacht-building world has right or reason to do. It might lead to a sudden collapse of our cherished fame in the defeat of the representative of beamy infatuation.

That has happened with our sloops, and we believe a like unexpected disaster awaits the schooner classes. We are aware that this all amounts only to an assumption, and that assertions do not make facts. Unfortunately we must rest content at this stage since the outrageous partisanship shown in the discussions surrounding the late America Cup render an international contest a very remote contingency. The argument may, however, not be without some force in view of recent events which have proven so thoroughly the soundness of similar "assertions" made in these columns in relation to cutters.

Because our experience has proved the worthlessness of over beam and fine form, it must not be supposed that we see nothing worthy of praise and imitation in the Montauk type. On the contrary, in many respects the principles embodied in her are identical with our teaching, and the Ellsworth model handsomely lined through a thorough comparison and in marked contrast with the average American yacht, we have stated in a prominent way ere this. Further, the rocker to the keel, the round up to forefoot and rake to post are one and all eloquent aids to cutter peculiarities though accepted with more or less faint heart. But of far more importance is the great displacement and limited skin to be found in Ellsworth's productions. These alone are enough to insure victory under such a faulty system of measurement as the length rule which takes no cognizance of size.

That the Elephant of 42-foot length is some 8 tons of lead more than the 3 or 4 of other yachts. This she takes along on less wetted surface than her sisters, owing to the gifted manner in which Elsworth combines great displacement, fine entrance and clear run, with the least wastes of surface. In a word, as an Ellsworth production thereby acquired stands her in good stead, and in light airs the retarding influences of friction are reduced to a minimum. In Fanita, 41-foot load line, we find the same conditions prevailing. Some 15 tons of lead in the 7, 8 or 9 tons of her opponents and the body clothed as economically in surface. Montauk is a larger edition of the same school and her performance is traceable to the same reasons. So far so good, and in Elsworth models we see a marked step in advance beyond the shoal and light weight crudities of most other builders. But if preferable to the old cocked hat, we doubt whether we must think that vessels of the cutter order represent more speed and accommodation, bulk for bulk, besides being safer and abler boats in a sea and more economical in management and keep. Much are the teachings of naval science, and so far as practice has certainly been found in accord. The Elsworth model is the natural outcome of length measurement, but not for that reason the best when equitably compared upon size. Tonnage, weight and power are of more account than form until high rates are reached, and these are supplied in Elsworth models with liberal hand since they escape taxation under length. Under the bulk rule, the same ideas have found to work well so far as they can be considered tested by the recent competition of a single vessel with a squadron not moved subsequently and probably for a similar fate. Should we test a match with an English schooner should be brought about. But here again the restrictions put about the America Cup crop up as a bar to such a consummation. The sloops will be taken up in next issue.

FACTS ABOUT THE AMERICA.

IN the July number of *Harper's Monthly Magazine* there is an account of the yacht America and the cup she won, which quite eclipses the history of the "schooner" which appeared in the July number of the *Century*. It is well known that the America, when she came to Europe in 1851, was sailed by a crew of fifteen men, she having crossed with a jury rig, and her racing outfit was sent over by steamer. Referring to this incident, *Harper* says:

"She reached the neighborhood of Havre, her port of destination, and was met by a pilot-boat which at once showed the French flag, and was supposed, of course, to carry a French pilot. As soon as the pilot stepped on board, James R. Steers said to his own pilot, Richard Brown, 'Dick, that fellow is no Frenchman.' Immediately Dick walked up to the stranger and shouted in most emphatic tones, 'I tell you what, my friend, if you let that yacht scrape bottom, I'll throw you overboard.' Dick kept hold of the tiller himself, and would not give it up. As the yacht approached the lights of Havre the pilot confessed his inability to take her in. He left her and hurried to his own boats, with the startling news that 'the Yankee is the fastest vessel going.' So it came to pass that when the Steers brothers and the rest of the party crossed the Channel, and offered to back their yacht with wagers, they discovered they had been betrayed. They could not find their bets. So confident of success were they that they had brought $1,000 each to invest in that way, while Dick Brown had manifested his faith by mortgaging his own pilot boat to John C. Stevens for $2,000, every cent of which he intended to stake upon the race. But the 'French pilot,' who had been employed by somebody to get out of the way of America and learn her sailing qualities, had destroyed her chance of winning a dollar. Moreover, at eleven o'clock of the night preceding the long-anticipated regatta, the Messrs. Steers were informed that their yacht was sailed 10 miles to leeward, with the

mount to get out of the way, but all to no purpose. The snake approached with increasing velocity until, when within striking distance, it darted the spiked end of its tail into the flank of the mule.

This was sufficient motive power, and the frightened animal dashed across the prairie at break-neck speed, for several hundred yards, then stumbling, fell, throwing the Colonel into a mass of cactus plants, nearly stripping the clothing from his body, and severely lacerating his face and hands.

The snake was so firmly fastened to the flank of the mule by its spike, that it was not detached by the race, and in fact had to be cut out.

The mule swelled to enormous proportions and died in great agony after its fall.

Col. Ochiltree is well known in this city, as well as in Texas, as a gentleman of unimpeachable character and veracity.

Yours, etc., ROBERT WALLACE,
Brother to J. B. Wallace.

No. 5314 Ninth street, N. W., W., D. C.

UNITED STATES NATIONAL MUSEUM,
UNDER DIRECTION OF THE SMITHSONIAN INSTITUTION,
WASHINGTON, July 13, 1882.

Editor Forest and Stream, New York City:

DEAR SIR—I have to acknowledge the receipt of your letter of 10th inst., transmitting a communication received by you from Mr. Robert Wallace, concerning the hoop snake.

In reply, I beg to refer you to the indorsement of Dr. H. C. Yarrow, Honorary Curator of the Department of Reptiles.

Very respectfully, G. BROWN GOODE,
Assistant Director.

UNITED STATES NATIONAL MUSEUM,
UNDER DIRECTION OF THE SMITHSONIAN INSTITUTION,
WASHINGTON, July 12, 1882.

Prof. G. Brown Goode:

DEAR SIR—With regard to the letters referred to me from the editor of FOREST AND STREAM and Mr. Wallace, about hoop snakes, I have only to say that as the story emanates from Col. Ochiltree, a gentleman of undoubted veracity, it ought to be true. Unfortunately, however, there is no hoop snake in the National Museum, no case marked No. 402, and no such person as Robert Wallace at No. 5014 Ninth street, N. W., Washington, D. C., for such a number does not exist. With these trifling errors corrected, the story is perhaps all right. Respectfully yours, H. C. YARROW,
Honorary Curator, Department of Reptiles.

MR. GEO. DAWSON is writing some very entertaining letters to his Albany *Evening Journal* from the St. Marguerite, where he is salmon angling. He has found some large game up there, and writes: "Although salmon fishing is, of course, our primary purpose in visiting these remote waters, we cheerfully accept whatever gifts, in the shape of game, 'the gods do sends us.' And there is a great deal of large game to be had by those who can bear the fatigue necessary to find it. Sometimes it comes to the mild-mannered and always gentle-tempered angler unsought and unexpected. I remember when a mammoth moose came within short rifle range of our camp at 'Lazy Bogan,' the head waters of the Cascapedia, and where Gen. Arthur, Robert Dun and myself were fishing one summer. He was as large, and not unlike a small sized Jersey cow, and would have been a safe mark for those who are sure of hitting nothing of less dimensions than a barn-door. But before the only rifle in camp could be brought to shoulder the monster had 'smelt a mice,' and concluded to postpone his purposed crossing of the river 'to some other fourth of July.'

"On this river and in the mountains by which it is environed, bear and caribou are often killed. The former being especially numerous, are frequently met with by those who are not looking for them, and are therefore altogether unprepared to 'go for them.' This was the case with the Judge last year. He was fishing a pretty pool a mile or two from camp, when his attention was diverted from his fly by the appearance of a large black bear within a hundred yards of him. Old Bruin was quietly perambulating the sandy beach, seeking what garbage he might devour, when he discovered the Judge, and concluded that his hide would be more secure if he increased the distance between himself and his equally alarmed neighbor.

"The Judge, contrary to his usual habit of hospitality, forgot to ask him to stop and dine with him—perhaps because he wasn't quite sure whether there would be more than one at the feast if the invitation was accepted. Fresh tracks of others along the shore where they resort to fish were seen so frequently that the Judge concluded, if he had a similar visitor this year, he would be prepared to be more gracious in his hospitality. He accordingly brought a Winchester with him, and it drew its first blood yesterday from a bear who was freed within a mile of our camp, and who was brought down from his perch high up on a dead pine where he had fled for refuge on our approach. His mate was more fortunate. A careful search for him was in vain, and we had to be content with our single trophy.

"The day previously two large bears had been taken in traps placed by one of the *habitans* on the side of a mountain in our immediate neighborhood. They are coveted as well for their flesh as for their hides. At this season, and until near mid-winter, they are very fat, and are excellent eating. The flesh of an average sized bear is worth five dollars or more, and the skins range from eight to fourteen dollars, according to size and condition. The traps used to catch them are immense affairs, with a spring that would force their teeth their full length into a white oak plank. They are first set and then fastened by a formidable chain to a log as heavy as the trapper can lift. But it is no unusual thing to find the chain of the trap broken and the trap itself carried away on the imprisoned limb of the self-liberated animal. Instances are given where they have been found, exhausted or dead, after having drawn the trap with them for several miles. Cases are even cited where the bear has gnawed off his leg to secure his liberty—leaving his amputated paw as the only reward of the hunter.

"Besides bear and caribou there are a few moose among these mountains, but they are most numerous—for some reason I could not ascertain—on the south side of the Saguenay. Otter, fisher, fox, beaver and other animals whose fur is an important article of commerce are still successfully hunted by the Indians and French *habitans*. It has never been my fortune to come across a beaver camp, although they are still quite plenty in the mountain lakes within a circuit of fifty miles. I was at one of these lakes a day or two since, and saw evidences of the recent presence of beaver in the branches of trees freshly cut by them for some useful purpose; and I had the good fortune to find a perfect skeleton of the upper jaw of one of the family at a camp built by the Indians in their excursions for beaver and other game. An examination of this relic will show how it is possible for them to rival the ax man in the facility with which they gnaw down trees for house-building purposes."

SHEEPSHEAD IN THE SUSQUEHANNA.—Lancaster, Pa.—On the 8th inst. Mr. Clark Bostrick took a genuine salt water sheepshead at Fite's Eddy, on the Susquehanna, which weighed seven and a half pounds. It was sent to this city by Mr. Horace Zahm.—B. A.

A CAPE COD WATER WITCH.—A Boston correspondent sends us this clipping: "One of those individuals who possess what used to be called an impossible power of detecting water beneath the surface by the turning of a forked witch hazel or apple-tree twig in his hands, when passing over the locality where water was desired, has made his appearance on Cape Cod. A Provincetown man says that the 'water-finder' is quite old and nearly blind. 'He locates water for well diggers, or pretends to, simply by moving about over the surface with his eyes totally blinded. He pretends to give, also, about the number of feet below the surface at which the water will be found. It is said that the old water-finder is a farmer and a lime burner; also, that he has been employed at Beverly and Newport at $8 per day this season, and succeeded in locating water; also, that he succeeds in detecting the presence of metals." Investigation shows that a person somewhat answering this description has been quite successful in locating water veins this season along the line of the Eastern Railroad, and that there are others in New England who have fully shown themselves possessed of the same 'power of divination.' In upper New Hampshire wells are often located by such means." And our Boston friend says "go for him." We decline with thanks. We don't want him. Have no occasion to go for him. Can get plenty of water this side of Cape Cod. As a citizen of New York city we are entitled to about ninety gallons of water every twenty-four hours, and when that fails we know of an ice-cold spring within the city limits. No, we shall not go for the Cape Codder.

The Calhoun (Georgia) *Times*, with an air of modesty that disarms it of any-how-is-that-for-high appearance, tells the following truth: "About two weeks ago Mr. Smith, living a few miles from Calhoun, Georgia, on the Oostanaula River, lost a yearling heifer, about three years old, and as it was fine stock, made diligent search, but could not find it. A few days ago a party of young men fishing on the river were attracted by the smell of a dead carcass, and upon examining the cause, lo, and behold! they found a monster catfish, which had swallowed the calf, and the horns of the calf becoming entangled in the fish's gills had drowned the fish. The fish measured exactly twenty-three feet and seven inches in length and was five feet eight and one-quarter inches across the head, and from the length of its whiskers supposed to be one hundred and seventeen years old."

A PROMPTLY PAID POLICY.—Philadelphia, Aug. 2, 1882.—Mr. James R. Pitcher, Secretary U. S. Mutual Accident Association, 409 Broadway, New York.—Dear Sir—I am in receipt of your draft for $5,000 in full payment of the accident policy of my husband. It gives me great pleasure to acknowledge the promptness of your company in forwarding it, and you will please express my thanks to the Board, and I would like to extend it to each member for his generous response. That the association may be blessed and prosperous in its future career of usefulness is my earnest prayer. Very truly yours, MRS. CHARLES S. BOYD.

GOLD PENS.

Pencils, Holders, Cases, Etc.

THE CALLI-GRAPHIC PEN.

A GOLD PEN and RUBBER HOLDER, containing ink for several days' writing. Can be carried in the pocket. Always ready for use. A luxury to persons who care to preserve their individuality in writing.

THE
KNICKERBOCKER CLUB GUN.

To sportsmen wishing a *close shooting* fowling piece, I recommend the **Knickerbocker Club Gun.** The barrels are of the best English metal; the locks strong and carefully made; and for durability they are equal to the highest priced guns. Each gun is rigidly tested before leaving the factory, and a record made of the shooting at 40 yds. in a 30in. circle, which is guaranteed.

A. Top snap action, fine Damascus barrels, bar locks, rebounding hammers (out of line of sight), percussion fence, extension rib, double bolt, through lumps, large head strikers, pistol grip, Deeley & Edges patent fore end, checkered grip and fore end, horn butt plate, engraved, left barrel choke bored, and record furnished of gun's shooting qualities, 10 and 12-gauge, $47.00.

B. Best Damascus barrels, finely engraved, both barrels choke bored, and record furnished, 10 and 12-gauge, $60.00.

Also Hollis, Buckley and Bonehill Breech-Loading Double Barrel Guns. Twist and laminated side snaps and top snaps. English and Belgian Muzzle-Loaders. All Sportsmen's Sundries. Guns sent C. O. D. privilege to examine on receipt of $5 to cover express charges.

Standard Works.

FOREST AND STREAM BIRD NOTES.

An Index and Summary of all the matter relating to ornithology contained in the first twelve volumes of the FOREST AND STREAM. 195 pages, paper. Price, postpaid, $1.50.

SHOOTING.

Its Appliances, Practice and Purpose. By JAMES DALZIEL DOUGALL. Contains practical information on guns and gunning. Its chapters treat of the Barrel, the Stock, Locks, Triggers, Recoil, Breech-Loaders, Rifles, Care of Guns, Ammunition, Loading, Dogs, Grouse, Woodcock, Black Game and Partridge Shooting. The chapter on "The Purpose" of Shooting is the best defense of legitimate field sports ever published. Elegantly printed on fine paper, 380 pages, cloth. Price, postpaid, $3.

SHORE BIRDS.

I. Haunts and Habits. II. Range and Migrations. III. A Morning Without the Birds. IV. Nomenclature. V. Localities. VI. Blinds and Decoys. This is a reprint of papers from the FOREST AND STREAM. Pamphlet, 45 pages. Price, postpaid, 15 cents.

PRACTICAL DOG TRAINING.

Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of FOREST AND STREAM. Pronounced by those who have read the chapters, as published in this journal, to be the best work on the subject ever written. 100 pages, cloth. Price, postpaid, $1.

FOREST AND STREAM PUBLISHING CO.,

B. F. NICHOLS & CO.,

BOSTON, MASS.,

Manufacturers of

HEXAGONAL SPLIT BAMBOO FISHING RODS,

REMOVED TO 153 MILK STREET.

We are obliged to have more room in our factory and greater facilities for manufacturing our goods to meet the increasing demand. We have received the highest award and silver medal at the Massachusetts Charitable Mechanics' Association Fair for our superior goods. Send for catalogue.

DOG TRAINING;

—BY—

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

FOR SALE AT THIS OFFICE. PRICE $1.00.

The Maynard Rifles and Shot Guns.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.

PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.

For **Hunting** and **Target Practice** at all ranges, the **"MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world,** as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the **new attachment for using rim and centre-fire ammunition.**

MASS. ARMS COMPANY, Chicopee Falls, Mass.

Enos James & Co.'s Hard-Hitting Guns.

The above cut represents the

James "Triumph" Gun.

The demand for the James Breech-Loaders in 1881 was so great that we had great difficulty in filling all our orders. This means that Americans appreciate a good honest gun when they see it. Why pay a fancy price for a gun made by some old maker, when you can buy a beautiful James complete gun equally as good for half the money? Or why buy a gun upon which the maker is ashamed to put his own name, when a good, reliable James gun can be had at the same price? In American products we are agents for COLT, PARKER, HARRINGTON & RICHARDSON, and FOREHAND and WADSWORTH. Dealers needing any of these brands should order direct from us to avoid commissions.

Hollabird Shooting & Fishing Suits

Unequalled in Convenience Style or Workmanship.

Write for circular to

UPTHEGROVE & McLELLAN, Valparaiso, Ind.

THIS ☞ is our Skeleton Coat and Game Bag. "A" and "B" show entrances into game bag. This coat has seven pockets besides the game pockets. It is dead grass color; can be worn over or under a common coat. Weighs but fifteen ounces; is unequalled for warm weather shooting. Send breast measure and we will mail it to you for $8.00.

[ESTABLISHED 1869.]

UNITED STATES CARTRIDGE COMPANY,

LOWELL, MASS.

Our paper shot shells are made with great care upon new and improved machinery, and the paper is subjected to a process that renders the shells waterproof, pliable, and capable of withstanding large charges of powder without bursting, and are reloadable from four to ten times, if desired. They also keep their smooth shape stiff, inside and out. We offer them as equal, if not superior, to any other makes, and warrant them in the full sense of the word.

PAPER AND BRASS SHOT SHELLS.

ROSEWOOD LOADERS. CAP EXTRACTORS AND RECAPPERS.

Rim Fire and Central Fire Cartridges for Pistols and Rifles.

POCKET RELOADING TOOLS FOR ANY CALIBRE. PRIMERS AND BULLETS FOR RELOADING. "THE RICE SHELL EXTRACTORS." BENCH CLOSERS, *Etc.*, Etc.

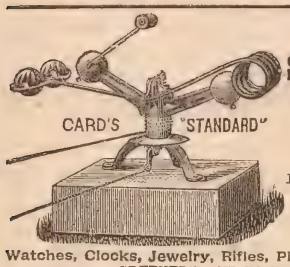
The Parker Gun.



Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

31 Wall Street, New York City, N. Y.

SOMETHING NEW!

The Pieper "Diana" Gun.

This is the only gun of European manufacture made entirely by machinery. The system is entirely new, and actual tests have shown that for accuracy and strength it has no superior.

The reinforce lumps and bolt loop are of one piece of wrought steel. The tubes are finished to gauge and are put together *without heat* so that they are perfectly straight and always shoot to center. This is only found in very high cost guns made on the ordinary system, as the best barrel filers are necessary. The locks are finely finished and of the best steel, and all the joints are closely fitted; all the parts are interchangable.

A public trial was made in Cleve, Prussia, in August, 1881, to which the best continental makers sent their finest guns. The trial was for closeness and penetration. 4 is excellent, 3 is good, 2 is fair, 1 ordinary. The gun of Mr. Roedel, of Prague, was made on the Pieper system. The result was as follows:

	30yds.	45yds.	60yds. Total.
Size of shot.	2 4 6 8	2 4 6 8	2 4 6 8
H. Pieper, Liege	3 3 4 4	4 4 4 3	4 4 4 4—45
Roedel, Prague	3 3 3 3	4 4 4 4	3 3 4 4—42
W.W.Greener, Birmingham	4 4 4 3	4 4 3 3	3 2 3 3—40
N. Bodsen, Liege	3 4 2 4	4 3 3 4	1 1 3 1—38
C. Bartels, Wiesbaden	3 3 3 4	4 3 4 4	1 3 2 3—37
Sackreuter, Frankfort	2 3 3 4	4 4 3 3	3 3 1 3—36
Camphausen, Crefeld	1 4 2 3	3 3 4 2	3 3 3 3—34

	30yds.	45yds.	60yds. Total.
Size of shot.	2 4 6 8	2 4 6 8	2 4 6 8
A. Jannsen, Liege	3 3 3 3	4 4 3 3	1 3 2 1—32
Beermann, Munster	3 2 1 2	4 4 2 4	2 2 3 2—31
Brunn, Birmingham	3 3 2 2	3 3 4 4	2 3 2 2—30
Witte, Zutphen	3 4 3 3	1 1 1 1	3 2 2 2—27
H. Jansen, Wesel	1 2 1 2	4 3 2 2	2 1 2 3—25
Heuse-Lemoine, Nessouvaux	2 3 1 4	1 2 3 2	1 2 2 2—25
Cordes, Bremerhaven	2 1 1 1	3 3 2 1	1 2 2 1—20

Attested by the Jury, Klimm, Royal Inspector of Forests, Keyssler, Royal Inspector of Forests, Heise, Inspector of Powder at Cologne, G. Hahn, record keeper. It will be noticed that the Pieper guns are especially effective at long range.

Mr. H. Pieper has appointed the undersigned sole agent for the United States and Canada, and offers the goods at prices far below their real worth, in order to speedily introduce them into this market.

REPAIRING PROMPTLY ATTENDED TO.

For Sale.
TO SPORTSMEN.—FOR SALE.—A handsome farm and country seat, in Cecil County, Maryland, containing 115 acres, fronting on the Bohemia River, near its junction with the Elk River, with good fencing. The buildings consist of a large modern double-walled brick mansion, thirteen rooms with bath room; hot and cold water in bath and kitchen. The whole farm supplied with water by a first-class windmill. The other buildings consist of a billiard room ice house, two tenant houses, granary, two large barns, carriage house, sheds, corn crib, etc. The house is elegantly furnished throughout. There is also a Rumsey deep well pump in summer kitchen, water good. Ducks in abundance when in season, and perch fishing excellent. The buildings are all in first-class order, so is the farm, plenty of fruit and grapes, &c. It will be sold with the furniture, stock, produce and farming implements, also decoys, sink box, &c. Any gentlemen or club desiring a handsome shooting box the above is one of the most desirable in the State. The location of the mansion is near 100 feet above low water mark, and the view very fine. Access by rail or Ericsson steamers. Photographic views of buildings.

New Illustrations and new Maps covering the Kennebec, Penobscot, Aroostook, and St. John Rivers.

pp. 218. Cloth, $1.50.

A. WILLIAMS & CO., Boston, Mass.

THE ANGLER'S AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

THE OLIMAX PATENT GUN CLEANER

Is the most practical cleaner and oiler for breech-loading arms ever invented.

It operates on an entirely new principle, and it is astonishing how quick and well it will clean and oil a gun. Each cleaner is packed in a neat box with full directions for use, and will be sent to any address, postage paid, on receipt of $1.50.

Illustrated Circular sent free on application.

In ordering give calibre of gun. All orders and inquiries to be addressed

Hotels and Routes for Sportsmen.

OLD DOMINION LINE.

The Steamers of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Kittyhawk Club Grounds, Van Slyck's, etc., etc. These points can now be reached by rail and stage from Norfolk. Norfolk steamers sail Tuesday, Thursday, Friday and Saturday. Lewes, Del., daily except Saturday at 4 P. M.

Full information given at office, 197 Greenwich street, New York.

KENEBAGO LAKE HOUSE.

This justly-famed sportsmen's resort is situated in the heart of the best fish and game region accessible in the State. Trout always plenty and take the fly, and deer, moose and caribou have here their favorite haunts. The Seven Ponds are easily reached from the house, most of the route by boat, where are established fine camps and boats by the undersigned, who were pioneers in opening up the country for sportsmen. The scenery around the lake is lovely beyond description. Distance from Rangeley City ten miles, by carriage and horseback. Mail service tri-weekly. Rates reasonable. Address GRANT & RICHARDSON, Proprietors, Kenebago Lake, Franklin Co., Me. July 12,'82.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make Sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kenawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

THE ROUTE OF THE TOURIST,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, V., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. V., between the mouth of Chesapeake Bay and the Pacific Ocean.

Kay's Chip
—OR—
EXPANSIVE SHOT CONCENTRATOR,
With Perforated Case.
In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.
By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.
100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.
Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale at our office.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 24, 1882.

VOL. XIX.—No. 4. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS.

Advertisements of an approved character only inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Address all communications,

THE AMERICAN TEAM.

THE men who are to make up the shooting dozen in the match with Great Britain are now busy at work upon the range at Creedmoor, practicing in anticipation of the meeting in September next. The test shooting carried on during the past week was sufficiently trying to winnow out the few weak men who presented themselves, while, of course, there was the usual bad luck attending men who felt their election sure. The men have secured a good captain, and there is no reason at all why, with the practice of three days per week which the men intend to devote to the work of preparation, we should not see very high averages during the next few weeks.

The match, if it is to be won at all, is to be scored as a victory for our team by an adherence to those rules which were so important in previous contests. These men are capable of better scores by far than any they have yet shown. They have been working thus far as individuals, and each man has put forward his greatest strength. Working singly, it is not likely that any amount of practice will show better results than what has already been accomplished. The difference between what has been done and what must be done to win the match is what may be gained by union. The men must be brought nearly up to an average, and that a good one, and this can be done by team drill. The rifles are capable of any demands which may be made upon them. The "unaccountable" misses which marked the shooting of the four days last week must be done away with. The same trouble was found with our present small-bore rifles, but care in the handling and make of the ammunition and attention to the manner of loading entirely did away with this annoyance, and to-day the "unaccountable" is a thing of the past. The nondescript weapon of the coming match is really a match rifle in this respect, and the first care of a good coach will be to see that the load and loading are precisely as they should be. The men are all of them good holders; if they are not, there is no room for them on the team. With these conditions looked after, there is nothing to prevent the ability and advice of a good coach showing itself in the score of the shooting men about him. Holding "dead on" may be practiced as easily by a military team organized as this one will be as by any small-bore team. With detached verniers and wind gauges the bar of the rear sight may be made to record the minutest differences, and the chance shot of the leader of a squad should be the sure guide to the man following. If it be not, then the team is not properly organized, and is little better than a mob of marksmen.

Apart then from the flukes of bad luck into which any team may fall, there is no reason now apparent why the team chosen on Friday last at Creedmoor should not be successful there in the match. Everything necessary for victory is either now in their possession or within the compass of their endeavor. There should be no lack of appreciative support on the part of the public. The funds which the National Rifle Association has asked for should be forthcoming at once. Americans are interested in many ways in having no defeat to American arms. Though the conditions did not so demand, this is really a test of American against English made weapons. It seems to be a gauging of the Hepburn against the Hatford rifle. That the latter is capable of good work the few fragmentary scores which have reached us of the doings of our rivals is evidence, while there is the long Wimbledon record to look at. The Hepburn rifle must be good, for it comes of excellent stock, and it has stood every test thus far. Apart from our patriotism as Americans, the winning of this match means the upholding of the American name in the small-arm market of the world. If we have no wars at home we are interested in those of other nations, who look to our armories to supply the necessary shooting irons. The trade in these weapons now belongs to America. It has been won on the merits of the arms and in the face of strong opposition. The match of September should reflect that superiority in a victory for the home team. The riflemen, therefore, deserve the support of every citizen, be he military or civilian, and the appeal of the National Rifle Association should be handsomely and generally responded to.

Looking at the personnel of the team there may be something to criticise. They are, of course, all within the requisition of being National Guardsmen, but it will strike the visitors as a trifle strange to meet an old Wimbledon shot as a part of the force of the opposing squad. The match can be won by a distinctively American team, by men who have been trained on our American ranges, who are up in the American methods, who shoot for sport and the love of it, and are not mug-hunters, and who are Americans in every sense. The accident of birth was not made a condition of the match, and very properly, too, but it was not contemplated either by the proposers or acceptors of the match that there should be other than American-trained riflemen on the home team. While it would be the height of folly to weaken the team by cutting out a really good man, we are of the opinion that it would give general satisfaction to the country at large if the team should be made as distinctively American as possible. The captain, the committee and the shooting men have full power to make up the team, and it would be well for them to consider the above in making up the list of men who are to shoot in the final test. It is to be, if we understand it properly, a fight between American National Guardsmen, armed with the best rifles which our American armories can turn out, against a team of British Volunteers, with the best military breech-loader they can find in their factories. Such a match will rouse enthusiasm and compel patriotic support; but if we are to fall back on Wimbledon-trained marksmen in any measure, it argues very poorly for what has been done in American range drill for a decade past and what we are now doing. We want the match to show what our National Guard has been doing in the way of rifle practice against the endeavors of the British Volunteer force, and this cannot be fairly shown if we are to place on our team even a single man who has been widely known as an English shot, and who, up to the time of preparation for this match, was not known on our ranges.

At this writing the Adjutant and Secretary of the team had not been named, but with Capt. Robbins and Major Farr in these positions, Col. Bodine, the Captain, will find himself well supported. In their choice of a captain the team was fortunate in securing Col. Bodine. If service merits the reward of this post, he certainly has won it. He is able as no other man in America is to render the team efficient service in meeting every difficulty connected with their shooting. He can lead to victory by the force of example, and if the young men about him do not win, it certainly will be through no fault of the "old reliable" at their head. The prospects, on the whole, are very bright. There is much to be done, and much encouragement to undertake the labor. It is really an up-hill fight for a company of tyros, such as an American team must be at the best, to cope with the veterans of the butts who are coming over to do battle, but there is every element of success in the home team, and there is every assurance of a well-fought battle and of another in the series of American victories at international rifle shooting.

ACCORDING TO THE Sacramento (Cal.) *Bee*, there was recently received at that port "a consignment of English pheasants from China. Well, they came—that is, 9 out of the 70 that were shipped. It appears that the birds were improperly cooped, and did not have the right sort of attention en route. They have been turned over to the care of W. T. Coleman, who has already succeeded in raising several. The hope is expressed that in a very few years pheasant shooting will be one of the leading field sports of the State." This is precisely what may be expected to happen to wild birds *in transitu* until some careful, intelligent person has charge of such matters at the shipping port. It is of no sort of use to thrust a lot of pheasants or prairie chickens or wild turkeys into a coop and leave them there, huddled together like a lot of ducks being sent to market, and only taking the trouble to give them a little corn and water once a day. Wild birds cannot stand such treatment. They are accustomed to having plenty of air and exercise, and if too many are put together they crowd one another until the weaker of the lot are suffocated or thrown down and trampled to death. Or if they are not too much crowded, but are otherwise improperly confined, they dash themselves against the walls of their prison so long as they have the strength to do so. Such birds, if they are to be imported, should be protected by every known means from the dangers to which they must necessarily be subjected on a journey of this kind. There is no excuse for carelessness in such a matter, and it is in the highest degree senseless to waste money in the purchase of birds when they are sure to be destroyed before reaching their destination That they can endure long voyages and the attendant confinement is very clearly shown by the very trifling loss which has attended the importation of the European quail sent to this country by Consul Braun, and unless similar precautions are taken with importations of other species it is not worth while to attempt the introduction of foreign birds to our covers.

JOHN R. WILTSIE.—Very many of the readers of this journal will learn with deep regret of the death of John R. Wiltsie, on August 16. Mr. Wiltsie was a prominent and very highly esteemed citizen of Newburg, New York, where he held a high position in the respect and confidence of his fellow townsmen. Of fine physique, fond of the sports of field and stream, and all his life participating in them, he was a splendid specimen of well-developed physical manhood. It was only a few weeks ago that he called at this office on his return from a trip to the Adirondacks, where he had celebrated his sixty-eighth birthday. Mr. Wiltsie's first trip into the North Woods was made in 1838, and after that he visited different parts of the woods almost annually, always making new friends wherever he went. For the last eighteen years he had also made annual fishing and shooting trips to the St. Lawrence, in company with his brother-in-law, Mr. J. H. Dudley, of Poughkeepsie. At the opening of the season this year, Mr. Wiltsie formed one of a noteworthy shooting party, of which the other members were Mr. Thomas C. Ring, (aged 78 years), treasurer of the Newburg Savings Bank; Mr James Patton, (aged 80 years), of New Windsor; and Mr. Benj. Sears, (aged 75 years), of Coldenham—the oldest and best known shots of Orange county. Mr. Wiltsie was for thirteen years president of the Hudson River Association for the Protection of Game and Fish, and always took a lively interest in promoting the work of that society. In his principles and practice Mr. Wiltsie was a fine example of a true sportsman—because he was a true man.

DEATH OF B. B. REDDING.—We are pained to learn by telegraphic dispatch that Mr. B. B. Redding, of San Francisco, died in that city last Tuesday, August 21. Mr. Redding was appointed one of the original Fish Commissioners of California in 1870, and retained his position up to the time of his death. In his work in the commission and in other enterprises of like nature Mr. Redding was well known as a public-spirited and energetic man. He was a valued contributor to the columns of this journal; and of late years had devoted some attention to the study of aboriginal life in California.

ADIRONDACK SURVEY NOTES

VI.—GUIDES AND DEER.

THE Adirondack guides, taking them as a whole, are an exceptionally good body of men, who, as a rule, are steady, temperate, honest and industrious. That there are exceptions goes without saying, but these do not get much patronage, and are looked down upon by the great body of guides. They are superior to western guides generally, by their entire absence of swaggering airs, and not a single specimen of the "Buckskin Jo." or "Rattlesnake Dick" have I met. Not that there are no modest, intelligent guides on the plains and in other parts of the West, but it is only there that the fantastic egotist displays himself in the manner of the hero of a border novel, and, even if harmless, is a nuisance. The Adirondack guides are usually well known and are in demand, but sometimes this demand exceeds the supply, and hangers-on about the hotels undertake to guide sportsmen and tourists. Life and property is as safe in these woods as anywhere in America, and there are scores of guides who might be trusted with both, to any extent.

It is of interest to note their varying opinions on protective laws for game, especially deer. One rainy day half a dozen of them were assembled, and the conversation turning on this subject, ran thus:

"There was a party through here a few days ago, and from what I know of them they will kill a deer before they are in the woods many days," said one of the older men.

"Well, let them," spoke up a younger one. "What are deer in the woods for but to kil! when a man wants meat? I know one man that won't go hungry long if he can get venison."

"I don't agree with you," replied the first speaker; "these men come in here to kill deer for sport, as well as food, before the law is up, and, while I will go with you so far as to say that a man living in the woods may kill a deer in June or July, if he or his family want meat, yet people who live outside and come in for sport have no right to do it, and for one I'd like to see them sweat for it. I wouldn't like to complain of a woodsman for killing a deer—he will never kill more than he needs—but I would send word out to Dodge, or any other game constable, if I knew of a sportsman who did it."

"You have it right," spoke another. "I've thought this matter all over, and have learned that a live deer in the woods is worth more to me than a dead one any day, unless I am hard up for meat; and I tell you that when the deer and trout are gone from these woods we can hang up our fiddles, for there will be no one here to guide. It's the deer and the fish that brings sportsmen up here to spend their money, and so I believe in keeping up the attractions as long as possible. You can put this down: No deer, no trout, no guiding; and when the deer are played out we are played out, too, and I don't like to see men come into the woods in June and kill deer."

At this point the rain ceased and the different parties separated in their boats. I was struck by the force of the logic of the last speaker, who certainly presented the case to his comrades in the strongest light, that of self-interest. In this matter of killing deer out of season, there is no doubt of the fact that sportsmen—heaven save the mark!—are mainly to blame for the lax views that some of the guides hold on the subject. They employ the guide and set him the bad example of violating the law. As an instance of this, the following conversation occurred between myself and a gentleman at a guide's house (I had related the above conversation to him):

"Oh, yes, that's all very fine," said he; "but if you hire any of those guides who talk that way, and just offer them ten dollars to put you on a deer, out of season, see how quickly they will do it."

"Perhaps so," said I, "but that is not fair. I would then be his employer, and he might think he would lose my custom in future if he did not comply; besides, it is not the proper thing to tempt any man to do an unlawful act. These guides are mostly poor men, working for their daily pay, and that some of them, perhaps most of them, might yield to such a temptation is not to be wondered at. But do you think that it is honest to kill deer out of season?"

"I don't see how it is dishonest," he replied; "the deer don't belong to anybody; and if my necessities in the woods demand meat, I don't see why I should not take that which is running wild."

Here was a fitting opportunity for a sermon, and the temptation was strong to give it to him; but it is not always pleasant to tell a man to his face just what you think of him, so I merely replied: "It is a question whether a man has a right to place himself in such a position or not. Fish are in season and plenty, and canned goods will take him over the close season."

I now want to say to him through FOREST AND STREAM that the deer belong to the State of New York until lawfully killed. That the State has decided not to have them shot until the 1st of August; and the man who goes into the woods and kills one before that date might just as well break into the State treasury and carry off the money of the people. He is taking a mean advantage of honorable sportsmen who wait for the season to open before they taste venison; and it is a very lax state of morals which permits a man calling himself a gentleman to do it. He is a venison thief. The State allows you to go into its woods and take a gun with you, but you should then be on your honor not to violate its hospitality any more than you would if invited to the grounds of a private gentleman. Looked at in this light it is a question if a gentleman will wish to capture unlawful game.

Not one of the survey party, guides or others, has ever desired to taste the forbidden deer until the close season expires; they live well and bountifully on fish, ham, canned goods, and such other things as are brought into the woods from the nearest towns when a guide goes in for supplies. For my own part I take no pleasure in the killing of this beautiful animal at any time. Certainly, looked at from any standpoint, the sport does not compare with fighting a trout or bass. One pull of the trigger and your game is down, or away. Like men who fish with bean poles and swing a fish over their heads at the first sign of a bite, the pleasure consists merely in counting one more.

One evening in July four deer came down on the point near the Forge House and fed and drank in plain sight of a dozen, or more, of us gathered in front. On previous evenings one had been seen there alone and they were getting quite tame. Poor fellows! their confidence in man will be the ruin of them after the 1st of August. Venison is good, but I have formed such strong friendships with several deer, which come up and lick my hand, in the Central Park grounds, that I would care more to pet than to shoot their kindred. Perhaps it is not the worst thing in the world to get a little tender-hearted as one's hair begins to mildew.

F. M.

The Sportsman Tourist.

RAMBLES THROUGH NEWFOUNDLAND.

PART IV.

IT was my good fortune during my rambles to penetrate through all the famous game grounds of the island, and nowhere have I spent more delightful hours than in the early morning under the shadow of the great cliffs watching for the various kinds of sea ducks to come into the nook commanded by my position. It might seem to those who live in summer climes that while violent storms sweep over the bleak Newfoundland hills in the winter time, and deal destruction to crafts near to its rock-bound coast, that there was nothing for the sea-shore dwellers but to cling to their cots till the tempestuous season passed; but there is far other and more delightful pastime afforded them in the very din of storms. Now Newfoundland presents almost around her entire coast, what I may call a stern rocky wall to the sea, and sailing around the island for the first time your impulse is to ask, "How did people ever get upon the island?" Here and there the bold cliff seems to relent, and you notice an opening clean-cut as if chiselled by the hand of man through the rocky wall, and putting your boat through this opening, you often find the water as deep at the very base of the smooth-cliff wall as in the center of the passage; and you hear the wavelets, when there is only a slight breeze, lapping against the rock. Inside the opening, sometimes the eye is charmed by green meadows nestling in a vale through which a large brook sings its way downward, gently sloping from the wild hills onward to the sea. The sea-arm runs often from two to twelve and even twenty miles inland, winding through flats and moorlands, now and again in through hills, clad always in their tresses of evergreen. In such vales you find generally a nest of cosy little cottages, whitewashed or painted white. About the hills you hear the tinkling of the cow-bells or the bleating of the sheep or goat.

The history of these "coves," as they are called, is this: About a century ago there was a large flow of emigration from the British Isles. For the greater part newly married couples arrived in the island, with strong arms, pluck, and willingness to seize labor by the forelock. In each such cove one couple settled, rarely more than one, and as the coves were as a rule only a few miles apart, the isolation was not as dreadful as might first appear. There were always numbers of old country "youngsters" to be had from the nearest populous place, and one of these was "shipped" to the solitary cove-dweller for a year for his "prog," that is, his victuals and his clothes. From this cove the settler and the youngster caught cod during the summer months in a little open skiff, each provided with a pair of lines. Then the cod used to come in among the very rocks by the cottage after the caplin, and the fisherman and the boy might often sit, and, a gaff in the hand of each, load the boat without putting out a hook. One little skiff frequently in the season then, with only two hands on board, landed 200 quintals of cod, worth, on the average, about eighteen shillings a quintal. The cluster of white cottages you now see, sailing around the coast, belong to the descendants of the solitary pair, and the employment of their owners is still fishing. With the early spring they spread the tiny wings of their little open craft and go around for the cod, which they dry upon rocks, or upon flakes, shipping it to St. Johns in the late autumn.

This is, of course, a feature only of the general coast, for Newfoundland has a large city, St. Johns, and several other important towns, besides numerous large settlements. But from what I have written the reader will be the better able to follow me among the rocks in the gloaming, listening to the doings of the sportsman through the wild winter.

Every house that you find around the coast has a gun-rack, the pieces being of various sizes. Long-barreled guns of heavy calibre, and capable of belching out "eight fingers comfortably," are those used for the ducks.

Now while the storm may rage and drive the wave foam up over cliffs three hundred feet high on one side of a projecting point or cape upon the other side, it will be as smooth as a pond, and it is by taking advantage of these situations that the sportsman is able to make havoc among the sea duck even while the tempest thunders.

I went out for a week's duck shooting to one of the hospitable coves in the bay of St. Mary's in the midst of February, a few winters ago. For a week steady, the wind had been blowing sheer in upon the land, and not a bird had been killed. But I must add that what was a disappointment to the rock-dwellers in this respect was cause for much gratification in another. For it is almost certain to happen after a strong southerly gale has prevailed for a few days, if the wind suddenly chop around and blow in upon the land, that large quantities of wreckage are driven ashore. Some of the inhabitants lie in the rocks hours before dawning, waiting for light to look for the prize, and the spoils of ocean are often not less interesting than valuable. All the houses in these coves are built of deals and boards picked up on the strand or beach. I have known silks in bales, boxes of jewelry, combs, cottons, scarfs, and even packages of bacon and pork to be thrown up among the rocks, not to speak of the vessel debris, and the hundred other incidental things.

So it was in the case I have mentioned. Several huge square pieces of timber and large quantities of deals had been picked up all along the face of the cove, and stuck up in the crevices till the sea became smooth enough to collect them. The game disappointment was more easily borne.

I brought a sturdy, strong-limbed dog with me, whose pedigree I cannot give. He was one of the many dogs to be found in the island inured from infancy to the buffeting of the waves, and invaluable to the sportsman shooting ducks by the surf or by the rocks.

During my first night's stay in the cove the wind blew fiercely, and in order not to disappoint me, who had come so far for the sport, two of the young men agreed to set out with me the next day, if the wind did not show signs of abating, and go across the small peninsula to where there was shelter. But about noon the wind fell.

The following morning, an hour before the dawn, we set out for the "tilts." The tilts were three little shanties, built in the crevices of the rocks, about two miles out on the coast from the dwellings. In these tilts the fishermen lived during the summer while fishing, as the place was nearer the fishing grounds, and afforded better landing facilities than the dock by the cottages.

I shall never forget that tramp through huge rocks, up dizzy heights, and down again through yawning chasms through the darkness and the piercing cold. My dog whined and shivered, I believe in terror, clinging to my heels. I followed my sure-footed guides out around the perilous way till we came to the cliff top, looking down upon the tilts. Dawning showed the fainted streaks of gray, and I could see the great sea stretched out before me like a vast and indistinct field of hazy blue. The better trained eye of one of the guides saw more, and taking me by the shoulder, pointing through the gloaming to the sea he said, "look;" but looking with all my might, I saw nothing but the indistinct outline of the sea. Then he whispered me to "make no noise," that it was "a big flock of ducks," "and now," he said, "mind yourself coming down here, it is not nice for a stranger." I kept close to his heels, and shuddered as I saw him step over the beetling brow of the cliff to make his descent.

The terrors of that descent I shall never forget. Piercing though the morning air was the perspiration started through every pore of my body. The path down consisted of here and there a tiny step, like a stairs step, being blasted into shape on the face of the craggy cliff, which, added to a few natural spurs and shelves in the rough rock wall, formed a means of descent from the top to the tilts below. I managed to get down, and so did my dog, though the poor brute whined piteously on nearly every step, for which he received from the guides "curses, not loud but deep."

They laughed at me as I got to the bottom, saying, "Why, our girls and women run up and down here two or three times a day in summer; that's nothing." I felt piqued at this rebuke and tried to think of some form of danger, strange to my guides, but familiar to myself, which I might brag about; but alas! I could not think of any.

"Now, we had better station ourselves," said the leader, and it was decided that we should go into one of the tilts, built upon the lowest ledge of rock, and wait for the birds to come on. There was only a light breeze blowing, and its direction was off land, so that under the shelter of the cliffs above us the water was as smooth as a mild pond.

Bringing the dogs in we took up our position in the tilt, first having removed the "firing boards" in the side of the little building. Through this aperture we were to fire. By the time that our preparations had been made the growing light had purged the hazy veil from the face of the sea, and we had a good view of the surroundings. Looking through the opening beyond a little point on our left, what a bound of delight did my heart give as I saw a huge, dark moving mass, covering fully an acre in area, crossing toward the shore. "There they are; gambirds at that," whispered one of my companions. And then in the same low tones, "Keep your nerves steady; you will soon see something that you never saw before."

I may state that the duck called "gambird" by the inhabitants is the American eider duck—*Somateria mollissima*—known locally also as the "sea duck," and "big salt water duck."

It was next to impossible that I should try to believe my eyes that the huge mass coming on was all birds, and that thousands would come in under the very muzzles of our guns. Nothing less, I was assured in low whispers, would happen, and one pointed down into the water and said, "Do you see all these shell fishes clinging to the rocks on the bottom? The ducks are after these." It was soon plain enough. The whole body moved rapidly in, singing a multitudinous song, whose music seemed not unlike the sighing of the surf. A few acted as leaders, bearing their crests high and proudly, and continuously turning their heads from side to side, as if on the lookout for danger. The nook immediately below our tilt soon filled up with the birds, while for several gunshot lengths outside there was a solid mass. We lay still, making not a motion. "Let them dive," whispered the senior of our party. "If they all go down at once we will leave the tilt and get a shot lower down. It will be observed that the point at which we were was several feet above the level of the birds, which would prevent us from "raking" them with our shot, whereas, by adopting the proposal made, we would be on a direct level. Meanwhile, the whole mass pressed on and swarmed into the many nooks about where we were. After a sharp look around, down went the leaders, and were followed simultaneously by all the rest. Not a bird remained to be seen of the numerous host of three seconds before.

While my wonder was upon me my companions ran out, saying to me hurriedly, "Come;" and in a trice had placed themselves behind a hedge of rock directly at the water's lip. I was beside them in an instant, and we all disposed our dogs cosily behind us, and made ready. We were to fire in the order in which we lay. I being on the right was to fire to the right, he in the center in the center, and he on the left to fire to the left of the nook. I heard the word "Now" given, and that is all I noticed save the birds, so excited was I. We

raised ourselves simultaneously, leveled together, and fired as one gun. For the moment we could not determine the effect of our shots, so great was the confusion among the skurrying birds, beating the water into foam with their wings. But when we did see it, the exclamation "Well done, by Jove," from the staid shot of the cove gave me a fuller idea than I could gather from the number of birds floating dead just before us. You could trace as accurately as if you had fired along a snowbank, the direction of each shot. Three rows of dead birds lay in the nook, and wounded ones almost innumerable hobbled around, and skurried off, making the best of their way with trailing wings and broken legs. I felt not a little pride to see that I had as many to show on the right of the nook as either of my companions had; nor when they both for the first time critically examined my gun, and pronounced it to be able to "pitch shot pretty well."

Immediately on the discharge of our guns, over the rock went the three dogs and began fetching the birds. But the task was too heavy, and we launched a little rodney, kept in the summer for mooring the larger skiffs and in winter for shooting purposes. The number of birds shot dead, and those wounded which we followed up and shot also, reached 103, not one of these birds weighing less than seven pounds. This being slaughter enough for one day, each took a load of birds, went up the jagged cliff-path—which did not look quite so terrifying in the light—and on to the cove. I took eight birds across my gun, each of my companions took exactly double that number, the rest of the birds we left in the tilt and they were brought round to the cove later in the day by four of the young men from there. These birds, hung in a cool porch, will remain fresh during the winter, and when thoroughly soaked and properly cooked, are little inferior to the choicest members of the duck family.

During my stay at the cove I went out on several expeditions, but at none, not indeed summing up the total luck of all these, had I with my companions such fortune as on the morning at the tilt. Perhaps it was the "biggest shot" of the winter on that part of the coast.

One morning during my stay, the wind having blown in-shore for some days, I resolved to cross the narrow peninsula and "try Westward Cove." We set out, Peter and myself, about an hour before the dawn. Peter having slightly overslept himself. A tramp of four miles lay before us, through deep snow and over marshes not so deeply covered, but supplying, as an offset to depth, a provoking crust, which always would nearly bear you, but never would quite bear you. Toilsome and maddening it was this get up and break through again, every step to the knee, over two miles of marsh; and to make matters worse, before we reached the point of descent to the rock it was so bright that we must betray ourselves to any birds in the bight.

We crept cautiously to the bank, and saw a dozen birds or so within easy range of our firing place, and after my companion had looked upon them a minute, he exclaimed, "All right—sleepy divers." We'll get a shot yet unless there are any hounds around." (The "hounds" I satisfied myself were the long-tailed duck, *Harelda glacialis*.) The "sleepy diver" gets the name from the sleepy look it has, and the comparative ease with which you can get a shot at it compared to other ducks around the coast. The bird is really the American scoter—*Œdemia americana*. We lay upon the bank for a few minutes, after which my preceptor told me there were "no hounds." Then, when the sleepies went down, as they did simultaneously, we ran as fast as the nature of the slope would permit, about a fourth of the distance, and then threw ourselves down noiselessly by the side of a boulder, our dogs doing the same. While the birds were up we moved neither hand nor foot, lying there like the rock till they went down again. This is a very general way of "working upon" duck in the daylight all around the island, and to serve as a screen in the descent rows of rocks are placed at certain points beside which the sportsman may lie without fear of recognition.

That day we got five birds, I taking two, my companion three; but what I have to tell of most moment in connection with the trip is, what befell my dog. There was a pretty heavy sea running at the time, but the two dogs did not mind this. The dog of my companion would, when he saw the sea curled up ready to break, dive at its base, and come out all right on the other side; but my dog, nurtured in smoother places, and in less turbulent waters, was at the mercy of every sea. He had brought in two birds and was swimming out a third time, when a huge sea curled up green and threatening. My dog was between a jagged projecting rock and the sea, about midway, and instead of diving into its base, he raised his head timidly, half, and then turned his side to it, swimming along in the trough. The sea broke, and I saw him through the rushing foam borne against the goading rock edge. When the sea went out again I saw that he was badly stunned and swam around confusedly. He was too far for me to reach him even had I the appliance, so I knew he was doomed.

It is a strange, yet a well established fact, and noted by myself more than a hundred times, that heavy seas break in upon the shores in a succession of threes, that is, after it has been quite smooth for a few minutes, at a landing dock among these rocks, you see a swell grow outside, curl up and break; such sea will assuredly be followed by two others, after which the waters will become smooth again for another period. I knew there were two seas to follow that which struck my poor dog, and they came and beat him against the rocks, after which his dead body floated away, and with a tear—I could not check it—I saw the last of him drift around the cape.

In many of the inhabited parts of the coast the duck is found only in comparative scarcity, and so it is that in the autumn, late, parties of young men set out from such places and proceed to points sometimes fifteen and twenty miles distant, where, in a favored spot in the rocks, and under the cliff, they erect a shanty or tilt, to which they can resort in winter to watch and wait for sea duck. I have spent many a night in one of these cozy little tilts wrapped warmly in my blanket in a comfortable bunk, lulled to sleep by the music of the sea upon the beach and against the iron-bound rocks about me.

Before returning home I set out with a party of three others, we being provisioned for three weeks, a distance of fifteen miles to one of these little shooting houses. It was situated on a wild part of the coast, built on a little rock platform at the foot of a perpendicular cliff that soared 300 feet into the sky. We stayed in this tilt for a fortnight. We could always get plenty of drift wood to burn, and had blazing fires during our sojourn, because the wood we chiefly used was pieces of broken boat planks with a deep coating of pitch on one side. You cannot travel any where upon the naked coast but you meet such mementos of the ravages of the tempest and destruction of the hardy toilers that struggle with the fierce tempests in these dangerous waters. The wind blew straight in from the sea upon us for ten days, and during that time the sea spray rained incessantly, like a continuous rainstorm, upon the roof of our little dwelling.

The days were dreary enough, though my companions found much solace in their pipes, a pack of cards, and in fighting over again the battles of Alexander and of Napoleon upon the chess-board. I had two books—a copy of Tennyson and "David Copperfield." I cannot tell how affected I was reading for the first time, in the midst of the storm, the recital of the shipwreck at Portsmouth, where the destroyer and the lover of "little Emily" both perished; how the mighty green waves, curling and smoking, and breaking with the crash of thunder and furiously assaulting the grim rocks, reminded me of the great waves that annihilated Steerforth's ship and beat the life out of the noble-hearted Ham. But after the inland gale had subsided, and the storm began to pipe over the cliffs, out from the land, the long-angered sea seemed to sleep at the base of the hills, and numbers of birds which had weathered it out, famishing perhaps, exposed to the violent storms, came in singing hungrily in large numbers. But as birds of nearly every kind that inhabit the coast waters—the harlequin duck (*Histrionicus torquatus*) called locally "lords and ladies;" long-tailed duck (*Harelda glacialis*), provincial name, "hounds," from the resemblance between their cry and that of a pack of hounds in full chase; surf duck (*Pelionetta perspicillata*), called by the fishermen "bottle-nosed diver," the "sleepy diver," mentioned elsewhere in this paper, also the "American eider duck;" the king eider (*Somateria spectabilis*), local name "king duck," and the red-breasted merganser (*Mergus serrator*), called in Newfoundland the "shell bird," besides the "sea pigeon," or black guillemot (*Uria grylle*), little auk (*Mergulus alle*), called "bull bird," and several others which I cannot just now call to mind—as all these, I say, came in, it was impossible to move in trying to get a shot at some birds for the time under water after the shell fish without disturbing the rest; for alarm but one bird while all the rest are down, and they too take the alarm, many fathoms deep among the rock nooks at the bottom of the sea, and when they rise it will not be at the point where you saw them dive, but quite beyond the range of your duck shot.

We got about fifteen birds of two or three different kinds however, not a great number, but, considering the weather, about as good as might be expected. I may say that on the morning of our departure I was lying down behind a kelp-covered rock, every now and again a dash of spray coming into my face, waiting for a pair of bottle-nosed divers to come in range, when something rose about ten yards out from the rock like the bottom of one of those old-fashioned pots or skillets. I knew it was alive and swimming, and that is all I knew about it, but feeling instinctively that it was game, I leveled, fired and knocked the daylight out of something as big as a large sheep. The dogs jumped out and seized it, dragging ashore a fine seal of the "harbor" variety, scientifically known as *Phoca litorea*. As that was my first seal I had the skin and flippers taken off; the latter I had stewed that evening for my dinner, the former I had elaborated into a pair of boots.

It will not, I shall venture to assume, make a joint in this recital of a winter's ramble to annihilate a few weeks of time spent under more civilized atmosphere and recount an expedition attended with fatalities, later in the season.

There are a good many young men in Newfoundland who would like to shoot ducks in the cold weather, but would not care for braving the cold and the dangers attendant upon the sport like unto the cats that would relish fish exceedingly well, but who will not hardship themselves to wet their paws. So that it is hard sometimes to make up a party. It was in March while fierce winds swept over the island, singing dismal songs through the windy crags, and adown the gorges about the coast. The "gambird" or American eider duck had now begun to move away from the prominent portions of the coast, and shrink back into the bights or toward the bays. I organized a party from a settlement on the coast to fit out for a few days to give the birds a "farewell shot" for the season.

I have good cause to remember the morning we set out from the settlement. It was about three hours before the dawn, and the stars twinkled brightly through the dark vault of heaven. The day before there had come a heavy fall of snow, and a high wind prevailing, huge drifts, sometimes, on the level, reaching twenty feet, were to be found here and there, while large masses overhung the cliffs for many paces out beyond the natural precipice-rim. I may say I have often, in winter, walked along by the ridge of the precipices, upon the snow, and suddenly, by some landmark, found I was many paces out beyond the natural edge of the cliff. Such a position is fraught with the gravest danger, as these masses are continuously breaking away, and being hurled among the rocks, or into the boiling sea hundreds of feet below. Here and there, going along the cliff's rim in summer, you see a cross or head-stone, telling you in a few words the sad story: "Two men walked over here in a storm in the winter of ——;" "Sacred to the memory of ——, who was precipitated upon the rocks below in a snow-slide," and so on.

On the morning we set out for our expedition against the ducks, the leeward cliffs were all in this treacherous condition. We reached a well-known sea-fowl haunt in the gray between the dawn and sunrise; but seeing no birds, journeyed on for two or three miles further. The sun rose bright and strong, and the trees growing out by the precipices' edge dripped merrily. We reached a huge "scrape," or shaving cliff—distinct from its surroundings by being soft and gravelly from top to bottom, and forming an angle of about forty degrees with the beach below—from the top of which we could see several large beds of ducks feeding away vigorously. The snow was drifted in a huge mass about thirty feet out beyond the brink of the scrape, but, in order to reach the bottom, it was necessary that we should go over this artificial and perpendicular front.

There were five in the party besides myself, and these all being as nimble on the cliffs as their own mountain goats, and laughing at all peril, prepared the descent by making steps in the snowbank downwards. But before this task was done, we saw an instantaneous movement taking place in the whole mass, and that we were moving with it at tremendous speed down the gorge. The whole occurrence passed before my eyes like the swift shadows that rise and pass one in a fevered dream. The mass seemed to settle down flat, moved without noise, and easy as if its feet were of feathers. I saw my comrades and heard them shout in exultation, enjoying the situation. But consciousness, or rather the power of being able to recall the whole incident, fled from me. My first recollection was that I was thrown rudely on the beach, by the very edge of the sea, and a stupefied, pain-like feeling I felt in my head. My eyes were dizzy, and I reeled around upon the beach stones. Then I looked about me, and heard the laughter of my companions, and found that I had my gun firmly clutched in both my hands.

It was now all clear. The laugh I heard was only momentary. It came from three of the party who stood near myself at the outer edge of the snow-mass. And then a piercing cry I heard—it came from a brother—"Where is Bill?" And then all asked together, "Where is Jack?" but the silent hills only returned a sound to the wild beseechings of the sorrow-stricken party.

Still we thought that they might be playing us a trick, and looked in every crevice at the bottom of the cliff where it was possible they might have concealed themselves; but the first impression was only too correct—they were buried under the huge snow-mass, and while we were speaking, if they were not killed otherwise, were smothering to death!

We knew not what to do. Sick at the heart with terror and sorrow, and without the appliances to dig in the snow, even were our puny exertions of any value, we stood bewildered. All was as still as the very grave. The huge mass rested there, beaten into powder in its fall, yet placid as if it had just come from the heavens.

That afternoon about fifty sturdy hands discovered the bodies of our ill-fated companions. Both were close together, wedged in against a hard rock projecting from the cliff-wall of the scrape. One had his gun clenched by both hands, the other held his lightly in the right hand as if alive. They were without bruise or scar, but the faces were a purple black. My last act there was to carve out in letters upon a cross for each the simple legend of the mournful death of one and both. I was, indeed, the only one who could carve such a legend; perhaps in the whole settlement of sixty souls there were not three who could read or write. And the two crosses stand to this day upon the brink of the ill-fated spot where we descended on that March morning.

Toronto, Canada. J. E. Collins.

RICE LAKE.

THE dog days are now upon us, and all who are so fortunate as to be able to shake the dust of the metropolis from their feet, are doing so with a warmth that is only equalled by the intolerable heat that has been our lot for the last few days. In fact, from the appearance of out-going trains, steamboats, etc., there is a perfect hegira of sweltering, suffering humanity to country and seaside. There are many who have done the mountains and seaside to satiety, veterans or novices with the rod or gun who are seeking through guide book and excursion tables for new fields to explore, where their prowess may be displayed and glory won in stream or woodland. For those I desire to pose as a humanitarian by disclosing a little Utopia for sportsmen, where the brightest realization of their dreams can be found, where in stream fin abound so plenteously, and where in woodland feathers prevail so extensively, that patience, heretofore one of the essential qualifications of the "true sportsman," is banished from its fair domain. The ground is well known to, and patronized by, our cousins across the border, but is a *terra incognita* to even the vets here.

The place I refer to is Rice Lake, in Ontario. It is a beautiful sheet of water, varying from one to four miles in width, and is about fourteen miles in length. It is the source of several rivers, which are navigable by canoe for many miles back into what is a vast wilderness of forest, where in season large game abound, and which is the resort of many enthusiastic Kanucks, whose sporting proclivities are only limited by the great chain of lakes in the Northwest. Rice Lake owes its name to the extensive beds of wild rice which have existed there from time immemorial. I believe these rice beds are the largest, and the grain of the best quality, that can be found on this continent. The lake and an extensive tract of land on its westerly side have been set apart by the Dominion Government, as a reservation for a portion of the Chippewa tribe of Indians, who have a very pretty village, which is called "Hiawatha," located on the banks of the lake. It is said that the lands in this reservation are the best cultivated, and return the largest crops of any in that section of the country

Lately the government has been paying great attention to the propagation of fish in this lake. For some years past Mr. Charles Gilchrist has been the Inspector of Fisheries in that section of the Dominion which includes Rice Lake, and to his earnest zeal and indefatigable efforts is largely to be attributed the success of the government in stocking this lake and its tributaries with its "finny tribe," which excel in quantity and quality even the wonders of those traditionary fish stories which were inspired on the bosom of Rice Lake in the balycon days of yore. Mr. Gilchrist (who, by-the-bye, is one of the jolliest, most genial and hospitable mortals that can be found in many a day's tramp, as all who have come within the beams of his smile can testify) attributes to the wild rice the wonderful success in stocking this lake with fish and redeeming it from depletion, making it, a desert in this respect, blossom like the rose.

This rice grows in from one to six feet of water, on a soft muddy bottom, from two to six feet above the surface; its head when ripe is from one and a half to two and a half feet in length, and full of grain. It grows in beds so thick and strong as to require great exertion to force a canoe through it. The beds are from two to six miles in length, and average about two miles in width. In fish ponds it is of inestimable service in the propagation of fish. Its great root surface gives it great purifying power. It affords shelter to the young fry, being a protection from the larger fish. Its stalks, etc., support a great quantity of parasites, upon which the young fish feed.

As soon as the rice is ripe it is gathered by the Indians; the harvesting commences about the last week of August, and, if no heavy rains or high winds occur, lasts about three weeks.

An Indian and squaw, or as one reminded me rather imperatively last summer, an Ingun lady, take a canoe, she in the stern paddling for dear life, and he in the bow, gracefully, but so lazily, wielding a stick in each hand, strikes the head of the grain, which falls into the canoe, and in this manner gathers and threshes at the same time. The rice crop of an Indian is equal to his efforts, and I cannot avoid here offering another tribute to woman, by saying if it were not for the Injun lady the Indian's crop of rice would be infinitesimal.

Mr. Gilchrist, who, during the entire summer, resides at the lake, buys from the Indians almost all the rice they gather, paying the same price they can obtain at any of the towns they deal in, and saving them the trouble of trans-

portation by land. He has erected an extensive drying and store-house at the lake, and personally superintends the drying and packing of the rice, which he sells in large quantities, shipping it to parties all over this country, who are sowing it with remarkable success in ponds and lakes for the purpose of enticing wildfowl to their domain, and aiding in the propagation of fish.

I will now attempt to acquit myself of my purpose by giving directions of how to get there from this city. The shortest route is to Rochester; from there to Charlotte, on Lake Ontario. At Charlotte you take the boat and cross to Cobourg, on the Canadian side; from there the Peterborough and Mormora Railroad conveys you to Harwood, a small village on the borders of the lake, where an excellent hostelrie, at very reasonable prices, can be found. By leaving New York in the morning, via Hudson River Railroad, and making close connections with the lake steamer at Charlotte the same evening, you can reach Rice Lake in thirty-six hours from New York.

From the 1st of August until the latter part of October, the bass fishing cannot be excelled. Tiring of still fishing, one can resort to trolling, and can find a little excitement in hauling in a twenty-pound muskalonge. As an attraction for wildfowl, the lake is unsurpassable; thousands of every variety of waterfowl make it their feeding ground, where they grow fat and luscious on the wild rice. Here, after the 1st of September, can be found black, gray, teal, bluebills, redheads, goldeneyes and wood ducks, as well as coots, reed birds, etc., while in the adjoining forest wild pigeons and partridge abound. Need I say more to send the blood coursing tempestuously through the veins of even the most exacting and capricious sportsman? R. S. H.

New York, August 2, 1882.

THE WHITE SULPHUR SPRINGS.

To a man wearied with the different troubles and cares that poor humanity inherits, and which afflict the rich and the poor alike, this beautiful spot is as a haven of rest. I think the scenery and surroundings here are the grandest and loveliest I ever gazed upon. Nature has hollowed out from these massive, rugged mountain ranges a basin, or plateau, of some fifty acres, and it is a veritable garden of the gods. The lawn, gently rolling, is shaded by grand old oaks, centuries and centuries old. Under their spreading shade the Shawanee Indian chiefs had their wigwams and held their council and smoked the calumet. That this spot was their regular abiding-place is proved by the number of relics found. Ancient graves, mounds, arrow-heads, stone tomahawks, ironstone lance-heads, fragments of pottery ware are often picked up.

Tradition tells us that this place was called Yokemac, and here it was that all the tribes of that warlike race, the Shawanees, assembled once a year to indulge in their Olympic games and other rites and ceremonies that were peculiar to the North American Indian. They were a mighty nation, and numbered thousands of warriors. They held undisputed sway over all that territory running from the Blue Ridge Mountains to the Ohio River, and were in the very plenitude of their power long after the tribes of red men under Powhatan had been conquered and destroyed by the English.

Indeed, until the year 1751, the foot of the white man had never trod the unbroken wilderness. It was not until the year 1749 that this glade, shut in by lofty mountains, was discovered, and discovered by an accident. It seems that an eccentric character named John Cartwright, living in Winchester, Va., who, when the moon was at its full, had, what the country people call "spells," and would steal off like old Rip Van Winkle, with his gun and dog, and wander at will, for days and weeks at the time, through the pathless forests. In one of these trips he discovered a fairy-like spot where the ground was level, the trees of vast size, and medicinal springs gushed from each hill, and a broad river ran on one side and a brawling clear stream on the other, both filled with fish. He returned home and told in glowing colors of a paradise he had found hid away in the fastness and gorges of the great Alleghanies.

The tale was looked upon as the wild ravings of a madman. But he stuck to it with unyielding tenacity, and finally two hunters, Jacob Martin and Stephen Sewell, determined to venture in search of this land of enchantment. With a kit on their shoulders they set off, and finally reached the spot. They dwelt together for some time in a hollow tree, and revelled in a land that was filled with deer and bear and whose waters teemed with fish. Sewell named the mountain after himself.

Sewell and Martin were killed by the Indians, and it was not until years after that Yokemac was seen by the palefaces. It was twenty-three years later that the Shawanees were beaten at the battle of Point Pleasant by the colonial troops, and were driven from their hunting grounds and forced to seek shelter with a portion of their tribe that dwelt on the banks of the Scioto in Ohio. But they never relinquished absolute title to the spot made sacred by their council fires. Marauding and scalping parties hung and circled around the region, making war to the knife against the palefaces, and it was not until their numbers dwindled away to a mere frazzle was this section safe from their forays.

The whole of this region was owned by Nathan Carpenter under a letter of patent. Carpenter was subsequently killed by a small band of wandering Indians in a stockaded fort where the town of Covington now stands. His wife Kate fled to the friendly recesses of a mountain overshadowing Yokemac, and it is called Kate's Mountain to this day. It overlooks the White Sulphur from the south.

It was years afterward, in 1788, that the wonderful efficiency of these waters for chronic rhumatism and gout was discovered, a Mrs. Anderson was cured of chronic rheumatism, and the fame of the healing waters spread far and wide, and a year later a few tents were erected by for invalids who were driven to the place in rough wagons. The bathing facilities consisted of a huge tree hollowed out to answer the purposes of a tub.

In 1788 a few log cabins were erected by an enterprising genius, who probably ran a bar and barber shop, thus shaving the poor invalids at both ends.

It was not until the year 1818 that the White arose to the dignity of a watering place. A tavern was built, cottages erected, a big mirror put in the bar room, and the young man with a mock diamond in his shirt front exported from a city placed in charge, and a darkey with a brush stood at the bathing trough. Probably about this time a man with a tin cup stood at the spring to hand the visitors water, with a placard on his hat of "Please remember the dipper."

If miracles could be played in these days, I would like to watch the countenance of an Indian brave as he rubbed his eyes after a century's slumber and saw in the center of the grounds where once rested his tent of buffalo hides, a great stately building rising white and fair against the green of the trees. A half a hundred tasteful cottages are dotted over the ground, and on the hill is a pavilion from whence on a summer's evening there comes forth sweeter music from brass and silver throats than his untutored soul ever dreamed of. What must he think if he had happened to awake in the night time and seen the grand hotel with its three thousand windows blazing with light, while the electric lamps, spouting their white flame, makes the beautiful lawn as bright as day.

There are some of the most exquisite bits of scenery around the springs that I ever beheld. A broad stream runs along the base of Kate's Mountain called Dry Creek, and by following it along your eye is charmed with a succession of panoramic beauty that is simply indescribable. In some places the stream rises and deepens and lies in all its grace and purity at the very foot of some rugged rocky bouldered mountain that rises sheer upwards until its pinnacled crags pierce the clouds.

> "The tender azure of the unruffled deep,
> The mountain moss by scorching skies embrowned,
> The orange tints that gild the greenest bough."

In this creek there are perch, carp and other fish, that bite freely. Some thirty miles away are the mountain runs, where the trout are caught, and I understand from the mountaineers that in Pocahontas county, fifty miles distant, the streams are filled with speckled trout. I had intended going, but my party failed to arrive owing to business matters. The best way would be for several to rendezvous at the White Sulphur, lay in an outfit, rent from the stables here a light two-horse spring wagon and then drive to the streams and camp out. Indeed that would be the only practicable way, for the good fishing grounds are so deep in the mountains, miles and miles away from the nearest habitation, that it would not pay to ride there and back every morning and evening. I shall never rest contented until I have whipped these waters and see for myself if all the wonderful tales I have heard of streams literally alive with trout are true. Chasseur.

White Sulphur Springs, W. Va.

A HALF-WAY HOUSE.

It was nearly dusk one August afternoon when the Professor and Sigourney, with their two guides, were descending the Raquette. They had been on a trip to the Saranacs. They had stopped at Martin's and seen several embryo sportsmen in top boots and corduroys start on their first trip to the woods.

They had crossed Round Lake, that proverbially rough water. Whenever a breeze ruffles the surface of the Raquette or St. Regis, the guide is wont to rest upon his oars and exclaim, "Guess it's rough on Round Lake to-day." Thus our party had long looked forward to the excitement of crossing that roughest of the Adirondack lakes. But when at last they did cross, and when they came back too, Round Lake's surface was as a polished mirror. Their own faces looked out of it and mocked them. The Professor thought he had seen rougher water than that down home. It was very unusual, the guides said.

They had dined at Bartlett's, and such a dinner! but Bartlett's reputation is already made. Upper Saranac, three mile carry, both were crossed, and now they were going swiftly down the Raquette. Ay! not that stream flowing through acres of deadwood, that they call the Raquette now, but the old river, flowing in all its primeval beauty, unscanned by the selfishness of man.

"Yer see that carry," said Wren, pointing to a small opening in the bushes through which the river could be seen as it turned in its course. "Well, the river runs by there agin' an' it cuts off some to carry across. Five year ago a green guide come down an' they told him about it. When he went by here he didn't see it, but when he come round he see'd where it come out, an' he just hauled the boat over an' put it in the river an' rowed round agin jist where he rowed afore."

At length they turned into Tupper's Lake, and pulled across to Moody's. It was quite dark when they reached the landing. The boats were drawn up and they hastened to the house. It is pleasant after a long trip in the wilderness to reach a house again; after a long isolation from man to see a human face. Balsam boughs are all very well, but a good bed is doubly soft after a few weeks of them. Many parties indeed, instead of camping out, make trips between these half-way houses.

The room which our party entered was a cheerful one. There was a fire in the stove, for even August nights in the woods are sometimes cold. Eight or nine men were in the room, some sitting about the fire, some leaning against the wall. One, a tall, wiry man, stood behind a bench pouring out liquors. That was Mark Moody. There were piles of duffle on the floor, and guns, fishing-tackle and coats hung upon the walls.

Supper was ready. All filed into the long dining room. All were hungry, and the attack began without ceremony. Plate after plate of smoking venison was emptied. The trout vanished. The corn cake melted away. Then came griddle-cakes and maple syrup. A dark girl, with sharp features and straight black hair, brought them on.

"Look!" whispered the Professor. "A red Indian girl. There can be no mistake. That is the Huron nose, though the brow is more of the Mowhawk type."

"That," broke in Hank, "why, that's old Moody's daughter."

She hopped around with the speed of several Indians. Now she stood by Sig.

"Tea or coffee?"

She spoke with the rapidity of a book agent.

"Well, if that last was coffee, I'll take tea."

She was gone. After supper Mr. Moody entertained his guests in the "bar-room." The other party were eight in number, four sportsmen—a clergyman, a lawyer, a merchant, and a fat man who was nothing in particular except very fat and very jolly—and their guides.

"I say, Moody," said the fat man in a high, squeaky voice, "I say, how long did it take you to build this house?"

Thereupon Moody related how he had cut the logs and shaved them down to planks with a draw-knife, and how he had made all the shingles. He said it was not done yet, and our party found on going to bed that that was quite true, for the walls had been lathed but not plastered, and the rooms, consequently, looked into each other.

When Moody finished his narrative the lawyer pronounced the building "a successful case" The clergyman said it was a "noble work," and "founded on a rock," which last was quite true. The Professor went into a eulogy on the patience and fidelity of hardy backwoodsmen, which the fat man interrupted with:

"I say, Moody, do you keep any hounds?"

"Wal, no, only one ter foller up a wounded deer now and then."

"I say, Moody, let's see him."

Moody went to call the dog, while the conversation turned on the breeding and training of the hound.

The dog was brought. All eyes were turned upon him.

"What! by Jove! why, I say, Moody, that's nothing but a black and tan."

"Wal, I don't know what he is, but I know he's got a nose that can foller a deer."

That night our party slept well. The Professor alone dreamt, and his dreams were of Indian girls hunting deer with black and tan terriers.

The next day our party stopped over at Moody's. At noon the Professor discovered boats coming across the lake. The field glass was manned, and bright-colored dresses and fluttering veils reported. All were on the *qui vive*. The boats landed. Three maidens in bloomers stepped lightly out. Guides came up bringing shawls, bags, umbrellas, wraps, etc., all followed by a solemn gentleman who was quite overlooked. Dinner was delightful.

The young ladies soon proved that they were not of those fashionables who affect a poor appetite at table but gobble in private. These gobbled in public. A rivalry sprang up as to who should eat the most trout. Miss Francis and Miss Frederika Smith were both outdone by Miss Josephine, who pronounced the menu of the hotel delightful, and declared that she had never enjoyed a meal at Saratoga as much.

The Professor was charmed, and when he wrote home to his wife that afternoon said they had met a pleasant party at Moody's—Mr. Smith and Frank, Fred and Joe.

That evening our party got up a rifle match for the entertainment of the ladies. Hank bore off the honors, and was lionized by Miss Frank, but her Endymion behaved toward this Diana much like the original. He declared he "never could quite go them frizzled city girls."

Sig showed Miss Fred the powers of his rifle.

"Do you see that dead pine across the lake?" said he. "I think I could send a bullet even to that."

"O, la, how nice! Why, I should think it would strain your rifle to shoot as far as that."

O, shade of Nimrod! But what do women know about a gun? and he went over to talk with Miss Joe.

"Oh, Mr. P., I'm so sorry you didn't win the match, for do you know when I first saw you I thought you were a guide; you're just the image of a dear guide we had on the St. Regis—from Paul Smith's you know—been to Paul Smith's? lovely place! reminds me of a hotel on Lake Lucerne. This scenery is so like Switzerland, don't you think so, Mr. P? But Pa is beckoning, I'll be back directly. Ta-ta!"

Sig did not await her return, but called Wren and went off in search of something.

In about an hour they returned. Sig drew the Professor into their room and closed the door.

"A mud-turtle! What in——"

"Hush!" whispered Sig, and then produced a can of soft pitch and four walnut shells. The pitch was applied to the turtle's feet, which were then stuck fast inside the shells. Moody's boy, who was an accomplice, lit a light in the room of the Misses Smith and placed the animal on his back beneath the bed.

The young ladies retired, all in the one room.

After a space of time which seemed several hours to the party listening across the entry, the light was put out. While it had been burning, the turtle remained perfectly quiet; but when it had been dark about fifteen minutes, he began to crawl. The floor was bare, and the walnuts struck it with blows which were heard plainly across the entry. Whack! whack! whack! followed by a scream. Louder whacks. Louder screams, and three figures in white, calling loudly for Papa rushed into the entry. Papa appeared also in white and brandishing a pistol. Moody and wife rushed out with a light.

"What's the matter?"

"Oh! a panther, or a bear, or something, under our bed, oh!"

Moody went for a rifle, and our party now appeared, armed to the teeth. The room was surrounded. The strange noise continued. Moody headed the attack and the men entered. A light was brought to bear upon the spot whence the noise proceeded, and the brute was drawn forth. Moody came out holding the creature by one foot, while a comical expression played upon his face.

The young ladies were late to breakfast next morning, and our party took an early start.

Ah! Moody! Wherever they go they will remember you and your good cheer. Often, amid the dust and turmoil of the city, they will see, at times, before them, that quiet cabin on Tupper's Lake. And when its timbers are decayed, and its owner long since passed away, tradition will hand down the fame of both.

RAIL TIDES.

For the following table of high tides at Lazaretto, Pa., we are indebted to the courtesy of Mr. Wm. Miller, proprietor of the Riverside Hotel at that point. The post office and railroad station for Lazaretto is Mo.re's Station. Trains leave Broad street depot, Philadelphia, as follows:—6.30, 7.35 and 10.16 A. M. 12.30, 1.32, 2.30, 3.16, 4.31, 5.30, 6.20, 6.36, 8.30, 10.30 and 11.32 P.M.

Natural History.

A BABY SEA LION.—Some weeks since we noticed in these columns the birth of a young sea lion at the Cincinnati Zoological Gardens, which are under the care of our valued correspondent, Mr. Frank J. Thompson. In the Cincinnati *Enquirer* is a brief account of the preparation of the young animal for his first bath, which our readers will find interesting. Those who desire fuller information on this subject, as well as on the habits and breeding of the sea lion (*Zalophus gillespii*) in captivity, are referred to articles by Mr. Thompson in FOREST AND STREAM, July 11, 1878, and Feb. 27, 1879. The account given by our contemporary is as follows: "In the sea lion's enclosure in the Zoological Garden may be seen a seal pup, which has now experienced seven weeks of the light of the blessed sun. He is a rather ugly little fellow, but yet an object of great interest. His coat of hair is rather rough and non-repellant, and not at all calculated to shed water. About the end of the fourth week he appeared one morning with a glossy coat of grease, and upon looking into the cave, evidences of grease were seen upon the floor. The experienced superintendent knew the time had come when the mother thought her interesting bantling should learn to swim. He had the carpenter construct a platform from the edge of the rock platform, sloping into the water, and fixed partitions to confine the young pup to that part of the pond arranged for his especial benefit. When all had been done and quiet restored, the seal pup ventured to the edge of the rocks and rolled over into the water. The anxious mother stationed herself at the deeper edge of the wooden platform to prevent her offspring sliding into water too deep for it. The pup would drown as readily as a human baby if it should get into deep water before it had learned to control its respiratory apparatus. The seal pup flopped around in the water, occasionally getting its nose under the surface. Then there would be a great spluttering and coughing until the water was expelled and the nostrils recovered from the spasm. Those who have watched the seal playing in the water must have noticed that when it comes up from below it opens wide its nostrils; then before it dives again closes them tightly, the outer edge being drawn hard against the septum, very much as the upper eyelid is drawn down, the line of closure being perpendicular, of course. The same observer must have seen the seal come up occasionally with his mouth open, or a fish in it, and wondered that the animal did not swallow water. Nature has provided it with a set of muscles for closing the nostrils, and another powerful set around the throat for closing the "swallow." Thus the seal, taking in a supply of air, closes the nostrils and the throat, and is at liberty to open his mouth if he chooses. Now this is just what the young seal needs to learn. He has a body properly shaped for floating and diving, and the use of his flippers is soon learned. But the infant muscles must be trained by practice to close the air passages at the proper time, and the mother seal, who, in a state of nature, always calves on a sloping beach, inures its young gradually to deeper water. Thus the mother may be seen carefully watching her young to see that it does not slip into deep water and drown, and a very intelligent mother she is."

NOTE ON THE RED-HEADED WOODPECKER.—Pawtucket, R. I., Aug. 15, 1882.—For the past two or three years specimens of the red-headed woodpecker (*Melanerpes erythrocephalus*) have been taken in Rhode Island, but I have seen no account of their nesting here. July 28, while on a day's pleasure trip to Oakland Beach (a summer resort a few miles below Providence, on Narragansett Bay), my attention was attracted by a woodpecker which seemed to be feeding at some little distance from where I was standing; the species I could not then make out. It soon left the spot and flew past me, and as it went by I saw it was the red-headed woodpecker. It lit upon a tree a short distance from me, and this being the first specimen I had ever seen alive, I was anxious to see more of it, and so followed it up. Arriving at the tree, which was a small oak, I found no bird, but soon discovered a hole about ten feet from the ground. I rapped lightly upon the tree and out came the bird, looked at me about a minute and then flew away. I could hear the young in the nest quite plain. I went away, and in about one half hour returned, rapped on the tree again and then took a seat close by. The bird came out as before, and I had the satisfaction of watching her some five minutes. On August 13, while out in a canoe on the Pawtucket River, I saw a full plumaged (white head and tail) bald eagle watching some fish-hawks which were sailing over the water in search of fish. Soon as one saw the eagle he gave an alarm note, and they all left, together with the eagle. The last eagle seen before this was October 29, 1880. They are very rare with us.—SAMUEL F. DEXTER.

A TOUGH STORY.—The Portsmouth (N. H.) *Chronicle* tells a pretty strong story about the intelligence of a toad, which runs as follows: Mr. Charles White, of Newcastle, has a brood of chickens which have a run of a portion of the yard, the old hen being kept shut up. The chickens are fed with moistened meal in saucers, and when the dough gets a little sour it attracts a large number of flies. An observant toad has evidently noticed this, and every day along evening he makes his appearance in the yard, hops to a saucer, climbs in and rolls over and over until he is covered with meal, having done which he awaits developments. The flies, enticed by the smell, soon swarm around the scheming batrachian, and whenever one passes within two inches or so of his nose his tongue darts out, and the fly disappears; and this plan worked so well that the toad has taken it up as a regular business. The chickens do not manifest the least alarm at their clumsy and big-mouthed playmate, but seemed to consider it quite a lark to gather around him and peck off his stolen coat of meal, even when they have plenty more of the same sort in the saucers.

DEPREDATIONS OF THE SQUIRREL.—Fern Lodge, Nova Scotia.—I can fully corroborate your remarks in answer to a correspondent in a late number of FOREST AND STREAM, regarding the carnivorous propensities of the squirrel tribe. The common squirrel of England is well known as a flesh eater; and now I must include our common "chipmunk" or ground squirrel (*Tamias striatus*), in the list of enemies of the feathered tribe, for a young one we had in a cage lately pounced upon a bird put into his cage by mistake, and tore off a bunch of feathers, and had it not have been for the cries of the poor bird which immediately brought assistance, the squirrel would soon have made mincemeat of him.—J. MATTHEW JONES.

THE ENGLISH SPARROWS' DEPREDATIONS.—It looks as if, in certain sections of this country, we might be about to enjoy (?) the same experience that the Australian farmers have had with this small pest. The Central Falls correspondent of the Providence *Journal* tells a pitiful tale of a farmer's experience with these birds which we print below. He says: "One of our citizens who has a good reputation as a gardner, thinks if some one will invent something that English sparrows will eat that will kill them sure, he can make money. He tells a mournful yet comical story of his experience with these pests, which were brought over to this country for their imaginary good qualities, and which are so well cared for and protected in some localities. For instance, he has planted peas five times this season, and from those five plantings he has secured two small messes of about half a peck each. He believes it would have been cheaper to buy peas it they didn't cost more than two dollars a peck. Among the peas were some received from the Agricultural Bureau, Washington, for trial, and which he was very anxious to try. But he didn't have an opportunity, although he hopes by care and good luck to have two or three pods ripen—just enough to try again with next year. He couldn't understand why the peas didn't grow until the third planting, when he noticed numberless bird tracks around them. He began to suspect. He kept watch, and his suspicions were confirmed. It was the sparrow. He says they will attack the corn spindle as soon as it begins to grow, and later will tear down the husks to get at the young corn and destroy it. Two years ago the only way he saved enough of a special kind of sweet corn for seed was by tying up the husks at the point of the ear, so that birds couldn't get at the ear. He chartered a boy who wanted some fun, provided him with a double-barreled shotgun and ammunition, and put him in the garden to shoot the sparrows. He shot thirty or forty, but by that time the birds got so wild they wouldn't come anywhere near the garden while the boy was there. The fun was gone and the boy went away. The boy was gone and the sparrows came back. The experiment wasn't as much of a success as was desirable. He has tried to poison them by throwing down poisoned grain to them—such as they feed on in the winter—but they evidently prefer green stuff in the season and laughed at him. Noticing that when an ear of green corn is husked and kept where they can get at it, they clear the ear pretty quick, he thinks when the time comes he will poison some ears and leave it for them; but the prospect now is that he will have to go away from home to get the corn."

THE GOPHER.—This name is given in different regions to many different animals. To certain mammalia, as the pouched rat of Canada, *Geomys bursarius*, Rafin, the hamster of Georgia, *G. pinetus* Rafin, and the ground squirrel or spermophile of the Western praries, and in the pine woods of the Southern coast, a land tortoise, *Testudo polyphemus*, Cuv., *Xerobates carolinus* Ag. is known by this name. The same is said to be derived from the French word *gaufre*, a honeycomb, and is applied to burrowing animals which honeycomb the soil. The mammalian gophers are useless to man, and many of them very destructive to vegetation, but the land tortoise, known by this name in Georgia and Florida, is inoffensive and valuable for its flesh and eggs, which are fully equal in delicacy and flavor to those of the green turtle. To my taste, having often eaten them side by side, it is superior. This gopher is from ten to eighteen inches in length, the upper and lower shells united together on the lateral edges; the legs short and thick, with well developed nails on the feet; color, dark brown. It feeds on grass and wild fruits, digs burrows in the sand from five to ten feet in depth, of a winding form. It is entirely inoffensive, notwithstanding its great strength, which will allow a large gopher to sustain a weight of 200 pounds. I never was more astonished than when I saw a gopher only a foot long, walk off with a boy of twelve years old on its back. The land tortoise are of slow growth, and are said to live to the age of 100 years. The largest species is that of the Galipagos Islands (*Testudo indica*), which reached the weight of 200 pounds and were much used for sea stores by the crews of whale ships. They are said to be now nearly extinct. Another species is found in the south of Europe (*Testudo graca*), which is the one described by Gilbert White in his Natural History of Selborne. While living at Halifax Inlet, East Florida, my host had a large hound, which, besides being good for deer, wild cats, 'coons and 'possums, would trail a gopher in the woods, and when he overtook it would turn the creature upon its back, and so detain it until his master should come up. The dog could not kill the gopher, which retires into its shell, neither could he pick it up, so he adopted the best and only method of capturing it. That was not instinct, but reasoning power, an adoption of ends to means. Every Sunday morning my host would go to the woods with a sack, followed by Buck, and seldom returned without four or five gophers, two of which of the average size would feed a large family.—S. C. C.

A STRANGE STORY.—Lockport, June 29, 1882.—In your issue of September 29, 1881, you published my "puzzling question," about the breeding together of black and yellow-billed cuckoo. I have something more to offer, that I should have thought more improbable, had I not seen it. On the 16th of June, while passing through the same apple orchard, I saw a turtle dove sitting on one side of what I thought was a robin's nest, and wondered why it was in that position. Passing to the other side of the tree, I was surprised to see a black-billed cuckoo occupying the same nest. I advanced to within fifteen feet of them, when the cuckoo left the nest, but the turtle dove remained in the same position, until I had repassed to the other side, when it also flew away. The nest was out on a large branch, about ten feet from the trunk of the tree, and between eight and nine feet from the ground. On getting up to it, I found it was a robin's nest, and contained one robin, two cuckoo, and two turtle dove eggs. Having never seen or heard of such a mixing up of eggs and birds in one nest, I took eggs and nest to add to the collection of my son. The turtle dove eggs were fresh, but the cuckoo and robin eggs were just tainted. The nest had been relined by the cuckoo with fine dry roots and weeds, and I wondered that the robin laid in it after being disturbed by the other birds. The nest and eggs have been shown to two individuals who are well posted in ornithology, and both agree with me. They consider it a very valuable find. —J. L. DAVISON.

LOCKPORT, N.Y., July 31, 1882.—*Editor Forest and Stream:* I have seen the eggs and nest mentioned above, and I have no doubt about the correctness of the observation, or the honor and integrity of the observer.—A. WALTON TRYON, M.D. (Ex-President Jewett Scientific Society.)

A CHARMING CAT.—The Newman (Ga.) *Herald* relates that "a cat charmed and caught a full grown crow a few days ago. The cat was on the fence and the crow lit near it when the cat fastened its eyes upon the bird, and so strong was the charm that the crow showed no resistance." We wish that the *Herald* had been more explicit and given us the details of the charming. We are in agony to know if the crow was charmed by the song of the cat, as we have often been, or if the position of the cat, "on the fence," constituted the charm, as it often does with politicians. The account states that the crow was charmed before being caught, and no mention is made of its being charmed afterward. It does not state whether "the cat fastened its eyes upon the bird" with glue, gum arabic, shingle nails or shoe pegs, but the fact that they were fastened is given in the shortest manner. The statement that the charm was strong leads us, however, to infer that the fastening was secure; perhaps horseshoe nails. If the editor had been charmed with "old crow," we would not require these details. It is possible that the strength of the charm bore an inverse ratio to that of the crow's intellect. The crows with which we are familiar, would not yield without "resistance" to the fascinations of a cat, be it never so charming, and the appointment of a commission *de lunatico inquirendo* to take evidence as to the mental capacity of Newman crows might lead to interesting scientific results. But after all, what we want is a method of charming, not crows but cats, so they will make no resistance.

A BLUEJAY'S GAME.—Knoxville, Tenn., Aug. 12.—In "J. Quay's" interesting letter in your August 10 number, he says: "Ernest Ingersoll, in writing for New York, speaks of birds that reside all the year around in our fields, like the bluejay," while he, J. Q., wrote of having seen them only in the largest forests. Perhaps it will interest J. Q. and others to know that here, as in New York, the bluejay is the most domestic, as the boldest and most mischievous of the wild birds. Several pairs build every season in the trees around my house. To illustrate their mischievousness or love of fun I give you the following: One of a pair, flying a number of times to a high picket fence around my lawn yard, attracted the attention of a pair of white kittens of mine, and they, thinking to have a grand dinner, mounted the fence and commenced a cautious approach from picket to picket. The jay let the first get to within eighteen inches, then hopped over and between the two. The second kitten approached; the bird hopped over it. It turned and the jay hopped back and between. The first kitten approached, and the jay hopped back over it, and so kept it up till one kitten got disgusted and left, and the other followed soon after. To finish off, as the kitten started for the house the jay made a swoop towards it and flew chattering to its nest. Once or twice after the jay tried to inveigle the kittens to another frolic, but failed.—H.

POISONOUS SNAKES IN GEORGIA.—Can you inform me what poisonous snakes have been identified in this country? I have found but five; three varieties of rattlesnake, one water moccasin (which, however, must not be confused with the common water snake found in every stream in the South) and the highland moccasin, called copper-head at the North. There is also a snake called cotton-mouth, which I have never seen, and a snake called spike-tailed rattlesnake, said to exist in the low country, which is, I believe, a myth. Can you inform me about these.—W. T.—(Rock Mart, Ga.) [Your "common water snake, not poisonous," is probably a species of *Tropidonotus*, which has a wide geographical range. The "water moccasin" and the "cotton-mouth," we think, are the same snake, as we have found both names applied to *Ancistrodon piscivorus*, in the South. The "highland moccasin," or copper-head, is *Ancistrodon contortrix*. In addition to the last two poisonous snakes, there may be found in Georgia two species of "ground rattlers," so-called, *Caudisonia miliaria* and *C. tergemina*. These latter look like ordinary rattlers, but are much smaller and have plates on the head instead of scales. The brilliantly-colored "harlequin snake," *Elaps fulvius* is likewise found in Georgia.

WEIGHT OF OPOSSUMS.—An inquirer wishes to know the limit of weight attained by the opossum. Will some of our Southern readers supply the information?

New Publications.

HUBBARD'S GUIDE TO NORTHERN MAINE.

We have received from the author, Lucius L. Hubbard, Esq., Boston, Mass., a copy of "Hubbard's Guide to Moosehead Lake and Northern Maine." This is a third edition, revised and enlarged (there are over eighty pages of new matter) of the "Summer Vacations at Moosehead Lake," which was so well received.

The three indispensables of a satisfactory guide-book are comprehensiveness, accuracy and compactness. Mr. Hubbard's book is so fortunate as to possess each one of these merits. Its plan is a model.

"Part First" contains some plain, sensible and practical chapters on "How to Camp Out," discussing the time of the year, the camp outfit, provisions, canoes, guides, camp-fires, cooking, hygiene, etc. There are two full-page wood-cuts, giving excellent representations of the bark and foliage of different trees—cedar, fir, hackmatack, spruce, pine and hemlock. This for the novice. It will be readily understood that this part of the book may also be read with profit by campers who pitch their tents in other woods than those of Maine.

"Part Second" is devoted to Moosehead Lake and the immediate vicinity. All the different waters, mountains and other points of interest are detailed, with distance, route, and all other information given explicitly and concisely, yet delightfully free from the mannerism of the average guide-book. "Part Third" is devoted to tours beyond Moosehead Lake, the East and West Branches of the Penobscot, the Aroostook and St. John rivers, the Forks of the Kennebec, the Katahdin Iron Works, and the other principal routes for canoeists. In the chapter "Tours for Campers" eight different tours are detailed, starting in each case from Boston, and varying in the time consumed from one week to three weeks. A tabular statement is given of time occupied, fares, guides, hotels, provisions, etc. In short this is a guide-book of the most helpful sort. It comes nearer to our ideal of what such a work should be than any other publication with which we are familiar.

There are numerous Albertype illustrations, prepared from negatives made with the Blair tourograph, with woodcuts, and two large and finely engraved maps of Northern Maine, covering the Aroostook and St. John rivers. There is also a railroad map and a time-table.

The visitor to Maine should have this book in his pocket. With it he is well armed and equipped, and if he do not venture too far into the forest primeval, may by its aid find his way without difficulty. (Boston: A. Williams & Co.; 218pp.; cloth, $1.50.)

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN AUGUST.

THE following schedule exhibits the game now in season. (Also, in parentheses, seasons which open during the month.):

Alabama—Doves.
California—Deer, doves,
Dakota—(Aug. 15, grouse, quail, snipe, curlew, plover).
Delaware—Woodcock.
District of Columbia—Woodcock, ruffed grouse; (Aug. 15, deer).
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo.
Illinois—Woodcock; (Aug. 15, wildfowl, pinnated grouse).
Indiana—Woodcock.
Iowa—Woodcock; (Aug. 15, wildfowl, pinnated grouse).
Kentucky—Woodcock.
Louisiana—Deer.
Maine—Plover.
Maryland—Woodcock; (Aug. 15, ruffed grouse).
Massachusetts—Woodcock, doves.
Michigan—Woodcock.
Minnesota—Woodcock.
Missouri—Woodcock, plover, meadow lark, dove; (Aug. 15, pinnated grouse).
Montana—Fool hen, grouse, ptarmigan; (Aug. 10, buffalo, elk, antelope, mountain sheep and goat, moose, wildfowl).
Nebraska—(Aug. 15, grouse).
Nevada—Elk, antelope, mountain sheep and goat, sage grouse; (Aug. 14, deer).
New Brunswick—Woodcock, wildfowl, snipe.
New Hampshire—Woodcock, plover, wildfowl, rail.
New Jersey—(Aug. 25, reed birds).
New York—Woodcock (except Dutchess, Herkimer and Oneida cos.), squirrels, deer, (Hounding season opens Aug. 15; forbidden in St. Lawrence co.)
North Carolina—(Aug. 15, deer).
Nova Scotia—Woodcock, wildfowl, snipe.
Ohio—Woodcock.
Oregon—Grouse, wildfowl.
Ontario — Woodcock; (Aug. 15, wildfowl, snipe).
Pennsylvania—Woodcock, plover.
Rhode Island—Woodcock, plover.
Texas—Deer, pinnated grouse.
Utah—Elk, deer, antelope, mountain sheep; (Aug. 15, grouse, quail, wildfowl).
Virginia—Ruffed grouse, woodcock
Washington Territory—(Aug. 15, deer, elk, antelope, mountain sheep, grouse).
Wisconsin—Woodcock; (Aug. 15, grouse, quail).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp tail grouse; (Aug. 15, ruffed grouse, wildfowl, plover, curlew, snipe).

☞ For exceptions, local laws, etc., see FOREST AND STREAM Schedule "B," issue of July 20, page 486.

WHAT DESTROYS THE RUFFED GROUSE?

DURING the four past years the editors and correspondents of FOREST AND STREAM have answered correctly many very puzzling questions in connection with forest and stream, woodcraft and natural history. Such as what becomes of the antlers of deer and other *Cervi* shed each year? At what season these are shed? What emasculates the squirrels? What the English sparrow is good for? Where hoop snakes are the most plentiful? How speckled trout catch flies with their tails? How shooting clubs protect the game and fish? etc.

"Byrne" has calmly sat and looked on, while these sometimes hot controversies were going on, ready at any time to give the correct answers, in case no one else stumbled on them. But sooner or later some one would step in and give the true solution of the question "befo' de meetin'," and it was not necessary to call upon me.

All such questions have been answered to "Byrne's" satisfaction, and I think correctly, except the one of "what causes the disappearance almost entirely of the ruffed grouse in districts where it had before been quite plenty?" This has not been answered by any one to "Byrne's" satisfaction, and as there seems to be no hopes of its being so answered, I will have to attempt the answer myself.

The theory of the partridge fly or tick destroying the young will, I think, not answer, from many natural reasons, one of which is, that this fly has not, so far as I can learn, been found West, and it is certain that this grouse fluctuates in quantity different seasons, wonderfully in sections where they are not destroyed to any great extent by man, or visible birds and beasts of prey in the West. They do not increase in numbers West in places where there is every visible reason why they should increase greatly. In places West where they were very numerous twenty-five and thirty years ago, they are not near so plentiful now, yet there is no visible reason why they should not be more plentiful. And from what Eastern correspondents write, the same facts pertain everywhere East.

"Byrne" will now give his theory of the cause of this disappearance of the ruffed grouse and other birds of its family, and its want of increase in sections finely adapted to its natural increase, and some facts supporting this theory into an hypothesis, if not into facts, in natural history.

Some thirty-five or forty years ago, there was imported into North America from China and India certain great "gawkey, long-legged, coarse, cowardly, ill-looking, worthless, a perfectly outrageous parody on chicken life and farm, certain domestic fowls, known as Shanghais, Cochin Chinas, Brahmas, etc., chickens." Along with these was imported a "virulent anthrax," sporadic, or zymotic contagious disease commonly known as "chicken cholera," which devasted, and is devastating, our "chicken coops" and turkey roosts yearly. Now it is a well known fact that some of these malignant deadly diseases such as this, involves in general destruction not only certain species, but also whole families and orders in its deadly embrace, and the scientific study of these diseases will have to be carried much further than it has been before we can know what species any one form of these dis eases do involve. For we do not as yet know but that the deadly so-called "hog cholera," and this same "chicken cholera" and other deadly forms of disease of man and other animals are caused by one common parasite.

This "chicken cholera" has never been, I believe, scientifically investigated. While the so-called hog cholera has been thoroughly (see reports of United States Department of Agriculture), the disease, or two diseases, are very similar in their action in the pig and in the chicken, and there seems to be no cure for either when once attacked, the only safety being in prevention. But it is possible that either may be cured by proper treatment in the first stages after being taken into the system, while it is in the incubation state, or latent, and before it becomes virulent and has attacked the vitals. Now let us see if there is any proof that this "chicken cholera" does destroy other species of the order to which the domestic chicken belongs. I have positive proof that it does destroy both the domestic and wild turkey. I have lost hundreds of domestic turkeys, having the same symptoms and dying at the same time that the chickens were dying around them by the dozen. Several years ago I procured a "clutch" of nine eggs of the wild turkey, placed them under a domestic hen. Seven hatched out and I reared them to the size of a prairie chicken, when seven of them died in one day with this disease in exactly the same way and with the same symptoms of the chickens and the tame turkeys running with them.

Query: do quail die with this disease? I have never seen one actually die with it, but facts show conclusively I think that they do. For instance, I have seen young quail exceedingly plenty on my place in Illinois and in that neighborhood in July and August. It is there unlawful to shoot quail until October the first, and but very few, scarcely any, are shot in that neighborhood before that time. In July each covey of quail numbered from twelve to twenty; when the season opened on October first, some seasons, and these were the same seasons that chicken cholera had devastated our poultry yards, but very few quail could be found, and when a covey was found it would consist of a few individuals—four, six, eight or ten would be about as they would run, and quite often only the two parents with no young with them would be found, with rarely a covey with its normal number.

The same facts exactly apply to the ruffed grouse under my observation. This bird was not, in the early settlement of the country, found near my home in Illinois, but began to appear there about twenty-five years ago. I had as fine a country for it to propagate and breed in as the most exacting and æsthetic *Bonasa umbellus* seemingly could ask. I took very great pains to protect the noble incomer, not killing them myself or allowing others to do so, so far as possible. For a few years they increased finely, then for a time became very scarce, then gained a little, and so they have kept on fluctuating in numbers year by year until the present time, and I do not think that in that neighborhood there are any more individuals of this fine bird than there was three years after we discovered the first covey in there. I know that they have not been killed by dog and gun; but I do not know positively that they curled up and died with the chicken cholera. But I do know that all facts show that they did, do and will. As I said before, all the facts I have given as to the quail are equally true of this grouse. The same large coveys of young until about two-thirds grown, and then suddenly reduced to a very few individuals or entirely disappearing.

Whether the prairie hen or the pinnated grouse (*Cupidonia cupido*) is destroyed by this disease or not, my observations are not so complete, but so far as they have gone they incline me to believe nearly conclusively that they are. About twenty-five years ago the prairie chickens began to decrease more rapidly in numbers than the amount killed in my neighborhood with the gun would warrant. After that time the same depleted coveys would be found at the opening of the season, and the number of birds varied too greatly different years. Now for a few observed facts as the season or time of year that this disease, "chicken cholera," destroys the birds, and my argument is complete. Old birds generally die with it April, May and June, young birds in the last half of July and August, when they are about two-thirds grown. The old birds do not often die in the spring, but seasons when they do they are generally the finest and fattest of the flock, these fine birds dying very suddenly. Thin birds die more slowly, and sometimes nearly recover. Then if these are facts, and I certainly think they are, we may have all the birds named very plentiful the first half of July, and very scarce September first. As to the virulence of this disease and its capacity for killing chickens, I will say that I have often seen farms stocked with hundreds of chickens and turkeys, and all be dead in a few days but a few old setting hens.

BYRNE.

CROCKETT'S BLUFF, ARK., Aug. 10.

GRASS PLOVER SHOOTING.

YEARS ago, before the Stetson House, at Long Branch, was erected, and the numerous cottages extending in a line southward were built, the whole extent of field land from the bluff to nearly a quarter of a mile inland was a continued succession of plover grounds. At that time the fields at Long Branch were either cultivated or used as pastures directly up to the bluff, which rose before the surf fifteen or twenty feet high. On these plover grounds, which were either potato fields or pastures, from Howland's Hotel to Deal, I have shot hundreds of grass plover, but have never seen one close by on the beach. I was quite a boy when I began shooting at Long Branch, and became very skillful under the tuition of an old friend, and at that time by no means a young tutor—Mr. Thompson, who, with his son-in law, Mr. Shade Green, and the latter's brothers, Capt. Charley, Jim and Walter, were considered the best sportsmen at the Branch. I remember how I astonished my old friend Thompson by crawling on all fours down the potatoe rows—the vines having attained full growth and blossom—until I got within shooting distance of the plover I had seen alight in the field, when I would jump to my feet, put the birds up, and kill them before they got well on the wing. And such birds! Just here, in speaking of the potato fields in which I so often shot them, I discovered a peculiar species of small beetle always in the crops or maws of the birds I killed in these lots. It was doubtless this insect that attracted them.

It was considered ten four miles from Howland's to Deal, and we generally had good shooting from the time we reached Capt. Charley Green's house at what was then known as "the fresh water pond," a half mile from Howland's. We frequently met Messrs. J. W. Wallack and Edwin Adams with their guns on the plover grounds. We never extended our tramps beyond the Hathaway House at Deal, always winding up there for a rest and refreshments. The Hathaway boys being shooters we never failed displaying our bag, were it small or large, and an hour's cooling off put us in good shape for the return over the same route. We were generally quite successful on these grounds, and seldom arrived at the hotel (it was "the Bath" then, kept by Col. Green) without a dozen or more birds each. Years after I met my friend Thompson at Capt. Bond's, Long Beach. I had become grown up then. Mr. Thompson showed his age considerably, but shot the same gun, and just as well as when we first met, for we went out together, and had several good days among the bay birds during our stay at Long Beach. I remember also of having had good grass plover shooting near Swedesboro, Gloucester county, N. J., when I was a boy, and being taken out by Sheriff Knisell in his low doctor's gig and killing them from the wagon. The night before the proposed shooting trip he would order his farmer to have different openings made in the fences by taking the bars down, and the birds not appearing to fear the approaching vehicle as it drew near them in narrowing circles, would allow us to get within easy shooting distance and have plenty of time to jump from the wagon before they arose.

There reached me once in the month of April as a present from the West a box of what my young friend who sent them said were English snipe and "prairie keets." On opening the box I discovered the "prairie keets" were grass plover, and as fat as adipose matter could make them. It was out of season to be sure. I wrote my young friend, chided him, and posted him, but as to the "prairie keet," they were very nice.

HOMO.

DEER HUNTING IN MICHIGAN.

ON the head waters of Michigan's Tidibawasee lies a forest of pine, hemlock, white cedar, "tamarack" and birch, interspersed here and there with "hard wood," consisting principally of beech, maple, oak and elm. But, though a wilderness, it cannot be called an unbroken forest, for even here the enterprising lumberman has pushed his way, and the many openings or "choppings" now strewn with logs and brush, and overgrown with thickets of pin cherry, Blackberry or raspberry, tell of his work, if, perhaps, not of his devastation.

The country is quite hilly, and, strange enough, there are numerous swamps, dense and almost impenetrable with their growth of hemlock, white cedar and tamarack. Here and there, too, are scattered those lakes so still, so clear, so deep, so impressively wild—those beautiful lakes for which our northern country is noted. Wide expanses of marsh also exist, many of them thickly overgrown with cranberry vines, and their surfaces dotted with hundreds of bushels of the bright red berry.

Late in the season, when deer seek shelter from storm and cold in the timber and swamps, such a country would hardly be regarded by those experienced as a still-hunter's paradise; yet there was a party of seven such hunters pitched their tent and made their camp late last fall.

He who has experienced the pleasure and experiment of a hunter's day in the woods, who has eagerly listened to the day's experience of his comrades as related around the evening camp fire, who has laughed there at the ceaseless flow of story, wit or jest, can realize something of it all; but he who has been so unfortunate as never to have joined in the pleasure and fun of such an occasion, is solicited to call in the aid of his imaginati n.

Four of the party, who must be introduced as Uncle Sam, Frank, Sam and Splasher, left home some weeks in advance of the others. After a tedious trip by sail we transferred our baggage to a two-horse wagon, and with a somewhat indefinite idea as to the locality we should select for our camp, took the road into the woods, hoping to reach a desirable point before night. But the road being bad, night overtook us and we were compelled to set up a tent and camp among the pines, intending to resume our journey in the morning. Soon, however, it commenced to rain, and the possibility, not to say the probability, of a wind storm in the timber so frightened our teamster that he insisted on hitching up and going on. It was finally decided as an alternative, that he and Frank should follow the road on foot, and, if possible, find a better place. While they were gone, some of us, not much alarmed about the storm, availed ourselves of the opportunity to get a little sleep, having slept little, if any, the two preceding nights.

Too soon it seemed, to one sleeper at least, our scouts returned and reported having found a "settler" and a vacant lumber camp. It was now about one o'clock, still, at intervals, raining lightly, and dark as Erebus. But out into it all we went, stumbling over one of the stumpiest, roughest, darkest roads ever traveled. At the end of about two and a half or three miles we came to the camp, which, by the aid of the "settler," who kindly got out of his bed, and with a lantern, came to our assistance, we took possession of. The "settler" soon made us a good fire, and then left us to get what rest we could. As it was but an hour or two until daylight, we lay down upon the long benches, which seem to be an invariable appurtenance of lumber camps, and slept the sleep of the weary.

The settler's name, as we soon learned, was John; and to this genial, kindly John and his household, we were, during our stay, indebted for many favors. Giles, his brother-in-law, and Henry, his nephew, must not be omitted in this connection. John was an intelligent Frenchman, and a dear lover of the gun. He sometimes accompanied us into the woods, and materially assisted us in our pursuit. His evenings, in company with Giles, were almost invariably spent in our camp, participating in, and contributing to, the social merriment. Long may you live, John—you and yours—and many a big buck may you kill.

We took our choice of the many bunks at our disposal and made our beds of the regulation hemlock, which, though a time-honored and much-lauded material for that purpose, it is probably often a mistake to use. Would it not be as reasonable to suppose that doses of conium or aconite, generally administered, and long continued, would invariably, or even often, produce good results? That hemlock has strong medicinal or poisonous properties, is, of course, well known, and the question then is whether in a given case the effect will be good or bad. The writer's individual experience is decidedly adverse to its use. Even the smell of it is more disagreeable to him than that of turpentine.

We found deer stalking rather a difficult matter in such a brushy country, the brush being of the snappiest kind, too. Nevertheless we managed to kill some deer, but, so far as the daily record was concerned, the numbers were not especially worthy of note, until one day Frank killed four. This was the result of using a repeating rifle, and probably could not have been done with any other kind. Three of the party were walking along a road, when they heard the jump of deer in the brush near at hand. A convenient stump was immediately mounted by Frank, which brought to his view a doe standing about forty yards distant. She being instantly killed, two fawns made their appearance, and then followed a most exciting repetition of shots from two repeaters; but Frank was the fortunate one and killed them all. The next move was to carry these three deer, at one trip, a distance of two miles to camp, which was no small undertaking for three men. Finding it necessary to rest occasionally they would then take good positions and watch, hoping thus to get another shot, which Frank—whose luck was evidently on for that day—succeeded in doing, adding, thereby, another fawn to his previous score. They now had four deer to carry, but were equal to the emergency, and brought them all in.

There is an element of luck, prescription, allotment—call it what you will—which enters largely into the affairs of life, and is especially observable in this matter of hunting. The merits of skill and experience may be fully recognized, and yet there is that mysterious something which brings to the tyro most remarkable success, while the application of knowledge meets with most aggravating failure. Why an experienced and usually successful deer hunter may, for a whole week, employ all his art without so much as getting a shot, perhaps without so much as seeing a deer, while a novice, hunting, probably, but a portion of the same ground, meets with the most favorable opportunities and the best of success, is supposed to be something that no fellow can find out. But, while the reasons for this may be incomprehensible, there are evidently certain laws governing the whole

subject. Some of these, at least, an observer may read and profit by. Take, for instance, the recognized tendency of incidents, when once developed, to repeat themselves in quick succession—to come in spells—and what does it teach? Simply that if Dame Fortune condescends to smile on one, he should lose no opportunity to let her repeat it as often as she will: for, having once succeeded in reaching the smiling point, she seems rather to be pleased with the effect, and disposed to try it again and again. It is quite possible that on such occasions some kindred admirer flatters her vanity by referring to her beauty as being, much enhanced by a smile, and thus this happy condition of things is augmented. Of course this is not positively known to be the case, but, considering the sex, the idea is not at all unreasonable. However this may be, oh, Nimrod! let not now the moments slip nor the grass grow under your feet.

One rainy day, the rain falling heavily and continuously, this same trio started out for a long tramp in the woods. In "breast hunting" they soon got separated, and, to make matters worse, Uncle Sam and Sam both got "turned round"—in short, lost. Uncle Sam, so far as he was concerned, was equal to the emergency. Sitting down to quiet and collect his somewhat scattered senses, and giving audible expression to his disgust of the situation, he laid out the course by his compass, and after a tiresome tramp through swamps and fallen timber reached camp. Not so, however, with Sam. He realized that he was lost, and yet would not depend on his compass; the compass did not seem to point in the right direction, and it must be wrong. So he struck out on his own hook, and after some time accidentally came to a lumber camp, where he was kindly invited to take dinner. As these lumbermen often know but little about the country and roads, except so far as they are immediately concerned, they did not direct him very definitely, but put him on a road that lead miles away to another camp. Arriving at this camp he recognized it as one he had visited before, and consequently he knew the way from there, though the miles were long to the now tired walker. Arriving at camp, coming in from the opposite direction to the one taken in the morning, and having traveled in an extended circle, he asserted that he had been around the South Pole. But it is the opinion that he didn't know whether it was the South Pole or the North Pole, or, in fact, whether he had been around any pole at all. Frank, who is endowed with that happy faculty of location so valuable to the hunter, reached camp as usual without difficulty.

After two weeks we were joined by the remainder of the party, Dan., George and Eb. The addition added very much to the animation of affairs, and everything went merrily until one evening we were surprised by the arrival of nearly thirty lumbermen, who had come to reoccupy the camp. They did not propose to have us leave, there was room enough for us all, but the idea of cooking, eating and sleeping in the midst of so many, and strangers at that, could not be entertained. It was rather amusing to notice the gloomy expression that settled down upon the face of almost every hunter as he came in and learned the situation. The subject was discussed among ourselves that evening, and before turning into our bunks it was decided to begin work on a log cabin of our own next morning. We had had tents, but there was snow on the ground, and the weather cold; so we decided on the cabin. John kindly offered to give us a location on his cleared ground, near a fine spring of water, and assist us in the work. Accordingly we began the construction of a house sixteen by twenty feet, using heavy logs, such as are selected where oxen or horses are employed, though we had the aid of neither. Clapboards, or "shakes," as they are called in that country, were made from a large pine, carried nearly a quarter of a mile on our backs, and the roof carefully constructed of them. We chinked the spaces between the logs, daubed them with clay, mossed the remaining apertures, put in a window-sash with glass, which John happened to have, made a door with wooden hinges, constructed four bunks, piled a heavy mat of hemlock boughs on the roof to keep out the drifting snow and add to the warmth, and moved in within two and a-half days. If any one thinks lightly of the labor performed in this undertaking let him reflect that the work was not only carefully done with a view to permanence, but that the difficulties were much increased by the want of facilities usually employed.

On the other hand, should anyone feel disposed to be incredulous, he is informed that every one of the party has a mechanical reputation of no ordinary degree, and in almost every instance merits his reputation, while several of them possess that universal kind of genius which would enable them to construct anything, from a saw-mill to a breach-loading gun, and make the tools to do it with, too, if necessary. But these characteristics are referred to almost exclusively for the reason—and it is hoped the reader will so regard it—that it seems remarkable, and therefore worthy of note, that a party of seven persons, not at other times associated on account of their mechanical tendencies, should have been thus incidentally thrown together. That cabin, around which at one time hung sixteen deer, would have been an object of interest to any one who could have seen it; but to those who built and occupied it, it must be an ineffaceable recollection. In leaving it the thought presented itself whether any of us should ever visit it again, and the silent answer was, some may, but surely not all.

Another peculiarity of our party was that every one played the violin. We had none of our own with us, but John, in a measure, supplied the want with one having but three strings, and it was really amusing to see the violin circulated in regular order from one performer to another. Under the inspiration of the music the enthusiasm at times reached the dancing point, when what is sometimes termed a stag dance would ensue, a very appropriate kind of dance for the hunter, is it not? especially when, as in this case, there are several antlered old fellows hanging up at hand.

There were five very fine heads of horns secured on this trip, two of which are now in the hands of a taxidermist for mounting. One pair of these horns, secured by Sam, is very large, eight-tyned, some of the tynes themselves branching, and is beautifully symmetrical. Not many hunters meet with such heads in a lifetime.

Bears were not plenty and but two were killed, Uncle Sam and Sam securing the honors on that score.

There are many beaver dams in this country, most of them old and deserted, but some of them still occupied by these wonderful animals.

But it must not be forgotten that the story which seems all too short for the writer, may be all too long for the reader; therefore, with the omission of many items, this subject must speedily brought to a close. Suffice it then to add, that our party killed twenty-five deer, two bears, a number of ruffed grouse, which were plenty, but which we did not often care to interfere with, and other animals, not, perhaps, too numerous to mention, but in a deer country hardly worthy of notice. Compared with the large number of deer killed by parties who hunt in that region with hounds, our kill was not remarkable; but considering the nature of the country and the fact that we still-hunted—as all should be compelled to do, if there are to be any deer left in Michigan—the number was fair. In truth we ought not to have killed any more. We had plenty of venison to eat in camp, and brought sixteen whole deer home with us.

We were well treated on the railroads in Michigan; the Mackinaw Division of the Michigan Central, and the Flint & Pere Marquette allowing each his baggage and two hundred pounds of game free. We hoped to receive the same terms from the Dayton & Michigan at Toledo, but in this were disappointed. The man who attended to checking our baggage there, voluntarily remarked that if we would handle our own game—load it into the baggage car, etc.—"they would give us that free." We accepted this, but on our arrival in Dayton, the baggage-master there informed us that he had received a telegram requiring him to weigh our baggage and game, and charge us baggage rates for all weight over that of baggage usually allowed. This was a swindle on the part of some one. From Dayton to Xenia, and thence to our destination on the Pittsburgh, Cincinnati & St. Louis Railroad, we had to pay roundly for our game. SPLASHER.

A MORNING WITH THE WOODCOCK.

As early as May a friend and myself had decided to take a day with the woodcock as soon as the law was off, which in this State is the first of August, for in this section of the country, being so near Boston, it is the "early bird that catches the worm," and he has to be pretty early at that. The fourth of August arrived, and then I had to go alone. At 4 A. M. I was awakened by my alarm clock, and upon arising found the air clear and cool, and the eastern sky faintly light with the approaching dawn.

After breakfast I went to the kennels, and found the dogs all eagerness at my approach, as though aware of the sport that was in the wind. Taking only Nellie and Dash, I gave each a light meal and then started for the grounds. On my arrival the sun was just making its appearance, and everything bid fair for a morning of perfect pleasure. Entering the swamp I cast off the dogs and had proceeded but a short distance when Nellie stiffened on a grand point, Dash appearing on the scene, backing her finely. Waiting a moment to steady them I flushed the bird and killed, Nellie retrieving in good form. Stopping a few moments to let the dogs thoroughly beat the ground in hopes of finding another, I moved on only to find some of the best spots entirely dried up. I was beginning to think that I had secured the only bird, when Nellie again pointed, but before I could reach her the bird flushed wild, giving me a snap shot, which, as much by good fortune as good shooting, I improved by bringing the bird to the ground dead. The bird retrieved, I thoroughly beat the remainder of the ground, but failed to get a rise.

I was disappointed in only securing these two birds, for the ground is one of the best I ever saw, but I accounted for it by the exceedingly dry weather of the past six weeks. Looking at my watch I found that I had consumed two hours in the swamp, and as I had the forenoon before me, decided to try another place about two miles further on, where earlier in the season I had started quite a number of birds, and as there were two or three springs I was sure of wet ground.

Calling the dogs to heel, as the sun was well up and pretty hot, I soon arrived. The first place, where I had started two a week before, was drawn blank. Going toward a spring the dogs gave evidence of the proximity of game and moved cautiously along, catching the scent at about the same time, the dog slightly in advance. I flushed the birds and two splendid woodcock burst into view, one going for an opening and the other rising over the trees. I put on to the rising one and missed, owing probably to his being so near; the other one I killed. After retrieving the dead bird I started in the direction taken by the other, and commenced to cautiously beat the ground, but the dogs had only crossed two or three times when the bird flushed in an open spot some distance ahead, and immediately disappeared, not giving me a chance to shoot. I concluded that it would be useless to follow him because of his wildness, and also that he was making in the direction of an almost impenetrable swamp. Returning to where the birds first started I commenced again, and after fifteen minutes' work the dogs pointed on the edge of an open. I flushed the birds, and was somewhat surprised and disappointed to have three young ruffed grouse take wing and disappear. Moving on a little further the dogs again pointed, and again grouse were raised. When I failed to shoot the second time, the dogs looked up as much as to say: "Have your senses left you entirely? That was a bird."

In a short time I flushed the remainder of the covey; in all there were about ten. Being near the end of the swamp I decided to leave it rather than disturb them again. I had almost reached the edge when the dogs pointed, and by their manner I knew that it was a sight point. I walked in but was surprised to find no bird, when suddenly another covey of young grouse about as large as quail made feeble attempts to fly. With great difficulty I restrained the dogs and made my way out. I look for grand sport there the first of September. By this time it was near noon and I started for home, killing one woodcock on a little stream on my way.

I have often seen it stated that in July and August woodcock fly heavily and are easily killed, but I would say that here in August they fly as well and swiftly, according to my observation, as at any time during the year, and seem to understand as well how to put on the fancy turns and twists for which they are noted. NEPONSET.

HYDE PARK, Mass., Aug. 12.

SARDIS, Miss., Aug. 14, 1882.—I had the pleasure of flushing a fine covey of quail while passing through a field on my return from the lake, and one of the gentlemen who was with me informed me that it was not an uncommon occurrence to flush three and four covies in a walk through some of the fields in that neighborhood. I think the abundant crop of corn that is growing in this county will make hunting good here this fall and winter.—DAVY.

NEW LOUISIANA GAME LAW.—The game law of Louisiana was amended at the last session of the Legislature, the open seasons being as follows: Deer, Oct. 1 to March 1; wild turkey, Oct. 1 to April 15; quail, partridge or pheasant, Oct. 1 to April 1. By a curious and stupid clerical blunder, in transcribing the bill the word "duck" was substituted for buck, and the bill was so framed and the law so published.

PUT YOURSELF IN CONDITION.

As the shooting season is at hand when the inexorable law throws off its stern mantle of justice, and, metaphorically speaking, opens wide the gates of the great preserves to the enthusiastic devotees of the dog and gun who have been waiting, O, so anxiously, for a bout with the grouse, woodcock and wild duck, it will, perhaps, be not amiss to say a word to these enthusiasts, touching the important matter of being, in every sense of the word, ready for those halcyon days.

It would be folly to reiterate what this journal has already endeavored to impress upon its readers, viz.: The necessity of a good gun in a good condition, a good dog ditto, good ammunition and a good companion. All these are necessarily the concomitants of a good sportsman, and to such are we speaking. But it is to another essential we desire to draw careful attention, knowing by experience that upon it hangs the gunner's chances of happiness, health and ultimate success in the field. We refer to a thorough physical preparation.

A great majority of the guild are dwellers in cities and towns—lawyers, physicians, clergymen, merchants, clerks, *et id omne genus*, whose pursuits are of such a nature that while they are *con amore* with field sports, their physical condition is away down below their ideas. To illustrate: A merchant may be in prime order for doing his regular work faithfully and well, and yet let him take a few days' outing with an eight-pound gun and fifty loaded shells on his person, he will return at night "used up," with a wretched sick headache, feeling that "the sport" he so loudly praised the day before is a delusion and a snare. And all this, perhaps, in the face of a splendid bag. Again a soft (physically) clerk may sally forth to enjoy a day doled out grudgingly to him by a niggardly employer. The unusual violent exercise, so different from his every-day routine, "breaks him all up," and like as not entails to him a loss through sickness of two or three days, the wage of which is unceremoniously docked from his scanty salary. So, very often that which should redound to the happiness and health of those who most need those two desirable things, results in quite the contrary.

And now how can this be obviated? There is but one way. The novice must lower himself to the condition of the prize-fighter and the professional walkist and go into training; his flabby muscles must become tense and hard, his tender feet must be toughened and his bilious stomach cleared of all humors, and it is within the power of all sportsmen to bring this about. There is no one so closely confined that he can find no time for plenty of exercise between business hours, but "the rub" is he will not do it; he will lie snoozing in bed dreaming of the many birds he will bring to bag, when he might be out in the sweet morning air stiffening his sinews and laying the foundations for that which would bring the dreams to a glorious reality. Active, manly exercise is good the year around, but as man is a lazy animal and will not live up to his privileges, save, perhaps in the matter of field sports, we will venture on the following advice to sportsmen, assuring them that their enjoyment in the field will be enhanced a thousand fold, and great good will result to them physically and mentally.

When the great day is appointed—as it generally is a fortnight in advance—arise at 5 A. M. which is no chore these lovely mornings, don your hunting shoes and sally forth with a stout stick in your hand. Stretch off briskly for a five mile walk, and allow no symptoms of fatigue to tempt you either to cut it short or indulge in an "eye-opener." Your seven-thirty or eight o'clock breakfast will have wondrous charms for you, and when you go down-town listen to no blandishments of convenient "bus" or tram lines. For the first two or three mornings you may be a little tired when you go to work, but that will soon wear off, and when the desired morning comes you will skip the dasies and thrash through the brush untiringly and at night be as fresh as a rose, feeling that the day has been well spent.

This may seem a hard prescription to follow, but it is not, and we can assure our readers it will pay to try it to its full extent. Valuable time will thus be saved, and the mission for which we leave our business be accomplished. Tottering legs, aching heads and nervous arms can never do the execution on grouse or woodcock that the steady nerves of the well-conditioned shooter can accomplish, fortified as he is by a thorough physical training. H. W. D. L.

BIRDS ABOUT PHILADELPHIA.—Philadelphia, Aug. 21.—Quite a number of rail have bred on our marshes this spring, and the young already are in good order. One flight of birds has come, notwithstanding it was early for it. So we expect good sport after September 1. Grass plover can be found now all about Philadelphia, especially in the neighborhood of Darby Creek. Blackbirds are beginning to flock in considerable numbers on both our river shores, and the adjacent cornfields are suffering. Reed birds are coming every day and although the seed is not ripe they are taking up their quarters among them. At present, wherever a field of herd grass can be found a collection of these early coming flocks may be seen, but the bird is yet out of season and it should not be killed. Shore bird shooting is quite good now, south of Great Egg Harbor. Willets are more plentiful this year than last, and short-billed curlew numerous, though wary as they always are. Two parties leaving Philadelphia last week for shore birds were actually driven off the meadows by the mosquitoes. Plenty of birds were flying, but without a breath of wind to drive off the flies, gnats and mosquitoes, sitting still in a blind on a salt marsh was unbearable.—HOMO.

PHILADELPHIA NOTES.—August 16.—Grass plover are plentiful in the fields about Philadelphia on the river shores. It is not generally known, and but few have gone out after them. Reed birds are beginning to come. Last year there were but few. This season they will be plentiful. There is a good crop of seed growing and just beginning to top.—HOMO.

MASSACHUSETTS.—East Douglas.—Game prospects are good for grouse, and squirrels are quite plenty, the woods fairly swarming with the last. We have no market hunters in this section among our own sportsmen. Hunting out of season is done but little, and then at the beginning of the season by someone over-tempted.—AMATEUR.

NEBRASKA, Aug. 16.—Chickens are plentiful. Lots of them, though not so near as they were last year on account of the country settling up so rapidly. We will probably have lots of ducks and geese this fall. Quails, rabbits, plover, etc., also are very plentiful.—D. B.

ANOTHER VIEW OF IT.—Philadelphia, Pa.—*Editor Forest and Stream:* I note your Vail, Iowa, correspondent's strictures on the big game preserves. It must be that he lives in a country where there is game enough for all; and so cannot understand the true state of affairs obtaining in some other sections of the land. He surely does not know that the reasoning of his letter, however just it may be, so far as Iowa is concerned, will not apply to New Jersey. I am ashamed to listen, as I have to do daily, to the silly vaporings of men—whose ignorance and greed have almost decimated the game—railing out against the tyranny of societies for its protection. Clubs are rapidly forming and purchasing the best localities. The "pot-hunters" and exterminators will be known no more in these regions, and the game will be permitted to feed and thrive. The most improvident, near-sighted men I ever met are ignorant sporting men. Sportsmen are known and recognized under their proper name. What a lesson you teach in your late able editorial on this subject. The waters of the Delaware are at certain seasons blocked off as far down the bay as Cohansy, and lower, by gillnet's, 500 to 600 fathoms long. Yet these people growl at the fish commissioners because they are not allowed to fish on the Sabbath, and savagely call it a "d—d bad law, infringing upon the rights of American citizens." We hear a great deal of talk about our drifting into English preserves. Well, the man that cultivates eats thereof. Why not?—R. G. W.

THE WEATHER AND THE BIRDS.—The long period of drought which has extended over a large portion of the country, has been very favorable for the preservation of the birds. The woodcock shooter who has had the courage to face the terror of the swamp with its stifling heat is met, in most instances, with very poor returns for his outlay of time and labor. Our reports from many sections where birds were plenty in the spring, nearly all agree that summer shooting has been a failure. That this, as many of our correspondents predict, presages scarcity of sport the coming fall, by no means follows. On the contrary, we shall look for excellent sport among the longbills, when their proper season arrives, as the many birds which have escaped this summer, will then be found in their usual haunts, where, with renewed vigor and strengthened pinion, they will afford the sportsman a far greater amount of pleasurable sport than can be realized in the pursuit of half-grown, half-fledged game.

KANSAS.—Cimarron, Gray county, Kan., Aug. 13.—The prospects for hunting in Western Kansas are excellent. I have heard from reliable parties (stockmen) of buffalo in two localities; about 400 in one place that have been there all summer undisturbed; 150 in the other place, or more, in small bunches. Antelope are plenty; I can kill a buck any day I try to. Turkeys are reported plenty seventy miles south of here. I am going on a camp hunt on or about Oct. 10, to be gone twenty days. I want to see if turkeys are as plenty as they are said to be.—W. J. D.

Camp Fire Flickerings.

"That reminds me."

I SUPPOSE the remark must have become somewhat hackneyed by this time, but I will, nevertheless, venture to make it—that I look for my FOREST AND STREAM every week with impatience, and read it with immense satisfaction.

I have especially enjoyed the letters of your veteran correspondent "Nessmuk." His letter descriptive of the "Race with Death" of a "long-laker" was a gem. I have also very much enjoyed the rejoinders to two of your correspondents who have "crowded him" a little—or tried to. Your readers will all remember how well he held his own in the friendly contention. The result in each case reminds me very much of an incident which occurred on the Mississippi River, which, though many of your readers have doubtless heard it, will perhaps bear repetition for the sake of the moral.

A young man on the upper deck of a Mississippi River steamboat, surrounded by a group of friends of both sexes, spying a gaunt, tall backwoodsman on the deck below among the deckhands and "roustabouts," promised his friends some fun, by scaring this fresh son of the woods.

Descending to the boiler deck, he walked up fiercely to him, and drawing a bowie knife said in a voice of thunder, "I've been looking for you for a good while!"

After the raw-boned countryman had swung him around in the air, slammed him up and down on the deck, and mopped up all that part of the boat with him and what was left of his broadcloth suit, he tossed him on to a pile of barrels, and looked up at the party on the deck above, with the remark, "Perhaps there's somebody else up there has been looking for me for a good while." SPLIT BAMBOO.

BOSTON, August, 1882.

Killing the deer with a scythe (FOREST AND STREAM, June 1, 1882) reminds me of a story I heard told by Horace Greeley during his visit to Hamilton county, New York, in, I think, the summer of '70, when he visited Wilmurt Lake and spent several days with our party there. It was something like this:

A Dutchman in Pennsylvania was cleaning the big floor of his barn. The great doors were wide open, and he was busily pitching the refuse out, when suddenly, just as he was in the act of throwing out a shovelful, a deer fell dead on the pile outside. Thoroughly frightened, the Dutchman dropped his shovel and exclaimed, "Golly! I didn't know it was loaded." A minute afterward a hunter, coming up and showing the mark of a bullet, claimed the deer and explained the puzzle of the loaded shovel. MILLARD.

DAVIS RANCH, Laramie County, Wy., August, 1882.

WHAT THEY SAY ABOUT IT.

The popular New York journal, FOREST AND STREAM, has been enlarged to twenty-eight pages weekly. As a criterion and guide to all lovers of legitimate out-door sport, it is unsurpassed in its instructive and entertaining articles.—*New York Market Journal and Price Current, Aug.* 19.

That popular New York journal, so well known to our sportsmen, FOREST AND STREAM, has been enlarged to twenty-eight pages weekly. It is devoted exclusively to angling, shooting, yachting and kindred recreations, and is the finest journal of the kind in existence.—*Paw Paw (Mich.) True Northerner, Aug.* 18.

We commend the FOREST AND STREAM to all good people who take a rational delight in field sports. There should be a good club raised here for it. We read it with a regularity that will cause more than one raid to the North before snow flies, seeking pleasure and healthful recreation.—*Oskaloosa (Ia.) Herald, Aug.* 17.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July* 20.

FISH IN SEASON IN AUGUST.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Brook trout, *Salvelinus fontinalis.*
Grayling, *Thymallus tricolor and T. montanus.*
Rainbow trout, *Salmo iridea.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var. *sebago.*
Quinnat salmon, *Oncorhynchus chouycha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca flavitilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Amblopliles*, two species.
War-mouth, *Chænobrytlus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centroprisles atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscion regalis.*
"Sea trout," *Cynoscyon carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*

☞This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

And angling, too, that solitary vice,
Whatever Izaac Walton sings or says:
The quaint old cruel coxcomb in his gullet
Should have a hook and a small trout to pull it.
—*Byron, Don Juan, Canto xii.*

CAMPING ON THE SUSQUEHANNA.

THE bulk of our party, Webb, a young artist with an eye to the beautiful in nature, as well as a heart ever susceptible of impression from the fair sex, and Wm. H. Martenet, a young veterinarian, a recent fledgeling of the Am. Coll. Vet. Surgeons, equally as susceptible as his companion, both experienced campers, had gone into camp a week previous, and I, the fortunate neophyte, was spared from assisting in building the camp.

Permission had been obtained to camp on one of the many islets in the Susquehanna, about six miles above its junction with the majestic Chesapeake, and the boys had everything "shipshape" prior to my arrival. A mile and a quarter rowing from Port Deposit, on the C. & P. R. R., brought me to the long desired spot, and my camp life began.

During my first day I was under the special guidance of a most excellent gentleman from Port, but despite the most approved tackle, and the most enticing bait, I lured no fish, and was declared unanimously to be a Jonah, and a great fish was sought for, but none appearing, I was spared an involuntary bath.

Night drove away our host of visitors, and during the rest of our camp we were undisturbed; but night also brought my first real experience of camp life, for after the usual camp supper of flapjacks, bacon and coffee (no fish having been taken), kind hands swung my hammock, and ensconcing myself therein, I was about to depart for dreamland, when snap! thud! and one hundred and sixty-four pounds of humanity lay ingloriously doubled up. For the remainder of the camp I contented myself with a more lowly bed, where blankets and air pillows proved their utility.

The next day luck changed, and the Jonah and "greeney" became an important provider of fresh fish. The superiority of the rod and reel over the rod alone was fully established, as during the remainder of our stay I, with the rod and reel, far eclipsed two "expert" fishers who clung most lovingly to the "string tied to the end of a bean pole." My success, I think, converted one of them, as he spent a great deal of time trying to manufacture a reel for his pole.

My first bass was a revelation. I, who had never known any gamer fish than the catfish or the perch (except through reading of them), felt a thrill of pleasure which I suppose will only be equalled when I land my first trout. How the fellow fought, sending spray in every direction, now darting under the water and again leaping clear of the surface; but I landed him safely, and, must I confess it, I was weak enough to give one big shout of victory, much to the amusement of the others. It was but a three-quarter-pound fish, but I felt as big as if I owned the island, and besides, I was Jonah no longer.

One morning we were startled by a most agonizing scream, as from some one in great danger. Instantly surmising some one was drowning, we rushed at once to the boat, but before we could launch it we discovered the source of the noise to be a very hilarious darky, in a boat anchored off shore, who was encouraged by several duskey companions. Picture our disgust as we sought the quiet of our tent.

The black bass (large-mouthed species) are biting well, and afford excellent sport for the angling partics from Baltimore, Philadelphia, and the surrounding towns. Fishing is generally done from a boat at anchor, with live bait, or by trolling with a line from a sailboat. The latter is more successful. Fly-fishing is indulged in to a limited extent with success in the rapids, about a mile above Port Deposit.

Should any of your readers take a run in the direction of the Susquehanna, let me suggest that the most successful bait to use there is small-sized crawfish, while helgramite is considered as second best. Frogs do not seem to be a favorite. A bountiful bait of worms, three or four on a hook, I have found to be no mean bait.

Part of my last day's experience was to capture two bass at one time, one with crawfish, the other with worms; one weighed a pound and a quarter, the other only three-fourths of a pound.

To enter into further details of camp life would be tiresome to your readers (if they be not already disgusted), so I will say, going to camp rheumatic and bilious, I came out a new man; the pure air had cured my bodily ills, and I trust the beauties of nature's handiwork, so abundantly displayed, improved my mind, and I have determined to devote my future summer vacations to co-operation with the constantly swelling army of campers.

Let some of the thousands who read your excellent paper, and camp only in fancy's eye, make an effort and try but one week of out-door life, and my word they will, like little Oliver, cry for more. JEFFERSON.

BALTIMORE, Aug. 10, 1882.

LIGHT vs. HEAVY RODS.

I WAS up at the Rangeley Lakes this season. The fish were plenty and ran large, but did not rise well to the fly, and a large proportion of my fish were taken with bait. But I belong to the "Broad Church," and am not above drowning an occasional worm when the trout will not come up to a fly. I am free to say, however, that I would rather take one trout with the fly than ten with bait. Sport, not meat, is what I am after.

This reminds me that "E. T. W.," in your issue of July 27, says that he uses a heavy rod because he "likes to kill his fish quickly, and takes no delight in leading around a three-pound trout half an hour before netting it." If that is his idea of fishing, I cannot see why he stops at a ten-ounce rod; a codfish gear would be almost sure death to any three-pound trout, and he could swing them into the air, and slap them down into the boat or on to the bank without "leading them around half" a minute.

His reference to the Scotchman at Trout Cove reminds me of two men whom I saw fishing a few seasons since. They sat in a boat with two short stout poles, with cord lines and hooks to match, which they baited with a bunch of worms, and when a float disappeared they would drag out the wretched trout with a "swish," and consign him to their car, then rebait and look at the other hook. They spoke hardly a word, but kept up the round of bait and pull "in" —it was solemn business with them. They were fishing for market. They had no time to lead them around.

But I could never imagine that they would pretend to characterize their occupation by the name of sport, unless they include under that head weeding onions, or tallying baskets for a charcoal merchant. SPLIT BAMBOO.

BOSTON, Mass., August, 1882.

In re "heavy rod versus light," I think the truth is somewhere between the weights advocated by Mr. Van Sicklen and Dr. Henshall. A rod of 7 to 8 ounces, including metal, if of bamboo, and 9 to 10 ounces, if of ash and lancewood, gives, to my feeling, the best satisfaction. They are, then, light enough for all day casting without fatigue, and are free from that disagreeable topheaviness or shakiness likely to be found in the mere whips of 5 to 6 ounces. But I can't help thinking that actual weighing of the 5½ to 6 ounce rods, "so called," would develop a real weight of 6¼ to 8½ ounces. Many an angler, myself included, has, without meaning to tell a "trout lie," discovered that his rod was much heavier by the scales than he supposed; thus reversing, you will perceive, the effect of the scales upon the weight of our fish which we had fondly "guessed" to be much heavier.

MANHATTAN.

NEW YORK.

Does not the argument about light rods vs. heavy seem to be something like the old darkey's idea about the different denominations of Christians? When asked what he thought about them, he replied, "Dey all is going to heaven, but by different roads." Now anglers are all after fish, but with different rods. Let me ask some of the advocates of light vs. heavy rods whether they are after fish or sport? I have yet to see a man that does not confess to a longing for a big catch when he is out for a day's sport. Is it more gratification to play a large trout with a light rod for a space say of ten minutes while your partner has added two or three to his creel in the mean time? I do not wish to be understood as advocating the use of either exclusively, for there is a medium. I use an eight ounce rod as a general thing on small streams, braided silk for line, and have splendid results. August 14 I spent out with my light rod, and wished for my old stand-by weighing twelve ounces for this reason. The stream was weedy on the sides and I lost several large trout by the suddenness of their rising and making a rush under the grass, breaking loose from the tackle, owing to the lightness and the rod being too limber for them. But as Old Hickory says, such is life. W. E. M.

FIFE LAKE, Mich.

FLY-CASTING TOURNAMENTS.

IN response to an inquiry from Mr. George Shepard Page, who is now in England, Mr. Reuben Wood furnished to the London *Fishing Gazette* the following letter:

We asked Mr. Geo. S. Page if he could give us any particulars of the fly-casting tournaments in the States, and he has very kindly obtained the following most interesting information from Mr. Reuben Wood, the present champion fly-caster.—ED.

"July 13, 1882.

"To Geo. Shepard Page, Esq., London, England.

"DEAR SIR—Your very kind favor of June 28th just at hand, through FOREST AND STREAM.

"I herewith enclose printed rules as desired, taken from published report of the State Association. I would add, no person is eligible to enter a contest unless a member of a club in good standing, and the club one of those forming the State Association, for the protection and propagation of fish and game.

"The intention of the originators of these contests, I think, was to encourage and instruct amateurs in fly-casting; but, by some means, of late years the judges have laid but little stress upon any of the points except distance, a ruling that, while I stand unequalled for distance, I deprecate, from the fact that while a man may be able to cast a long distance, he may at the same time do it in the most awkward manner, and, in the nice points in handling a fly-rod for fishing, such as 'accuracy' (in being able to cast his fly direct to a certain spot), 'delicacy' (in being able to drop his fly lightly upon the water), and 'style' (being able to handle his rod easily and gracefully, using both hands equally well, in fact, a practical fly-fisherman) be entirely deficient.

"The art is, as compared with England, new with us, and I am sorry to say our best fly-fishermen do not, as a rule, attend our contests, for the reason that they are held in connection and in a measure as a side show 'to the Grand Pigeon Slaughter,' the grand object of the gathering, rather than the object originally intended when the association was formed, and as the name of the association would imply—'For the protection and propagation of fish and game.'

"I would advise (1.) Keep your fly-casting entirely separate from any other sport. (2.) Choose your judges from your old men who have a reputation and a thorough knowledge of the art as practiced, and required to capture the wily trout.

"As to our records on distances, Seth Green has a record, made at Syracuse, in 1869, of 84 feet; from the best sources I am assured that it was guessed at, as it was the first year any report was made of the length of the cast. For the next

two years no record was kept. In 1873 the best cast was 65 feet with 12 feet 3-inch rod; salmon-casting, rod 17.3, 80 feet; 1872, Seth Green, 65 feet, 1st prize, length of rod not given; 1873, no record given, I took 1st, casting 65 feet with a heavy wind; 1874, R. Wood, 1st, 68.6 feet, 11.6 rod; 1875, R. Wood, 1st, 75 feet, 12-foot rod; 1876, R. Wood, 1st, 69 feet, 12-foot rod; 1877, Ira Wood, 72 feet; 1878, my brother and I let Seth win with a record of 70 feet, 12-foot rod; Rochester, 1879, we did not cast. J. J. Meldram, one of my pupils, 66 feet, 12-foot rod. Salmon casting, Meldram, 1st, 72 feet; 1880, Ira Wood, 1st, 70 feet, 10.6 rod; 1881, R. Wood, 1st, 75 feet, 10-foot rod. Salmon casting, R. Wood, 1st, 110 feet; Ira Wood, 102.10; 17-foot rod; H. Prichard, 92 feet, 15 foot rod; 1882, R. Wood, 1st, 75 feet, 10-foot rod. You will observe the rules allow 5 feet to the foot for excess of length in rod. We think it too great, yet have followed the rule for years.

"The State Association owns, and we use for measuring distance, a cord with buoys attached, weighted underneath, so that when the cord is stretched the buoys stand upright, and the numbers easily read for some distance. Buoys placed five feet apart. Our first buoy is marked 25; a knot is tied in the rope at zero, that is, drawn to the stake from which we cast, so that the buoys register correctly. The odd feet between the buoys are estimated, if the full distance is not reached, as it would take so many buoys to mark every foot. Thus, I believe, I have given you all the points on fly-casting.

"As to black bass, we find them nearly, if not quite, as gamey fish as the brook trout. They attain a weight of nearly, or quite six pound. In a swift, rocky stream a two pounder will give any man all the proof he may require on this head. We are stocking many of our depleted trout streams and inland lakes with them, and prize them very highly, not only as a game fish, but as a table fish. If any one finds their peculiar flavor too strong, skin them, and most of it is lost. You cannot find a fish, other than the trout, within my knowledge, that will give you the sport they will.

"I think I have given you all the points you require; but if not, shall be pleased to reply to any future inquiries you may make. Keep your fly-casting separate from all shooting, and you will find that it will raise your standard, and increase your fly-fishermen. And every new fly-fisherman I look upon as another fish warden, for he will help you keep the poachers from your streams.

"With best wishes for your success, both in fly-casting tournaments and also with your black bass.—I am, etc.,

"Reuben Wood.

"74, South Salina street, Syracuse, N. Y., U. S. A."

"George S. Page, Esq."

"TROUT-HOGS" AND OTHER PESTS.

THE thing which, of late years, most detracts from the pleasure of a trip into the Maine woods, is the kind of people one meets there. There are, of course, many of the old-timers who used to go there before the railroads and steamboats (more's the pity) made access so easy into that region, who still go, and many new-comers who are sportsmen and gentlemen. But, unhappily, there are many others who, attracted by the lavish advertising of the people who are making the money, swarm in there, who are neither sportsmen nor gentlemen. There are persons who, finding that six-pound trout do not grow on bushes, even in that region, resort to all means to "get a big fish to take home"—trolling with spoons, getting a guide to jig them out, and even stealing them from fish-cars and ice-houses.

During one of my trips to Maine I had my car robbed of all the large fish in it, and I know of a case this season where two gentlemen, upon going to pack their fish to take home, found that all but about a dozen of the smallest had been stolen. It is pretty well understood who the thief was, too.

I suppose, as long as the world is composed, as it is, of all sorts of men, that we shall find nearly all kinds represented at the fishing camps—even down to the "trout-hog" and the man who blazons over the camp advertisements of his business. But I should suppose that the motive of self-interest alone would prevent proprietors of camps from extending to such men as I have described any special encouragement either to stay or to come again. Split Bamboo.

Boston, Aug. 15, 1882.

THE TROUT OF CASTALIA.

THE following statements about these famous springs were furnished me by J. E. Ingersoll, Esq., a prominent attorney of Cleveland:

There are two of these springs about five miles south of Sandusky city. The main spring comes from the ground in such force that it has scooped out a bowl sixty-five feet deep and about a hundred feet in diameter. The water rises with such force and volume that the surface is much convexed. The water is so clear that the bottom is distinctly seen, and so strongly charged with lime that from one quart of water a tablespoonful of lime can be precipitated.

About ten years since, Mr. Hoyt, a Vermont Yankee, who had a paper mill at this spring, tried the experiment of stocking it with brook trout, and, as Judge Cadwell, of Cleveland, informs me, procured about 10,000 of the young fry of this fish. The spring runs about four miles to its end in Sandusky Bay. In this distance, although the country seems to appear as level as a prairie, yet it has a fall of about fifty feet.

There are three grist mills along the stream worked by this water power. The width of the spring varies from 15 to 30 feet, and its depth from 2 to 8 feet.

At one point it spreads out into a pond, covering about one acre, and here are the largest trout taken; the largest yet taken, weighed three pounds.

A species of stringy moss grows in great abundance, forming a sort of network, and banks, almost entirely across the pond, giving the trout good hiding places, and when a trout is hooked he flies into one of these moss dams and makes a fight for his life.

Four years ago it was found that the whole length of the spring was swarming with trout, there being an abundance of the very best of food for them, the moss being alive with small crustaceans, like crabs and snails (univalves). I have not studied them critically, as I am too much occupied when angling to go into scientific examinations.

A club was organized in 1878 consisting of twenty-five members, who, under the name of the Castalia Sporting Club, have leased the spring from a point about half a mile below the head of the spring to its mouth, and have a keeper in charge. Fishing is allowed from March 1 until September 15. No member can fish more than two days in one week, nor take more than fifteen pounds in one day. Trout less than eight inches long must be returned to the stream, unless so injured as to endanger the life. No angling is allowed, except with flies. How will Caledonia Spring compare with ours?

On the 25th of July last Mr. Ingersoll sent me two trout, taken by him from that spring. One of them was a whopper. I never tasted finer trout in my life—flesh firm and of a deep salmon color. On the next day, July 26, I acknowledged the reception of the trout by the following rhymes (not poetry), entitled "The Angler," and dedicated to J. E. Ingersoll, attorney-at-law, and patron of the gentle art.

THE ANGLER.

Once more my muse my song inspire,
For once again I'll tune my lyre;
A gentle theme inspires my song,
To gentle themes soft strains belong.
To shaded wood or rocky nook,
Where leaps along the laughing brook,
At early dawn, or break of day,
The eager angler takes his way,
With rod and line, with fly and reel,
In hopes to fill his ample creel.
The place is reached, a dark ravine,
Where scarce a living thing is seen;
Dark pools and beetling rock pervades,
A paradise for river naiads;
A quiet stillness here prevails,
No leaf is moved by mountain gales.
The cautious angler looks about,
Ye Gods, he cries, what haunts for trout!
At once the task himself applies,
To joint his rod, select his flies,
If the day is dark, with clouds and mist,
A gaudy fly will suit him best.
But if bright with brilliant sun,
A hackle, either brown or dun,
With hopes and fears a cast is made
Behind a rock, and in the shade.
The curling water shows a rise,
The wary trout quick scans the flies,
And leaves untouched the gaudy chant,
And down she dives to her old retreat.

Right here my muse, the fickle jade, jilted me, as she has often done before, and I must send you "The Angler" in an unfinished state. Plague take the whole Nine.

T. Garlick.

Bedford, Ohio July 26, 1882.

CARP AS A GAME AND TABLE FISH.

THE following is an extract from the Petersburg, Va., *Index-Appeal*, and will prove of interest to our readers. We should explain, however, that in Virginia the name "chub" means black bass (*Micropterus*), and "freckle" is the "crappie" or "strawberry bass" (*Pomoxys nigromaculatus*). The account says:

It will be remembered by the readers of the *Index-Appeal* that about the month of December, 1880, a committee of the Petersburg Fish and Game Association, having first obtained the consent of the city council, and removed all other fish from the lake at the Central Park, placed in this lake some two dozen young German carp, of a lot sent to the Association by Fish Commissioner McDonald, from Washington. These fish were then from two to four inches in length. During the past few weeks these fish have made their appearance in shoals near the edge of the lake, whenever bread would be thrown to them, their beautiful movements in the water proving a constant source of interest to visitors.

A few days ago several members of the Fish and Game Association, including Mayor-elect T. J. Jarratt, Councilmen S. P. Arrington and John R. Patterson, Capt. J. T. Young, President of the Planters and Mechanics Bank, Mr. Ro. A. Martin, the well-known commission merchant of our city, and other prominent citizens, armed with fishing tackle, went to the lake for the purpose of fishing for carp, with a view to test their qualities for sporting purposes and as food fish. Several of the fish were thus taken, and the sport was so exciting as to call forth the greatest enthusiasm on the part of all who witnessed it, including some old anglers.

By way of giving our readers in Virginia and North Carolina, where all of the above mentioned gentlemen are widely and favorably known, their opinions as to this new fish, whereof so much has been published throughout the whole country within the last few years, we called upon several of them for their views. Here is what Mr. Martin writes:

"What is now written is simply to give the public our opinion of the carp as found in Virginia waters in the month of August, as a biter and puller, and as a fish to eat, formed upon the experience of the several gentlemen who caught a few from Park Lake last week.

"We found these fish would not bite at worms, but would at bread, and that the best bread with which to bait the hook is the crust of a baker's loaf or roll, fastened on the hook with the crust side up. Our party, including some old and experienced anglers, were astonished to see how some of the fish bit in genuine chub style. In bottom and wind the chub does not compare with the carp. We might say that among fish the carp is what an old-fashioned foxhound is among dogs—a little slow, but of long enduring power. This fish, we believe, fights as gamely for life when in water as a mountain trout. It does not pull so hard as a chub will for a little while, but long after a chub would 'throw up the sponge' the carp comes up smiling, and you cannot see that it has lost a particle of its power to repeat the same thing for many rounds. The truth is that of the carp we caught, though allowed to play a long time, not one of them said 'I give it up,' but continued to the last to fight hard. To any man of soul, who knows what good sport is, we would say, 'Make a pond, get some (as many as you can) young carp and put them in said pond. Throw out some scraps of bread to these fish once a day, and in twelve months you can have such sport as would have electrified old Izaak Walton.'

"Now as to the eating qualities of the carp. It must be remembered that the taste of mankind is so different that what would delight one person another could not stomach. We had one of these carp boiled, we think by a German by birth, but none of our party who tasted the fish thus cooked liked it. The next fish was baked (grandly done, stuffed splendidly in real old Virginia style). This was far more palatable than the boiled fish. It is our candid opinion that if the fish is baked, and the stuffing is in good order, and good dressing is provided, it will prove a very passable dish.

"As a pan-fish—we had one of the smaller fish fried—we must say that those fortunate people who know how a thirteen to fourteen inch freckle eats (say such as you can catch in McIlwaine's pond in Surry county or Neblitt's pond in Sussex county), will not take much stock in this new comer. But our opinion is that, on a cold frosty morning in October, the carp will be found to be good eating, if properly cooked.

"While in form of mouth the carp is like our mullet and roundfish, it is totally different in the matter of bones, not having more than a chub, we think. This fact, taken in connection with its pulling powers and endurance, would seem to show that the carp (notwithstanding its sucker mouth) belongs to the family of game fish.

"In conclusion, we would urge on the plain honest people of the State, who work and who now and then would like to have a little recreation, to make them a pond of from one to five acres, and stock it with German carp. It will be money well spent, and will tend to keep their boys at home on every holiday, instead of having them to wander off from the farm in quest of something to interest them. In closing we will state that after close inspection our party could not find that there were in the lake any young carp, the product of those put in. We think, however, from indications, that this will not be the case before the end of the fall."

Mr. Jarratt, one of the fishing party, had one of the carp baked, and it was pronounced by himself and other members of his family, and also his neighbor, Captain E. A. Goodwyn, who was invited to partake of it, as a most excellent dish.

Mr. Coleman, the keeper of the park, was also requested to take one of the fish and report upon it. Mr. C. speaks of it as very palatable.

Among the gentlemen present at the Park Lake at the capture of the fish was Mr. W. E. Wells, former Collector of Customs of this district. Mr. W. caught some of the carp, and says that as a source of amusement with the hook and line they are superior to any fish he ever saw.

The accounts which we have in the books represent the carp as a fish highly esteemed in Europe as a food fish. When our people in this section of the country learn the favorable reports which we lay before them to-day, especially as to the fish as a source of amusement, we are satisfied that the demand for carp will be greatly increased.

LANDING A GAR.

I WAS eighteen or twenty miles down the Mississippi and Tennessee Railroad, near Yocona River, last week, on a fishing trip, but did not have very good luck with "trout," as we term black bass, though I had heaps of sport with gars. These ugly rascals have been in the habit of enjoying a fine living on bait from hooks on ordinary lines. They would find a party of gentlemen and ladies fishing, and never seemed satisfied until every hook was cut off. Last Saturday, while the writer and a few friends were fishing in a small lake near the above named river, one of these terrors to cotton lines got among our hooks and broke ours and bit another off just below the sinkers, when, unfortunately for him, I threw over an artificial minnow, with silver leader, attached to a silk line about thirty feet long, and by the time it struck the water Mr. Gar struck it, thinking, I suppose, he had a "soft thing." One of my friends remarked that I had as well give him (the gar) my fancy hook and fine line and be satisfied, for it was a "goner" anyway. I told him if I did not land the fish that was then making the water foam around my hook I would treat him to the best cigar I could find in his town. Every one present except me and the fish were roaring with laughter. They were on the bank, I was up about twenty feet on a log, and at least six feet above the surface of the water, where I had a fine opportunity of testing the merits of a silk line and the strength and gameness of a large gar. I let the old fellow worry himself down; then it came my time. I took him to the bank and down it about fifteen yards to a nice place to haul ashore, when by that time (fifteen minutes) I landed him safely, greatly to the surprise of my friends. Their ejaculations of surprise, such as "Zounds! but I'd gave a dollar to get one of those fellows on a hook and line like that." "What kind of a line is that?" "Let me take a look at it." "I stand treats if you let me handle the next one you get on that hook," and many other such remarks. I did not take another that fought so hard as did that one during the whole day.

Sardis, Miss., Aug. 14. Davy.

Why They Don't Bite.—There is no doubt of the influence of electricity upon humanity, and it is unquestionably present, more or less, at all times, disturbing or quieting, repelling or attracting, bringing men in an unaccountable way to each other, and often ripening a short acquaintance into a life-long attachment; or repelling with a certainty that leaves no doubt. Assuming such to be facts, permit me to ask, why this same influence may not be extended to the inhabitants of the water, etc., the real cause, at times, of their indifference to food, when judging from all known conditions of the air and the water, we might expect that the allurements of the fly, the worm, or other bait would meet with a ready response, and bring that success that all sportsmen hope for. I lately saw an acticle, written evidently by a gentleman of experience and observation, in which he stated that he had noted for years the condition of the atmosphere and its effects upon fish, and had invariably met with no success when the "barometer had been falling." I also saw it stated in another article that the writer thereof had been most successful in fishing, immediately after a sudden change of weather, either from warm to cold or the reverse. Now I am sure, if some of your correspondents who may have made a study of electricity, many of whom doubtless are skillful with the rod, would give their views upon the subject, they will not only afford a rare treat to the readers of the Forest and Stream, but possibly give a solution of the great and heretofore unaccountable mystery—"why the fish don't bite?"—Syracuse.

Bass and Trout in Canada.—Belleville, Ont., Aug. 14.—Fishing in this locality has been fully up to the average this year, although the menhaden or "shad," as they are incorrectly called, interrupted bass fishing for some weeks. Now, however, fair takes are reported, the biggest of the season being a six-pounder. A few days ago Mr. Will T. Soule, of Boston, had a good day's sport in Squire's Creek, in the township of Rawdon, 23 miles distant. His catch for about twelve hours' fishing consisted of about 176 brook trout, weighing 38½lbs. The largest turned the scale at 1½lbs.—O.

LARGE TROUT AND FIRST BLACK BASS IN MAINE.—Portland, Me., Aug. 16.—*Editor Forest and Stream:* The writer of the very complimentary notice of Mr. Geo. Shepard Page, published in FOREST AND STREAM, April 13, 1882, carries his adulations beyond the bounds of facts in several of the statements made. He writes that "in 1867 he took the great ten-pound trout, which for upward of ten years was the largest *Salmo fontinalis* on record, and which was stuffed and exhibited at the Centennial Exhibition at Philadelphia, and subsequently at Blackford's annual trout openings." This trout was not taken by Mr. Page, but was hooked and safely captured by H. O. Stanley, Esq., of Dixfield, Maine, who is perhaps too modest to claim the credit therefor, but allows it to go to his cousin, Mr. Page, who was not in the vicinity when Mr. Stanley "took" the fish. The same writer states that "black bass were first introduced into Maine by Mr. Page, who took thirty-one live ones from Newburgh, N. Y., to Winthrop, Me., in 1869." Black bass were first introduced to Maine in 1866, and Mr. Page was in no way connected with the experiment. Some small lakes or "ponds" in the town of Acton, York county, Maine, were stocked, and from them many others have since been stocked with the black bass. Since these items have been deemed of sufficient interest for publication, this communication is written to effect a correct public record of the facts.—VERITAS.

TEMPERATURE AND TROUT.—Your editorial comment in FOREST AND STREAM August 3 on temperature for trout calls to my mind some facts that have come under my observation during the past ten years. During that time I have had a small aquarium in my house, supplied with a constant flow of water from the city pipes, and it has been very interesting to note the effect of temperature on fishes. Every autumn I have obtained trout of from a half pound to two pounds weight, and kept them through the winter and spring, and until they have one by one succumbed to the effects of the approaching warmth of summer, seldom living to the middle of June. As a rule they have died when the temperature of the water was about 70 degrees, while some of the stronger fish have lived in it several days till it reached a temperature of 72 or 73 degrees. The fungus growth usually makes its appearance on the fish before they die, and evidently it (fungus) is aggravated not only by temperature of the water, but also by the strong light to which the aquarium is exposed. In some instances I have had trout nearly covered with fungus, which on being transferred to a tank situated in a dark corner, they have recovered and become healthy. The same results are often produced with the perch and bass. The last named species, however, have sustained their reputation for eccentric habits, and while some of them have actually died from overeating, others have fought against fate and remained members of my family for two years.—M. (Boston, Aug. 15.)

BIG HAUL OF DRUM.—Montauk Point, Long Island, Aug. 18.—To E. G. Blackford: The large haul of drum-fish just made at Montauk was taken from one pound net, the bowl or pound part measuring only twenty-two feet deep and about thirty-five feet across the widest part. We took from this one pound over 400 fish, some of which were less than 60 pounds weight. In 1869 a small trap net at Montauk was filled with drums, but very few were saved. Our lift this week was probably the largest haul ever made of this kind of fish in any common round pound and saved, as the rule has generally been among fishermen when a haul of this kind of fish has been made to cut the bowl and let them go. These kind of drum are probably the enemies reported from the Virginia and other oyster beds. I noticed that some of the very largest of these fish were blind, the eye being covered by a white film—some on only one eye, others on both. That peculiar drumming noise they made after being landed on the vessel's deck I can only compare to two or three taps on a bass drum, and was made only by the largest fish of the yellowish cast, while there was no noise made by the smaller dark colored fish. Since the appearance of these drumfish at Montauk no good fish of any account have been taken.—R. VAN VLECK.

BASS IN TROUT WATERS.—New York.—Is not this business of introducing black bass into waters now or formerly inhabited by trout, being overdone? Once placed in a stream or pond, "big mouth or little mouth" can't be dislodged. He is there for all time, eating up every living thing not larger than himself. He has already been put into so many ponds and streams from which he is spreading himself "all over the face of the land," and destroying everything else, that I can't help crying out "hold." Waters adapted to trout are not so numerous that we can afford to throw away so carelessly the chances of stocking or restocking them with our favorite fish. I have done something in this trout stocking line myself, and with fair success; but every summer I visit my streams with fear that the everlasting black bass has been put into them, or gotten into them from some connecting pond or brook, for they pervade and invade the same haunts and pools as trout, when they are once introduced into the neighborhood. Black bass are well enough when compared with pickerel, etc., but I am hardly ready to put them in the same rank as the beautiful trout. I am an old angler for both fish, and know "whereof I do speak."

THE RESTIGOUCHE SALMON CLUB.—The accounts of poor catches on the Restigouche in the early part of the season, as reported by your correspondents, were true, but later there has been an unusually large catch of fine salmon by the members of the club, most of whom are from New York city. We attribute the poor fishing of the early season to the floods, which kept the fish back, and as they subsided and the river reached its usual level the fishing at once improved. The club controls a tract of twenty-six miles along the river, and eleven miles below the club house is the Bay of Chaleurs, into which the river empties. The largest salmon ever taken from the preserved river was the fifty-pounder taken by President Arthur before he ever thought of filling the Presidential chair, and which has given him more fame among the salmon anglers, who know every man's fishing record, than to be President of the United States. On the north side of the Bay of Chaleurs the fishermen are permitted to net the salmon, and they have marketed over 100 tons of them within the past six years. The heaviest fish taken by a member of the club this year weighed 42½ pounds.—X.

FOOD-FISH FOR OIL.—On this subject, which has lately been spoken of in our columns, the Newark, N. J., *Sunday Call* says: Early last week one of the steamers engaged in taking menhaden along the coast of New Jersey came upon a large school of weakfish running from two to six pounds each. The fish were surrounded with an immense purse-net, and 8,500 pounds were taken. They were brought to market in New York, but owing to the great heat the greater part of the cargo spoiled on the trip. The fast decaying fish were then taken to Barren Island for conversion into manure. Weakfish give so little oil that the "bunker men" say that it does not pay to press them. Knowing this, and being well aware of the risk of their spoiling without ice to preserve them, it was plainly the duty of the captain of the steamer to let the fish alone when he found out what they were. Such hauls are frequently made, but are not made public because the fish are not kept well enough to warrant an attempt to market them, and they are taken directly to the factories.

PHILADELPHIA FISHING NOTES.—The fishing in the Brandywine Creek, near Wilmington, for small striped bass, has been good for the past two week; also at Dupont's powder piers, on the Delaware River, near Ellersly Station. Betterton perch fishing is now fair, but the fish do not run large. Two or three weeks later the run of larger perch may be expected. Trolling for bluefish in the inlets on the New Jersey coast at Bancroft, Little Egg Harbor, and Atlantic City has been the main amusement of the fishermen at these watering places during the past fortnight. The fish were more numerous and larger in size at Bancroft than at any of the other points. This seems to always be the case. Why is it?—HOMO.

A SAVAGE MASKINONGE.—Ottawa, Ont., Aug. 16.—Mr. G. N. Boyer, a merchant of Carrilon, while bathing in the Ottawa River, to-day, was seized by a huge fish and his foot severely lacerated. The water about him was reddened with his blood, and not until some bystanders went to his rescue did the fish let go his foot. On leaving the water Mr. Boyer required assistance to get home. In the evening the monster was caught, and proved to be a maskinonge (*Esox nobilior*) of forty-seven pounds weight.—ANTOINE.

FISHING IN SAGINAW BAY.—Bay City, Mich., Aug. 13.—Bass fishing has been as good as usual in the bay this summer, especially on the west shore; several parties have had excellent success, and brought in some very fine specimens. It has been common for a skillful handler of the rod and line to take seventy-five during the day, ranging from one pound to five pounds in size. Trolling is excellent sport in these waters when not too rough.—F. W.

DYNAMITE IN THE HUDSON.—The West Shore Railway work at Cornwall on the Hudson now affords an opportunity for the dynamite fishers to ply their destructive work. It is said that dynamite cartridges are easily obtained by these fellows, and are being constantly exploded in the river, killing great numbers of fish.

STANDARD TROUT FLIES.—New York, Aug. 18.—If not imposing on your good nature would you be so good to explain, in answer to many inquiries, that the plate of "standard trout flies" advertised in your paper are colored entirely by myself, from first to last, no part of the colors printed whatever.—W. HOLBERTON.

Fisheculture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORD-FISH.

BY G. BROWN GOODE.

[CONTINUED.]

MOVEMENTS OF SPEAR-FISHES.

The spearfish in our waters is said by the fishermen to resemble the swordfish in its movements and manner of feeding. Professor Poey narrates that both the Cuban species swim at a depth of 100 fathoms, and they journey in pairs, shaping their course toward the Gulf of Mexico, the females being full of eggs. Only adults are taken. It is not known whence they come, or where they breed, or how the young return. It is not even known whether the adult fishes return by the same route. When the fish has swallowed the hook it rises to the surface, making prodigious leaps and plunges. At last it is dragged to the boat, secured with a boat-hook, and beaten to death before it is hauled on board. Such fishing is not without danger, for the spearfish sometimes rushes upon the boat, drowning the fisherman, or wounding him with its terrible weapon. The fish becomes furious at the appearance of sharks, which are its natural enemies. They engage in violent combats, and when the spearfish is attached to the fisherman's line it often receives frightful wounds from these adversaries.

In *Land and Water* for August 31, 1882, Col. Nicholas Pike author of "Subtropical Rambles," at that time United States consul at Mauritius, describes the habits of a species of *Tetrapturus* occurring in that vicinity. He states that they have the habit of resting quietly on the surface in calm weather, with their dorsals expanded and acting as sails. They are taken in deep water with hook and line or speared when near the surface, like sword-fish. When hooked or speared they make for the boats, taking tremendous leaps in the air, and if care is not taken they will jump into the boats, to the consternation of the fishermen, or else pierce the boats with their bills. The fish is highly esteemed in the Mauritius, the flesh being of a salmon color near the vertebræ; lower down it is red and like coarse beef. The species attains a large size, one having been seen measuring 26 feet.

MOVEMENTS OF SAIL-FISHES.

No observations have been made in this country, and recourse must be had to the statements of observers in the other hemisphere.

In the life of Sir Stamford Raffles there is the following account rom Singapore, under date of November 30, 1822:

"The only amusing discovery we have recently made is that of a sailing fish, called by the natives *Ikan layer*, of about 10 or 12 feet long, which hoists a mainsail, and often sails in the manner of a native boat, and with considerable swiftness. I have sent a set of the sails home, as they are beautifully cut and form a model for a fast sailing boat. When a school of these are under sail together they are frequently mistaken for a fleet of native boats."

The fish referred to is in all likelihood *Histiophorus gladius*, a species very closely related to, if not identical, with our own.

MAXIMUM AND AVERAGE SIZE OF AMERICAN SWORD-FISH.

The only individual of which we have the exact measurements was taken off Seaconnet, R. I., July 23, 1874. This was seven feet and seven inches long, weighing 113 pounds. Another, taken off Noman's Land, July 20, 1875, and cast in plaster for the collection of the National Museum, weighed 120 pounds, and measured about seven feet. Another, taken off Portland, August 15, 1878, was 3,999 millimeters long, and weighed about 600 pounds. Many of these fish doubtless attain the weight of 400 and 500 pounds, and some, perhaps, grow to 600; but after this limit is reached, I am inclined to believe larger fish are exceptional.

Newspapers are fond of recording the occurrence of giant fish, weighing 1,500 pounds and upward, and old sailors will in good faith describe the enormous fish which they saw at sea, but could not capture; but one well-authenticated instance of accurate weight is much more valuable. The largest one ever taken by Capt. Benjamin Ashby, for twenty years a swordfisherman, was killed on the shoals back of Edgartown, Mass. When salted in weighed 630 pounds. Its live weight must have been as much as 750 or 800 pounds. Its sword measured nearly 6 feet. This was an extraordinary fish among the three hundred or more taken by Capt. Ashby in his long experience. He considers the average size to be about 250 pounds dressed, or 325 alive. Capt. Martin, of Gloucester, estimates the average size at 300 to 400 pounds. The largest known to Capt. Michaux weighed 625 pounds. The average about Block Island he considers to be 200 pounds. There are other stories of large fish. Capt. R. H. Hurlbert, of Gloucester, killed one on George's Banks, in September, 1876, which weighed when dressed 480 pounds. Capt. John Rowe, of the same port, salted one which filled two and one-half barrels. This probably weighed 600 pounds when alive. I have been told that a swordfish loses one-third of its weight in dressing, but I should think that one-fourth would be nearer to the truth. Captain Baker, of the schooner Peter D. Smith, of Gloucester, assures me that he killed, in the summer of 1874, off Portland, a swordfish which weighed 750 pounds.

Mitchell and DeKay state that in 1791 a swordfish 16ft. in length was exhibited in New York. It is questionable whether they often exceed this measurement. My own observations have been made on specimens from 7 to 12ft. long. A stuffed specimen in the United States National Museum measures —— feet, and this seems to be very nearly the average size.

MINIMUM SIZE OF AMERICAN SWORD-FISH.

The size of the smallest sword-fishes taken on our coast is a subject of much deeper interest, for it throws light on the time and place of breeding. There is some difference of testimony regarding the average size, but all fishermen with whom I have talked agree that very small ones do not find their way into our waters. I have collected several instances from the experiences of men long wonted to this fishery.

Capt. John Rowe has seen one which did not weigh more than 75 pounds when taken out of the water.

Capt. R. H. Hurlbert killed, near Block Island, in July, 1877, one which weighed 50 pounds, and measured about two feet without its sword.

Captain Ashby's smallest weighed about 25 pounds when dressed; this he killed off Noman's Land. He never killed another which weighed less than 100. He tells me that a Bridgeport smack had one weighing 10 pounds (or probably 24 when alive), and measuring 18 inches without its sword.

In August, 1878, a small specimen of the mackerel shark, *Lamna cornubica*, was captured at the mouth of Gloucester Harbor. In its nostril was sticking the sword, about three inches long, of a young sword-fish. When this was pulled out the blood flowed freely, indicating that the wound was recent. The fish to which this sword belonged cannot have exceeded ten or twelve inches in length. Whether the small sword-fish met with its misfortune in our waters, or whether the shark brought this trophy from beyond the sea, is a question I cannot answer.

Lütken speaks of a very young individual taken in the Atlantic, lat. 32 deg 50 min. N., long. 74 deg. 19 min. W. This must be about 150 miles southeast of Cape Hatteras.

SIZE OF SWORD-FISH IN THE MEDITERRANEAN.

In the Mediterranean, near Sicily and Genoa, young fish, ranging in weight from half a pound to twelve pounds, are said to be abundant between November and March.

About La Ciotat and Martigues, in the south of France, many are taken too small to injure the fishing-nets, and very rarely reaching the weight of 100 pounds.

From the statements of Bloch and later writers it appears that large sword-fish also are abundant in the Mediterranean. Late Italian fishery reports state that the average weight of those taken on the coast of Italy is 50 kilograms (110 pounds).

Of the coasts of Spain and Portugal Steindachner remarks: "More abundant on the southern coasts of Spain than on the northern, western and eastern sides of the Iberian peninsula. We saw quite large examples in the fish-markets at Gibraltal, Cadiz, Lisbon, La Coruña and Barcelona, and at Santa Cruz, Teneriffe. The largest of three specimens in my possession is 43 inches long, another 24 inches." (20.)

RATE OF GROWTH.

Little is known about the rate of growth. The young fish taken in winter in the Mediterranean, ranging in weight from half a pound to twelve pounds, are thought to have been hatched during the previous summer. Those of a larger size, ranging from twenty-four to sixty pounds, taken on the New England coast in the summer, may perhaps be the young of the previous year. Beyond this even conjecture is fruitless. As in other species, the rate of growth depends directly upon the quantity of food consumed. It is to be presumed that a summer passed in feasting among the crowding schools of menhaden and mackerel in our waters would bring about a considerable increase in weight. That this is the case is clearly shown by the testimony of the fishermen, who say that in the spring sword-fish are thin, growing fatter and heavier as the season goes on.

Dr. Lütken and Dr. Günther have lately made some exceedingly interesting observations upon the young of the sword-fish and of the spear-fish and sail-fish. A translation of Dr. Lütken's paper, furnished by Dr. T. H. Bean, is given in the Appendix (paragraph 64).

Dr. Günther's studies were made upon very small specimens of undetermined species, belonging to either *Tetrapturus*, *Histiophorus*, or both. In his latest work, "The Study of Fishes," he summarizes the facts observed by him as follows:

"The sword-fishes with ventral fins (*Histiophorus*) belong to the Teleostæans of the largest size. In young individuals, 9 millimeters long, both jaws are produced and armed with pointed teeth, the supraorbital margin is ciliated, the parietal and preoperculum are prolonged into long spines, the dorsal and anal fins are a long series, and the ventrals make their appearance as a pair of short buds. When 14 millimeters long the young fish has still the same armature of the head, but the dorsal fin has become much higher, and the ventral filaments have grown to a great length. At the next stage, when the fish has attained to a length of 60 millimeters, the upper jaw is considerably prolonged beyond the lower, losing its teeth, the spines of the head are shortened, and the fins assume nearly the shape which they retain in mature individuals.

"Young sword-fishes without ventral fins (*Xiphias*) undergo similar changes, and, besides, their skin is covered with small, rough excrescences, longitudinally arrayed, which continue to be visible after the young fish has attained the form of the mature in other respects."

Dr. Lütken's description of the young sword-fishes is an exceedingly valuable contribution to knowledge.

I have collected together, in the plates which accompany this paper, the various published figures of young sword-fishes, and have had them redrawn as nearly as possible to a uniform scale.

Of the sword-fish, *Xiphias gladius*, two figures are given. One, taken from Lütken's "Spolia Atlantica" (pl. ii, fig. 10), is 37 millimeters long; the other is a reproduction of the often-

(20 Sitzb. Ak. Wiss. Wien, 1868, p. 396.

copied figure in Cuvier and Valenciennes's "Histoire Naturelle des Poissons" (pl. cexxv), 12 to 18 inches long. Lütken had a smaller specimen, 10 millimeters long, but it was too poorly preserved to be figured.

Of the various species of *Tetrapturus* and *Histiophorus*, six figures are given. The smallest is that from "Spolia Atlantica" (pl. ii, fig 11), and is of a fish 5½ millimeters long. Lütken remarks that he has a series from 5½ to 12 millimeters long which differ very little from each other. The next in size is copied from Günther, and is probably about 10 millimeters long; the third, also from Günther, is 14 millimeters long. Lütken has another link in the series, a specimen 21 millimeters long, which he has not figured. The fourth stage is from Günther, a specimen 60 millimeters long; the fifth, from Cuvier and Valenciennes (pl. cexxx), their *Histiophorus pulchellus*, about 410 millimeters long; the sixth, from Rüppell, a copy of his figure of *H. immaculatus*, said to be about 1,800 millimeters long. These illustrations show the development in a very satisfactory manner.

[TO BE CONTINUED.]

REPORT OF MR. HUGHLETT.

We have the "Report of Thomas Hughlett, a Commissioner of Fisheries of Maryland," dated January, 1882. Our readers will remember that the two commissioners of this State divide their territory and their appropriation, each taking a share and acting independently of each other. Mr. Hughlett has the eastern shore, and Maj. Ferguson the western.

Wishing to hatch shad, which he believed could be as well done on the eastern as on the western shore, Mr. Hughlett selected Coppage Landing, near Millington, Queen Anne county, on the Chester River; Tuckahoe Creek and Kingston on the Choptank; Sharptown on the Nanticoke, and Sharp's Point on the Wicomico, as the most favorable points for transportation as well as hatching. Not being supplied with the means sufficient to erect the machinery now in use in more advanced hatching stations, he was compelled to use boxes for this purpose, and with these he hatched 2,600,000 at Coppage Landing out of 3,660,000 eggs. Nearly five million were hatched at Tuckahoe, and two million at Sharp's Point. At these stations the river herring and the white perch (*Morone*) were hatched in considerable numbers.

A few Schoodic (land-locked) salmon were hatched and distributed, but their success in Maryland is doubted, as they are inhabitants of deep, cold lakes. Carp have been a success, and their spawning age determined. The fish deposited in 1879 (of that season's hatch) "certainly spawned this year (1881), and from the thirty-five fish placed therein, he this fall took more than a thousand, measuring from two to six inches in length." Legislation on the blockading of creeks and rivers with nets is recommended.

FISHCULTURE IN NEW ZEALAND.—We have received a pamphlet containing "History of Fishculture in New Zealand, by W. Arthur, C. E., read before the Otago Institute, February 18, 1881, and Operations of the Various Acclimatization Societies," with illustrations. From this and previous reports we judge that Mr. Arthur is doing much good work in that country where no ruthless pike nor destructive little sunfishes, the scourge of American waters, abide. Salmon from England and from California have been introduced into New Zealand, but with what success it is too soon to say. Other fishes, as German carp, brown trout (English), Tahoe trout (American), brook trout (ditto), catfish (ditto), whitefish (ditto), tench (English), chart (ditto), perch (ditto) and goldfish have been introduced by the Auckland, Hawke's Bay, Wanganui, Marlborough, Canterbury, Otago and Southern land societies, and by Mr. Howard. The English trout, *S. fario*, have established themselves in Canterbury.

The Kennel.

FIXTURES.

January 9, 10, and 11, 1882.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

BENCH SHOWS.

April 3, 4, 5 and 6, 1882. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

September 4.—National American Kennel Club Field Trials on Prairie Chickens, Fairmont, Minn. Entries for the Derby close July 1, for the All-aged, Sept. 4. Jos. H. Dew, Columbia, Tenn., Secretary.

November 17.—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 881, New York, Secretary.

December 4.—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11.—New Orleans Gun Club Field Trials or Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

GORDONS AND BLACK AND TANS.

Editor Forest and Stream:

The letters of "Vitus," which have appeared in your issues of April 20 and July 27, reminded me very forcibly of an old gentleman who gave me considerable trouble when I was at school. I refer to Nestor, who figures very prominently in Homer's Iliad, "from whose tongue flowed words sweeter than honey," etc., etc. But the same old gentleman never could find anything good in the days he is represented as speaking in; he always referred to men and their doings as nothing compared to the men he knew when young. According to "Vitus," the Irish setter of former days was an infinitely superior animal in every respect, even to his color, than the Irish setter of the present day, and he asserts it so flatly that it would be next thing to a grave offense to say he is wrong.

I am led to think from his writings that he has not the least belief in the Darwinian theory of the survival of the fittest, and also that he considers the sportsmen of the present day are not up to their forefathers in knowing what sort of a dog is best fitted for their work. If it is so with dogs, it must follow that by careful breeding and training of the horse he is depreciated, as when Dexter made a record of 2.17 no horse ever could beat it. How is it now when we look at the records of Maud S., Rarus and half a dozen others—has science and careful breeding not improved them? It is equally so with dogs. I affirm that no sportsman of the present day would be satisfied with one of the sage brown pottering dogs that were used to drive birds like sheep into nets. Yet, from Vitus' letter he would try to make one believe that that dog was infinitely superior in every respect to the Irish setter of the present day. To prove this assertion he attacks Stonehenge, of whom he says: "As for Stonehenge, I take but little stock in his authority on Irish setters, in fact, he is one of the sort who like to please the public without benefiting them." I think this is a most unwarranted attack on one of the ablest men of the present century. Yet for his (Vitus') own ends he uses this very man in whom he has not the slightest confidence, to prove that the present black and tan is a mongrel. In this, I think Vitus, to use a slang expression, "gives himself away." For any man who as Vitus says "is one of the sort to please the public without benefiting them," is not to be trusted as an authority on any subject.

Vitus says he lived in Ireland for 14 or years thirty years ago. I lived in Ireland twenty-five years, and I have seen very many of the Irish setters, and some kennels which are acknowledged to be the finest in the world, who trace their pedigrees back beyond the days of "Brian Burrough." and I never yet saw a sage brown dog among them that was thought anything of. I must confess I cannot see how Vitus makes the "gaidhrin" into the Irish setter; a pet hound is scarcely the same as a setter. Another assertion which I cannot quite reconcile is the color of the heather. I always thought it more of blue green with a dark red almost purple flower, and as it blooms nearly all the year round the bogs have a purplish tinge, especially in September, the grand shooting month there. Perhaps I may be color-blind, which is fashionable nowadays, which accounts for this seeming contradiction.

Leaving all this aside, what has Vitus proved by his long letters—that there are no such breeds as Irish setters, Gordon or black and tan setters? He may think so, and I shall be very sorry indeed if this affords him any pleasure, to try and convince him that the public do not believe him. He has got his little idiosyncrasy, and from some experience in these matters I would consider it cruel to show him that he is entirely mistaken.

All the harm he has done is to himself, by blackening the character of Stonehenge and stating that there is no such thing in existence as two of the most popular breeds of dogs as Irish and Scotch setters. This sort of discussion may be interesting to antiquarians, but the sporting press of the day, to a very large extent, is devoted to improvement, and not, as "Vitus" would have us to believe, the fostering of species which, instead of being improvements, are directly the reverse.

I trust that "Vitus" will not become discouraged in his readings and writings by the tempest which he has raised around his devoted pen, but that he will improve his library by the addition to it of "Idstone" and Gordon Stable's works, when we next hear from him on the black and tan question. I would also recommend him a week's shooting over some of the sad Irish black and tans, and then he would be the better able to judge of their respective merits and demerits.

In conclusion, I wish to thank him for having written as he has done, as it has settled one very important point—that we have a black and tan setter, pure, which can trace back its pedigree for sixty years. J. S. NIVEN.

LAMENT OF AN OLD TIMER.

Is there no one among the many lovers and breeders of the grand setter, who so lovingly remembers the pleasures of shooting over the old-fashioned trotter with a nose, that he still continues to breed and use them for his own comfort and the delectation of his old foggy friends?

I have looked in vain through the columns of the FOREST AND STREAM for some description, or even an advertisement of a slow dog, and such a treat would have made me wish for an arm long enough to give his owner a hearty hand shake, though half a continent might separate us. The writer never takes the field except for exercise and pleasure, and although a large bag adds unquestionably to his exhilaration, yet it is decidedly a matter of secondary importance compared to the ever new beauties of the fields and streams, and the never ending interest in the maneuvers and generalship displayed by his four-footed teacher.

Fair pack in memory's preface stands distinctly outlined the form and features of the only dog I ever owned, and although I have been afflicted with numerous canines since, ranging in speed from turtles to racehorses, yet compared with him they were mere nonentities.

He had the two qualities without which the most beautiful animal is useless, except on the show bench—nose and staunchness, and his one high-headed trot through the leeward side of a ten acre lot was as sure an indication to me of the presence of a bevy of game as any of my subsequent dogs had thoroughly quartered it, his nose traveled faster than the legs of the fastest, and more unerringly, for never to my knowledge did he make a false point, from his dog babyhood until the day when that despicable villain, the dog poisoner, curtailed his life and my pleasures simultaneously.

Has his like all vanished from the face of the earth? or is there still some good soul with my own antiquated notions, who can direct me to his counterpart, a high-headed, merry-stemed setter puppy, with an old-fashioned nose, an intelligent, affectionate

SLOW DOG.

THE COCKER SPANIEL.

INDIAN RIVER, Mich., Aug. 13, 1882.

Editor Forest and Stream:

I observe in the August 3d issue of my ever welcome paper two articles, the first, entitled "What is a Cocker?" by J. F. Kirk, Secretary etc., of the A. C. S. C., and the other by Jas. Watson, Esq. I shall reply in brief to Mr. Kirk at this writing, but will leave the presentation of certain facts and figures that I gained at the Cleveland show, partly from his own records and partly from my own, to show to all true friends of the cocker, that something is known of "what is a cocker" by others besides Mr. Kirk.

Here I must correct a little error of the printer, that makes me use the term "pug" nose instead of pig nose in the copy, for "pug" is less a correct term than pig, the type of the muzzle of the A. C. S. standard if I understand the matter correctly. Whether I am correct or not in the "deep-rooted opinion" that the A. C. S. standard "was especially devised to fit certain black spaniels," etc., the fact is painfully evident that "certain black spaniels" have almost uniformly won in all the bench shows of the past season, and if the reader will turn to the advertisement in the BROKER AND SPORTSMAN by the "Herald Sporting Club," he will see the relation that exists between the A. C. S. standard and that club, and be the better able to judge whether that standard was or was not devised "to fit certain black spaniels." etc., etc.

Mr. Kirk complains that I call it a "false and pernicious standard," but if he will show me any substantial evidence that it is not so, then I will gracefully yield to the fact presented. He asks me to read the "points as given to Benedict as a cocker," etc., etc. Now I would like to ask him what right he has to judge the cocker by a field spaniel standard, if there has not been some admixture of these strains somewhere, if not in the A. C. S. Club? Why not judge the cocker by the Laverack or Llewellin type, and then draw conclusions that these types are not cockers as well? Certainly there seems to be a "nigger in the wood-pile," and whether this nigger really exists or not, I claim and assert that the A. C. S. standard is altogether unfitted to meet the true conditions and qualities of the cocker, and if no change is made in that standard, that standard is not the correct and true representative of the cocker; therefore, the breeding to that standard is begetting "a worthless set" of so-called cockers, and the weight of twenty-eight pounds makes the strain rather "Jumbos" than cockers. Will Mr. Watson please make note of this, that he may understand what I mean by "Jumbo-like specimens?" Did he ever read of Barnum's huge elephant? If not, I refer him to the newspapers of the day; and when read, turn down a leaf.

Mr. Kirk's scoring at Cleveland while judging the spaniel classes, as I before remarked, will be attended to when I return to my home, where the documents are that may be called into requisition; then we will see whether these "imaginary bogies" are of the A. C. S. C.'s making or my own. I will close, for the present, by hoping that my "fellow-members of the A. C. S. Club," who are "the thoroughly true and staunch friends of the handsome little dog," will see themselves as others see them, and practice some of the "true interests" of the cocker, rather than prate about them.

A few words for Mr. James Watson. I will say that all his misstatements about me, which embrace the most of his article, are as far from the real facts as his standard of the cocker is removed from the genuine type of that "handsome little dog." Now, friend Watson, join those who are the true friends of the cocker, pug your pig-nosed representatives to a closer resemblance of the genuine cocker. Let me assure you nothing is the matter with "Senex" except that he wants the cocker to be a cocker in fact. Regarding what you say about my connection with Benedict a year ago, and with the A. C. S. Club, if any apology is demanded, I feel more like making one to my friends and myself for becoming a member of said club than to you who was a prime mover in making such a standard. You speak of me as "a disappointed exhibitor" at the Cleveland show. Now to be disappointed I must have expected something and not received it. This I did not; for how could I or any other man expect to win for the cocker that which was denied to him by your standard. Again I would inquire what right had the judge of the cocker spaniel class to judge cockers by your standard when that standard is ignord by some of the best cocker breeders in the country, and especially what right had he to judge the cockers outside of your particular strain. Friend Watson, will you answer these questions, and abiding these answers, I remain, SENEX.

DARLINGTON DOG SHOW.

THE following report we clip from the London *Field*, omitting the comments and prize list except for pointers, setters and spaniels: Judges—The Rev. G. F. Hodson and Messrs. T. B. Bowers, R. Colling, R. B. Lee, E. C. Norrish, Vero Shaw, T. Stephenson and James Taylor.

The good people of Darlington are certainly to be congratulated upon the result of their dog show, which came off on Friday, the 29th ult. Our readers being already in possession of all the facts connected with the differences of opinion which exist between the north-country committee and the Kennel Club, it is unnecessary for us to repeat what is already well known. Still, as matters stand, Darlington unquestionably has scored one in the struggle for independence. The entries this year in the dog department muster 617, as against the 690 odd of last year. The above statement, were it not capable of explanation, would look as if the show was going off. The fact, however, is that the Darlington committee this year, for the first time, determined to place their veto upon the same dog being shown in two classes, and we hear that the secretary actually returned twenty entries of puppies which had been nominated for the adult classes as well. Arguing, therefore, that at least twenty puppies more would have been entered under other circumstances by owners who read the conditions of the show, and, therefore made no attempt to send their dogs, we calculate that this new regulation may be fairly estimated as costing the committee no less than forty entries. If, therefore, assuming this reckoning to be somewhere near the mark, we proceed to add the forty entries thus lost to the 617 actually secured, and compare the total with the number of dogs shown last year, we find the falling off to be well under fifty.

Thus, taking Darlington as a test case, it would appear that the opposition of the Kennel Club, when directed against a first-rate provincial show, is a good deal under ten per cent., which, considering the great influence which is claimed by our London showmen is, to our mind, at least, a very small amount. It was only natural that the Darlington people were jubilant, and chuckled to their hearts' content, especially as the horses numbered nearly six hundred entries, and the town was full of visitors. In fact, we were assured by Mrs. Lambert, the genial hostess of that most excellent hostel, the Fleece, that it was "really like the good old times again," and nobody is better qualified to speak of those halcyon days than the lady in question, who on the present occasion was driven to her wits' end to accommodate her guests, many of whom openly stated that they had "come in person to back up Darlington."

The attendance on the ground was enormous, being over a thousand in excess of the best on record, and no doubt many of the fair sex were deterred from coming over on account of the rain on the preceding day. Friday, however, was fine enough, and everything went off as well as could be desired. Mrs. Gurney Pease was present, generously lending her beautiful park to the committee, and declining, at the same time, to accept complimentary tickets to the grand stand, on the grounds that all well-wishers to the show should give it practical and substantial support by paying for what they wished to see, as were many other members of the county families. The Glasgow committee also did what they could by allowing all the dogs entered for Darlington to leave their show one day earlier, so as to be in time, and Messrs. Spratt supplied the food in their best style. There was nothing, therefore, to mar the harmony or success of the exhibition, and it can scarcely be surprising that the Darlington committee are, under the circumstances, more than ever determined to accept extinction at the hands of the Kennel Club with complacency, and do their best to hold another bumper in the way of shows in 1883, which, by the way, is to be a jubilee year, being the twenty-fifth birthday of the South Durham and North Yorkshire fixture.

Speaking generally, and having in mind a good number of Darlington shows we can state fearlessly that the quality of the entries was never surpassed. A champion, or something very like one, was entered in almost every class, as such names as Bayard in the St. Bernards, Rock in the setters, Ponto in the pointers, John O'Gaunt in the clumbers, Brockenhurst Rally in the fox-terriers, Tetsly in the dandies, Violet and Rosemary in the bull-terriers, Bellissima and Venom in bulldogs, Rosemary and Princess Dagmar (the latter hardly a show bitch though), in the greyhounds, and a "new" mastiff, who was claimed for a hundred, will clearly prove. The arrangements were very good, and the judging was quickly got through in the six rings which were provided, though the absence of Donnison (who again deserted to the horses) and his bell was a bit felt when new classes were called on. This year the show was kept open until 6 P. M., the change being almost unanimously approved of by the exhibitors, who upon former occasions have had very limited opportunities of going thoroughly round the classes. Mr. W. Sewell as secretary was, as usual, most assiduous in his duties; and we beg to offer him and his committee our best thanks for the assistance we received at their hands, and our congratulations at the unequivocal success they scored over their show for 1882.

Champion pointers brought out Bang II., the last Birmingham champion as winner here. He has better shoulders than Pontop, who was defeated; but it must have been a tight fit between them. In the open dog class, large size, Don, who won, is very good in head, but his color—a nasty lemon—is against him. Young Ponto, who came next, we never raved about, but he was rightly placed here. In the bitches Ruby (the well-known Ruby) won first and cup for Mr. Fletcher, and her victory was undoubtedly deserved. Roy, the winner in the small-sized dog class, is a very taking lemon and white, with a typical head and rare shoulders. He is very full of quality, and with time (he is twenty-two months old) should prove a good winner. In the corresponding bitch class, Nell, another lemon, with a good head, but in milk, won easily, the class not striking us as a very strong one.

Setters: Black and tan dogs were a poor lot, nothing more. Roy, who won, was about the best, but his ears might be better. Duke was lame, and looked aged. Bella, the best of the bitches, won, but Nell, who took second, is curly in ears. In the Irish, Bogardus, a good dog, but rather weak in his fore feet, won, with Nellie second. She is plain in head, and on the present occasion was short of coat. Babb Junior is a smart youngster, who, we expect, will do better by-and-by. Any other variety of setter, dogs, brought Mr. Freme's Monk to the fore; he is a good dog, with excellent legs, feet and body, but looks as if he had been worked a great deal—unless

MR. E. E. HARDY'S ENGLISH SETTER DOG "POLLUX."

he has been used in schooling puppies; this seems unlikely, but possibly it is so. Blue Beard is a little sour-faced, and might be better in loins. Roy, the extra prize dog, is of a good stamp, but we do not think he is anywhere near his present conquerors. It is only fair to state that old champion Rock, who was entered, did not compete, as he was so seriously savaged by Ponto the night previously that for some time George Hellewell despaired of his life. According to the last reports we had, the old hero is getting better fast. A nice lemon and white puppy by Rock, called Iris, won well in the bitch class; she has a nailing good head, and her fault, we think, lies in the position and carriage of her flag. Lilian moved so stiffly in the ring that we thought she would have had to give way to Margery, although the latter's condition was not up to show form at all. Myrrha is a fair one, and worth her card.

Mr. Holmes had it all his own way with his well-known clumbers in the class set apart for them, and in the blacks Kaffir carried off first and cup for his new owner, Mr. Freme; but the judge admitted that it was a very near thing between him and Zulu, though in our opinion the former won easily.

PRIZE LIST.

POINTERS.—Champions: 1st, R. P. Leach (Bang II.). Dogs above 55lb.: 1st, R. Graham (Don); 2d, J. Fletcher (Young Ponto). Vhc., W. Coates (Rob) and G. Grencock (Ranger). C., J. G. Grace (Sam), V. W. Corbett (Sam), and J. E. Mason (Lord Rockingham). Bitches above 50lb.: 1st and cup, J. Fletcher (Ruby); 2d, T. Kirkby (Princess Bella). Vhc., E. J. Buckle (Carmen II.). Hc., J. Dickinson (Nell). Dogs not over 55lb.: 1st, C. Drury (Roy); 2d, W. Waddington (Bedwin Drake). Vhc., W. Shepherd (Shot). Hc., Sir. J. W. Pease, M.P. (Pop). C., R. B. Woosnam (Don) and J. Langdale (Don).—Open Class—Bitches not over 50lb.: 1st, C. Drury (Nell); 2d, Sir. J. W. Pease, M.P. (Kate). Vhc., W. Stoddart (Juno). Hc., E. P. Leach (Bloom) and H. Marshall (Duchess). C., F. Waddington (Flounce).

SETTERS.—Black and Tan—Dogs: 1st, W. H. M. Fawcett (Roy). Bitches: 1st, F. Waddington (Bella); 2d, C. Pickersgill (Nell). Irish: 1st, G. R. Ramsay (Bogarina); 2d, H. M. Wilson (Nellie). Vhc., C. F. Smurthwaite (Ruby Junior). Hc., G. F. Smurthwaite (Grouse Junior) and G. H. Loftus (Sam).—Any other Variety—Dogs: 1st and cup, J. Freme (Monk); 2d, Capt. J. F. Walton (Bluebeard); extra 3d, S. T. Jones (Roy). Bitches: 1st, J. W. Fleming (Iris); 2d, H. Dundas (Lilian); extra 3d, Capt. Walton (Margery). Vhc., H. Dundas (Myrrha). C., G. Renton, M.D. (Floss), and Dr. Iliffe (Countess).

SPANIELS.—Clumber—1st and 2d, H. Holmes (John O'Gaunt and Tower); Hc., C. P. Harvey (Pudge). Black and Liver: 1st and cup, J. Freme (Kaffer); 2d, J. Boyle (Zulu). Vhc., J. Freme (Sweep). C., J. Freme (Beverley Blanche), and V. Kitchingham (Yorick). Any other Variety: 1st, Kitchingham (Katrine); 2d, E. H. Wilson (Don Cæsar). Vhc., B. Hewitson (Rex). Hc., V. Freema (Beverly Bob). C., C. H. Backhouse (Sailor Duck).

AN INTELLIGENT COLLIE.

I HAVE just lost a collie pup. Though less than six months old, he had given evidence of possessing no mean intelligence. Alas! he found a piece of meat charged with strychnine, meant for coyotes, and is no more. At his age his performances were wonderful. I have seen him at a word from the shepherd round up and put between sixteen and seventeen hundred sheep in the pen (many of them wild Mexicans), and not chase or crowd any of them. The little chap would mass this large flock of scattered sheep and direct them toward the pen in half the time that several men could do it. When penning the sheep he had to work them down a long hill that sloped to a flat that the pen was built upon. When close in upon any portion of the flock he could not see over them, and would scamper back up the hill and locate the position of the pen and then flank his sheep according to his bearings. When the last sheep and frisky lamb was inside, he would sit down in the gate and slap the dust with his tail until the shepherd commenced putting up the poles that formed the gate, and I have seen him attempt to assist in that work by trying to drag the poles to the gate. At night he would keep the sheep in the pen, which consisted of brush, or if they broke out, would promptly put them back. I have herded those sheep myself, and slept in a small A tent a few yards from the pen. In case of the moon rising, fool sheep appeared to take it for sunrise, and would break out. The first time it occurred during Dick's administration, Dick put his paws upon my breast and licked my face and awoke me. I said, "Go for 'em, Dick!" and he did it and put the lost sheep back in the pen, and then came back and tried to tell me that all was right. After that night he needed no further hints, but took the business into his own hands, or paws. He had but little tuition, but he guarded that sheep pen as well as though he was five years of age instead of five months.

He had some odd tricks, one of which I will mention. If he had been guilty of any misbehavior for which he knew he deserved punishment, he would rush off and round up his flock of sheep as though he wished to show some work to atone for his misconduct. He had a nose like a bloodhound, and could follow a person's footsteps as well. I have left him asleep on the prairie more than once, stolen away and hidden myself, and watched him follow my footsteps. He would trace every step until he found me, and then would quiver for joy. If there is a heaven for dogs, may the Lord be good to a little fellow. C.

SAN ANTONIO, Texas.

PROPOSED COCKER CLUB.—Indian River, Mich., Aug. 14.—*Editor Forest and Stream:* Permit me to say to all those parties who have written me about joining an association of cocker breeders who are dissatisfied with the present standard and who wish to see the cocker judged by a true and proper standard, that I will call a meeting of all such, at some central point, as soon as I return to my home at Ann Arbor, about the first of October prox. All monies received will be returned to the proper parties at the meeting, and an organization effected that will deal justly with the cocker.—E. C. FRANKLIN.

POLLUX.

POLLUX is a black and white English setter dog, owned by Mr. E. E. Hardy, of Boston, Mass. He is two and a half years old, and is by Dash III. out of Diana (Adams' Rock—Nesbitt's Maud). He won first in the Eastern Field Trials Derby at Robin's Island last year, running a capital race. He also ran in the National American Derby at Grand Junction, Tenn., doing some fine work, but was beaten by Bess, his half sister, who was placed second. Pollux is rather under the medium size, but exceedingly well made and possessed of great power. His disposition is of the best, and he bids fair with proper handling to make it warm for his competitors at the coming trials, as if in form he will run in all the stakes.

DOMINION OF CANADA KENNEL CLUB.

IT gives us pleasure to announce that the sportsmen of Canada have formed a kennel club. We are indebted to the Ottawa *Daily Citizen* for the following particulars: The Dominion of Canada Kennel Club has just been granted incorporation. The club, which is composed of the most prominent of our gentlemen sportsmen, has also a representative board of directors resident in each of the provinces, as well as numerous shareholders scattered throughout the country from the Atlantic to British Columbia, thus making the scheme a national one in its principal features. They intend importing for their kennel, which is to be established in or near Ottawa, a stud of sporting dogs that will rank second to none in this country, and in the hands of a competent trainer will contest the bench and field against all comers. Another object of the club is the compilation and publication of a stud register or stock book for dogs only, on the same principle as the herd books which have proved invaluable to breeders of cattle, but on a system that will allow of the registration of an exact *fac simile* of each animal, giving his color and markings.

The idea was originated by Mr. Vicars, secretary of the club, and has met with the hearty approval of the most experienced breeders of the United States, as among other advantages it gives a means of detecting any attempt at fraud on the part of unscrupulous dealers. This is evidently a move in the right direction and should meet with support from every true sportsman, as heretofore we have been obliged to register our pedigreed stock in the books compiled by our cousins across the border, the Canadian entries contained therein forming no small portion of each volume. The club are now making arrangements for holding a grand bench show here during the spring, for which they have already secured a large number of entries, both in Canada and the United States, and they promise to give the public an opportunity of seeing the crack dogs of the present time, some of which are valued at a small fortune. Although a very much larger capital could have been secured, they have started with four thousand dollars, feeling confident that on this sum the enterprise will prove a success, and with the careful management it is sure to have in the hands of its present board of directors, will yield in time a fair dividend. We wish them every success.

The following is a list of the Provisional Directors of the Dominion of Canada Kennel Club:

Lindsay Russell, Ottawa; Z. A. Lash, Toronto; Lieut. Gov. Dewdney; A. O. F. Coleman, V.S., Ottawa; Dr. Nevin, London, Ont.; F. P. Austin, Ottawa; C. V. Temple, Quebec; John Gilmour, Ottawa; F. H. D. Veith, Halifax; W. A. Allen, Ottawa; E. F. Stephenson, Winnipeg; H. Bailey Harrison, Tillsonburg; Christopher Robinson, Q.C., Toronto; Alonzo Wright, M.P., Ironsides; Hon. A. P. Caron, Ottawa; D. C. Plumb, Niagara; B. H. G. Vicars, Ottawa, provisional secretary and treasurer.

The national objects of the club are (1) to encourage throughout the whole Dominion, the importation, sale, breeding, training and exchange of highly bred dogs of all classes; (2) to compile and publish a national stud book, in which dogs of every breed, whelped or owned in the Dominion, can be registered; (3) to endeavor to secure such legislation as will protect the game of this country, and assist in the enforcement of existing laws having that object in view; (4) generally to assist in the conviction and punishment of persons guilty of cruelty to animals, more especially to the dog, and the various kinds of game; (5) to encourage public exhibitions of dogs, such as bench shows and field trials; (6) to encourage legitimate sport generally. The first meeting for the election of permanent officers will be held in Ottawa, on Sept. 11.

ST. BERNARD IMPORTATION.—Mr. Fred. W. Rothera, of Simcoe, Ontario, Can., has just imported from the kennel of S. W. Smith, Leeds, Yorkshire, the St. Bernard dog Lady Abbess. She is by Capt. Bamebridge's Hero, out of Lottie, and took first prize at Dudley, England, in June last. She is a massive, well grown bitch, rough-coated, with true St. Bernard head and benevolent expression. Her color is rich orange tawny, with correct markings, and she carries double dew claws. Since her arrival she has presented her owner with a litter of seven, four of which—three dogs and a bitch—only are alive. These are fine healthy pups, orange tawny and tawny brindle, with white blaze, collar and fore legs, and these were sired by Mr. Smith's Rollo, who took first prize at the Alexandra Palace Show, in June last. Lady Abbess is in all respects a dog to be proud of, and will prove a worthy consort to Mr. Rothera's noble dog Priam, who has figured so successfully at shows here. Mr. Rothera is to be congratulated on possessing three such splendid specimens of this truly magnificent breed as Priam, Lady Abbess and Novice.

THE KENNEL CLUB AND ITS RULERS.

I WAS so completely taken aback by a statement in the letter of Mr. J. H. Murchison, published in the *Field* a fortnight ago, that I could not reply until I had satisfied myself as to facts.

Mr. Murchison, in reference to the black mail rule of the Kennel Club, attempts to justify it by showing that the National Coursing Club club do a similar thing. He says "The National Coursing Club have lately adopted the same rule and fee, and it may be well to note that it is composed of representatives from the principal coursing clubs in the kingdom."

As I was sure Mr. Murchison would not make a misstatement intentionally, and as I remember he was no novice in coursing, having, I believe, once held a nomination for the Waterloo cup, his words were to me, in the language of Mr. Swiveller, "a staggerer."

Mr. Murchison is right in saying the National Coursing Club is a representative body, and had it imposed the tax he speaks of on the coursing public, its representative character would have been its excuse or justification for the act; but the National Coursing Club has done nothing so foolish. It, unlike the Kennel Club, does not possess a newspaper to be subsidized at the expense of outsiders, and there could be no need for such a rule as the Kennel Club profit by, for, as a matter of fact, all greyhounds running at meetings held under N. C. C. rules have always had to be identified by name of owner, pedigree, sex, age and color, and that Mr. Murchison should have known. The N. C. C. have undertaken the compilation of a greyhound stud book, for which a charge of one shilling per entry is made; the Kennel Club compile a stud book and a charge of five shillings per entry is made. But Mr. Murchison and the *Kennel Gazette*, with a disingenuousness I cannot admire, compare the work of the N. C. C. with the utterly useless rule as to the name registration of the K. C., which rule is, I repeat, a subsidy to the paper run in the direct interests of the club.

Mr. Murchison tells us the K. C. gives away the surplus or profit made, and that may be; but by what right do they feed their own paper with the shillings of the public, and pose as liberal donors with the surplus.

Not only is the K. C. registry of names utterly useless, but, even if it were of use, it is a bad shilling's worth, the work being ill done. I quote as a sample the first greyhound on the list in this month's *Kennel Gazette*—"Artilleryman, d, Mr. T. Jones's, by Gunner—Anor, Feb., 1878." How is that dog to be identified by the register?

Now, as to the "Boycotting" of Darlington, I wish to observe that it is not an isolated case; and it is not only to shows that coercion is applied, but public expression of opinion would be choked if the K. C. had the power. Had I only myself to consider, I would speak more plainly; but there are those of the Kennel Club who will know what I mean.

Mr. Murchison would make out the Darlington letter to be a hoax; I do not take that view. It is more than twelve months since Mr. George Lowe, then Secretary to the Kennel Club, told me it was in contemplation to frame a rule equivalent to Mr. Doyle's resolution, and that to be followed by another rule debarring exhibitors and dogs from taking part in Kennel Club shows. I said to Mr. Lowe I sincerely hoped the club would do so; and I still hope that course may be taken, for the club would then be in name, as it is now in fact, a benevolent and admiration and benefit society.

Mr. Doyle's resolution was put out so as to feeler to see how far the club could with safety to its own interests go, and the canine public has been so prompt in showing its teeth that now we see the usual spectacle when dogs bark boldly and suddenly retire into the kennel. Mr. Murchison is one of those who believe the Kennel Club exists for the improvement of dogs and dog shows, and there is something very refreshing in the simplicity of his faith. I wish I could subscribe to his creed, but there are too many ugly facts in the way.

When men who extensively deal in dogs elect each other to judge each others' dogs against those of the outside public, they do not take a very sensible way of convincing people of their disinterestedness.—HUGH DALZIEL in *London Field*.

DOGS FOR COURSING LARGE GAME.—Glendive, M. T., Aug. 10, 1882.—*Editor Forest and Stream:* Hunters in this part of the world don't know much about dogs. I suppose it is because they don't read the kennel columns of FOREST AND STREAM. What we need in this rough country is a dog of great courage and speed, and good feet, the prickly pear or cactus, and the sharp stones of the "Bad Lands," are very severe on the feet. We have many greyhounds, some very fine ones, but they haven't the "sand," they run fast enough to pick up a deer, or mountain sheep, or a wolf, but will detain neither for an instant, unless several are together, the same fault I found with the Scotch stag hound, while both have good feet. I have dressed a splendid Scotch stag hound bitch with a large brindle bulldog of great sagacity and courage; the pups are now four months old and have splendid feet and promise good size and courage. I will report the result this coming winter. What do you "dog men" say to a cross of this kind? The bull dog has a fine scent and staying qualities, but is too slow. We want something to pick up wounded deer or antelope and hold it until the hunter comes up.—H. S. We hope our correspondent will report the result of his experiment. The same cross has been tried among the hills of Scotland, but was abandoned, as the animals, with more courage than discretion, would pitch in regardless, generally with disastrous results to themselves. With our game, however, the cross may prove satisfactory and we shall await with no little interest the report of the result.]

DEATH OF THE IRISH WOLFHOUND VIXEN.—Prof. H. B. Roney, of East Saginaw, Mich., has had the misfortune to lose by death his imported Irish wolfhound bitch Vixen, from heart disease. He still has Dragon, her mate, who is now the sole representative in this country of this famous but almost extinct breed. We trust that Prof. Roney will be able to secure another one to take her place, as undoubtedly these dogs, with their great speed and high courage, would prove invaluable to the large game hunters of the far West.

DOGS POISONED.—Some miscreant a few days ago poisoned eight puppies belonging to the Hornell Spaniel Club. It is a pity that the fiends who perpetrate such outrages cannot be brought to justice and made to suffer the penalty for their wickedness.

KENNEL MANAGEMENT.

H. G., Cedar Falls, Iowa.—The "Management and Diseases of the Dog," by Sir Woodroffe Hill, is what you want. We can send it; price $2.

H., Dorchester, Mass.—Mange is contagious. Continue the sulphurious acid. Give him a dose of Epsom salts, and see that he has plenty of well-cooked vegetables in his food; a little cod liver oil will also benefit him.

P. A. T., Yonkers, N. Y.—A cocker bitch is bred to a cocker dog; four or five days later, through accident, she is lined by a terrier. What will the progeny be? Ans.—It is possible that she may throw to both dogs, as cases of superfetation are well authenticated, but the probabilities are that only one sort will be produced. We should be pleased to have our correspondent inform us of the result.

Dog, Brooklyn, N. Y.—1. What is the best ointment to rub on a dog whose fleas have taken the hair off, also for a raw sore? 2. Is the preparation of one ounce lard and two drachms of green iodide of mercury injurious or dangerous to put in a raw sore? 3. Is one part of sulphurious acid to three parts of water dangerous to get on raw sores or in the eyes? Ans.—1. Try the black grease that exudes from carriage axles for restoring the hair; for raw sores use benzoated lard. 2. Yes. 3. No.

SALE OF SPORTING DOGS.—A draft of dogs from Mr. Purcell Llewellin's kennel was disposed of at Aldridge's, on August 4. As a rule prices were low, Noble Windem being purchased by Mr. Lidderdale for 23 gs. Nimble Windem was secured by Mr. Cunnington for 36 gs. Col. Makins became the owner of Royal Windem at the same figure. Sydney Bondhu, who ran in the Derby this year, only fetched 34 gs., being purchased by Mr. J. A. Platt, and the same gentleman secured Champion Baffle, a Birmingham winner, for 26 gs. —*Live Stock Journal.*

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Bramjos. By Prof. H. B. Roney, East Saginaw, Mich., for black and tan English bloodhound dog, whelped Jan. 16, 1882, by his Caradoc (Forester—May Thorn) out of his Juno II. (Hugo—Juno I.)

Nellie C. By Mr. H. D. Chauncey, Midland Park, N. J., for black and tan setter bitch, 2yrs old, by Colburn's Duke (Dash—Belle) out of Nellie P. (2d New York, 1879).

Benedict's Boy. By Mr. H. F. Shellhass, Brooklyn, N. Y., for black cocker spaniel dog, whelped May 27, 1882, by imported champion Benedict (Bachelor—Negress) out of Beatrice (Nigger—Belle).

Mark Lyrry. By Mr. F. S. Rowley, Dallas, Texas, for red Irish setter dog puppy by Larry out of Red Bess.

Bessie O'More. By Mr. F. S. Rowley, Dallas, Texas, for red Irish setter bitch puppy by champion Rory O'More out of Norah O'More (Rodrick—Ellen).

Arabi Boy. By Mr. J. N. Brunson, Sycamore, Ill., for lemon belton English setter dog puppy by Druid (Prince—Dora) out of Princess Draco (Rob Roy —Livy).

Dufferin Lassie. By Mr. A. H. Rimmer, New York, for pointer bitch, whelped July, 1882, by champion Rush out of Lady Dufferin.

Abraham. By Mr. Geo. C. Sterling, New York, for black and white English setter dog, whelped June 13, 1882, by Johnnie Rae (Rob Roy—Doll) out of Swan (Druid—Lady Cypress).

Colonel. By Mr. W. J. Brock, Providence, R. I., for black and tan terrier dog, 5mos. old, by Vortigern out of Lilly II.

BRED.

☞ *See instructions at head of this column.*

Queen—Bow. Mr. Jeff. Waller's (New Orleans, La.) orange and white pointer bitch Queen to Mr. Edward Odell's champion Bow, Aug. 8.

Nellie C.—Jack. Mr. H. D. Chauncey's (Midland Park, N. J.) black and tan setter bitch Nellie C. (Colburn's Duke—Nellie F.) to Mr. Fitch's imported Jack (Gronsse—Belle), Aug. 15.

Daisy—Rob. The Westminster Kennel Club's Daisy (Flake—Lilly) to the Borstall Kennel's Rob (Rush—Romp), Aug. 10.

Mona—Dash III. Mr. M. S. Norton's English setter bitch Mona (Carlowitz—Queen Bess) to champion Dash III.

Dora II.—Dash III. Mr. ——'s English setter bitch Dora II. (Rock—Dora) to champion Dash III.

Modjeska—Dash III. Mr. A. M. Tucker's (Charlestown, Mass.) white and lemon ticked English setter bitch Modjeska (Leicester—Peeress) to his champion Dash III.

WHELPS.

☞ *See instructions at head of this column.*

Leda. Dr. E. C. Franklin's (Ann Arbor, Mich.) imported black cocker bitch Leda (weight 21 lbs.), July 8, five (one dog), by his imported black cocker spaniel Montague (weight 27 lbs.)

Lady Abessa. Mr. Fred. Powers, (Simcoe, Ont.) imported rough-coated St. Bernard bitch Lady Abbess (Hero—Lottie) seven (five dogs), by Rollo (E. K. C. S. B. 11,754); two dogs and one bitch since dead.

Nina II. Mr. Geo. C. Creamer's (Hamilton, N. Y.) red Irish setter bitch Nina II. (Red Hugh—Nina), Aug. 10, seven (six dogs), by Capt. Bixby's Ruby (Elcho—Rose).

Whiskey. Mr. Chas. Lincoln's (Detroit, Mich.) white, black and tan fox-terrier bitch Whisky, Aug. 10, five (four dogs), by Rampart.

Cecilia. Mr. Thomas F. Ryan's (New York) English setter bitch Cecilia (Dash III.—Cornelia), Aug. 5, six (four dogs), by champion Emperor Fred.

SALES.

☞ *See instructions at head of this column.*

Benedict's Boy. Black cocker spaniel dog, whelped May 27, 1882, by Benedict (Bachelor—Negress) out of Beatrice (Nigger—Belle), by the Hornell Spaniel Club, Hornellsville, N. Y., to Mr. H. F. Schellhass, Brooklyn, N. Y.

Druid—Princess Draco whelp. Black, white and tan English setter dog puppy, by Mr. J. H. Clark, Philadelphia, Pa., to Mr. Arnold Burges, Hillsdale, Mich.

Arabi Boy. Lemon belton English setter dog puppy by Druid (Prince—Dora) out of Princess Draco (Rob Roy—Livy), by Mr. J. H. Clark, Philadelphia, Pa., to Mr. J. N. Brunson, Sycamore, Ill.

Bob III.—Mignon whelps. Black and white cocker spaniel dog, whelped April 13, 1882, by Bob III. (Buccleuch—Nell) out of Mignon Daisy—Daisy II.), by Mr. Eugene Powers, Cleveland, N. Y., to Mr. B. E. Miller of the same place; also a black and white dog of same litter to Mr. S. E. Barney, New Haven, Conn., and a liver bitch to Mr. C. E. Helm, Locke, N. Y.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Judge. Imported Newfoundland dog, by Mr. E. Sherman, New York, to Mr. D. Tallman of same city.

Abraham. Black and white English setter dog, whelped June 13, 1882, by Johnnie Rae (Rob Roy—Doll) out of Swan (Druid—Lady Cypress), by Mr. John Davidson, Monroe, Mich., to Mr. Geo. C. Sterling, New York.

DEATHS.

☞ *See instructions at head of this column.*

Vixen. Imported Irish wolfhound bitch, owned by Prof. H. B. Roney, East Saginaw, Mich., from heart disease.

Fairy Prince—Pearl whelp. Liver and white English setter bitch, whelped Aug. 7 (Fairy Prince—Pearl), owned by Mr. A. S. Bishop, Pittsburgh, Pa.

PUBLISHER'S DEPARTMENT.

A man wrote the Bangor *Commercial* to remind the owners of dogs of the importance of giving them plenty of cold water during dog-days. The editor endorsed the correspondent's idea, and added: "We always give our dog a drink when we drink ourselves, and consequently he is never thirsty."—*Boston Post.*

An author need not confine himself to his individual experiences; the world is all before him where to choose; but there are subjects which he had better not handle unless he have some personal knowledge of them. The sea is one of these. The man who sang,

"The sea, the sea,
The fair, the fresh, the ever free"

(a couplet which Gifted Hopkins might have penned), should never have permitted himself to sing about the ocean. His poem—and it is one of Barry Cornwall's most popular lyrics—has neither savor nor salt. When I first read it, years ago, in mid-Atlantic, I wondered if the author had ever laid eyes on any piece of blue water wider than the Thames at Greenwich (*Greenridge* is what the purists over there call it); and the other day, in running through Barry Cornwall's Life and Letters, I was not a little amused to learn that he was never two miles from land in the whole course of his existence. Imagine Byron or Shelley, who knew the ocean in all its moods, piping such thin feebleness as

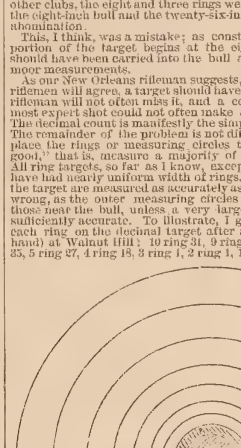
"The fair, the fresh, the ever free!"

It required a man whose acquaintance with the sea was limited to a view of it from an upper window to do that.—*Atlantic Monthly.*

CLEVELAND, O., Aug. 15, 1882.—*Forest and Stream:* I wish to call the attention of your readers to my boat improvements. It is well known that I build an iron sectional boat, but it is not so well known concerning the late improvements in them. From year to year I have made alterations, and so change and bettered them as to make them an entirely new boat built from those of a few years back. The result is, and I state an actual fact, a majority of this season's buyers have voluntarily written in terms of high praise about them. According to the testimony of scores of well-known sportsmen, fishermen, as well as hunters, they stand unrivalled as PORTABLE HUNTING AND FISHING BOATS. Chief among the improvements are the NEW ROWING GEARS. There are several sizes of the latter, some one of which can be applied to almost any kind of a boat. They are rapidly being adopted by clubs, the members pronouncing them "the best boat movements ever devised!" They are simple, practical, strong and attractive in appearance. W. E. BOND. —*Adv.*

Rifle and Trap Shooting.

THE MASSACHUSETTS DECIMAL TARGET.



Editor Forest and Stream:

I read with much interest the communication of "M. D." in your issue of May 11, on the subject of targets, and have scanned the columns of succeeding issues in the hope of seeing other riflemen take up the subject, and so create a discussion that should result in American riflemen breaking away from the crude methods of the past and adopting a target both for short and long range that should have some sense in its construction, so to speak.

The ideas advanced by our New Orleans "M. D." I think very sensible. The target he proposes would be vastly superior to any now in use except the Massachusetts decimal. The principle on which that target is constructed, if fully carried out, would make the perfect target for all ranges; but for the sake of comparing scores with other clubs, the eight and three rings were made to correspond with the eight-inch bull and the twenty-six-inch center of the Creedmoor abomination.

This, I think, was a mistake; as constructed the geometrical proportion of the target begins at the eight ring, or edge of bull, it should have been carried into the bull as well, regardless of Creedmoor measurements.

As our New Orleans rifleman suggests, and as I think all intelligent riflemen will agree, a target should have sufficient area so an ordinary rifleman will not often miss it, and a center ring so small that the most expert shot could not often make a perfect score of ten shots. The decimal count is manifestly the simplest in getting at averages. The remainder of the problem is not difficult to get at, that is to so place the rings or measuring circles that they will "do the most good," that is, measure a majority of the shots most accurately. All ring targets, so far as I know, except the Massachusetts decimal have had nearly uniform width of rings, so that the widest shots on the target are measured as accurately as the best. This is manifestly wrong, as the outer measuring circles are but seldom used, while those near the bull, unless a very large number are used, are not sufficiently accurate. To illustrate, I give the number of shots in each ring on the decimal target after a day's shooting (entirely of hand) at Walnut Hill: 10 ring 31, 9 ring 42, 8 ring 46, 7 ring 57, 6 ring 35, 5 ring 27, 4 ring 18, 3 ring 1, 2 ring 1, 1 ring 0.

[The diameters of the black rings are 3½in., 5¼in. and 8in. respectively.]

In the three outer rings, notwithstanding that they contain more than double the area of the rest of the target, there were but two hits; the three outer measuring circles were used but twice during the day, and then to measure shots that were of little account, while these near the center of the target were used from 21 to 57 times.

It is apparent that for such shooting the rings should have been narrower near the bull and much wider toward the outer part, to measure to the best advantage; but average rifle shooting is not up to this high standard, and in general use I think the target would prove to be not far out of the way. For mid and long range targets the same principle should apply whatever the number of divisions. There is no sense in having the center division so large that riflemen can readily place 15 or 20 consecutive shots within it, as is often done at 500 or 800 yards. There should at least be one ring added within the bull if the present size of bull is to be continued in use, and the outer should then count 1 instead of 2, as at present.

Another change, I think, if generally adopted, would do much to promote long-range practice. As at present conducted, it is an all day's job to shoot a match of 45 shots at the 3 ranges, and but few can afford the necessary time and expense. Abolish the first and second stages in the "any rifle" matches, and but little more time would be required to shoot a score of the same number of shots than at short range. By this change riflemen would also get rid of the bother and loss of time in packing up their kits and transporting from one distance to another. One other great advantage would result—permanent shelters from the sun or rain could be constructed when but one distance is used, and long-range practice be made much more comfortable than at present and be carried on at any season of the year.

The three ranges (800, 900 and 1,000 yards) may be well enough for the military rifleman who has but few traps to look after, and such rifles and ammunition as make it as much a matter of luck as skill whether he hits or misses, but for the non-military shooter, with his delicate but superior weapon, they are an abomination, and I for one should be glad to see them dispensed with. PEABODY MARTINA.

CLUB CONSTITUTION.

THE following form of constitution and by-laws, adopted by the Clinton, Mass., Sportsman's Club, has the merit of brevity, and its publication may be of use to new clubs:

ARTICLE I.—NAME.

This club shall be called the "Clinton Sportsman's Club."

ARTICLE II.—OBJECT.

The object shall be to promote gun practice and improvement in shooting.

ORDER OF BUSINESS.

Reading minutes of last meeting.
Collection of fines.
Report of committees.
Balloting for candidates.
New business.
Adjournment.

ARTICLE III.—OFFICERS.

The officers shall consist of a president, vice-president, treasurer, secretary, and a board of three directors.

ARTICLE IV.—DUTIES OF OFFICERS.

Sec. 1. The president shall preside at all meetings of the club or board of directors.

Sec. 2. The vice-president shall perform the duties of the president during his absence.

Sec. 3. The treasurer shall collect and have charge of the funds of the club, and pay such bills as have been approved by the directors and at the annual meeting shall make a detailed report of all funds collected and disbursed by him during the year.

Sec. 4. The secretary shall keep a record of all meetings of the club and board of directors, notify each member of all meetings by mail or otherwise.

Sec. 5. The directors, together with the president, vice-president, treasurer and secretary (who shall be directors ex-officio) shall have charge of the management of the club and club property.

ARTICLE V.—MEMBERSHIP.

Any person wishing to become a member may do so by notifying the secretary, and receiving a majority of the votes cast at any meeting of the club, and the payment of one dollar.

ARTICLE VI.—MEETINGS.

Sec. 1. The annual meeting shall be held on the second Wednesday in June of each year, and special meetings may be called by the president and board of directors, or upon the written request of five members of the club.

Sec. 2. The officers shall be elected at the annual meeting, by ballot, for one year; and should any vacancy occur during said term, it shall be filled by the board of directors.

Sec. 3. No meeting shall be called except on a previous notice of twenty-four hours to each member.

Sec. 4. Seven members shall constitute a quorum.

ARTICLE VII.—FEES.

Sec. 1. The initiation fee shall be one dollar.

Sec. 2. If at any time the funds of the club shall be exhausted, an equal assessment shall be made upon all members of the club, and in no case shall the assessment amount to more than five dollars in one year.

ARTICLE IX.—FINES.

Sec. 1. If any member refuses to pay an assessment, he shall be suspended or expelled from the club.

Sec. 2. Any member pointing his gun at another member, whether gun is loaded or not, shall be fined one dollar for each and every offense.

ARTICLE X.

No liquor shall be furnished by the club or directors.

ARTICLE XI.

These by-laws may be amended at any regular meeting, notice of the same being sent to each member of the proposed change.

RANGE AND GALLERY.

THE AMERICAN TEAM.

THE preliminary work of selecting the team was carried on very smoothly during the past week, and after four days' test shooting a very excellent company of riflemen has been gathered out of which to make the final shooting squad. The programme was a very simple one. Any National Guardsman in any part of the country was at liberty to shoot in private practice, and if he made on two days a score of 162 in the possible 240 he was at liberty to come to Creedmoor and there shoot in four days' competition, making each day a full record of seven shots at each of the six ranges. The best three aggregates were to be taken, and by them the order of the men was to be fixed. The right to name two men in addition to the fourteen thus chosen was very properly reserved by the officers of the associated team.

In accordance with these conditons twenty-six competitors presented themselves, representing Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Colorado and the District of Columbia. The men are all approved marksmen, but several of them are quite new to Creedmoor and its atmospheric peculiarities, and several were handicapped by using new guns. The full list of the men, the military organizations to which they belong and rifles used follows:

C. W. Hinman, private, Company D, First Massachusetts; Hepburn rifle.

George La Barnes, lieutenant, Company K., Second Connecticut; Sharps's Borchard.

J. K. Williams, captain and adjutant of First Connecticut; Borchard.

W. M. Farrow, private, Newport artillery; Browne gun.

T. R. Denman, major, First brigade staff, New Jersey; Borchard.

G. F. P. Howard, lieutenant-colonel and inspector of rifle practice, First brigade, New Jersey; Borchard.

T. W. Griffiths, captain Company F, Ninth New Jersey; Borchard.

John Smith, private, Company C, Ninth New Jersey; Borchard.

E. O. Shakespeare, major and aide-de-camp. First division, Pennsylvania; Hepburn.

D. R. Atkinson, captain Company E, Thirteenth Pennsylvania; Borchard.

P. J. Lauritzen, private National Rifles, Washington, D. C.; Sharp's military.

J. M. Pollard, private, National Rifles, Washington, D. C.; Hepburn.

W. B. Johnston, private, National Rifles, Washington, D. C.; Springfield.

Joseph N. Lower, private, Governor's Guard of Colorado; Hepburn.

O. A. Morris, private, Twentieth separate company, Binghamton, N. Y.; Hepburn.

N. D. Hinds, private, Twentieth separate company, Binghamton, N. Y.; Borchard.

D. H. Ogden, private, Twentieth separate company, Binghamton, N. Y.; Sharps' military.

George W. Tolley, private, Sixteenth separate company, Catskill, N. Y.; Hepburn.

S. C. Irlam, private, Twenty-first separate company, Hion, N. Y.; Hepburn.

J. McNevin, ordnance sergeant, Thirteenth Regiment, Brooklyn; Hepburn.

Frederick Alder, private, Company C, Seventh Regiment; Hepburn.

J. L. Price, captain Company H, Seventh Regiment; Sharps' military.

N. D. Ward, sergeant, company A, Ninth Regiment; Borchard.

J. L. Paulding, sergeant, company B, Twelfth Regiment; Borchard.

A. B. Van Heusen, sergeant, company B, Twelfth Regiment; Sharps' military.

J. Dolan, sergeant, company F, Twelfth Regiment; Hepburn.

The first day was a lovely one for the onlooker, a nasty one for the shooter. The breeze—about five o'clock variable, puffy and quite strong—which tempered the heat of the sun, carried the bullets far from the butts, and the bright light that animated the scenes on the range created mirage and deceitful glitterings, which rendered the act of aiming a very trying one. Add to this the fact that every man felt a great responsibility resting on his trigger arm, and it will not be hard to guess why the scores were not better. The gathering of spectators was small, consisting mainly of expert riflemen and friends of the contestants. The most noteworthy people on the ground were General George W. Wingate, executive officer, who, with Mr. A. H. Weston's assistance, managed the shooting smoothly, rapidly and pleasantly; Colonel John Bodine, captain of the team of 1880; General Molineux, President of the National Rifle Association; Mr. George J. Seabury, Secretary; Major Joseph G. Story and Captain C. F. Robbins. In order that there might be as little "coaching" as possible, the competitors were assigned to targets in such a manner that no two men from one place shot from the same firing point. Ten targets and markers were provided for the competition, but only seven were found necessary.

During the competition in the first stage a strong southerly breeze blew directly across from the rear of the firing-points towards the targets. The weather was very hot, and the straggers at first were "all at sea." They found it exceedingly difficult to lower their rear sights sufficiently to counteract the effect of a "lifting" wind. Col. Howard, of New Jersey, had his rifle by tweaking his wife's hairpin-barrel while cleaning his gun before competition. In order not to lose his position in the race, he borrowed a gun belonging to Gen. Wingate. He shot evenly, although his score was small, being 26 at each range, or a total of 78 points in the first stage. The competition in the first stage was completed soon after 1 o'clock and a recess was taken until 2 o'clock.

The scores in the second stage were very poor. The competitors were unable to decide whether this result was due to the hearty dinner supplied to them by the National Rifle Association or to their tender experience in shooting with open sights at the longer ranges. The wind was less strong, but was treacherous. Farrow, who stood third in the list of scores in the first stage, made a clean string of "duck-eggs" at 800 yds., and did little better at the other ranges. Johnston had similar luck, but fortunately for his score, Sergt. McNevin fired his opening shot on the target at which Johnston was shooting, at the same instant that the latter fired, and while Johnston's bullet lodged in the bank, McNevin's shot was a bull's-eye, which, under the circumstances, was accredited to Johnston. The remaining shots fired by Johnston missed the target. Only 9 competitors exceeded 67, the qualifying score in the local competitions.

The records of the day stood as follows:

	First Stage.					Second Stage.			
	800 Yds.	900 Yds.	1,000 Yds.	Total.		800 Yds.	900 Yds.	1,000 Yds.	Total.

Farrow	50	45	95
Lower	63	35	98
Williams	58	36	94

The second day opened with a heavy shower of rain, lasting two hours, which placed the range at Creedmoor in a magnificent condition. The foliage of the trees assumed a brighter shade of green, and the broad expanse of lawn pleased the eye while it suggested "rheumatics" to the older riflemen. The white targets stood out with vivid distinctness against the grassy parapet, and the bulls-eyes were so well defined that it seemed almost impossible for the marksmen to miss them. When the riflemen assembled at the 200-yards' firing points at 10 o'clock to begin the second day's competition, the sky was overcast, giving the clear gray light so conducive to fine marksmanship, and the yachtsman in Tuesday, Mr. Smith's, the wind was "up and down the mast." The atmosphere was oppressive, however, the thermometer indicating 81 deg. on the shady side of the club house.

The men shot with more deliberation than on Tuesday, and less nervousness was perceptible; but it was only after lunch that they got into thoroughly good form, and the improvement in the scores is chiefly noticeable at the longer distances. The team total of the best twelve men was 1,086 against 1,080 on Tuesday. Mr. Smith's clean string at 800yds. is a noteworthy achievement. Several of the men had very bad luck. Farrow had not got to the bottom of the trouble with his gun, and again fell low. He will have to do his very best work for the next two days to score his place. Mosher's gun had some defect near the muzzle, which caused it to lead badly. Col. Bodine put it in tolerable order, but McNevin's score suffered by the mishap. Several men lost shots by setting their bullets too deep in the cartridges.

After a recess of one hour for dinner, the marksmen resumed their work at 2 o'clock. The wind had died away in the meantime, and the weather could not have been "better for shooting if it had been made to order," said Col. John Bodine. The latter moved about among the riflemen, giving advice wherever he could do so without infringing the rule prohibiting coaching.

The score of the day stood:

	First Stage.				Second Stage			
	200	500	600	To-	800	900	1,000	To-
	Yds.	Yds.	Yds.	tal.	Yds.	Yds.	Yds.	tal.

Howard	81	69	150	Williams	48	41	89

The third day opened with a good company of spectators, among them the veteran G. W. Yale, one of the "has beens" of rifle shooting who had come down from Connecticut to offer a few suggestions on the best rifle to beat the Britishers. Col. Joseph G. Story called the roll of competitors promptly at 11 o'clock. Twenty-three responded. An official notice was received from J. N. Lower, of Colorado, that he had retired from the contest. His scores of 98 on the first day and 111 on the second day of the competition convinced him that he would not be able to win a place in the team. Lieut. George La Barnes, of Company K, Second Connecticut Regiment, did not appear, and it is supposed he has withdrawn. His scores on the two preceding days of the competition were, respectively, 117 and 110. The weather was very hot. The mercury stood at 93 deg. in the shade when the competition began. A stiff breeze, veering from the west to the northwest, kept the riflemen busy guessing at the wind during the contest at 500yds. While they were shooting at 500yds. there was no wind stirring, and the flags hung close to the masts, and when they had fired their seven shots at that distance and moved back to 600yds. the wind had sprung up and blew toward the south, giving a rear wind from the firing-points toward the targets. While it was not exactly a "fish-tail" breeze, the changes from south to south west, and occasionally to the west, were so frequent as to cause the riflemen much uneasiness. Several "quiters" were made in consequence of its fluctuations. Adjt. Williams, of Hartford, Conn., scored 7 points at 200yds., and after scoring 2 and several "misses" at 500 yds., retired in disgust from the competition.

Good average work on the part of a large number of the competitors was the feature of the day's practice, and the old hands at the rifle who are watching the contest closely became confirmed in their opinion that there is first-rate material for a team in the field. The greater part of the day was rather favorable than otherwise for shooting, though the great heat caused considerable mirage. When the shots at 900yds. were about half fired, however, the wind, which had been fairly steady from the southwest, freshened and came in wild puffs that defied calculation. The dial marked directions varying over an arc of ninety degrees, and for several minutes stood there were moments when every flag on the range pointed in a different direction. The sky became partly overcast too, and at times the men had to fire with the sun in their eyes, while the targets were under shade. Those circumstances unaccustomed to the range look for in many cases through omitting to lower their elevations in allowing for this state of affairs. The scores, as will be seen, were bad from the time that the atmospheric change came, but it was agreed that more difficult conditions were seldom or never before encountered.

The day's scoring was as follows:

	First Stage.				Second Stage.			
	200	500	600	To-	800	900	1,000	To-
	Yds.	Yds.	Yds.	tal.	Yds.	Yds.	Yds.	tal.

Griffiths	87	73	160	Lawritzon	80	57	137
McNevin	78	78	156	Irlam	74	61	135
Smith	75	71	156	Johnston	78	52	130
Alder	83	68	151	Morris	73	49	122

The wind was blowing half a gale from the northwest in the faces of the riflemen as they began the final day's contest. The air was cool, and the sunshine felt comfortable. The dew-drops glistened on the grassy lawn, and a mist was passing away behind the hills. Hinds, of Binghamton, fired the opening shot. It was "up high." Farrow had discarded his "Browne" gun and started with a Hepburn. The red disk rose in response. Contrary to the usual custom of the treacherous wind, it continued to blow from the same quarter during the forenoon. The sky was clear, and the sun shone brightly. McNevin made fair scores at 800 and 900yds., but spoiled his 1,000yds. score by making two "unaccountable misses." Major Denman made a good beginning in the second stage, closing at 800yds. with 33 out of a possible 35 points. He also made a good score at 900yds. However, and only made 20 at 1,000yds. His score of 80 out of a possible 105 points headed the list, but it was too small to carry him on the team. Irlam went off the target on his third shot at the longest range. Van Heusen also went to pieces at the last range, missing the target at no middles and at the end of his score. Major Shakspeare opened his score at 1,000yds. with a "miss," and then made a string of "outers." He began to feel nervous about his position, and almost made up his mind to withdraw. By remaining in the competition until the end he secured a place on the team. The day's record was:

	First Stage.				Second Stage.

Smith Alder	85	69	154	Ward	77	41	118

As soon as the last shot had been fired the Committee of the National Rifle Association in charge of the committee held a meeting, whereat the scores were aggregated, the best three days' work of each man being counted, the fourth rejected. The result will be best exhibited by the following table, wherein all competitors who finished the match appear in the order of merit, with their counted scores and totals:

	First Day.	Second Day.	Third Day.	Fourth Day.	Total.
1—A. B. Van Heusen	169	182	158	169	509
2—S. E. Irlam	165	180	—	160	505
3—T. J. Dolan	165	165	175	—	505
4—J. W. Griffith	165	176	160	—	501
5—J. L. Paulding	—	165	169	155	489
6—F. Alder	—	167	151	163	481

W. B. Johnston	—	132	130	141	403
P. J. Larwitzen	—	117	137	139	393

Three ties occurred. That between Irlam and Dolan was decided in favor of the former, he having the total for 900yds. while Dolan was behind by one point at 1,000. Alder leads Hinds through having 69 at 1,000yds. to the latter's 66; Atkinson beats Smith through having 66 to his 54 at 1,000yds. The total of the highest twelve for the three days was 5,837 out of a possible 6,560 points. The average per man days was 89.7, a fraction over thirty points above the qualifying score. The average per man per day was a fraction over 102 out of a possible 210, or but six points below an average of centers.

When the committee had completed its deliberations General Wingate, the chairman, announced the following as being the list of the team and reserve. The team and committee forthwith held a joint *al fresco* session, with Major Joseph G. Story presiding. General Molineux, president of the association, made a brief address to the team, thanking them in the name of the riflemen of the country for their efforts and expressing the general confidence that he believed was felt in their skill.

The election of a captain was next taken up and Colonel John Bodine was at once unanimously chosen. He was then introduced to the meeting by a committee. He said he would make no speech. He was deeply moved by the honor conferred upon him. He thought the team was a strong one, and he had a feeling that it was destined to win the match. In answer to a question, he added that there was no intention to force any rifle on the team. Every man would be allowed to use his own discretion in his choice. Colonel Litchfield, U. S. A., added that the committe on rifles, of which he is chairman, would limit itself to recommending a rifle or rifles as suitable to be used in the match. Pretty steady practice will now be in order by the members of the team and reserve, and the first practice day was set down for Tuesday, August 22.

Col. John Bodine the captain of the team, is too well-known to require an extended notice. He was born in Ulster county, near the village of Highlands, in 1835. He has been connected with the National Guard in various capacities, for about thirty-five years. At one time he was colonel of the Ninety-second Regiment, Eighth Brigade, long since disbanded, and is now a supernumerary officer, having been transferred so by the disbandment of the Fifth Division, Major-Gen. James W. Husted commanding. Col. Bodine was a member of the American team in its contests with the Irish riflemen in 1874 and 1875, and of the American team which was victor in the 15-shot 1,000-yards match for the "Palma" at Creedmoor in 1876. He was also Captain of the American team which won the international match in a contest with an Irish team at Dollymount, Ireland, in 1880.

Sergt. A. B. Van Heusen is a native of Greenbush, Rensselaer county, in this State, and is 42 years old. He joined the Tenth Regiment, Albany, in 1861, and when the war broke out he went with the regiment, which was known as the One Hundred and Seventy-seventh Regiment, N. Y. S., for a term of service in the field, continuing for nine months. The regiment was engaged in the battle of Fort Hudson. In 1867 Sergt. Van Heusen removed to this city. He became a member of Company B, Twelfth Regiment, in 1875, and was subsequently elected Sergeant of the company. He began rifle-shooting in 1875, and has been a member of the regimental team in all of its matches at Creedmoor since that time. He has also been a member of the inter-State team four times and a member of the American team in the match for the Hilton trophy three times. He has won several individual prizes.

Samuel E. Irlam is a member of the Thirty-first Separate Company of Infantry, better known as the Remington Rifle Corps, of Ilion, N. Y. He is 37 years old. He has no record as a marksman previous to this year.

Sergt. Thomas J. Dolan is thirty years old, and was born in this city. He joined Company D, Twelfth Regiment, in 1873. The company, under command of Captain H. B. Smith, was famous as a sharpshooter's organization. It became reduced in numbers, however, and finally Captain Smith resigned and the company was consolidated with others. Dolan entered Company F, and was ultimately elected First Sergeant, a position he still holds. He began rifle shooting in 1875, and has been a member of the regimental team every year since that time. He has also been a member of the State team every year except one, and has been a member of the international team both seasons. He holds the championship marksman's badges of this State for the years 1880 and 1881. In the short-range match at Creedmoor last month he made three consecutive scores of 33 out of a possible 35, a feat never before accomplished.

Capt. T. W. Griffith is a native of Brooklyn, and is 30 years old. He removed to Hoboken, and joined Company F, Ninth Regiment, New Jersey National Guard, in 1875, and was subsequently elected Captain. He commenced target-shooting in 1875, and has been a member of the team representing that State at Creedmoor since its first organization. He has held the championship marksman's badge of the State during the past four years.

Sergt. J. L. Paulding is a native of Poughkeepsie, and is 26 years old. He removed to this city in 1868. He joined Company B, Twelfth Regiment, in 1878, and was promoted Sergeant in 1880. He commenced using military rifles in target practice during the year 1879. He won the first prize in the Judd match at Creedmoor last year and in 1880.

Frederick Alder was born in 1847, in London, England. He has passed the greater part of his life in this country. He became a member of Company C, Seventh Regiment, three years ago. His skill as a military marksman dates from that period. He had previously won a reputation as a "gallery rifle shot." During the past two years he has been a member of the team representing the regiment in the autumnal prize meetings at Creedmoor.

M. D. Hinds is 45 years old, a native of Broome county, and belongs to the Twentieth Separate Company of Infantry, Binghamton. He has been engaged in rifle practice in matches since 1876. His best recorded score was made last July, when he scored 92 out of a possible 105 points.

D. H. Ogden is a native of Binghamton, and is 41 years old. He joined the Forty-fourth Battalion, N. G. S. N. Y., in 1876, and in the following year was transferred to the Twentieth Separate Company, of which he is now a member. He commenced military rifle practice at Creedmoor in 1877, and was a member of the State team during the same period.

John Smith lives in Hoboken, where he keeps a hotel. He was born in England in 1847, and served his time as a member of the British Volunteers. While thus connected he won several prizes at Wimbledon, including twenty-one pieces of plate and several cups. He also won two Queen's badges, the St. George medal, and the bronze medallion given by the British National Rifle association. He is a member of Company C, Ninth Regiment, N. G. S. N. J.

Charles W. Hinman is 33 years old and a native of Boston, where he resides. He is a member of Company B, First Regiment, Massachusetts Volunteer Militia, and has been shooting at Creedmoor during the past two annual prize meetings.

D. R. Atkinson is a native of Pennsylvania, and is 32 years old. He lives in Honesdale, and belongs to Company E, Thirteenth Regiment, N. G. S. P. He has been a member of the team representing his State since it was first organized. He took the second place in 1879 and last year, and led his team in 1880.

James McNevin was born in Brooklyn, where he resides. He is 34 years old, and entered the National Guard as a private in the Fifty-second Regiment. When the organization was disbanded he enlisted in the Fifty-sixth Regiment, and when that command was also mustered out he was transferred to the Thirteenth Regiment, in which he is now Ordinance Sergeant. He began rifle-shooting in 1877, and was a member of the regimental team last year.

Sergt. N. D. Ward was born in White Plains, Westchester county, in 1836. He joined Company A., Ninth Regiment, in March, 1866, and was promoted Quartermaster-Sergeant by the late Col. James Fisk, Jr. He began shooting at Creedmoor in 1875, but has only but slowly improved. He has been on the regimental team during the past four years, and is a member of the Amateur Rifle Club.

Major E. O. Shakspeare is a member of Gen. Hartranft's staff, First Division, N. G. S. P., and lives in Philadelphia. He is forty-two years old, and is a member of the Pennsylvania State Rifle Association. He has been a member of the State team during the past two years. This is his first experience in shooting at the long ranges with a military rifle.

Nothing is more noteworthy than the differences of method among the men. That which would first excite attention would be the variety of position at long range. At 200yds. the men are obliged to stand, and at 500 and 600 the prone position is compulsory. At the others every man chooses for himself, and it seems to little common among riflemen that many adhere to the old prone position in preference to the new and approved "back" ones. Those who shoot with their heads towards the targets are Van Heusen, A kinson, Hinds, Griffiths, Smith, McNevin, Alder, and Paulding. Dolan uses the Pullen position, with the left arm behind the head, the stock of the rifle in the left hand and the barrel resting on the crossed legs. The rest use the ordinary back position, with the butt of the weapon in the hollow of the shoulder.

Other strong differences in the management of the sights. Irlam alone uses a notched sight. The rest shoot over the bar, and as a rule blackens both front and rear sights. Van Heusen, Dolan, McNevin, Alder and Paulding mark the rear sight for wind with a screw on the bar itself. Shakespeare alone whitens the block of his foresight and uses a white center line on the barley-corn. The rest, as a rule, just scratch the rear sight to indicate the proper allowance for wind, but one or two make no marks whatever in shifting their sights. Van Heusen, Dolan, Ogden, Alder, Ward and Paulding use detached vernier scales, and Atkinson and Hinds resort to equivalent devices. The results seem to warrant their pains, for, with one or two exceptions, these gentlemen run up the best totals.

In the charges, again, the variety is endless. Dolan uses 92grs. of powder and 550 of lead, with two lubricating disks which he makes himself from sperm oil and beeswax. Van Heusen uses 85grs. of powder and 550 of lead throughout, with one common lubricant. Atkinson uses 86grs. of the same. Hinds uses 90grs. and 520 lead at 200yds., 75 powder and 500 lead at mid-ranges, and 90 powder and 550 lead at the rest. These, as specimens, serve to indicate all the various shades of opinion on the important question of ammunition.

THE AMATEUR RIFLE CLUB DEFEATED.

HAMILTON, Ont., August 16.—The international small-bore rifle match between the Amateur Rifle Club of New York city and the Victoria Rifle Club of Hamilton, Ontario, came off on the ranges of the latter at Ainslee Wood, on the Hamilton and Dundas road, about two miles southwest of this city. During the morning a light rain fell, but by half past ten, when the shooting commenced, the weather had cleared off nicely. The light at first was good, but toward noon the sun came out strong and rendered sighting extremely difficult. The wind was very gusty, though not strong, and proved very tricky. The competition was at 500, 600 and 1,000yds., Creedmoor targets, fifteen shots at each range, highest to possible at each 75 points. The following is the score at 800yds., which was finished just at 1 P. M:

Americans.		Canadians.	
Rathbone	67	Mason	73
Brown	68	Margetts	72
Dudley	68	Goodwin	69
De Forest	69	Mitchell	74
Davids	71	Pain	65
Todd	68	Schwarz	72
Total	403	Total	431

The 900yds. range was commenced at a quarter past one. During the interval between the ranges the sky became overcast, rendering the light somewhat better. The wind, however, became if anything more gusty than before, and at times was very heavy, and it required the very best judgment on the part of the marksmen to regulate their sighting. This range was finished at 3:30 with the following scores:

Americans.		Canadians.	
Rathbone	60	Mason	67
Brown	68	Margetts	72
Dudley	68	Goodwin	70
De Forest	72	Mitchell	63
Davids	63	Pain	65
Todd	71	Schwarz	61
Total	397	Total	398

At 4:10 the party proceeded to the 1,000yds., and were about to begin shooting when a perfect deluge of rain, accompanied by a hurricane of wind, set in. All the marksmen, as well as the spectators, beat a hasty retreat and sought shelter. The storm lasted about forty

minutes. At 5 o'clock, the weather having cleared and all being again ready, the word was given to commence firing. All went well till about 6:15, when it became so dark that sighting was almost impossible, and the Canadians ceased shooting. The Americans, several of whom have to leave on the morning train for home, after consulting among themselves decided to finish their scores, notwithstanding this disadvantage. This they accomplished at 6:30, as follows:

Rathbone	66
Brown	62
Dudley	70
Deforest	70
Davids	51
Todd	61
Total	379

The Canadians, who had forty-nine shots yet to fire, will resume in the morning.

HAMILTON, Ont., Aug. 17, 1882.—The rifle match was concluded today. The Canadians scored 828 at the 1,000yd. range and the Americans 379 at the same range. The Canadians' grand total is 1,207, the total being, at the three ranges: Canadians, 1,189; Americans, 1,179.

THE FALL MEETING PROGRAMME.

FOR the convenience of those intending to take part in the fall meeting opening at Creedmoor on September 12, Secretary Seabury has issued a preliminary programme giving a general idea of the days' marches to be shot. Thus far the matches decided upon are as follows:

No. 1.—"Directors'" Match.—200yds.—Open only to directors of the N. R. A. Rounds, five. Position, standing. Any military rifle. Entrance fee, $1. Prize.—The Directors' Championship Gold Badge, shot for annually, and held by the winner during the year.

No. 2.—"Judd" Match.—Open to all comers. Any military rifle. 200 yds. Position, standing. Rounds, seven. Entrance fee, $1 each. Two entries allowed, but only the highest score to count. 50 prizes, value, $418.

No. 3.—The "Champions" Match.—Open to all comers. Any rifle or rifles. 200, 600, and 1,000yds. Rounds, ten at each distance. Position, standing at 200yds.; any at 600 and 1,000yds. Entrance fee, $8. 10 prizes value, $200.

No. 4.—"Military Championship Match of the United States of America."—First Stage. Open to all members of the army, navy or marine corps of the United States, or of the National Guard of any State. Each competitor to appear in the uniform (full dress or fatigue) worn by the organization of which he is a member. 200, 500 and 600yds. Rounds, seven at each distance. Any military rifle. Position, at 200yds., standing; at 600yds., any. Entrance fee, $2; 10 prizes; value, $80.

Second Stage.—Open to the highest sixty in the first stage. The winner of the first prize in this stage is entitled to the "Championship of the United States of America" for one year. 800, 900 and 1,000yds. Rounds, seven at each distance. Military rifles of any pattern that has been regularly adopted by any national or State government. Pool targets will be opened at 800yds, one-half hour before the commencement of this stage; at 900yds. upon conclusion of 800yds. range, for half an hour, and at 1,000yds. upon conclusion of 900yds. range, for half an hour; firing at each range to immediately follow consecutively the closing of the pool targets at such range. Position, any. Entrance fee, $2; 10 prizes; value, $150.

No. 5.—"Wimbledon Cup" Match.—Open to all citizens and residents of the United States. 1,000yds., thirty shots. Any rifle within the rules. Position, any without artificial rest. Entrance fee, $5. Cup and nine prizes; value, $660.

No. 6. "Short Range" Continuous Match.—Open to everybody. 200yds. Five shots each. Any rifle. Military weapons to receive one-half of the point allowance for each score. The highest three aggregate of any two scores only to count. Entries 50 cents each, or five taken in one name at the same time) $2. Entries unlimited. No competitor to win more than one prize. Absolute ties will be decided by lot. Fifty prizes; value, $500.

No. 7.—"Mid Range" Continuous Match.—Open to everybody. 500 yds. Any military rifle (an allowance of one point on each entry to military rifles of 50 calibre). Rounds, five. Position, any within the rules. Entrance fee, five cents each, or five taken at the same time in one name for $2. The highest aggregate of any two scores only to count in determining the prize winners, but no competitor to take more than one prize. Entries unlimited. Absolute ties will be decided by lot. Fifty prizes, value $250.

N. G. Members of the N. G. S. N. Y., using the Remington State Model Rifle, and complying with the State regulations, may count their actual scores made in matches 6 and 7 as qualifying for the N. Y. State Marksman's Badge.

No. 8.—"Skirmishers'" Match.—Open to members of the Regular Army, Navy, Marine Corps, National Guard, Volunteers or Militia of any County, State or Territory. Competitors to be in uniform (jacket, cap, trowsers, belt and cartridge box or belt). 600 to 200yds. Second-class targets. Weapon, any military rifle excepting repeating rifles. Competitors form in single rank in rear of 600yds. firing point, opposite the target to which they are assigned, each having his ammunition in his cartridge box or belt, and are numbered from the right. At command of the officer in charge, the man in each squad whose number is called, advances to his firing post, 600yds., and loads. At the bugle call or other signal, each competitor then assumes the "double time" and advances toward his target, taking his alignment from the guard designated, until a second signal is sounded, when he halts (assuming any position), fires and resumes loading and firing in his discretion until the next signal, which will be given twenty seconds after the command "halt," when he rises and again advances in "double time" until the signal "halt" and "commence firing" is again sounded. When the competitors arrive at about 200yds. from the target, the signal "Skirmishers in Retreat" is sounded, when they face about and return over the same ground firing as before, the rifles to be carried at a right shoulder in retreating. Five halts are made in advancing and five in retreating; competitors to fire one shot at each halt, but must fire twenty shots in all, but must fire at least one shot at each half. Upon ordering the advance, the signal to "cease firing" is sounded, when the markers examine the targets and signal the total number of hits upon each as follows: so many bull's-eyes, centres, inners and outers. After the retreat, the signal to "cease firing" is sounded and targets examined as before." The practice is continued in this manner until all the competitors have fired. Five points will be deducted from a competitor's score for each failure to fire at least one shot each half, for each shot fired after a signal to advance has been sounded, for each shot found on his target in excess of twenty. A competitor firing on a wrong target will be at once debarred from further competition. Entrance fee, 50 cents for each entry. Re-entries permitted, to the extent that the target accommodations will allow, in the discretion of the executive officer. Ten prizes, value, $80.

No. 9.—"Army and Navy Journal Revolver" Match.—Open to everybody. Any revolver with trigger-pull of 3lbs. or over. Five shots each entry. Entrance fee, 50 cents each, or five taken in one name at once for $2. Standing position. Re-entries allowed. First prize, shotgun, value, $200, also 20 per cent. of the entrance money. Second, third, and forth prizes, each, 10 per cent. of the entrance money.

No. 10.—"Hilton Trophy" Match.—Open to teams of twelve from the following: 1. The United States of America.—A. The Army of the United States, one team from the troops stationed within each of the three military divisions—Atlantic, Pacific, and Missouri (three teams in all). B. The United States Navy (one team). C. The National Guard or uniformed militia of the several States and Territories, including the District of Columbia (one team from each State or Territory). 2. Other countries.—England, Ireland, Scotland, and each of the provinces of Great Britain, each of the provinces of Canada, and all other countries, one team from the following: A. The regular army. B. The militia. C. The volunteers. D. The navy of any country. Separate teams may be sent out only when the organizations are separate. The members of each team to be officers or enlisted men, and active members of the corps or organization which they represent, and to appear in the authorized uu form (full dress or fatigue) thereof. They shall be selected in such manner as shall be prescribed by the military authorities of the country or State they represent, and shall, if required, be certified to by them as being their authorized representatives. 200, 500, and 600yds. Rounds, seven at each distance. Position, standing at 200yds; any at 500 and 600yds. Any military rifle which has been adopted as an official arm by any State or government. Ammunition, any. Entrance fee, $2 each man. First prize, a trophy to be shot for annually at Creedmoor or such other range as the National Rifle Association of America shall select, to be held during the year by the head of the corps or organization whose team may win it, to be returned to the N. R. A. at the expiration thereof. Value, $3,000. Also a medal to each member of the winning team.

No. 11.—"Inter-State Military" Match.—Open to one team from each State and Territory in the United States, consisting of twelve members of the regularly organized and uniformed National Guard or Militia of such State or Territory, chosen in such manner as shall be prescribed by the military authorities thereof. Each team must be provided with a certificate from the Adjutant-General of the State it represents, certifying that each of their number is a regular member of their uniformed Militia, in good standing, and was such on the first day of June, 1882. They shall appear in the uniform of their corps. Distance 200 and 500 yards. Position at 200 yards, standing, and at 500 yards, any, with head to the target. Weapon, any military rifle which has been adopted as an official arm by any State or Government. In cases where the State has adopted no particular model (which must be certified to by the Adjutant-General), the team will be allowed to use the rifle in use by the Regular Army of the United States, or by the uniformed Militia of any other State. Rounds, ten at each distance. Entrance fee, $2 each man. Prize, a large bronze, to be shot for annually at Creedmoor, and to be held during the year by the State of the Militia of whose team may win it. Value, $350. Also a medal to each member of the winning team.

No. 12.—"Inter-State Long Range" Match.—Open to teams of four from all rifle associations or clubs in any State or Territory in the United States. Members of the various teams participating must at the time of the match be residents and enrolled in the State represented for at least three months prior to the date of the match. 800, 900, and 1,000 yards; fifteen shots at each distance. Any rifle within the rules. Entrance fee, $10 each team. Prize.—A trophy, to be held for the year by the successful team, which shall be deposited in some central place in the State whose team may win it. Also a medal to each member of the winning team.

No. 13.—"New York State National Guard" Match.—Open to teams of twelve from each regiment, battalion, or separate company of infantry of the National Guard of the State of New York, each man being certified by his regimental commander to be a regularly enlisted member, in good standing of the regiment, battalion or separate company he represents, and to have been such on June 1, 1882. All competitors must appear in the uniform of their corps (full dress or fatigue). 200 and 500yds. Position, standing at 200; any with head to the target at 500yds. Remington rifle, State model. Rounds, five at each distance. Entrance fee, $1 each man. Two prizes, value $300.

No. 14.—"First and Second Division National Guard" Match.—Open to teams of twelve from each regiment, battalion or separate company of infantry in the first and second division of the National Guard of the State of New York. All competitors to appear in the uniform of their corps (full dress or fatigue), and to be certified by their regimental commander to be regularly enlisted members, in good standing of the regiment or battalion they represent, and to have been such on June 1, 1882. Remington rifle, State model, 200 and 500yds. Five shots at each distance. Position, standing at 200; any with head to the target at 500yds. Entrance fee, $1 each man. Two prizes, value $125.

No. 15.—"Army and Navy Journal" Match.—Open to teams of twelve from all regularly organized military organizations in the United States, including the regular army, navy and marine corps. All competitors to be regularly enlisted members, in good standing of the regiment, battalion, corps or troop they represent, and to have been such on June 1, 1882, and to appear in the uniform (full dress or fatigue), of the organization they represent. Weapon, such military rifle as has been issued at the public expense to the organization which the team represents; 500yds. Rounds, seven. First prize.—To the organization whose team make the highest aggregate score, a silver trophy, manufactured by the Gorham Company, and presented by Colonel William C. Church on behalf of *The Army and Navy Journal*, valued at $750. This trophy to be held for a year before becoming the property of the winner. It will be held for a year by the officer commanding the winning corps. Second Prize.—Trophy, or cash (optional), $500.

No. 16.—"Military Team Off-Hand Match.—200yds. Open to teams of five men from any company, troop or battery of the National Guard of the United States, Great Britain, Canada, or any other nation, or from the United States army or navy. Any two members to be entered from any company or regiment. Any four members will be allowed to shoot from any foreign military organization, even though they are attached to different companies or regiments. Teams to shoot in their regulation or dress uniforms, unless excused by the National Rifle Association. Any rifle. Standing at 200yds. off-hand at 200; position or head to target at 500yds. Seven shots at each distance. Any regulation military rifle; wind gauge permitted. The trigger to pull six pounds, which will be tested at the firing point. Winners will be debarred if this preface is produced that they have not fired under the conditions of this competition. Ties will be decided according to N. R. A. rules. Two entries will be allowed, but only the highest to count. Entrance fee, $5 per team; 11 prizes; value, $250.

No. 18.—"Short Range All Comers" Team Match.—Open to teams of four of all comers. 200yds. Seven shots per man on each entry. Position, standing. Any rifle. Teams shooting all military weapons to receive six points allowance on aggregate score. Competitors must be members of one team only. Two entries allowed, but only the highest score to count. Entrance fee, $5 per team. Five prizes, value, $75.

No. 19.—"International Military" Match.—To be shot Friday and Saturday, September, 15 and 16, 1882.

Teams.—Open to teams of twelve men on each side, respectively representing the Volunteers of Great Britain and the United States of America. The respective teams to be composed of volunteers who were efficient in 1881 and of uniformed national guardsmen or militia who are and have been active members since September 1, 1881.

Uniform.—The match shall be shot in the uniform of the corps of the respective nationalities.

Distances.—200, 500 and 600yds. on one day, and 800, 900 and 1,000 yds. another day.

Rounds.—Seven at each range per man. No sighting shots.

Positions.—Standing at 200; prone or sitting at 500 or 600, any at 800, 900 and 1,000yds.

Rifles.—Any military breech-loader coming within the rules of the National Rifle Association of Great Britain.

Cleaning.—No cleaning or wiping out of rifles will be allowed except between ranges.

No. 20.—"Consolation" Match.—Open to all comers. Winners of prizes amounting to $2 in cash or value, won in any match of this meeting, to be handicapped two points on their score. 200yds. Any military rifle. Seven shots; standing position. Twenty-two prizes, value, $80.

No. 21.—"Gold Watch" Match.—1,000yds.—Other conditions to be announced hereafter.

GARDNER, Mass., Aug. 18.—The following is the record made at the last meet of the Gardner Rifle Club, at Hackmatack Range. The distance was 200 yards, off-hand, the inch rug and Creedmoor target combined being the one used:

	R.	C.	R.	C.	Totals.	
G J Ellsworth	94	48	93	48	187	96
I N Dodge	92	47	84	45	176	92

The Monomonoe sporting Club at South Gardner, have elected officers as follows: President, Aaron Greenwood; Vice-President, Marcus Wright; Clerk and Treasurer, F. M. Greenwood; Executive Committee, Geo. Nichols, Marcus Wright and C. H. Newton. On Saturday they start out for their annual camp; they will pitch their tents in Rindge, near Mount Monodnock.

BOSTON, Aug. 19.—The attendance at Walnut Hill to-day was very slim. The riflemen who were present had to contend against wind shifting from 9 to 10 o'clock. The scores made are appended:

Decimal Target (Rest).										
E F Richardson	9	10	10	10	10	10	9	9	10	10—97

Creedmoor Match.										
R. Davis	4	5	4	4	4	5	5	5	5	5—46
J Borden	5	4	5	4	4	4	4	5	5	4—44
S H Bates	4	4	4	4	4	4	5	4	4	4—41
200yds. Creedmoor.										
J Borden	4	4	4	4	5	5	4	4	2	4—36

In the latter match only one of the entries finished, owing to the high state of the wind.

WORCESTER, Mass., Aug. 18.—The second of a series of contests at Pine Grove Range took place yesterday. A portion of the time there was a steady rain, after which the breeze was strong on the dial, from 6 to 11 o'clock. The distance was 200yds., off hand. The score is as follows:

Massachusetts Target.													
Stedman Clark	11	9	7	9	12	11	6	12	12	12—101			
M G Fuller	10	11	9	11	11	7	9	12	10	10—100			
Creedmoor Target.													
Moses Carter	45	35	45	44—5		F Johnston	44	43	43	44—38			
S Cleary	31	45	44	44—11		N Freeman	43	44	33	44—37			
V W Eames	43	45	44	44—11		F Wesson	34	44	43	43—37			
Capt Walker	44	45	44	44—11		J Williams	43	33	42	44—37

THE TRAP.

WINSTED VS. PARKER.—Winsted, Conn., Aug. 12.—Friendly match between a team of eight members of the Parker Gun Club, of Meriden, and the Winsted Gun Club. The contest resulted in a victory for the latter, although the shooting was very close throughout. Clay pigeons, 15yds. rise, 25 birds each. The score was:

Winsted Gun Club.		Parker Gun Club.	
J W Bidwell	14	E Birdsey	17
V A Blakeslee	20	I L Baker	21
James Bevens	20	G A Strong	12
J K Camp	20	J L Ives	21
J E Dean	17	N F Taylor	16
I Ferguson	18	N Cornwell	14
H L Roberts	14	F O Downing	21
A Roberts	17	E T Richmond	14
Total	140	Total	136

MALDEN GUN CLUB.—Aug. 19.—At Wellington, Mass., this afternoon, a strong cross wind interfered with fine shooting. Some of the gentlemen present exhibited their skill at glass ball smashing, but no record score was kept. In the clay pigeon sweepstakes the following result was secured, out of a possible 20: Symmes 19, Brookings 18, Sawyer 15. Messrs. Symmes and Brookings carried off the first and second prizes.

FALL RIVER, Mass., Aug. 17.—The eleventh match for silver cup resulted in its being won for the third time by Mr. E. W. Buffinton. The following were the scores:

	Balls.	Clay Pigeons.	Total.
Buffington	11110 11111	01111 11101	17
"Jackson"	11101 11011	10011 01101	13
Hall	11109 11111	00111 11000	13
Valentine	11011 11000	10110 01101	12
Cornell	00111 11111	01101 00000	11
Wood	10101 00000	00101 01100	6
Borden	00111 10111	00000 11000	10

August 1 a match for the Massachusetts State champion badge, at Revere Beach, Lynn, between Mr. F. A. Johnson, of Boston, the holder of the badge, and Mr. E. W. Buffinton, of Fall River, resulted in a victory for the latter. The scores were as follows; 50 glass balls. Holden trap, 18yds. rise:

Buffinton	11111111111111101111111101111111111101111101001 45
Johnson	11101100111111111111111111111111111111101101101—41

Mr. Buffinton now holds the badge until won from him by some challenging party.

TOPSHAM, Me., August 18, 1882.—Regular shoot of Riverside Club 20 clay pigeons; 15yds. rise; for Club Badge.

G E Keene	00111 00111 10100 01001—10
S Strout	11111 11111 11111 01110—18
A Q Goud	11111 11111 11101 11110—18
C Keay	11111 11111 11010 11100—16
G Goud	01101 11111 11111 11111—18
G M Lee	01000 01111 11011 01100—12
R A Bodge	11100 01110 10110 11100—12

Ties on 18, 20yds., 3 birds each, S. Strout, 110—2; A. Q. Goud, 111—3; C. Goud, 110—2. A. Q. Goud wins badge.—M. C. H.

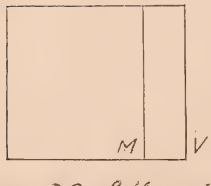
THE AMATEUR CLUB DEFEAT.

THE Amateur Rifle Club, of New York city, has been defeated by the Hamilton Rifle Club, of Toronto, Canada. The small-bore club *par excellence* of the United States has had to acknowledge a defeat, and at the hands of men whom they have repeatedly beaten at the same sport. Nor is this the first defeat which the Amateur Club team has recently experienced. Not long since a party of junketers, styling themselves a team from this city, went to Boston and met the defeat which they had invited. The result was not surprising when the manner in which it had been invited on the part of the whipped ones was considered. No body of men should know better than the members of the Amateur Club how a team should be constituted and governed. A team is not a company of men who are individually good shots. That is a requisite, but it is not all that is required. We have had such teams visit Creedmoor from abroad, and they have been surprised to find that they were not successful. Organization is important, and the ability to shoot in such manner that each may help the other is a point which cannot be overlooked if victory is sought. It does not appear, from what we can learn of the recent efforts of the team who brought home defeat to the Amateur Rifle Club, that there was much—if any—organization among them. No doubt each man did his best, but it was not the united effort we have been accustomed to see in the old-time teams.

The Amateur Club has too proud a record to have it frittered away in such style as this. There is no reason why it should not have retained its prestige and not known what it was to suffer defeat. The recent beatings were really self-inflicted, for no one can doubt but that the Amateur Club contains material, which properly molded into a team, would not have won both the Boston and Hamilton matches. If the club was not in a condition to properly meet their challenges let a declination be sent; but make up a scrub team without any organization worth mentioning, each member paying his way, and proceeding as an irresponsible atom of an incongruous whole, is to bring disgrace upon the fair fame of a club which stands without an equal in the world. Better far to have the Amateur Club disbanded and at once than to go on with a series of these knock downs. They seem to show that the club is weakening where in reality it has only grown slovenly and presumptuous. Every lesson given at Creedmoor has been conned well at other ranges, and put into successful practice. The Canadians have secured American rifles, have caught the knack of American team discipline, and have of course secured the natural result, a victory. Instead, the Amateur Club sends out a team foreordained to defeat, according to every precedent and every rule governing rifle practice. The club which so gallantly took up the Irish challenge in the fall of 1874 had better disband at once than suffer many more of these latter-day defeats to come upon it,

Yachting and Canoeing.

FIXTURES.



Aug. —Southern Y. C., Inter-State Regatta.
Aug. 24—New Bedford Y. C., 31 Class Schooners. 1st Class Sloops, $100, $75. Principal Clubs.
Aug. 26—Beverly Y. C., Open Regatta, Marblehead.
Aug. 28—Bay of Quinte Y. C. Open Matches.
Aug. 29—Salem Bay Y. C., Championship Sail-off.
Aug. 29—Hull Y. C., Club Championship Match.

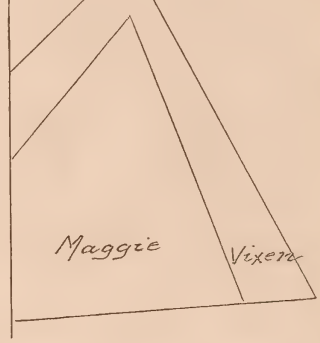
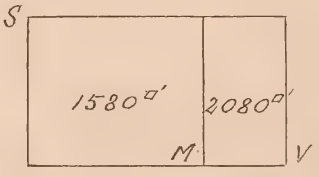
Oct. 3—Jersey City Y. C., Ladies' Day.

NEW YORK Y. C.—ANNUAL CRUISE.

[CONCLUDED.]

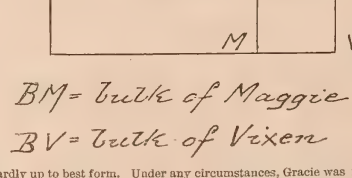
THE strictures made in these columns concerning the pettiness of seeing a fleet of large schooners content with a drift to Newport and the Vineyard Sound, have borne good fruit in contributing to the success of a cruise outside, around Cape Cod, by a large portion of the New York squadron. So well were those criticisms put that they called forth a whole column of clumsy vituperation, in bad English, from one of the lesser lights, on the subject. We regret being unable to return so much notice, owing to the lack of standing and influence of our jealous contemporary, which we must also decline to follow into the gutters. Having larger fish to fry than to bandy words with a self-appointed stool-pigeon, under obligations to the club for a week's charity, we will continue these articles with a review of the single-stickers making up the sloop division, thankful that the squadron got as far as Marblehead, and hopeful that in the future even such a desperate undertaking as a voyage to Bermuda will lose its terrors to yachtsmen, though the possibility of overcoming the amusing scare some contemporaries exhibit at the mere thought of going off soundings is a remote one. One of our would-be critics, having in younger days met a bit of a gale which laid him up seasick and drove him ashore to live on a pittance in preference, trembles with fear at the mention of the sea, and cannot understand the extravagant courage of others in pushing headlong into the dangers of the ocean which have struck such terror to his heart. But FOREST AND STREAM has cruised many thousands of miles on the blue, and we never enjoyed life so much as then, nor did we find more danger or hardship attaching thereto than to other professions in this world, whatever abdicated old relics may try to make the innocent believe to the contrary.





AM = area A of Maggie
AV = area A of Vixen

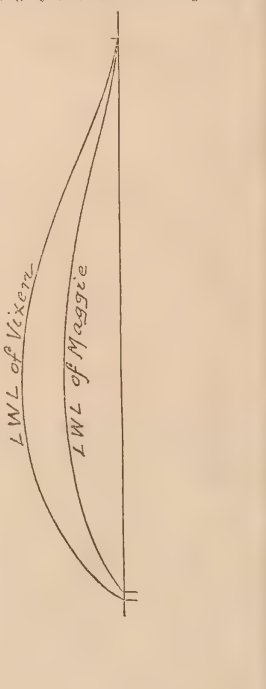
In days gone by the New York Y. C. had a river course for its races. This was then lengthened down the bay, and as the boats grew in tonnage the Southwest Spit was rounded, while now we find them going out to the Sandy Hook lightship and even sailing some bold matches with the start out at sea, a consummation of a plan equally as much laughed at in the past as the idea now brought forward to shift from Sound drifting to the more business-like procedure of an ocean voyage. Anything will do to slide up and down the Sound, any kind of model and any sort of rig, but a trip in company to sea would put the yachts on their mettle, and quickly bring about some wholesome changes in model and sails, as well as afford an appreciation of the sport yet totally wanting in our clubs. If the six hundred miles to Bermuda be too startling an innovation, let the fleet gather at Newport, make a dash for Boston, a run to the Isle of Shoals, and fetch up in Bar Harbor, or off Eastport, Maine, and round off with a straight on end passage home in a single pull, with a prize to the first yacht inside the Hook. That would be more to our heart, and that such ventures will be witnessed in years to come no one can doubt who has watched the gradual evolution of the landsman owner into the sailor, and the skimming dish into the vessel. But upon such cruises leave the frightened reporters at home or they may have to be carted to their graves, victims of a dread for salt water. "Bankers, brokers and merchants" abroad engage in that sort of fun, and we do not believe Americans an enervated race incapable of enjoying what the people of other climes indulge in with relish. It is a slight to the New York Y. C. to suppose it composed of such Nancys that yachting must forever remain a method of dawdling away time in smooth, sheltered waters instead of developing into the instructive and noble art of amateur navigation.

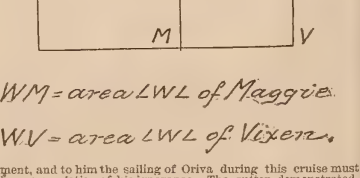


The sloops did not show up as strong as might have been for this cruise. It was supposed that the races with the Canadian Atalanta and the rivalry existing among the large vessels of this kind would have induced a regular "boom" in sloops this season. Such was, however, not the case, nor does their future look bright. Beyond the old Julia, no additional sloop of large tonnage has been listed, none were built, nor do we know of any in contemplation. The extreme unhandiness of the rig, the great strain upon the hulls, and cost of keep are all against their popularity, and we do not expect to see many more sloops over sixty feet long make their appearance. The preference seems to be for schooners or for cutters if a close-winded flyer is wanted. The lot which mustered in Hempstead Harbor for the run to the eastward included Fanny, 74 tons, J. D. Prince; Gracie, 84 tons, Flint and Earle; Julia, 83 tons, Rear Commodore E. M. Brown; Eclipse, 42 tons, E. A. Willard; Oriva, cutter, 48 tons, C. Smith Lee; Sagitta, 50 tons; Valkyr, cutter, 41 tons, A. J. Cassatt; Rover, 31 tons, W. E. Iselin; Volante, cutter, 35 tons, Tower and Hodges; Vixen, 39 tons, F. C. Lawrence, Jr.; Kelpie, J. N. Winslow; and Whileaway, G. F. Randolph.

The first four of these formed the first class, the others the second. Of Julia we have already spoken. We may add that upon the heel of her old bowsprit was inscribed the legend "trim 4in. by the head to go to windward." As the sloop seems to be especially deficient in that respect, this injunction might be tried for what it is worth. Fanny, a broad flat affair, a sort of sand-bagger on a large scale, we have always held a dangerous customer in smooth water, and her performance on the cruise proves that boats of the frying-pan order have great speed even though sailing with fixed ballast. In a blow Fanny would not prove a likely ship and she was lucky in finding her best weather during the whole time of her recent trial. She seems rather too good for Gracie, particularly in turning to windward, and if smooth water could only be relied upon Fanny would be our choice as the fastest in her class. But in a bout with the sea we should hesitate between her and Gracie, unless the latter has seen her best days of which there is some evidence. The alterations to her last winter, more board and more lead, do not appear to have been of any benefit, for she is hardly up to best form. Under any circumstances, Gracie was never remarkable to windward, as Mischief could beat her almost even at the game though ten feet shorter. Now that Gracie has had a protracted comparison with a really smart boat at turning, it will be seen that too much confidence has been placed in Gracie as a reliable yacht to meet a foreign cutter. Most of her record has been made by fast reaching and running, as the prevailing westerly winds over the New York course and the drifting down the Sound have given her a good chance to display those qualities to the most advantage.

SM = Sail area of Maggie
SV = Sail area of Vixen





BM = bulk of Maggie
BV = bulk of Vixen

That all these large sloops are structurally weak and not to be relied upon for distant cruising has been shown by this year's experience. Julia in one of the June races retired, and brought up inside the Hook leaking like a basket, and the pumps could hardly keep her clear though almost rebuilt a couple of years ago in Boston, and only just out of the carpenter's hands from New London, where she had undergone a complete overhaul. Gracie followed suit in the match for the Goelet Cup off Newport, and last fall the new Pocahontas suffered from the same complaint. These yachts had scantling enough, their timbers were selected and clamps, ceiling and plank worked in long lengths, yet they failed for want of proper through fastening. Spike-work will no longer do where the strain of board and spars is so great, and if such yachts were put to the hard service English cutters are they would collapse into a bundle of matchwood in a single season. Racing them half a dozen times in light weather with a few weeks boxing about in the Sound is very different work from bringing them to the line some thirty times, driving them in hard weather and keeping them on the go knocking about along the coast eight months in the year. Sooner or later we will come to that pitch. In Boston small yachts are experiencing something of the kind already, and New York flyers must be put together and rigged in better fashion in the future to stand the work they will be asked to perform. We question whether large sloops will long survive, and as small schooners are not the best vessels to race, the regular cutter rig is pretty certain to displace the sloop, and by the better division of the sail and staying of the spars diminish to some extent the rack and pull in wake of the chain plates and partners, while more depth and deadrise will ease the boats in their motions, and with flush decks, enabling the beams to cross, a stiffer structure will result.

Eclipse, the new wonder, did not disappoint her friends in the good company she was. The paltry weather forbade anything like a record being made, and business called her owner home, so that she did not round the Cod and race at Marblehead. In the New London race something seemed amiss, for she did not hold the wind we have seen her do upon other occasions. We have since learnt that while hauled out with her board removed, a length of her pennant had been cut off to save the trouble of drawing the splice. So the board could not be dropped to the full extent and the yacht suffered in consequence. In the Newport race worse luck befell her. In turning to the Block Island mark this sloop had assumed a leading position, second to Fanny only, when the luff rope of her jib parted and the sloop had to be luffed for hasty repairs. She had the weather gauge of Gracie and Oriva at the time by nearly half a mile. Subsequently her topmast went at the cap and with it the chance that was left. Next day she was recalled to the westward. We saw quite enough during the runs to convince us that in Eclipse we possess a very fast sloop, and what is more, a fast one under all circumstances of wind and sea. Now that her owner, who always sails her himself, has got the hang of his boat and knows what she likes, we look for a bright record in her log. She is large enough to worry the big ones and yet an even match in tonnage for Vixen, Fanita, Valkyr, Oriva and their kind.

Perhaps the most remarkable exhibition was the speed Oriva developed in view of the adverse opinions entertained. We believe FOREST AND STREAM was the only journal which detected good qualities in this vessel, for though we never took her to be a very fast boat, fair average performance we have always claimed the Oriva capable of, nor do we see any reason to change that opinion. In the light weather of the first day's run to New London the cutter must have been an astonishing conundrum to the old school, which held that no boat "dragging" great weight could be fast. Often enough have we laughed at the crudities appearing in the *World* and some sporting papers and other poorly-informed journals, concerning the fallacy of expecting any yacht "dragging" lead on the keel to show speed in anything but heavy blows. When Volante was outrun in zephyrs during former cruises the talent reporting for such journals used to gravely avow a faith in light displacement, so far as he was capable of comprehending any connection between weight and displacement, and to him the sailing of Oriva during this cruise must have been a revelation of his ignorance. The cutter demonstrated, however, only well known principles of naval science, and proved upon what flighty reasoning we, in America, have been giving preference to shoal boats. Oriva sailed so well in the New London match and on the run to Newport in a breeze that she suddenly acquired "a reputation for great speed." It does not appear to take much to do and undo the opinions of the average reporter, and it would not be astonishing to find that after coming out flat-footed for cutters, our contemporaries should turn their fiftieth somersault back again for the sloop, for, after beating all but the big Fanny in the Newport race, Oriva once more "did not do well" up the coast "because she laid down on her side," when every one knows that to be characteristic of narrow boats, and not in the least affecting their speed.

WM = area LWL of Maggie
WV = area LWL of Vixen.

The fact is that Oriva was in excellent condition and well handled. Last year her sails were a hindrance, but now with a Lapthorn outfit and a clean bottom, she is doing better. When we review the year our verdict will probably not be changed as to this cutter. She is fully up to the average, under certain favorable circumstances rather better, and in strong beam winds and smooth water not quite as good as the best in her class. As a cruiser though she is to be preferred on the score of safety, rig, room and cool cabins, and she will have many sisters in the future. In the Marblehead races she should have gained still more credit, though her fine sailing failed to attract the attention of the reporters present. Leaving Gracie and Fanny to themselves as twenty feet longer and more than double the tonnage of Oriva, there were two good vessels of about her size remaining, and both of these she disposed of, with a large margin to spare, her victory being a full offset to that of the Vixen over the Maggie. The two yachts the cutter beat were Active and Addie Voorhis, now simply the Addie. The former is known as a very fast one down wind, though not especially good against it, and Addie has always had an excellent reputation. Both are New York built originally, and if anything have been improved since owned in the East. Active is 50.2ft. load line, with 16.2ft. beam and 5.10ft. depth, and Addie 50ft. load line, 19.8ft. beam and 5.8 deep. Both of these Oriva disposed of with great ease; and both of them can be taken as representing a fair average of our fleet of sloops.

Certainly among cutters Oriva would take no higher rank than do these two among American sloops. Yet Oriva's beating both by half an hour is dismissed by the superficial reports published in other journals by the mere mention "Oriva was not placed," because

she could not take the cup from Gracie and Fanny, twenty feet longer on load line and nearly double her beam. We therefore refer to this event as really the last hit of sailing. She has yet done and something which ought to go far towards setting any doubt still existing as to the possibility of making boats of her type speedy. It is probable that this cutter has made many converts this summer, as she has compelled many would-be critics to swallow their own words and learn a new chapter in naval architecture. She certainly dispels the mass of myth which builders in America have been content to take as gospel with their trade. Valkyr, a combination cutter, now the property of Mr. A. J. Cassatt, did not stay with the fleet long enough to permit us judging her accurately. Kelpie, Wilwa away and Rover as well as others joining off and on during the cruise are too well known to require further reference.

In point of weather, the earlier portion was a drift, a smart southwest wind during the Newport race, and moderate weather the rest of the time with a lucky offshore wind and smooth sea along the sands of Cape Cod. Those who dread anything savoring of business, and like things mild and diluted while afloat, had it to their hearts' content, for not a squall nor yet as much as a drop of rain interfered to mar the serenity of this aspect, and the occasional calms were just enough to preserve the *dolce far niente* of a Sound drift all the way round to Marblehead.

The start was made by signal from the flagship early morn Thursday, Aug. 3. By two bells in the morning watch calkers had been hove short and to the roll of the second gun, ground tackle was broken and the beat out commenced, with New London as the objective point. Fanny led out with Montauk well astern among the schooners. These two soon gained a commanding lead which they kept up for the rest of the cruise, and the honors fell to them among the big ones, with Oriva coming in for a good share too. The wind came out more to the northward and then began flying around the compass in a most distracting way, never more than a short-lived zephyr at any time. It became a matter of choice and drifting, the first thing up in a casting for luck which fell first to the lot of one, then to the other, so that as a race it is not worth while noticing relative positions. It entailed a vast amount of work upon steerers and crew, and the day were out in tedious shifting of light sails from one side to the other, so that what few of the vessels were made much scattered. A salutary lesson was administered by a lot of brick-laden traders going right through the fleet, their loads standing them in good stead in such variable airs, and the everlasting "jeehawking" aboard the yachts hung discountenanced by short-handed coasters who know the value of sticking to your course and letting the wind find you instead of backing back and forth with as much chance of missing what there is going as of catching enough to make up for the extra ground gone over. When morning colors were made aboard the Estelle she had fetched Oak Neck, Whileaway was leading the sloops, and Madeleine held honors among the schooners, with Tidal Wave and Montauk well up. The airs then dropped away entirely, and nothing but mud hooks held the yachts from drifting stern first or broadside on with the flaming flood. About one half hour in the afternoon watch brought airs from the westward, and the clink of the windlass sent charming music across the placid Sound for miles. But the breeze remained fickle, veered to northeast, and things looked dubious for making port at all that night. Oriva showed this by fairly striking in lively from S.S.E., and at last the flyers carried bones in their teeth and settled down to real work with scuppers smoking.

Crusader had spun ahead with Fanny following, Whileaway, Gracie and Oriva in her wake. With booms over the port quarter it was a merry dance for the long-hodden fellows, and Tidal Wave was settling her score with Montauk. At seven P. M. Horse in the Bank bore abeam, and the flood was again met. At eight the wind fell away and the night was drifted through. When the morning broke Horton's Point was abeam, and with a new southeast breeze all hands were fetched in one by one, those hugging the northern shore having made the best thing. The times taken under the circumstances are of no value. Montauk was first yacht in, Fanny second, then Clytie, Crusader, Julia, Oriva, Tidal Wave, Madeleine, the rest abeam, and Rover a couple of hours after. Clytie made the fastest passage among the schooners and Fanny among the first class sloops, with Julia 1min. longer and Oriva 4min. more, the first in her lot and the sixth out of a fleet of 21 vessels. The yachts dressed ship during the afternoon and long shore festivities were had in these we have no heart for inclining to do in a journal of this kind, nor have the conquests made connection with the art of working ship. A salute was fired in honor of Chief Justice Waite who boarded the Ruth. Clio, Varuna, Phantom, Ruth, Rebecca, Scud, Princess and sloops Vixen, Corning and Wizard joined the squadron. Cutters being especial objects of interest just now we quote from the *World*, last our own account be deemed prejudiced, concerning the performance of the Oriva: "The race might now be said to have begun, and the most marked surprise perhaps was the sailing of the cutter Oriva in this light wind. Soon after crossing the line she sent aloft her balloon topsail and set her balloon foresail and at once began to steal ahead, passing boat after boat until she reached the Julia, and finally seeting her fairly and squarely side by side, and this in weather so light that the fleet had scarcely steerage way." The speed of cutters in light winds may be considered well established. Not only do our columns team with evidence, but this week we find the *World*, Mr. Gouverneur Morris and an expert correspondent, all agreeing that fore fields and gales has decided the superiority of it. This conclusion is diametrically opposed to the preconceived notions we have gone to so much trouble to combat.

Aug. 5.—This was the day set for the matches for the four Cook cups, value $300 and $200, presented by Commodore Cook of Harbor lighthouse around Cornfield lightship and home. Two classes for schooners and two for sloops. From a racing point of view, the day was a wretched failure. A start was effected at 9:50 to a light S. S. W. wind with the first run of the flood. In twenty minutes the wind died away, and a tedious drift was the result. Gracie lufted out from Julia, the latter not being a high sailer, and later Oriva successfully tried Eclipse in the same way, though the latter was in no condition, as her board could not be fully dropped. Most yachts had to make a bitch out to clear the Bartlett ship, and then the wind once more dropped away, the tide carrying the fleet down to the mark, with Fanny in the lead. She let go her kedge, but it did not hold. The wind again sprang up, and sent the Eclipse away, with Fanny rushing through her bows and holding so close a wind that she weathered the Bartlett ship on the return, all others having to make one or more legs to do the same. This performance won for the Fanny a name she has really long been entitled to. Her matches sailed in the "lower Bay" were evidence enough that she was by far the best to windward first class in smooth water, though this seems to have escaped casual observers. The Fanny is in no better form this year than before; she is simply doing what she has shown herself capable of time and again, as often noted in these columns. Gracie was, as usual, drifted to the westward, and Julia out of the question. Beyond this and the fact that Oriva went to the southward in search of wind and lost her class lead by the maneuver, the race was devoid of anything worth recording. Montauk had a sail over, the other first class schooners not entering for want of light canvas; and as the club rule is for "two yachts to start, or no prize," it is a mooted question whether the cup will be awarded. We trust it will, as the rule is not an advisable one. It leaves it within the power of others to prevent a race, and discourages coming to the start for fear of not having competitors and then getting all the trouble for nothing. Messrs. Chester Griswold, John H. Bird and T. B. Asten acted as committee. Cups go to Montauk, unless ruled out, Peerless, Fanny and Vixen. Summary:

Aug. 6.—This being Sunday, half the fleet laid over, the rest started for Newport in a brisk westerly breeze, shortly after meridian, the dense fog of the previous night having risen. On the run the smaller craft found too much for kites and big topsails and reduced to sunger sail. Rambler and Tidal Wave kept the lead throughout the passage with Montauk closing up fast. Social's foremast had come down and with it all head rigging, making a bad wreck to clear, and she had to put in for a refit. Wizard sprung topmast. Crusader squared for the westward. Tidal Wave had Fort Adams abreast at 7 P. M., and Rambler 2m. later, Montauk at 7:7, and Phantom at 7:22. They luffed around and brought up inside the breakwater. Then came Peerless, Varuna, Ruth, Clio, Fleetwing, and Estelle with Oriva hailing among the sloops, having beaten Julia in spite of the sluggish wind, then Sagitta, Princess, Peerless, Social, Whileaway, Social, Albatross, Regina, and Wizard; Next day the Vice-Commodore brought his Clytie from New London with Waterwitch, Aeolus and the Madeleine schooner as well as the sloops Gracie, Fanny, Vixen and Kelpie. Fanny had passed Fort Adams in this run at 10:25, Gracie 10:15, Clytie, 10:20, Madeleine without light sails at 10:28:45, Aeolus 10:31:44, Waterwitch at 10:53:20, and Vixen at 11:02.

Aug. 8.—For the Goelet cups, one for schooners, value $1,000, and one for all sloops and cutters, value $500, a very fair fleet came to the line that morning. Course, from line between Fort Dumpling and Fort Adams, southwest-by-south around mark boat stationed near buoy off north end of Block Island, leaving same on starboard hand and return, forty miles. It was blowing a grand sailing breeze from about southwest, making it a nose-ender for half the distance, and most interesting and exciting work, which was, however, to a certain extent, spoiled by the slow start, a full half hour—why not half a day—being allowed for the yachts to cross, so that what might have been a close fight all the way down and back became a good deal like Indian file business. As a large number of yachts were handicapped in spite of the long period allowed, it can be seen that nothing but want of proper management is to blame, and the same yachts would be handicapped if they had one, two or three hours to get away in. Estelle went over in the lead at 9:13:42, with Albatross following at 9:15:08, Halcyon at 9:23:46; Clytie 9:30, Æolus 9:30:20, Peerless 9:32, Tidal Wave 9:32, Montauk 9:36:32, Republic 9:38, Princess 9:40:20, Rambler 9:47:25. The sloops in the following order: Eclipse 9:18:35, Vixen 9:20:10, Whileaway 9:22:20, Gracie 9:23:30, Oriva 9:33:12 and Julia 9:38. All hands had plain foro and aft sail for the beat out. Tide last of the ebb, the flood being met when close upon the Brenton's Reef lightship. The first board was a long one to Southwest Ledge, with Estelle showing the way. Albatross, Halcyon, Eclipse, Fanny, Gracie, Tidal, Whileaway, Peerless and Ruth in the order named, the rest strung out in their wake.

The fleet then split tacks, half working down the Narragansett shore, the others going off to the southward. Republic, Clytie and Æolus essayed jibtopsails, the last of the latter's sail carrying, and the sail hauled down till a fresh lashing was rove. Eclipse was leading the sloops when the luff of her jib parted and she came out for temporary repairs. Later her topmast went over the side and her chances of scoring went with it. Oriva showed fine weatherly qualities and worked away from Gracie and well up to Fanny, which was something to the credit of cutters as a class, for they had not been supposed capable of such performance. Closing up on the buoy, Æolus saw her jibboom go at the cap and had to clear the wreck. Halcyon had a bout for an hour with Montauk, and gave her the closest push she has had so far. With a trifle less strength to the wind it will be an open question between these two. Mr. Platt got around the mark the first of the fleet, and soon after jibed mainboom to port, and smothered with bunting, the Estelle left astern. The fleet turned as follows: Montauk, 1:09:55; Estelle, 1:16:10; Halcyon, 1:07:55; Tidal Wave, 1:18:11; Fanny, 1:19:13; Oriva, 1:24:30; Albatross, 1:26:31; Gracie, 1:27:20; Eclipse, 1:27:46; Clytie, 1:28:45; Ruth, 1:34:40; Vixen, 1:37:35; Aeolus, 1:37:40; Julia, 1:40:32; Peerless, 1:42:34; Wizard, 1:46:55; Julia, 1:49:20, and Princess not timed.

Tonnage now told. Gracie ran by Oriva, Clytie went by Albatross, and Ruth showed a fast pair of heels even without big kites. Halcyon made the pace hot for the leader, while Gracie, now at her best, was catching Fanny with a lively rate. It was plain winning for the latter, with the breeze up to the strongest of the day. The match ended as under, prizes going to Montauk and Fanny on narrow margins, though the Halcyon not having been measured leaves the schooner cup in dubious doubt. Fanny wins from Oriva by 1m. 43sec., the allowance being put at 18m.

Whileaway	9 27 20	Not timed.	

Aug. 9.—The run to New Bedford was made in a good breeze from southwest. After beating out of harbor, it was a free run and balooners were in requisition, with spinakers to starboard. In working out Montauk poked her jibboom through Julia's mainsail, obliging the sloop to return to harbor. Outside a bit of sea was found which tried the smaller yachts pretty hard, and had it been dead on end the wreck report would have contained some well-known names perhaps. As it was only Sagitta whipped the topmast out of her, and Gracie, already reported leaking during the race the previous day, did not push her by the jump. Away went sailing though, and quick time was made, the leaders holding well together. It was of course a day for the long-waisted fellows, though Peerless did some very fast running for her hailing port. When going by the spar buoy off the Dumplings, Peerless and Clytie fouled, the former declining to give sea room for Clytie to clear the buoy, and the latter fell foul of the latter to port took the mast right out of a catboat at anchor close aboard. From the Dumplings in Old Whale city, it was wing and wing, the fleet coming to as under:

Oriva had laid over in Newport, and the other yachts had parted company. In Newport Harbor no less than forty-four yachts were under the commodore's orders, the largest number ever assembled under one flag officer. In New Bedford the officers and members of the N. Y. C. Y. C. had all in their power to make the stay of the squadron a pleasant one.

Aug. 10.—All hands got underway about 11 A.M., and after heaving to off Clark's Point for a start, commenced the beat down to Quick's Hole for a passage into Vineyard Sound. There was a nice wholesome breeze from southwest, and although it was a beat, it was without zest, a pleasing variety upon the down wind monotony hitherto the club's prevailing luck. Varuna met the fleet going out, and shortly after sent her jibboom through Sagitta's mainsail, the latter having right of way. Both put into New Bedford. Fanny led through the Hole with schooner Phantom close aboard, the time at West Chop buoy being for Fanny, 2:21; Phantom, 2:16:10; Gracie, 2:18:50; Madeleine, 2:52; Waterwitch, 2:57:20; Wizard, 3:1:40; Clytie, 3:4:55; Albatross, 3:9:3; Vixen, 3:10:40; Estelle, 3:15:21; Regina, 3:16:30; Princess, 3:18:53; Rambler, 3:22:40, and Alarm, 3:28. Some went into Vineyard Haven, the others bringing up off Oak Bluffs.

It had been determined finally to extend the cruise beyond near-by ports and venture upon a run outside to take in the prizes offered by the Eastern and Quonochontaug clubs. The stay in Vineyard Haven decided the undertaking, but enough yachts were got to accompany the commodore to make quite a respectable showing. Early morning, August 11, being bright and clear, all hands filled away at 6 A.M., upon Sagitta, and taking a moderate southwest wind and strong leeging tide, Cape Page was passed at 8 and, the Handkerchief lightship at 9, when the fleet came up to a N.E. by E. course, going by the Shovelful lightship one hour later. The wind freshened from northwest and the schooners ran to the fore stowing jib topsails, Montauk taking the lead. Fanny, of course, was showing the way to the sloops, Gracie next, with Vixen and Oriva trying to luff one another out of the wind, at which Vixen succeeded, dropping the cutter in her wake. Nahsett towers were abeam at noon.

During the afternoon the wind chopped to the eastward, and then it fell calm and the fleet was again pretty well bunched. At 4 P. M. it came out again from southwest and sent Montauk ahead. The commodore made signal "Marblehead," and a good sailing breeze carried the yachts across Massachusetts Bay. Toward dusk it lightened up, harbor being made during the night. The squadron which made the passage included schooners Montauk, Clytie, Albatross, Varuna, Estelle, Phantom, Halcyon and Princess, and sloops Fanny, Gracie, Oriva, Vixen and Regina. Phantom and Halcyon hail from the East. It was agreed on all sides that the run was the most interesting portion of the cruise, and that the fear of yachting beyond the confines of the Sound, to which some persons are prey, is to be quickly held unworthy of the principal claim to the country. Sunday was spent at anchor or in cruising about and getting things into shape for the matches next day. A very large fleet was in harbor, over a hundred yachts being counted.

Aug. 14.—The races this day were for a schooner cup, value, $500, and two cups for first and second class sloops, value, $300 and $200, offered by the Eastern Y. C., and open to the visitors. Montauk declined to start on the plea that the Eastern yachts were in racing trim, and so Commodore Cook had to, but her most formidable rival, the Halcyon was no better off than the New York boat, and she may take Mr. Platt's refusal to sail as a very strong compliment. The steamer Confidence ran fifteen miles southeast and anchored as the weather mark. The start was effected at 11:15, wind light southeast. All hands stood across to the east on the first board, then tacked to the southward. The wind freshened and the work out became interesting. Half a dozen boards brought them around the mark without incident, as follows: Fanny, 3:10; Gracie, 3:12:48; Oriva, 3:28:10; Halcyon, 3:28:35; Vixen, 3:29:20, and Julia, 3:36:20. Not noticed. Spinnakers were run out to port. Gracie trying the other side but having to shift. The finish was made as under:

	Start.	Finish.	Elapsed.	Corrected.

Dream	11 55 00	Not timed.		

Halcyon wins among schooners, Fanny in first class sloops and Vixen in second. In the evening the New York fleet formally disbanded. Next day, August 15, a private match was sailed between the cutter Maggie and sloop Vixen, 15 miles to windward and return, for a $250 cup. The wind was light, and in beating out Maggie was weathering the sloop finely, though the latter footed a trifle faster. Vixen was lucky in catching the first of a strengthening breeze which lifted her a lively rate. On the cutter, and as the breeze continued to stiffen up steadily, the sloop got it first clear out to mark, thereby establishing a considerable lead, maintaining it to the finish. Time as under:

	Start.	Turn.	Finish.	Elapsed.
Vixen	11:29:00	2:50:10	4:42:00	5:13:00
Maggie	11:29:00	3:06:10	5:01:00	5:32:00

Concerning the bearing of these races on the question of type, we will have something to say next week. In the mean time we annex some scale-drawings, showing the manifest unfairness of racing boats of different type on length measurement. Vixen gauges 1,800 cubic feet and Maggie 1,300. If the latter be called 15 tons, Vixen is, in reality a 21-ton boat, and the great odds the cutter had to contend with can be appreciated. A comparison of midship section, sail plan and water lines plain, all reduced to square measure to facilitate examination, will go far toward a full understanding of the results of these races, and qualify their import materially.

LAKE YACHTING.

Editor Forest and Stream:

This is the season for cruising, and most of the yachts owned in this part of the country—I might say all hailing from Lake Ontario ports—are now on their favorite cruising ground, namely, among the Thousand Islands. Of the local craft the Oracle returned last night from a two weeks' cruise, and will leave to-night for Charlotte, whence she will proceed to Oswego on the 23d and sail in the race there. The Katie Gray will also take part in this race. As you will have learned previous to the receipt of this, the Bay of Quinte Yacht Club will hold their annual regatta on Monday, the 28th inst. The prizes will be liberal enough to insure a good attendance, and we fully expect that the cutter Aileen, whose overwhelming defeat of the big schooner Oriole in Toronto you so graphically described in a recent issue, as well as the Verve, the famous sloop Cygnet, formerly of Buffalo, and the well-known Vanity, of Cobourg, will be themselves against the Norah, a very fast sloop of 55 tons yacht measurement, built by Cuthbert, at Trenton in 1879, and purchased by our Commodore, Mr. R. J. Bell. The Norah has never sailed in a race, but in her first year with topmast and no light canvas, she beat the Oriole and the fleet of the Royal Canadian Y. C. by nearly half an hour, finishing 30 minutes ahead after starting 20 minutes behind them. We shall also have the Dauntless, of this city, Lady Agnes, of Toronto, (formerly Gorilla, of Cobourg,) and General Garfield, of Kingston, and possibly some of the Oswego first class. It is to be regretted that the Norah and Aileen will not meet on terms fair to the former, which under our rule of measurement will have to allow the cutter 10 minutes, whereas the cubical contents of Norah are 4,781ft. and those of the Aileen 4,500ft., the latter being, we think, should allow time. However, the owner of the Norah will be glad to meet the flying cutter on the terms prescribed by the club's rules.

In the second class we shall have the Gracie, Katie Gray and probably the Laura, of Kingston, the cutter Cricket, of Oswego, and cutter Verve, of Toronto. The Emma, of Cobourg, which has been sold to Mr. J. Cooper, Jr.; of Toronto, will not likely compete. Her absence is to be regretted, as the Gracie has been much improved and is fast enough, her owner thinks, to beat anything of her size, while the Emma is one of the fastest of this class. It is to be regretted that

BEVERLY YACHT CLUB.—AUG. 19.

THE open match sailed off Monument Beach was somewhat marred by vacillating winds, but a large fleet came to the line. There were four classes, the third not finishing in time to make it a race. First class for all rigs over 29ft. water line; second, cat rigs 29ft. and over; third all rigs under 29ft.; fourth, cat rigs under 23ft. Two cash prizes in each class. Ariel and Curlew were ruled out for sailing wrong course. Judges, W. Lloyd Jeffries, Geo. H. Richards and A. H. Hardy. Summary as under; several boats not finishing for lack of wind:

SYSTEMATIC OBSERVATIONS.

Editor Forest and Stream:

My principal interest during the recent cruise of the N. Y. Y. C. has been in boiling, so far as the position of passenger on a big schooner and the use of a first-rate binocular would permit, the performances of Oriva, and I have partially arrived at the following conclusions as to the sloop vs. cutter controversy. First, as a "fanner" the cutter, as might be supposed, is far and away the best type. This is no surprise to those of us who remember the drifting abilities of the old Vindex years ago, and is also borne out by theory. Second, in a short or confused sea with wind either light or strong, the superior dryness of the cutter makes her much the better boat. This was very observable in the Goelet cup race at Newport, where the Oriva seemed to go as straight as a ruled line, while the sloops slopped about in a way that must have kept their rudder across most of the time. As to the difference in a regular sea or in smooth water with a good breeze I doubt, and my dubitation seems to be warranted by the results of the Maggie-Vixen race, though of course one race, etc., and Vixen was sailed for all there is in her, as might have been predicted from her having been put into the hands of Mr. Yams. There arises in my mind another doubt, which is whether our British brethren have not weathered us more in the rig than in the hulls? Certainly, bar Albatross, Intrepid, Montauk and perhaps one or two more, there is not a decently rigged schooner in the N. Y. Y. S., and I do not know of one with her mainmast in the right place for weather work.

It is really disgusting to see a fairly decent hull crippled with two light shrouds on a side, a mainmast forced into the stern by the centerboard trunk, no mast runners, half the time no foretopmast backstay, and all the light gear about one-third the size it ought to be, as if the strains put on kite stuff in a ten-knot breeze were not proportionately greater than on shortened lower sails in a blow. In beating out of Newport both days with a small head sea, I noticed in the headstays of most of the schooners as they pitched slack so as to lose a considerable portion of the draw of the sails. Of course no hull can get justice done it under such conditions. I agree with your remarks about Montauk's performances. She may be a dyer, but there was no schooner in the late cruise to bring out her flying abilities. Gracie's comparatively indifferent performances astonished no one who had heard of her alterations in the matter of center of effort; she was in good form last season, probably as good as she admitted of. She is evidently wrong this.

I say nothing about cutter vs. sloop in really bad going. Of course the one can get along where the other drowns. Neither do I allude to the comparative comfort side of the question, except to say that Oriva impressed me as cooler than the trunk cabin boats of her class. I regret that I did not try a thermometer on both.

GOUVERNEUR MORRIS, JR.

[The conclusions of Mr. Gouverneur Morris strike us as among the most concise and logical we have seen, and we could not undertake to dispute a single one of his points.]

CUTTER LAUNCHED.—Beduin, the new 80-ton cutter built for Mr. Archibald Rogers, of this city, was launched from the yard of Henry Piepgrass, Greenpoint, August 17. She is the largest cutter yet built in America. Her lead keel weighs 35 tons, and ballast 60 tons in all. Design by Harvey & Prior, 50 Old Broad street, London, and 221 West Fourteenth street, New York. Length over all, 82ft.; on load line, 70ft.; beam, 15ft. 9in.; hold, 12ft. 6in. A sister ship is nearly ready for launching for Mr. Stillman. A full description will be found in our last volume.

Answers to Correspondents.

KING CHARLES, Baltimore, Md.—See answer to W. G. H.

W. G. H., Armstrong, Mass.—We do not know of a breeder of King Charles spaniels.

E. C., Hoboken.—See answer to L. A. You will find a variety of upland and lowland.

SNIPE, Cohoes.—No law in this State on snipe nor rail. Meadow lark season, Oct. 1–Jan. 1.

ARKANSAS.—The story of the "Arkansas Traveler" was published in our issue of March 25, 1880.

F. M. T., Nyack-on-the-Hudson.—We know of no preparation used to attract moths and butterflies.

D. V. C., Falconer, N. Y.—Where can I procure foxhound puppies? Ans. Write to Col. T. G. Tucker, Gaston, N. C.

J. D. P.—Wild rice should be sown in spring or fall. We will try to procure result of experiments made with other plant.

G. A. R., Cottage City, Mass.—The horse-hair origin of the *Gordius*, hair-snake, is hardly worth discussing in the year of grace, 1882.

G. H., New Orleans.—We cannot supply the numbers of ROD AND GUN, but will republish the matter relating to the Indian mounds.

L. A., New York.—In Pike county, Pa., you will find in their seasons deer, squirrels, rabbits, woodcock, quail, ruffed grouse, trout, pike and pickerel.

S. B. W., Augusta, Ga.—You can obtain duck decoys of any of the gun dealers advertised in this paper. Use as many of them as you can put out, the more the better.

C. D. C., Quincy, Ill.—1. Your gun should be a serviceable one; a change depends on your own taste. 2. From what we can hear, the cartridge gives good satisfaction.

B. A. M., Austin, Minn.—The night hawk (*Chordeiles virginianus*), and the whippoorwill (*Antrostomus vociferus*) are of different genera, and of course of different species in the family Caprimulgidæ, or "goat suckers." The family also includes the "chuckwill's widow" (*A. carolinensis*).

RIGHT AND LEFT, Hillsborough Bridge, N. H.—Will you kindly inform me the name of the proper flies to use for black bass fishing in New Hampshire during the month of September? Ans. Use bright flies, as green drake, jungle cock, bee, mullady, green hackle, red ibis, abbey, or professor.

J. H. D., Poughkeepsie, N. Y.—1. Has any person the right to shoot robins on his own land during August and September? 2. As the bobolink has now changed his plumage to the rice bird, is he any longer a bobolink, and under the protection of the game laws? 3. Is the mourning dove a game bird? If so, why not named in list of protected birds? Ans. 1. Robins may be shot on one's property when they are destroying grapes or fruit, but not otherwise. 2. The bird is still under the protection of the law. 3. It is so regarded in some States, where close seasons are prescribed for it. It has not received attention from the New York game protectors.

N. A. C., Gildersleeve's Landing, Conn.—1. Can a long-legged dog, as a general rule, endure more than a more stocky one, close built. 2. Is lemon and white a good color. 3. Is shape of nose any indication of keen scent. Ans.—1. No, although there are many exceptions to the rule. 2. Yes. 3. No.

INQUIRER, Lowell, Mass.—May I hope for information in regard to the following questions? 1. Name and publishers of practical instruction in fly-fishing? 2. Kind of flies to use at Connecticut lakes the latter part of September? 3. Exclusive of $20 or $25 split bamboo rods, what material, make and weight is next to be preferred; can not a reliable rod be obtained for $10 or thereabout? 4. To what date does the trout season extend according to N. H. law? Ans. 1. Morris' "American Angler's Book," price $5.50; we can supply it. 2. Red ibis, professor, May fly, green drake, queen of the water, brown and black hackles (palmer). 3. Get an ash and lancewood or hornbeam rod of eight to eleven ounces, according to your taste. You can get such a rod for the price you name; write to our advertisers. 4. To the 30th of September.

L. T., Red Hook, N. Y.—1. What is the "bench show dog chain," recommended by the various bench show committees this year, and where can I obtain them? 2. Who won the second prize at the last New York Bench Show in the class for rough-haired terriers? In your issue of April 27 you credit it to me, for my Irish terrier Colleen, which is an error. 3. What is the pedigree of the Irish terrier Colleen Dhas, the property of the Messrs. Carey, mentioned in your issue of Jan. 5, last, as winning first prize at the Alexandra Palace Show. Ans.—1. Write to the Medford Fancy Goods Company, 96 Duane street, New York. 2. Wildbrier, owned by Mr. H. S. Jaffray, New York. We correct the error with pleasure. 3. Colleen Dhas is by G. Jaimeson's Sport (J. Small's dam—J. Craig's Fan) out of G. Jaimeson's Peggy (Mickey Dooley's Sailor—G. Jaimeson's Fan).

S., Ottumwa, Iowa.—Please inform me if there is any work published on the fresh-water fish of this country. I desire an illustrated work, giving complete descriptions of all game fish, their habits, etc. If there is such a work please inform me where it can be obtained, and at what price. Ans. There is no such work. "Jordan's Fresh-Water Fishes of North America" is in press. It will be a scientific book, probably not noting habits and not illustrated. "The Game Fishes of the United States," by Kilbourne & Goode, gives twenty large colored illustrations of the principal game fishes of both salt and fresh water, giving one of each genus, and many smaller plates of kindred species. The price is $60, and it is well worth it as a work of art alone. It is thoroughly reliable and correct. "The American Angler's Book," by Thaddeus Norris, price $5.50, is a standard illustrated work on angling, and contains all that was popularly known when written. We can furnish either of the two last.

THE DOG HE DID NOT LIKE.—"Yes," Athelwald replied, speaking in low, impressive tones, "yes, I do like dogs; I am fond of them. But I like a shy, coy, shrinking dog, who flies away to the shadowy recesses of the woodshed when he hears the footfall of the stranger, and can only be won to sociability by love and kindness and patient pleading. I do not love the bold, forward, unquestioning mass of canine insolence and obtrusiveness that comes sneaking out from behind a lilac bush when one is just half way between the gate and the piazza, and nestles up to a stranger like an old acquaintance, and drags one all around the yard in a backward attitude, with no thought of one's dignity or comfort." And, with a dry, convulsive sob, he turned away, and as he walked toward the neckwear department the book-keeper noticed that his fawn-colored trousers had been patched in the postern gate with a nine-cornered piece of olive-green.—*Burlington Hawkeye.*

FOREST AND STREAM is so prosperous that it has been enlarged to twenty-eight pages. It is the ablest of our journals devoted to such out-door sports, as hunting, fishing yachting, etc. Its correspondence is full of interesting reminiscences of sportsmen, and it deserves special praise for the earnest effort it is making to secure the enactment of wise game laws and their enforcement.—*New York Evening Post, Aug. 19.*

Remember if you wish to buy a fine gun and save money, go to C. L. RITZMANN, 913 Broadway, New York.—*Adv.*

Pencils, Holders, Cases, Etc.

Send for Illustrated Catalogue describing the **new attachment for using rim and centre-fire ammunition.**

MASS. ARMS COMPANY, Chicopee Falls, Mass.

SIMPSON'S NEW FISHING TACKLE CASE.

A want long felt for by sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his Spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material, and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors, who have investigated its perfections. Size—Box: Length 12, width 7¼, depth 4¼ inches; trays (4): Length 7¼, width 4, depth 1 to 1¾ inches. top tray: Length 11¾, width 7, depth 1¾ inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-book, and each case packed in a neat box and sent on receipt of $4.50. To Clubs taking six at one time, $24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

R. SIMPSON, 98 FULTON ST., NEW YORK.

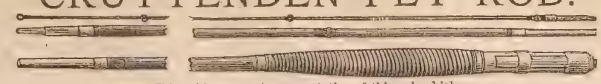
Training vs. Breaking

By S. T. Hammond ("Shadow"), Kennel Editor of FOREST AND STREAM.

Plain, practical, tested by thirty years' experience, humane, rational, efficient. Endorsed by those who have read it as the best book on the subject ever written.

To the ten chapters of "Training vs. Breaking," the author has added two sketches:

The One-Eyed Grouse of Maple Run,



My Old Dog Trim.

The whole forming a book of 100 pages. Printed on fine paper; handsomely bound in cloth. Sent postpaid on receipt of price, $1.00.

Forest and Stream Publishing Co.

39 PARK ROW NEW YORK.

CRUTTENDEN FLY ROD.

This cut is an exact representation of this rod, which

CANNOT BE EQUALED FOR THE MONEY.

It has Nickle Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of Rod. Tull Nickle Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tenuons which never allow the joints to get stuck together by swelling of same if they should get wet. Butt stained dark, polished and wound with cane and silk, giving it that desirable appearance and the feeling of the high priced rods. The middle joints and tips are made from fine lancewood, left natural color, varnished and polished. This makes a handsome contrast to butt, and gives the entire rod a look of beauty which is a joy to every fisherman's heart while using it. The rod is well ringed throughout. Length ten and one-half feet, weight from nine to ten ounces. This is the best made, best finished rod for the money in the United States, and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning rod to be repaired. With short tip it makes an excellent Bass Rod.

Sent to any part of United States, prepaid, with one Trout or one Bass Tip for $5.00. Trout Tips, each, $1.00, Bass Tips, each, 75cts., Trout Tips, one-half Bamboo, each, $1.25.

Gunmaking and repairing of all kinds by J. W. Livingston, formerly with Parker Bros., Conn.

Card's Standard Traps, Guns, Pistols, Fishing Tackle, Watches, Clocks and Jewelry.

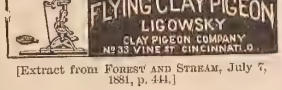
The Colt Club Gun.



It should be remembered that while we are the chief distributors of the regular Colt Guns, we are sole agents in New York for the Colt Club Guns. The marvelous performance of these guns in pigeon and glass ball trap shooting is so well known that no word of commendation is necessary. Every genuine Colt Club Gun has the rubber heel plate with the words "The Club Gun" around a circle, within which appears the rampant colt beautifully embossed. We are also agents for the new Harrington & Richardson Hammerless Guns, which at about half the cost surpass all imported hammerless guns. Address

P. O. Box 1114. **H. & D. FOLSOM, 15 Murray St., New York.**

TARRANT'S SELTZER APERIENT

Punctual as a Timepiece. Unless the bowels do their duty with the regularity of clock work, perfect health is impossible. Therefore when disordered, control them immediately with TARRANT'S SELTZER APERIENT, the most genial balsamic and effective laxative and alterative known to the medical profession.

SOLD BY ALL DRUGGISTS.

[Extract from FOREST AND STREAM, July 7, 1881, p. 444.]

* * * This flight so nearly resembles the actual motion of birds that the Clay Pigeons afford excellent practice for wing shooting. We commend all sportsmen to test its merits. * * *

WONDERFUL SPORT.

The Parker Gun.

Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

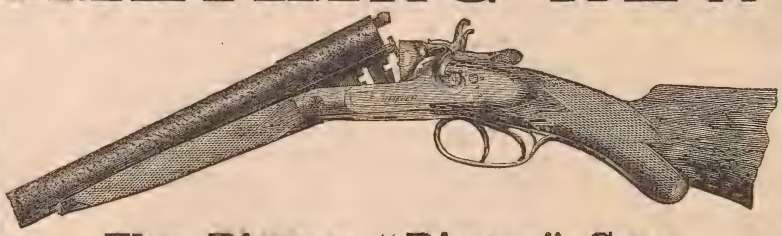
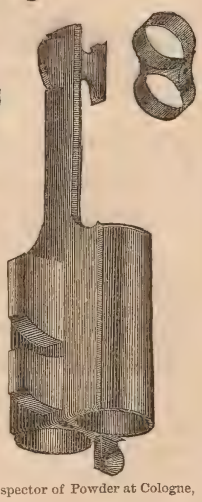
31 Wall Street, New York City, N. Y.

DOG TRAINING;



—BY—



T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

FOR SALE AT THIS OFFICE. PRICE $1.00.

SOMETHING NEW!

The Pieper "Diana" Gun.

This is the only gun of European manufacture made entirely by machinery. The system is entirely new, and actual tests have shown that for accuracy and strength it has no superior.

The reinforce lumps and bolt loop are of one piece of wrought steel. The tubes are finished to gauge and are put together *without heat* so that they are perfectly straight and always shoot to center. This is only found in very high cost guns made on the ordinary system, as the best barrel filers are necessary. The locks are finely finished and of the best steel, and all the joints are closely fitted; all the parts are interchangable.

A public trial was made in Cleve, Prussia, in August, 1881, to which the best continental makers sent their finest guns. The trial was for closeness and penetration. 4 is excellent, 3 is good, 2 is fair, 1 ordinary. The gun of Mr. Roedel, of Prague, was made on the Pieper system. The result was as follows:

	30yds.	45yds.	60yds. Total,
Size of shot.	2 4 6 8	2 4 6 8	2 4 6 8
H. Pieper, Liege	3 3 4 4	4 4 4 3	4 4 4 4—45
Roedel, Prague	3 3 3 3	4 4 4 4	3 3 4 4—42
W.W.Greener, Birmingham	4 4 4 3	4 4 3 3	3 2 3 3—40
N. Bodsen, Liege	3 4 2 4	4 3 3 4	1 1 3 1—38
C. Bartels, Wiesbaden	3 3 3 4	4 3 4 4	1 3 2 3—37
Sackreuter, Frankfort	2 3 3 4	4 4 3 3	3 3 1 3—36
Camphausen, Crefeld	1 4 2 3	3 3 4 2	3 3 3 3—34

	30yds.	45yds.	60yds. Total.
Size of shot.	2 4 6 8	2 4 6 8	2 4 6 8
A. Jannsen, Liege	2 3 3 3	4 4 3 3	1 3 2 1—32
Beermann, Munster	3 2 1 2	4 4 2 4	2 2 3 2—31
Brunn, Birmingham	3 3 2 2	3 3 4 4	2 2 2 2—30
Witte, Zutphen	3 4 3 3	1 1 1 1	3 2 3 2—27
H. Jansen, Wesel	1 2 1 2	4 3 2 2	2 1 2 3—25
Heuse-Lemoine, Nessouvaux	2 3 1 4	1 2 3 2	1 2 2 2—23
Cordes, Bremerhaven	2 1 1 1	3 3 2 1	1 2 2 1—20

Attested by the Jury, Klimm, Royal Inspector of Forests, Keyssler, Royal Inspector of Forests, Heise, Inspector of Powder at Cologne, G. Hahn, record keeper. It will be noticed that the Pieper guns are especially effective at long range.

Mr. H. Pieper has appointed the undersigned sole agent for the United States and Canada, and offers the goods at prices far below their real worth, in order to speedily introduce them into this market.

PRICE LIST.

For Sale.

TO SPORTSMEN.—FOR SALE.—A HANDsome farm and country seat, in Cecil County, Maryland, containing 115 acres, fronting on the Bohemia River, near its junction with the Elk River, with good fencing. The buildings consist of a large modern double-walled brick mansion, thirteen rooms with bath room; hot and cold water in bath and kitchen. The whole farm supplied with water by a first-class windmill. The other buildings consist of a billiard room, ice house, two tenant houses, granary, two large barns, carriage house, sheds, corn crib, etc. The house is elegantly furnished throughout. There is also a Rumsey deep well pump in summer kitchen; water good. Ducks in abundance when in season, and perch fishing excellent. The buildings are all in first-class order, so is the farm, plenty of fruit and grapes. &c. It will be sold with the furniture, stock, produce and farming implements, also decoys, sink box, &c. Any gentlemen or club desiring a handsome shooting box the above is one of the most desirable in the State. The location of the mansion is near 100 feet above low water mark, and the view very fine. Access by rail or Ericsson steamers. Photographic views of buildings.

Apply to JOHN S. HENKELS, Real Estate Broker, 51 North Sixth st., Philadelphia, Pa. aug10,3t

THE ANGLER'S

AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

THE OLIMAX PATENT GUN CLEANER

Is the most practical cleaner and oiler for breech-loading arms ever invented.

It operates on an entirely new principle, and it is astonishing how quick and well it will clean and oil a gun. Each cleaner is packed in a neat box with full directions for use, and will be sent to any address, postage paid, on receipt of $1.50.

Illustrated Circular sent free on application.

In ordering give calibre of gun. All orders and inquiries to be addressed

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and likelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kenawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

THE ROUTE OF THE TOURIST,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, V., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. V., between the mouth of Chesapeake Bay and the Pacific Ocean.

Sportsmen's Goods.

Kay's Chip
OR
EXPANSIVE SHOT CONCENTRATOR,
With Perforated Case.
In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.
By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.
100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.
Address all orders to A. B. KAY & CO., Newark, N. J.

In ordering state caliber of gun. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

ANSWERS TO CORRESPONDENTS.

NOTWITHSTANDING THAT THE FOREST AND STREAM has been permanently enlarged to twenty-eight pages, the subscription price remains the same as before.

NOTES OF THE SEASON.

ANOTHER leaf is torn from the calendar, and to-morrow's sun ushers in the glorious September, first of the three months which hold the highest place in the sportsman's heart. From this time until the leaden sky of winter shall succeed the autumnal blue, the out-door world will increase its luring charms, and with clarified atmosphere and ever changing garb of verdure and foliage, call the sportsman forth. September, October and November—these are the choice field months of the year.

To-morrow, September 1, will in many States open the legal shooting season for a wide and rich variety of game. And eagerly as they have been anticipated, and patiently as the intervening weeks have been counted off, so heartily will these field days be improved and enjoyed.

A glance at the carefully-prepared game table printed on another page will show that the personage we speak of as "the American sportsman" may in September take his pick of a heterogenous supply of game. If he be ambitious, there is the deer or the moose, the caribou, the elk, the antelope, the mountain sheep; or—if that be game—the buffalo. Or if more humble be his aspirations, robins, "rabbits" and squirrels are in season too. The fancy of most gunners will turn to the feathered race, and here may be found a like diversity, ruffed grouse and rail. Many a quick-aimed gun will be discharged at the flashing form of *Tetrao umbellus*, that prime favorite of the expert shot, and the wily hero of many a zig-zag escape from wing-shooter, and unscathed by the volley of the poke-shooting "treer." The grouse, in most sections where in season, are now pretty well advanced in growth, and much more scattered than they were a month ago, or will be a month hence. The gunner who in early September returns at night with a good bag of grouse must have followed them far over the hillsides. The ratio of steps taken, shots fired and birds bagged, is decidedly different now from what that ratio will be a month or six weeks hence.

With the exceptions of Connecticut and New Jersey, woodcock will be everywhere in season in September. In some of the States the birds have already been hunted for two months. But in many sections, even though the close time has expired, the birds are not yet fairly through their moulting; they are ragged, and not in full feather. But from this time they will improve, and toward the end of the month they will be flushed in prime condition. They, too, are scattered now; a few still linger about the cornfields; others will be found in the low-lying covers along the streams, and others in the damp dingles on the hills.

Quail shooting opens in some States to-morrow, and in others on the fifteenth; elsewhere they are protected, as they should be, for a month or two months longer. September is too early for quail shooting; the broods are, as a rule, not half-grown. They will afford a much more worthy object of pursuit later in the season, when the sky is bluer and the rustle of the falling leaf intensifies the silence of the woodland.

Prairie chicken shooting is with the first of September just in its prime. From many parts of the great West reports of the abundant "chicken crop" have come to us, and before this number of the FOREST AND STREAM reaches its thousands of Western readers they will have tested for themselves the prairie chicken shooting of 1882.

The storm of last Sunday was just what the shore-bird shooters had been looking for, and it is safe to say that the visitor to the beach now will reap a rich harvest. This should be a red-letter week for the beach gunners. The rail and reed-bird gunners are now flocking to the marshes, and with to-morrow's tide the fire will open all along the line.

And to the gunner, whether his game be the rail which makes a mouthful, or the elk which will feed a camp, the FOREST AND STREAM extends the compliments of the season, bespeaking for each a full measure of the enjoyment and satisfaction which come of days well spent afield.

A NEGLECTED SPORT.

IT is very singular that few sportsmen in the East hunt large and dangerous game. The States of Pennsylvania and New York, as well as most of those lying east of them, still have more or less bears, panthers, lynxes and wild cats, which few men except guides and trappers ever hunt. Why this is so, we are at a loss to answer. It cannot be that our lovers of field sports have become so degenerate as to abandon these sports which their ancestors delighted in on account of the danger attending them, for certainly there are sports still followed which are as full of danger to life and limb as the pursuit of these animals, and the only reasonable solution of the question appears to be that the hunting of such big game has gone out of fashion only in this part of the country, for some Eastern men have gone to the far West to hunt the grizzly bear.

In Germany the wild boar is hunted with dogs and spears; in India the officers of British regiments have their regular "pig stickings," and hunt the tiger and the elephant. In other parts of the world the wolf is followed with as keen a zest as it was two centuries ago. And yet our youth go to the Adirondacks and are content with bagging the harmless deer, many of them even killing them by "floating" at night, a most lazy and unsportsmanlike method, and one little calculated to develop manly qualities. Some one, whose name escapes us at this moment, has laid down the axiom, "the greater the danger the greater the sport," and young Hotspur, eager at the scent of danger in defying the power of the king, exclaims, "O, it more stirs the blood to rouse the lion than to start the hare!"

Instead of looking on the cougar, which by a mistake has been termed a panther, as the noblest of our eastern game animals, as indeed it is, our sportsmen have allowed a bounty to be placed upon it as belonging to the class of vermin. Let our young deer floaters imagine their feeling of triumph on bringing down a lordly panther or a ponderous and savage bear, and compare this with the killing of a timid deer. How their hearts would throb and the breath be held until the swollen veins protested! And what memories of the long chase, the sudden turning to bay, and the quick but sure shot which brought the savage monster down to earth, would be cherished and told over at the fireside. This is the sort of sport which develops manhood and self-reliance.

We believe that if bear and panther hunts were organized by our sportsmen they would soon become popular. True, the game is not plentiful, but still the greater will be the triumph of bagging it, and a party might be weeks in the woods without seeing a bear, and would fail to get many that they did see, but the chase has its excitement which culminates when the game is brought to bay.

A party of four, with proper dogs that have not too much courage, could have splendid sport in the pursuit of a bear, and the following of it would involve some generalship in order to head it off. They would start as lightly encumbered with blankets and provisions as possible, and sleep on the trail until the game was killed or lost. We have suggested dogs with not too much courage for the reason that a dog which is brave enough to attack a bear seldom lives to repeat it, and timid dogs which would follow and annoy it by circling round and bringing it to bay occasionally, and so detain it until the hunters came up, would be the best.

Panthers are not plentiful enough to hunt systematically. There are probably not more than half a dozen in the entire Adirondack region, and they could only be found by accident when a party was out after bears, but when found they are wary, and their chase is calculated to develop the highest qualities of both pluck and muscle. Let us remove the bounty from panthers and organize bear-hunting clubs.

THE LONDON FISHERIES EXHIBITION.—Although Prof. Baird's circular, which we published in full in our issue of Aug. 10, was very plain and clear, there seems to be some misunderstanding of it by a few who intend to exhibit. The Professor's rule is that objects which he purchases in order to fill up the American exhibit will be shown as part of the collection of the National Museum, or the Fish Commission, without either label of the seller on the object, or the appearance of his name in the catalogue. Objects which are loaned or donated by the maker, inventor, or dealer, will be labeled with his name, which will also appear in the catalogue. The rule which the jury at Berlin followed was to award prizes to the exhibitor of an article and not to the maker; thus a dealer in fishing tackle might receive a reward for the best rods, lines, or reels, which he bought from some maker who had not enterprise enough to exhibit. While the Fish Commission will receive full series of articles it will not allow an unnecessary, or unreasonable, duplication, merely to make a show of quantity. Those who wish to exhibit will do well to bear these things in mind.

CATFISH FOR BELGIUM.—We publish elsewhere the correspondence which relates to the introduction of American catfish into the waters of Belgium. The sluggish, muddy rivers of that country are particularly adapted to sustain this fish. Professor Baird has directed Mr. Fred Mather, of this journal, to procure the fish, and has left the selection to his judgment, merely suggesting that more than one kind be sent. Mr. Mather has decided to send the small northern "bullhead," *Amiurus catus*, for one, and thinks of obtaining a larger southern species also, and would like suggestions as to the comparative table qualities of southern catfish, and also the best means of obtaining forty or fifty young specimens of them. He can be addressed at the office of the FOREST AND STREAM.

THE COMING FIELD TRIALS.—The coming field trials are sure to be a success so far as the running of the dogs is concerned, for we hear whispers from far and near of many wonderful animals that are to take part, each and every one of whom can win "just as easy as rolling off a log." We have also heard of several others who, perchance, may not secure the first place, but are dead sure to win the second. No one to our knowledge has yet put in a claim for third place, and we would advise those who have this class of dog to enter them at once, as this prize is well worth the winning.

FOREST LAKE ASSOCIATION.—This club, composed of well-known residents of this city, have secured the Forest Lakes, in Pike County, Pennsylvania, where they will maintain game and fish preserves, with club house, cottages, etc. The management of the enterprise is in good hands, the officers being: Dr. Alexander Hadden, President; Edward G. Black, Vice-President; Dr. J. V. S. Wortley, Secretary; Robert Betty, Treasurer; J. H. Van Etten, counsel.

THE FOREST AND STREAM aims to reflect the varying phases of legitimate field sports as conducted in every portion of this broad land. With the opening of the shooting season our friends everywhere are invited to send us for publication reports of their field days and shooting excursions.

ADIRONDACK SURVEY NOTES.

VII.—FISH

"THERE is a fish in Long Lake which some call a muscalonge and others a pickerel," said the guide, "and no one seems to know exactly what it is, or, if they do, the others who differ from them don't accept their decision. You should go there and see the fish and settle it."

"Certainly, we will go," said I, "what will we want in way of blankets and baggage?"

"Nothing; go as light as possible, take your rods and creel and that is all we will want. We will leave Fourth Lake in the morning about 10, dine at Bennett's on the Raquette, go down the lake and river, carry into Forked Lake and again down the river to Buttermilk Falls, where we have a short carry and then a longer one of half a mile into Long Lake, where we will stop for the night at Kellogg's and fish in the morning. After getting what you want we will come back by way of South Pond, Mud Pond, Minnow Pond and Blue Mountain Lake, fishing them all, and no doubt some new specimens will be found in some of these waters which we have not picked up yet."

We followed this programme and on arriving at Kellogg's on Long Lake, we found the question of maskinonge versus pickerel being argued in the bar room. One man said that he had been all through New York markets and had asked the differences between the fish, and the market men had always showed him fish like those in the lake for maskinonge, or muscalonge as it is here called. Fortunately the landlord had one in the kitchen and Sheppard suggested that it be shown to me. On producing it there was no difficulty in determining it to be the great lake pike, or pickerel, *Esox lucius*. It is singular how much mixed the mass of anglers are about this family of fishes. The colors alone are sufficient, generally, to identify them without going into the structural differences, as scales on cheek, etc., yet many who can distinguish the two named do not distinguish the great pike from the smaller pickerel, *E. reticulatus*, the one which only grows to five or six pounds and has black network on its sides, but call them both "pickerel." We only stopped next day long enough to take four specimens, two of which were too large for the alcohol tank, and therefore had to be given away. The smaller ones, about two pounds each, were put in the creel and we climbed the high hill that lay between the lake and South Pond, where we fished for small fry, and then struck the hard two-mile carry to Minnow Pond, which must be some three hundred feet above Blue Mountain Lake, into which it empties. The carry to the lake is described as "half a mile going down, but a full mile going up."

We took some black bass in Raquette, going back, and they seem to be exceedingly plenty. They took the fly near the shores, but the larger ones were not there, or not in the humor for flies. A big one struck a spoon but broke away. The introduction of bass into these trout waters was a grave mistake, and is a source of regret to trout fishers. It was done some years ago by the New York Fish Commission, and they have been doing something equally bad this spring in putting rainbow trout into the Fulton Chain, a fish much inferior to our brook trout, and one which will grow faster and eat up the food if it does not eat the trout. Like the introduction of the English sparrow, this fish may turn out a nuisance. No waters that will sustain our brook trout should be planted with bass or rainbow trout, for when they come in the brook trout go out. The guides said that many of the rainbow trout were dead, but I fear enough were alive to establish themselves. When the Scotchmen held a congratulatory dinner over a single thistle planted in Victoria, twenty years ago, they did not foresee that to-day many farms would be ruined by it.

Most people agree on the excellent table qualities of the Adirondack lake trout. They are a fine fish, and I prefer them to the brook trout for the pan. In the spring, while the water is cool near the shore, these fish take the fly well, but in summer they must be sought in deep water, for of all their family in America they are most sensitive to warmth and die soonest from it. The salbling, or German charr, is probably as sensitive, and these waters would suit it very well. The fish would also suit the waters, as it is a lake trout of large size with a beautifully colored crimson side and belly, and a fine table fish. The native lake trout of this region can be distinguished from those planted here by the commission from parents in Lake Ontario, by their color. The skin is darker and the flesh redder, yet ichthyologically they are the same fish. One would think the strangers, having been placed here in babyhood, would assume the characters of the natives. I had no chance to test their comparative table qualities. The land-locked salmon planted in Bisby and Woodhull have thriven and will no doubt be a valuable addition to those waters; I hear of one having been taken in Woodhull of one and a half pounds.

Bullheads (catfish) and frost fish (a species of Coregonus), are the main table fishes beside those mentioned. The former can be readily taken near the shores, especially at night, but the latter do not bite and are usually captured in the fall, when on the spawning beds in the inlets. Sunfish infest all the lakes. These pests must destroy millions of trout-fry. Worthless themselves, nature has seen fit to guard them with formidable spines which even a ravenous pike is forced to respect to some degree, hence they increase at the expense of trout. If the amount appropriated to the river and harbor bill could be diverted to the extermination of the last sunfish in America it would be money well spent, provided it was not distributed by the politicians.

The "salmon" which one hears of so much here is simply the lake trout, sometimes called salmon-trout, and often the first part of the name only is used. I heard a man try to make a distinction between brook trout which live in lakes and those which inhabit the inlets or brooks. He termed the latter brook trout and the former "lake-brook-trout," in his argument to sustain his position that there were two species, or rather to maintain that "lake trout" was an indefinite term and meant any trout which was found in a lake. He did not succeed very well after a guide asked him to describe his lake-brook-trout so that it could be distinguished from the ordinary brook trout, and suggested that a deer was the same animal whether found on the mountains or in the lakes. A lake trout of 27¼ pounds, from Raquette Lake, is credited to Alvah Dunning, the guide, who sent it to the superintendent of the Adirondack Railroad. It was taken July 2, 1879.

Brook trout abound, but are not as plenty as I thought for. In some of the lakes they are either scarce or won't rise. I did not try bait for them and did not change flies often. On Big Moose I took many, and, of course, lost a big one. This is how it happened. He struck and I struck. He appeared astonished and opened his throttle valve, and crowded on all steam, hoping to reach the lower end of the inlet on time. The brake on the reel broke at this instant and the bell cord overran. He turned at the same time and started in on the down grade, and passed the boat with axles red hot; saw 'em gleam against the dark bottom. What could be done when the air-brake was gone? We held our breaths at the pace, but he slowed up on a curve and the strain was felt on the coupling again. I whistled "down brakes" and he mistook a lily-pad for a turn-table and went round it, something became uncoupled and he slowly steamed out of sight with a train of only two flies behind him. Jack called "fifteen minutes for refreshments," and I hauled into the shop for repairs. F. M.

The Sportsman Tourist.

EAGLESMERE.

ALLOW me to open this article with the assertion that no better companion can be found for a shooting or fishing excursion than a clergyman of the right sort. Whether it be the sudden relaxation from the responsibilities of his regular vocation I know not, but he is always alive to the ever varying phases of the trip, and while acting as a sort of ecclesiastical air-brake, does not in any sense mar—but on the contrary enhances—the pleasures of the outing.

It was my good fortune last May to be the companion of such an one for a two weeks' sojourn in the wilds of Sullivan county, Pa. Leaving our valley home in western New York, we arrived at Towanda, Pa., at 3 P. M., in good time to take the train on the "State Line & Sullivan," a sturdy little coal road that pierces the wilderness in a southerly direction, bringing up at the Loyal Sock coal mines, at Bernice, the product of which it hauls down to Towanda, where it is distributed all over the United States. Our train consisted of an almost endless string of coal dumps, with a funny little passenger car bobbing along a mile or so in the rear of the engine. Nevertheless we were very comfortable, and not a little amused in watching the representatives of Sullivan county and listening to the wonderful fishing yarns of an old gentleman who, although way beyond the regulation three score years and ten, was bound like ourselves for a favorite trouting locality. Arriving at Dushore, the metropolis of the county, a place of perhaps five hundred inhabitants, we took stage for La Porte, the county town; and now it seemed that we were in the woods in earnest. Over rocks and through ruts we jolted, crossing the Loyal Sock on a long covered bridge, listening to the swirl of the waters we could not see with all an angler's delight.

La Porte was reached at about 9:30, and it is still a matter of wonder to me how the seat of government was ever moved to that forsaken place without wearing it all out "in transitu" over those fearful roads. The town consists of two hotels, the court house, church, a large tannery, three or four stores and a scattering of houses. As far as the eye can reach on every side stretches the interminable forest, its vivid green interspersed here and there by desolate brown patches, showing where the insatiable bark peelers had been at work. But we slept well at the comfortable hostelry, and the following morning were all ready for the last stage of our journey, a six-mile ride to Eaglesmere, our objective point. While making arrangements with the local butcher for our transportation across country, who should come rattling into town with an excellent team and double-seated democrat wagon, but Chris. Peale, an old and tried friend of the dominie's, whose route lay exactly in our direction. We soon had our traps aboard, and bidding good-bye to La Porte, went bowling along the forest road at a rate that tossed off the six miles in no time.

Eaglesmere is a lovely little oval of spring water about a mile in length, twenty-two hundred feet above tide water. Far from the haunts of civilization it still has a romantic history. Nearly a century ago a wealthy Englishman while hunting in this region was struck by the beautiful sand along its shores, and conceived the idea of founding great glass works here that should bring him in wealth and fame. He carried out his scheme and spent a large fortune putting up magnificent stone buildings and tenements, but the transporting of his wares to Harrisburg by wagons over frightful mountain roads, and the bringing in of supplies by the same slow process proved disastrous to the undertaking, and the works were abandoned and tumbled into ruins. For years this lovely spot lay tenanted only by the wild deer and bear until re-discovered by the ubiquitous trout fisherman, and summer cottages began to spring up, a hotel was built, and to-day one finds a summer resort in miniature, with good hotels and a telegraph station within six miles, a little steamer plies the lake, and a band thumps a windy accompaniment to flying feet on the balcony of the hotel.

It was at the door of one of these cottages loaned by a dear friend of the dominie's that Chris. hauled up and deposited his load of two fishermen and their impedimenta. Do you call this a cottage? I remarked as I looked up at the hotel-like structure before us, with its two stories and a broad verandah all around. "O well, S. has a large family, and no man delights in plenty of room so well as he," quoth the dominie, "but come in, here is the key on the joist, just as Mrs. S. wrote me." A jolly wood fire was soon crackling in the grate, and another in the kitchen stove, and after unpacking we donned the fishing suits we were to wear during our stay and sat down to a cup of coffee. Talk about cottages in the backwoods, why this was a finely furnished house—carpets on the floors, easy chairs, spring beds, pictures, besides many little comforts and luxuries that a good wife will accumulate for the good of her family and guests. After looking over the supplies and finding everything in good shape the dominie suggested that we try our New York worms (he had brought some along to be ready, you know) on the trout in the outlet for an hour or so and see if we could get enough for supper, and we did, basketing twenty small ones, and you may be sure they were not large, for we ate them all.

There are no trout in the lake, but within a radius of three miles are a number of streams tributary to the Loyal Sock and Muncy Creek that afford fine fishing. Among these are "Shanersburg," "Rock Run" and "Pale bridge," all near enough to reach comfortably by walking, fish and return at night by supper time. The trout run rather small in these streams, but are quite plenty, the large ones lie in the big creeks below, but the water being high we had to confine ourselves to the branches.

We had resolved to put in our first day on Shanersburg, that being the most accessible of the streams; so the morning found us up with breakfast dispatched at an early hour, and with the dominie—who knows the country like a ritual—in the lead we threaded the wilderness happy as a couple of schoolboys out for a holiday. The air was bracing and the day fine, and when luncheon time came we were hungry as wolves and some miles down the stream. Our luck was far from extraordinary, and when we got through cleaning our catch preparatory to going home it only numbered sixty-one trout, none of them monsters. But sixty-one trout are quite a mess for two men—even in the first flush of mountain appetites—to surround; but a heroic onslaught at 9 P. M., and another next morning, so reduced the pile that we started for Rock Run without feeling that we were wanton destroyers of the loveliest of game fish, and in no wise entitled to the medal awaiting those who by their prowess are entitled to entrance to the most noble order of "trout hogs." To Rock Run was a good three-mile walk, but we arrived at the old mill in good time, and although the day was a poor one we beat our previous catch eight fish. It was a weary homeward walk we took that night in the gloaming, and it did seem as though the cottage would never come in sight, but it did at last, and what was our surprise to see a cheerful light streaming from the open door and windows. "S. has come" quoth the dominie, quickening his pace, while I followed feebly fleet, and sure enough we found not only S. but his good wife, waiting with open arms to receive us. They had driven over from Muncy, twenty-four miles, with a wagon load of delicacies and substantials just to make us happy, bless 'em. May be we didn't make awful inroads into the steak, lettuce and asparagus provided, and may be the bottled pop (I guess it was) didn't disappear? Ask the dominie who had a headache all the next day, so we couldn't fish, and as the day was Saturday necessitated our waiting until Monday before operations could be resumed.

But don't think Saturday and Sunday were wasted—far different. Uncle 'Lijah and his amiable wife, who were up to see how their cottage was getting along, and to mend a pesky leak in the cistern, dropped in to dinner, and we were favored with a call from Mr. and Mrs. Peale, who had raised a fine family and wrested an independent living from this stern and barren soil, not forgetting Davy Sams, the minstrel, who, between sips of hot lemonade and the crunching of ginger nuts, discoursed original snatches of psalmody, that we all vowed would put Messrs. Bliss and Sankey to their metal to equal. So the days passed and Monday morning came, and Mr. and Mrs. S. took their departure, not, however, until our host had driven us to within easy walking distance of Rock Run, where we proposed to put in a full day. The day was fine, and having learned by experience where the barren waters were, we made the most of our privileges, and when brought up with a round turn by a terrific thunder shower we scored one hundred and one. What a tramp we had home that night—five miles through the driving rain, wet to the skin, baskets heavy and stomachs empty. I never so fully realized what hunger was. Misty visions of our long table well filled with good things danced across my disordered vision, and my groaning stomach seemed to say "'twas never thus before." When we reached the cottage, all soaked and "busted," I had just strength enough left to grope in the darkness and grasp a pilot biscuit with one hand and a wired cork with the other and sink exhausted into a chair. O, it was awful, but the dominie remarked "that the instinct of self preservation seemed fully alive in me when I made that masterly move in the dark."

And so the week wore away, our catches averaging about the same day in and day out. Individually the "apostolic hook" was in the ascendency, and I had the honor of beating my friend but once. Not a trout was wasted, for Uncle 'Lijah going home carried a fine lot down to the friends in Muncy, and when the last day came we went down to Shanersburg and caught an even hundred. These we packed in ferns and prince's pine and carried home with us fresh as daisies.

We had hoped our last day to fish down to the Loyal Sock in time for a few casts for the big fellows, but the distances are magnificent in Sullivan, and we couldn't even get in sight of the big creek before we had to turn about and "make tracks for home" or stay in the woods all night. It seemed a little sad next morning to be obliged to don the habiliments of civilization, pack up our traps, and leave the pleasant spot where we had been so happy, but Mr. Morgan was at the door with his broad-gauge horse and wagon, so bidding adieu to Eaglesmere and the cottage, we bundled in the truck, and with a stern resolve to come again, went trundling down the mountain. Now, if there is anything that will make a man forget trouble, it is a six mile ride with Mr. Morgan of Eaglesmere. Mr. M. keeps an excellent boarding house at the lake, and he and Mrs. M. have the happy faculty of treating their guests so they are sure to come again. M. is a bluff, hearty Milesian, full of anecdotes that he recounts inimitably. A strong Church of England man, he holds all other sects (especially the Baptists) in quiet contempt

and many an amusing story did he reel off touching the doings of the itinerants.

But La Porte was reached at last, and bidding Morgan good-bye, we whiled away the afternoon and evening at the court house, taking in the pros and cons of Sullivan county justice. At 5 A. M. we were aboard the stage en route for home and civilization, feeling well paid for our trip.

H. W. D. L.

A SUMMER AFTERNOON.

SUNDAY afternoon, dinner over, we saunter slowly out with paper and pillow to the hammock listlessly hanging under the beeches. Glorious tree an old beech is; though its bark be gritty its heart is sound and full of sap, running out into the tips of its tiniest twigs, bursting the soft brown envelope which protects the tender buds and scattering them in showers to the earth. The leaf at first so frail and delicate, soon grows firm, and with its companions, casts a most grateful shade. Under such a canopy it is now our privilege to recline, and with the gentle, soothing swing of our comfortable supporter, we are prepared to enjoy to the full our *dolce far niente*. Too much exertion to read, we lazily drop the paper, which flutters down, subsiding into the grass with a soft rustle. From our elevation, we gaze down between the tree trunks, out over the sunlit farms, with their houses nestled snugly among clumps of dark green verdure, to the still waters of the bay, and beyond to where the Orange Mountains break the horizon. A few fleecy clouds hang over their tops, quiet, motionless, and, but for a single exception, the steady wheeze, wheeze, wheeze, wheeze, of one restless steamtug, all nature seems to sleep. The soft beat of paddles is borne to us from the distance as an excursion steamer forges past, laden with her dense crowd of humanity, then all is silence again.

Overhead, way up among the green boughs, hangs an oriole's nest, tied with that wonderful ingenuity this bird displays, to the extreme fork of a bending branch, light, airy, it hangs suspended; swaying responsive to the lightest breath. A subdued twittering, with an unmistakable movement of the gray pouch-like shape, tells us that there is life there, and the tremor of the overhanging leaves testifies that the little household is stirring. A bright form flashes down through the tree-top as the parent bird approaches. Cautiously, silently he comes, with short, quick flirts, from twig to twig, until reaching his little ones. Then ensues a pause, and after a final glance around to see that all is right, he ducks in under his green doorway, and the twitter and hubbub is fairly doubled, as he drops the longed-for food into the hungry little mouths. Another flash of bright plumage, and his clear ringing note is heard, as he darts off to renew his search for more choice morsels in the orchard near by, with which to gladden the hearts of his darlings in their cosy home. His mate now appears, going through the same performance, the stealthy approach, joyous reception, and quick departure; this continues until all fades into the far away, and—you—are—asleep.

Br-r-r-oom! an ominous muttering awakens you. The clouds are heavy in the west, and during your nap have tumbled into great masses and banks, which are slowly and majestically rising and spreading over the sky. *Boom, Broom, Br-r-r-oomm*, the distant thunder crashes among them, and reverberates as it rolls down their mighty corridors; there comes the breeze, you see the tree-tops bow before it, and soon it rollicks and surges through and among the branches above, making it very lively for our little friends in the nest. The sun disappears behind the now swiftly gathering clouds, and the heretofore stationary vessels bend with full sails as they run before the gust. All is activity, and a gloomy darkness takes possession of the quiet scene of an hour before. The clouds are inky in their blackness, and the thunder following close to the lightning's flash, bellowing incessantly, and rending the heavens with that terrifying s-o-l-w-s-h, bing, bang, boom, boom, completes the confusion now raging in the air. Great, splashy drops, the forerunners of the deluge to come, patter among the foliage as we hasten under shelter. We see the rain coming like a mist over the water, shutting out Robins' Reef Light, then, one by one, the vessels, as with a veil. As it draws rapidly nearer we hear the dull, hollow roar of its approach, and see the dust spurt up from the parched fields to vanish on the instant, beaten down by the flood. Its damp breath fans our face, and with a mighty rush it is upon us. Blinds bang, windows strain and creak, and the heavens seem as though shut out forever. There is a silver lining to all clouds, however, and while the very air teems with the falling water, a yellow gleam breaks through from the west, which broadens and suffuses the whole landscape as the storm recedes, until all is blue above, and the glances of a setting sun fall upon a lovely scene. "Nature smiling through her tears." In the east our clouds show their gold and silver lining, spanned by the sign of God's covenant, and while we breathe the reviving air, the sweet, flute-like voice of the swamp-robin floats out from the shrubbery as his clear notes are raised in evening song, the deep-voiced thunder rolling in at intervals a rich accompaniment.

DICK.

DESPOILING THE ADIRONDACKS.

Editor Forest and Stream:

The recent purchases made of the large tracts of land by a few individuals in the northern wilderness for the timber it contains, and the building of railroads through this region, is to the sportsmen who visit this resort like the tearing down of the old homestead, coming, too, as it does now, at the very time when the woods abound in deer (thanks to the vigilance of State Game Protector Dodge) where a scanty few formerly existed.

There is enough influence in this State by eminent men to make this place the much-talked of State park. This could easily be brought about if one good influential man would take the lead and make it a business to draft an act exempting these woods for the uses of the State, put himself in correspondence with the men of different cities in the State, and they to circulate petitions and use such influence as may be necessary for its enactment.

Could not such an act be passed when we know it would receive the support of such men as ex-Gov. Seymour?

A stranger visiting these woods will be surprised to see what a large number of the regular visitors are made up of professional men—Judges, Senators, Congressmen, and all men of note. Such an act would receive their hearty support.

Who is the man that will take the lead and who will join hands in its support?

Natural History.

SERPENTS WANTED.

WASHINGTON, Aug. 21, 1882.

Editor Forest and Stream:

In the year 1833 Dr. Gerard Troost, Professor of Chemistry and Natural History in the University of Nashville, Tenn., presented a paper to the Lyceum of Natural History of New York, which was read in April, entitled "On a new genus of serpents, and two new species of the genus Heterodon, inhabiting Tennessee." In this he described a venomous serpent from Maury county, Tenn., calling it *Acontias atro-fuscus*, but finding that the generic name was preoccupied, he substituted for *Acontias, Toxicophis;* this gave place, however, to an older name, *Ancistrodon* of Palisot de Beauvois, so that at the present time the species is known as *Ancistrodon atrofuscus* Troost.

Since the time the species was first described it has remained unrecognized, and so far as the writer knows, there are no specimens in any of the large collections of the United States, certainly none in the National Museum, Washington, D. C.

For some time Prof. S. F. Baird has been endeavoring to complete the National Museum series of North American reptiles, and many rare species have been supplied through the efforts of friends and correspondents, but quite a number are still wanted, among them this particular serpent of Troost's.

A description is here given in the author's words, in order that if seen it may be recognized; and the National Museum will be glad to receive a number of specimens of the species, living or dead, for which due acknowledgment will be made. In case living examples are captured Prof. Baird should be notified as it is necessary to make special arrangements for safe transportation.

DESCRIPTION OF ANCISTRODON ATROFUSCUS,

"vulgarly called highland moccason." As I have already mentioned, different names are given to the same animal, so the present species is also called copperhead and pilot, while these names are also given to other poisonous snakes.

Character—Head large, sub-triangular; broad behind, smaller and truncated in front, covered with plates to the occiput, behind which are small, smooth hexagonal scales; a deep pit between the eye and nostril; upper jaw armed with fangs (four in all, Dr. Troost says, but this is probably not the rule, two being the proper number); body above, dusky, variegated with dark brown spots. Abdominal scales 133, sub-caudal scales 25, 18 to apex of tail." The specimen described by Dr. Troost was 25 inches long, the circumference of the thickest part of the body being 4½ inches. "The thickness of the body diminishes abruptly at the tail, which is short, cylindrical, slender and terminates in a small horny point."

The color of the upper part of the body must be considered as black, variegated with brown spots, which are not of a uniform shade, but pass from dark into a lighter color; they are irregularly scattered over the body; nevertheless they exhibit a tendency to run from one side toward the other, widening toward the back. The light spots are composed of smoky gray, passing into blackish brown, exhibiting all the intermediate shades between these two colors; they are rather small stripes, of the breadth of from two to four scales, and disappear near the tail altogether, which is entirely black, having only four small white points, which are probably accidental.

The upper part of the head is black, bordered with gray, which becomes white behind the eyes. A dark longitudinal spot runs from the eyes and terminates near the tympanic bones. The upper lip is white, terminating near the tip in gray.

The lower part of the body is also irregularly spotted with black and a dirty white. The white color predominates, from the head backward, beyond the middle of the body, where the black gradually increases as far as the tail, which, as has been mentioned, is entirely black. The white is punctuated with black over the whole of the lower part of the body. The under part of the head is also irregularly marked with black and white, the white predominating; but the lower lip has three white spots, the tip being gray.

"The habits of this reptile differ much from those of the preceding species, *Ancistrodon contortrix*. It is always found on high dry land, in the pine barrens and similar places, never in water or swamps, and is therefore known among the inhabitants by the name of highland moccason. It is a very vicious animal, and its bite is very dangerous. General Robertson, one of the first settlers and founders of Nashville, was bitten both by a rattlesnake and a highland moccason, and, according to the statement of his son, Dr. F. Robertson, the pain or wound of the latter was more excruciating than that of the former."

It is to be hoped that this description is sufficiently plain to enable observers to identify this much-desired species.

Respectfully yours, H. C. YARROW,
Hon. Curator Dept. Reptiles, U. S. National Museum.

A MYSTERIOUS SNAKE.—Manistee, Mich.—I see "Byrne" still pursues the mythical illusion of the hoop snake. Will some one tell me the proper name of the following? In August, 1880, I killed at West Branch, Mich., a spotted snake resembling an adder, but having a hard horn on the end of the tail of three-quarters of an inch in length and very sharp. I call it horn because it resembled in texture, color, etc., the horns of cattle, light color next to the tail of the snake and the tip black. The natives called it the terrible hoop snake, and said had I not shot it on sight it would have spiked me. But the myth has passed away, for last month I found another, the same as the first, so before killing it I took a stick and stirred it up to see it roll, but it didn't roll, neither did it spike me, but proved to be an arrant coward, and I killed it through fear that it was not its time to roll, and some time in the future some one would get spiked.—S. E. B. [We cannot say what the snake was from the description. If another is taken send it to us. There is no snake which has a sting in its tail, nor in its tongue, as some persons imagine.]

A BUFFALO BORN IN CENTRAL PARK—Mr. Conklin has had another addition to the menagerie in Central Park, New York. The large buffalo in the cage opposite the Arsenal in Central Park gave birth to a calf on August 28. The mother has been kept in the Park for about four years. This is her second baby. The first was born about three years ago.

WHAT IS THE NATIONAL MUSEUM?

MOST intelligent people know that there is at Washington a National Museum; but respecting the scope and purpose of the institution much misconception prevails. The following particulars regarding the organization and objects of the Museum are taken from the appendix to the "Proceedings" for 1881:

Foundation and Legal Status.—The National Museum was organized in 1846 by the act of Congress transferring to the Smithsonian Institution the custody of the "National Cabinet of Curiosities," at that time deposited in the Patent-Office Building. These collections were, in 1857, placed in the Smithsonian building, the Regents of the Institution having accepted the trust on condition that the necessary appropriations for their maintenance should be continued by Congress.

The act above referred to provides that "all objects of art and of foreign and curious research, and all objects of natural history, plants, and geological and mineralogical specimens belonging or hereafter to belong to the United States, which may be in the city of Washington," shall be delivered to the Regents of the Smithsonian Institution, and, together with new specimens obtained by exchange, donation, or otherwise, shall be so arranged and classified as best to facilitate their examination and study.

The National Museum is the authorized place of deposit for all objects of natural history, mineralogy, geology, archæology, ethnology, etc., belonging to the United States or collected by the Coast and Interior Survey, the Geological Survey, or by any other parties for the Government of the United States, when no longer needed for investigations in progress.

Organization and Government.—The establishment of the Smithsonian Institution, to which, in addition to the carrying out of the other requirements of the bequest of Smithson, is intrusted the control of the National Museum, is composed of the President of the United States and his Cabinet, the Commissioner of Patents and a Board of Regents, which has for its members the Vice-President and Chief Justice of the United States, three members of the Senate, three members of the House of Representatives, and six other persons, not members of Congress, two of whom are residents of the city of Washington.

The management of the National Museum is intrusted to the Secretary of the Smithsonian Institution, who is, *ex-officio*, its director. He is aided by a staff of assistants, who are chosen by him, and for whose action he is responsible to the Regents.

This staff is at the present time composed of an assistant director, six curators, six honorary curators, serving without pay, a number of assistants and aids, acting in various capacities, a registrar, chief taxidermist and chief modeler, besides a considerable force of preparators, mechanics, watchmen, clerks, laborers, etc. The staff is constanly changing with the varying needs of the Museum. The operations of the Museum are carried on by means of an appropriation annually made by Congress "for the care and preservation of the collections." The collections are stored and exhibited in the building erected for the use of the Smithsonian Institution between 1847 and 1857, and in the new building, just finished, known as the "National Museum."

Composition of the Collections.—The Museum is made up, in large part, of the following materials:

1. The natural history and anthropological collections accumulated since 1850 by the efforts of the officers and correspondents of the Smithsonian Institution.

2. The collections of the Wilkes Exploring Expedition, the Perry Expedition to Japan, and other naval expeditions.

3. The collections of the scientific officers of the Pacific Railroad Survey, the Mexican Boundary Survey, and of the surveys carried on by the Engineer Corps of the Army.

4. The collections of the United States Geological Surveys under the direction of the United States Geologists Hayden, King and Powell.

5. The collections of the United States Fish Commission.

6. The gifts by foreign governments to the Museum or to the President and other public officers of the United States, who are forbidden by law to receive them personally.

7. The collections made by the United States to illustrate the animal and mineral resources, the fisheries, and the ethnology of the native races of the country, on the occasion of the International Exhibition at Philadelphia in 1876, and the fishery collections displayed by the United States in the International Fishery Exhibition at Berlin in 1880.

8. The collections given by the governments of the several foreign nations, thirty in number, which participated in the exhibition at Philadelphia.

9. The industrial collections given by numerous manufacturing and commercial houses of Europe and America, at the time of the Philadelphia exhibition and subsequently.

10. The material received, in exchange for duplicate specimens, from the museums of Europe, Asia, and Australasia, and from numerous institutions and collectors in North and South America.

Adjuncts to Administration.—As necessary adjuncts to the work of the museum, a working library, a chemical laboratory, a photographic establishment, a workshop for taxidermy, modeling, and the preparation of skeletons, and several smaller workshops are carried on as a part of the general work of administration.

Publications of the Museum.—The scientific results of the labors of the officers of the Museum, and of investigations upon the collections belonging to it, are to be found for the most part in the following works: Bulletin of the United States National Museum; Proceedings of the United States National Museum; Reports of the Smithsonian Institution; Smithsonian Miscellaneous Collections; Smithsonian Contributions to Knowledge; Reports of the Bureau of Ethnology of the Smithsonian Institution; Reports of the United States Commissioner of Fisheries; Bulletin of the United States Fish Commission, also occasionally in other scientific reports of other scientific departments of the government.

Objects and Methods of Work.—The collections in the National Museum are intended to exhibit the natural and industrial resources, primarily of the United States, and secondarily of those of the remainder of the world, for purposes of comparison.

The activity of the Museum is exerted in three directions. (*a*) The permanent preservation of objects already in its possession. (*b*) The acquisition of new material. (*c*) The utilization of material already in its possession, by its exhibition in the most instructive manner, and by the prosecution of and publication of scientific researches for which it forms the basis; by the distribution of properly-labeled duplicates of materials to colleges and other educational institutions. The preservation of material is accomplished

by means of the vigilance of the curators and the skill of the preparators. New material is acquired (*a*) in accordance with law, from the various government surveys and expeditions; (*b*) by gift from individuals, from other institutions, and from foreign governments; (*c*) by exchange for its duplicate specimens or publications; (*d*) by the efforts of officers of the Museum, who make collections in connection with their regular duties, or are detailed for special service of this nature; (*e*) by purchase when appropriations are made by Congress for that purpose.

The treasures in the custody of the Museum are utilized to the world by exhibiting them to the public, and by encouraging investigations on the part of the officers of the Museum and other suitable persons, and facilitating the publication of the results; also by the distribution to other Museums and educational institutions of duplicate specimens, which have formed the basis of scientific investigation, these being identified and labeled by the best authorities.

The Museum by these means fulfills a three-fold function:

1. It is a Museum of Record, in which are preserved the material foundations of an enormous amount of scientific knowledge—the types of numerous past investigations. This is especially the case with those materials which have served as a foundation for the reports of the resources of the United States. Types of investigations made outside of the Museum are also incorporated.

2. It is a Museum of Research, by reason of the policy which aims to make its consents serve as fully as possible as a stimulus to and a foundation for the studies of scientific investigators. Research is necessary in order to identify and group the objects in the most philosophical and instructive relations. Its officers are selected for their ability as investigators, as well as for their trustworthiness and abilities as custodians, and its treasures are open to the use of any honest student.

3. It is an Educational Museum of the broadest type, by reason of its policy of illustrating by specimens every kind of natural object and every manifestation of human thought and activity, by displaying descriptive labels adapted to the popular mind, and by its policy of distributing its publications and its named series of duplicates.

Plans for the Installation of Collections.—The collections in the National Museum are now being assorted and rearranged, for the purpose of placing on exhibition a selected series of objects which shall be of interest to visitors, and of making the remainder serviceable for purposes of scientific and technological investigation. A large portion of the most interesting material has never yet been exhibited on account of lack of space. The following general principles have been adopted in this work:

1. No object will be placed on exhibition which is not of evident educational value, and likely to interest and instruct a considerable percentage of the persons visiting the Museum.

2. The exhibition of duplicate material is to be avoided, except in instances where similar objects can be shown to advantage in different divisions of the Museum.

3. Each object will be placed in a case of the form best suited for its effective display, and the light, color of the background, etc., will be so adjusted as to show it to best possible advantage, and with the least possible fatigue to the eyes of the visitor.

4. Each object, or group of objects, will be accompanied by a large plainly printed label, which will give a concise description of what is shown, an account of its origin and uses, a synopsis of its history, and the name of the person or organization contributing it to the Museum. The character of the Museum is such that any labels which might suggest advertising for business purposes must be excluded. It will be the policy of the Museum, however, to give prominence on each label to the name of the person or business house from whom it has been received, provided that the object is a gift to the Museum.

5. The objects will be grouped together in systematic order, and each case will be provided with a general descriptive label. In the case of collective exhibits, the general label may also give the name of the contributor.

6. The specimens will be illustrated and supplemented by pictures, diagrams, books and maps, in such manner that the Museum may form an encyclopedia, the illustrations for which are in the exhibition cases, the text in the labels.

7. Guide-book manuals of the different departments will be published, which will embody in concise and systematic form the information given by the specimen labels, together with such illustrative material as may seem necessary to present in addition.

OUTLINE OF A SCHEME OF MUSEUM CLASSIFICATION.

The following outline of a scheme of classification has been prepared by Prof. G. Brown Goode:

I.—*Mankind—Anthropology*—1. Man as a zoological unit—Somatology and psychology. 2. Man, grouped in peoples or races—(*a*) Races of men, physical characters; (*b*) linguistic characters; (*c*) art and industrial characters; (*d*) ethnogeny; (*e*) geographical distribution of races; (*f*) history, prehistoric and recent, etc. 3. Man, in individual manifestations—Representative men: Biography.

II.—*The Earth as Man's Abode—Heriology*—4. The earth, in the solar system—Cosmology. 5. The earth's structure—Geology. 6. The features of the earth's surface—Physiography. 7. The atmosphere and its phenomena—Meteorology. 8. Effects of man upon the earth's surface, and on climate, physical features, etc., on man—Man and nature. 9. Apportionment and nomenclature of the earth's surface—Geography. 10. Exploration of the earth—Voyages and travels.

III.—*Natural Resources—Force and Matter*—11. Force in its manifestations—Physics, mechanics, and physiology. 12. The elements and their combinations—Chemical collections. 13. Inorganic matter—Mineralogical collections. 14. The vegetable kingdom—Botanical collections. 15. The animal kingdom—Zoological collections.

IV. *The Exploitative Industries—Exploitative Technology. Primary*—16. Exploitation of inorganic materials—Mining and quarrying. 17. Exploitation of vegetable products of spontaneous growth—Lumbering and field-gleaning. 18. Capture of animals—Hunting, fishing, etc. *Secondary*—19. Culture of plants—Agriculture, horticulture and forestry. 20. Culture of animals; domestic animals and their uses—Pecudiculture.

V.—*The Elaborative Industries—Elaborative Technology*—21. Preparation of food-stuffs, narcotics, etc. 22. Distillation, manufacture of perfumeries, etc. 23. Oils, fats, soaps and waxes; their preparation and use. 24. Gums, resins, glues and cements. 25. Pigments and dyes; painting, staining, polishing, bleaching, etc. 26. The chemical manufactures and their products. 27. Feathers, hair, bristles and their use. 28. Furs and leathers; tanning and currying. 29. Fibers, cordage, textile fabrics, needlework, basketwork. 30. Paper and its manufacture; book making; stationery. 31. Hard and flexible organic tissues and their use. 32. Woods, and the wood-working industries. 33. Stones, and the stone-working industries; masonry. 34. Metals, metallurgy and the metal industries. 35. Glass and enamel and their fabrication. 36. Pottery, and the ceramic industry. 37. Tools, machinery and motors, their manufacture and use. 38. Construction, architecture and civil engineering.

VI.—*Ultimate Products and their Utilization*—39. Foods and drinks: preparation, cookery, etc. 40. Narcotics and masticatories; pipes, etc. 41. Dress, and personal adornment. 42. Buildings, villages and cities. 43. Furniture, house interiors, domestic economy, etc. 44. Heating and illumination. 45. Medicine, surgery, pharmacology, hygiene, etc. 46. Public comfort recreation, protection and rescue. 47. Transportation by land and water appliances and accessories.

VII.—*Social Relations of Mankind—Sociology and its Accessories*—48. The vocations of men. 49. Communication of ideas and their record: writing and printing, telegraphy, signals, etc. 50. Trade and commerce. 51. Societies and federations, social beneficial, religious and political. 52. Government and law. 53. War (including armor and weapons). 54. Festivals, ceremonies, usages, memorials, etc.

VIII.—*Intellectual Occupations of Mankind—Art, Science and Philosophy*—55. Games and amusements. 56. Music and musical instruments. 57. The drama and the stage. 58. The pictorial, plastic and decorative arts. 59. Literature (from the intellectual standpoint only). 60. Folk lore, traditions and superstitions. 61. Science: (Research and record.) Scientific instruments. 62. Philosophy religious, metaphysical and cosmical. 63. Education and reform; schools, museums, libraries, etc. 64. Climaxes of human achievement.

Contributions and their Acknowledgment.—No money having at any time been specially appropriated for increasing the collections by purchase, the growth of the Museum has ever been and still is dependent solely upon the exertions of its officers and those of other branches of the public service and upon the public spirit and liberality of its friends. The friends of the Smithsonian Institution and the National Museum are earnestly invited to take part in the work of building up the collections and in particular to respond to special requests for advice or other aid which may reach them by letter. The following rules for the acknowledgment of specimens will be adhered to:

1. Each contribution will be recognized by a formal written acknowledgment from the Director.

2. Each contribution will be published in the annual reports of the Smithsonian Institution and the National Museum; and in the catalogues and other publications of these establishments in which the objects contributed may be alluded to, the name of the contributor will always be given.

3. On the label, which is invariably attached to every object, the name of the contributor will be conspicuously printed. In the case of donations the form will be "Gift of ——— ———," and where the objects have been obtained by special exertions of a friend of the Museum, who, however, is not their donor, the form will be "Obtained by ——— ———," or "Collected by ——— ———."

4. Objects which may have been bought by special appropriations, such as those for the Philadelphia and Berlin exhibitions, will not be labeled with the name of the persons from whom purchased, except by special agreement in cases where these persons have been only in part paid for their exertions.

5. The Museum will make every possible return for aid rendered, by offering in exchange its publications and its duplicate specimens.

Material for the Library.—The Smithsonian Institution solicits for the Library of the United States National Museum, under its charge, copies of publications relating to all departments of anthropology, art, technology, zoology, botany, geology, mineralogy and lithology, geography and explorations, the reports and catalogues of societies, museums, and zoological gardens, as well as copies of plans and labels and other accessories of work in museums, and the catalogues of colleges and schools containing references to courses of instruction or collections in natural history. Author's editions, or "separates" of communications published in periodicals, or proceedings of societies, are especially desired; and it is hoped that authors will furnish, as far as possible, sets of their publications complete to date.

The Smithsonian Institution offers in exchange an equivalent in copies of the proceedings and bulletins of the National Museum, also such of its reports and other publications as can be supplied at the time of application.

The Smithsonian Institution is pleased to receive from investigators in special departments, and from public museums and institutions of learning, applications for such specimens of natural history as are found in North America.

Packages of small size may be sent by express, charges to be collected on delivery, and larger packages by freight.

RATTLE SNAKES ON LONG ISLAND.—New York, Aug. 28.—During the month of July, five rattle snakes were killed on the grounds of the South Side Sportsmen's Club, of Long Island, four measuring from four feet to four feet eight inches in length and having from eight to fourteen rattles. I write to ask you about what date the young make their appearance on the island, as we are anxious to know if these are likely to have left a this year's crop behind them.—A MEMBER. [As snakes bring forth early in the season we should think that the time on Long Island would be early in June.]

LURE FOR MOTHS.—Rochester, N. Y.—In your issue of Aug. 24, in answer to correspondents, you inform "F. M. T., Nyack-on-the-Hudson, that you do not know of any preparation to attract moths and butterflies. A bait of New Orleans molasses thinned with rum, and then daubed on trees, fences, etc., will attract night-flying moths. Sliced oranges, or watermelon, will call diurnals; but they do not lure as readily as the nocturnals.—M. A.

WHAT THEY SAY ABOUT IT.

For once again the FOREST AND STREAM has been enlarged, until it is now without question the best magazine for sportsmen there is published, that is in our opinion. We look for its weekly visit as much as for any other paper that comes to our table, and it furnishes us with much that is enjoyable and instructive. Reading it is next to a day out in the open fields or on the waters in search of game and fresh air and a change.—*Fairport, (N. Y.) Herald, Aug. 13.*

Camp Fire Flickerings.

"That reminds me."

WE were having a real old-fashioned New England 'coon hunt. There was no mistaking this. A casual glance at the party would have satisfied the most skeptical observer that, as our leader remarked while whipping the dogs off a fox trail, "Keun, and nothin' but keun, is what we are arter." No; there could be no mistake. All of the signs, symbols and ear-marks were distinctly visible, even in the half-veiled light of the moon, which only dimly outlined our forms as we scrambled out over the rocks and struggled through the dense brushwood. No; nothing but a 'coon hunt could account for the limping gait, scratched faces and torn clothing of the party, as, at our best speed, we hurried toward the perfect volcano of barks, yells and howls that our pack were belching forth just in front. Our veteran leader, with his half century of experience, outstripped us, and when we arrived upon the scene he had lighted a torch and was viewing the surroundings. As we came up, the old man passed the torch to us, and stepping up to the tree around which the dogs were yelping, put his nose to the bark and took two or three long-drawn sniffs. Turning to us with beaming face and sparkling eyes, he eagerly exclaimed, "Boys, he's here."

This was my first 'coon hunt. Many years have since passed and many scalps of the midnight prowlers adorn my belt; many mirth-provoking scenes have I witnessed and much fun have I enjoyed, but I have never since met with anything that "touched my tickle" as did the old man's "Boys, he's here."

While some of us were kindling a fire, others were deftly swinging the axe, and soon the refuge of our victim gently swayed to one side, then with increased momentum struck the ground with a crash that woke the echoes of the stilly night for many a mile around. By this time our fire was going grandly, and the woods for quite a distance were as light as day. In order to give the young dogs a chance the captain had tied up all of the experienced ones except old Jack, who had lost his teeth but not his pluck, and without doing any especial damage to the 'coon his example was invaluable in instructing the tyro. No sooner had the tree struck than Jack, with short sharp yells of delight, sprang among the branches, and amid a perfect pandemonium of exasperated howls from his unfortunate companions, seized the prey and forced him out into an open space where he was quickly surrounded by the youngsters, who, wild with excitement pitched in regardless of consequences, raising a din that fairly deafened us. Glancing at the captain I saw that his æsthetic soul was reveling in highest realms of bliss, and as I watched the ludicrous contortions of his expressive face which plainly mirrored the fast changing vagaries of the scrimmage, I, too, was happy. After a long and bloody struggle the life was shaken out of the 'coon, and we gathered round the fire and lit our pipes. One old fellow who had uttered never a word during the melee exclaimed:

"I tell you, boys, this *is* a keun hunt;" and waving his hand in their direction he added, "*them's* keun dogs."

"That reminds me," said the captain, "of a keun dog I bought when I was a boy. I had been arter 'em onct or twice, and somehow I got er hankerin' for the fun and thought I'd get me a dorg. So one day up to town I seed Uncle Joe Shaw with a purty good lookin' purp, and I axed him was he a good keun dog. He kinder hesitated like a bit, then he slapped his hands togeller and sez, sez he, 'By Jiminy, that's it; he *is* a keun dog.' Wall, I dickered for him and tuk him home, and that night we went er keunin. We had two other dogs, and 'twant no time at all hardly 'fore we had a keun up a saplin', and I got the boys to hold on to the dogs so as ter give mine a show. Wall, I shuk him off and he struck clus to ther purp, an' you oughter have seen him git and hearn him yell. He never stopt ki-yien' nor runnin' till he got under Uncle Joe's barn. Wall, the next day, kinder mad like, I went up ter town; I found Uncle Joe lookin' mighty sollum, and I sez, 'Uncle Joe,' sez I, 'I thought you sed that purp was good for keuns.' 'What,' sez he, rollin' up his eyes, 'hain't he!' 'No,' sez I, 'he's wuz nor no dog.' He drawed his coat sleeve across his eyes, and with his voice kinder trembly like he sez, sez he, 'My boy, you don't know how shock't I be; never before has my belief in the truth of holy writ bin shook till now.' 'Hold on,' sez I, 'what's scripter got to do with the dog, anyhow?' He looked at me as if he felt kinder injured like, and sez, sez he, 'Ther Bible tells us that ther' want nothin' created in vain, and trustin' to the truth of this I reckoned that that blamed dorg must be good for keuns, as I'll take my affer davy he aint good fur nothin' else.'"

Mrs. Seale's exploit told in your issue of June 1 last, reminds me of a somewhat similar occurrence which took place near here.

Late last fall a neighbor of mine some two and a half miles from me, saw a fine buck herding with his cattle. The farm is a small one of some 200 acres, and is between the North Anna and the north branch of the North Anna River, and has no buildings upon it. Mr. N. tried in every way to get a shot at the deer but without success, until a happy thought struck him which gained the venison.

Mr. N. loaded his gun and taking with him the vessel from which he salted his stock, went to their pasture and gave the accustomed "salt call" once or twice. The cattle came promptly and with them the buck, who walked up within twenty feet of the gun and was slaughtered. I ate some of the quarry which I found exceedingly nice, but regretted it was killed in such an unsportsman like way.

CONWAY FARM, Va., August, 1882. R. M. CONWAY.

The story of the fellow who would not fire "because he only had one charge of powder and he wished to hunt all day," reminds me of one that I have heard told around the camp fire, which may be new to some of your readers. A young man from the city, brimful of that nameless fear of firearms, which haunts the dilletante sportsman who has not pulled a trigger for a year, went for a few days' duck shooting with one of his country cousins. They got very near to an immense flock (or "team," which should I say?) of ducks, which were feeding in shallow water, near the shore, and it was agreed that the city man should try a sitting shot, while the "bushman" took them flying. To the disgust of the countryman, the other could not summon sufficient courage to face the explosion that must ensue should he pull trigger, so he kept aiming and aiming but never firing. "Why in thunder don't you fire?" said his friend. "Because," he replied, "the minute I go to shoot, another duck comes swimming right in the way." INGLEWOOD.

MCDONALD'S CORNERS, New Brunswick.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN SEPTEMBER.

THE following schedule exhibits in parentheses, seasons which open during the month.):

Alabama—Doves; (15th, quail).
California—Deer, doves; (15th, grouse, rail, quail, wildfowl).
Colorado—Deer, elk, antelope, mountain sheep, buffalo, bison.
Connecticut—Wildfowl; (12th, rail).
Dakota—Grouse, quail, snipe, curlew, plover.
Delaware—Woodcock, rail, reed.
District of Columbia—Woodcock, ruffed grouse, wildfowl, pinnated grouse, plover, reed, snipe.
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo, wildfowl.
Illinois—Woodcock; wildfowl, pinnated grouse, deer, wild turkey.
Indiana—Woodcock, wildfowl, pinnated grouse.
Iowa—Woodcock; wildfowl, pinnated grouse, elk, deer.
Kansas—Pinnated grouse.
Kentucky—Woodcock, deer, wildfowl, wild turkey.
Maine—Ruffed grouse, woodcock, wildfowl, plover.
Maryland—Ruffed grouse, woodcock.
Massachusetts—Ruffed grouse, woodcock, wildfowl, doves.
Michigan—Ruffed and pinnated grouse, woodcock, wildfowl, snipe.
Minnesota—Grouse, woodcock, quail, wildfowl.
Mississippi—(15th, meadow lark, deer).
Missouri—Woodcock, plover, meadow lark, dove, pinnated grouse, deer; (15th, wild turkey).
Montana—Pod hen, grouse, ptarmigan, buffalo, elk, antelope, mountain sheep & goat, moose, wildfowl).
Nebraska—Grouse.
Nevada—Elk, antelope, mountain sheep and goat, deer, grouse, quail, woodcock, wildfowl.
New Brunswick—Woodcock, wildfowl, snipe; (15th, moose, caribou).
New Jersey—Reed birds, rail, squirrel.
New Hampshire—Woodcock, plover, ruffed grouse, quail, deer, caribou, moose, wildfowl, squirrel, rail.
New Mexico—Grouse, ptarmigan, quail, deer, wild turkey, elk, antelope, mountain sheep, buffalo.
New York—Woodcock, ruffed grouse, dear, wildfowl, squirrels.
North Carolina—Deer.
Nova Scotia—Woodcock, wildfowl, snipe; (15th, caribou, moose).
Ohio—Woodcock, ruffed grouse, wildfowl.
Oregon—Grouse, quail, wildfowl, deer, moose, mountain sheep, elk, antelope.
Ontario—Woodcock, snipe, hares, wildfowl, pheasants, partridges, grouse, prairie fowl.
Pennsylvania—Woodcock, wildfowl, plover, rail, reed birds, snipe, squirrels.
Quebec—Dear, caribou, woodcock, wildfowl; (15th, ruffed grouse).
Rhode Island—Woodcock, ruffed grouse, wildfowl, plover, robin, meadow lark, hare, squirrel.
South Carolina—Deer; (15th, wild turkey, ruffed grouse, quail, doves, woodcock).
Tennessee—Deer; (15th, ruffed grouse, snipe, quail, meadow lark, woodcock, wild turkey).
Texas—Deer, ruffed and pinnated grouse, quail.
Utah—Elk, deer, antelope, mountain sheep, grouse, quail, wildfowl.
Vermont—Ruffed grouse, woodcock, wildfowl.
Virginia—Ruffed grouse, wildfowl, woodcock, deer.
Washington Territory—Deer, elk, mountain sheep, grouse, antelope.
West Virginia—Pinnated grouse, deer, ruffed grouse, wild turkey.
Wisconsin—Woodcock, grouse, quail; (15th, deer).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp tail grouse, ruffed grouse, wildfowl, plover, curlew, snipe.

A DEER HUNT NEAR LAKE SIMCOE.

IN that district of Canada lying between Lake Simcoe and the great Georgian Bay, and even in territory bordering south and westward, up to 1860 were to be found some of the best haunts for deer and deer shooting anywhere in the north. Deer were numerous, vigorous, and there was a notable number of large ones. The belt of country between the waters has a width of thirty and more miles, and to the northward is merged in the vast wilderness which stretches away to the Frozen Ocean, in the borders of which great territory on the Severn and in the region of Lake Muskoka, north of Lake Simcoe, the first of the limited settlement which it will ever admit, had, in 1860, just been planted.

The Lake Simcoe region of which we speak is coursed by several rivers and numerous rapid flowing creeks and brooks of purest water, is dotted with a few little lakes, and with limited exception was covered with a forest of gigantic growth, mainly the hardwoods, but commingled freely with all the evergreens of the north, the pine and hemlock being predominant. There were frequent patches of swamp, some of considerable extent, furnishing dense covert, and there was an abundance of ground hemlock which fed the deer when the deep snows had fallen. The country in the main is pleasantly undulating, but in some localities there are tremendous valleys and long and steep hillsides. There were a few patches termed plains, which were simply barren and formerly burned land, and in the valleys of some of the streams, when the leaves had fallen, the open view amid the great rock elms was most inviting and magnificent. The settlements were sparse and the clearings advanced very slow, the inhabitants lived most simply, and among them were but few good guns or hunters. There were tracts of wilderness where one would not see a clearing across a road for ten and even more than twenty miles. Besides deer were some beaver and otter, foxes, lynx, and wolves and bear abounded. Occasionally there was a stray elk, sometimes a moose wandered to its northern borders, and there were plenty of the ruffed grouse.

Up to 1860 hunters from abroad had despoiled this region but little; but since that period, with the greater advance of clearings and the increase of hunting, the larger game has greatly decreased, and been extinguished in some localities, although in some neighborhoods it still is found.

Annually, for quite a number of years, we used to go thither from New York and spend several weeks in the fall and early winter in earnest hunting, until the nation's battle drew us to its ranks; and one of the closing chapters of our experience we now offer you, it having lain all this period in manuscript, although it belongs to the unforgotten past.

It was the 16th day of November, 1861. I was hunting in a locality about fifteen miles west from the west arm of Lake Simcoe, along the old pioneer Sunnidale road. By the imperious decree of affairs to-day and the morrow were the last days left for me here this campaign. Although success in hunting by others around me was not flattering, yet fortune was favoring me quite satisfactorily, and I dreadfully hated to leave. I did not know how to break away from the hunting, and stronger still was the charm of the wild Northern woods. I loved to haunt through them and commune with nature and behold her passing life and seasons. Such hours were hours of purest pleasure—like the fulfillment of golden dreams in the heyday of existence; and I never turned my back on these wild woods of the North, even when the stern cold of winter had come, and the deep snows had fallen, making them impracticable for the hunter, without saddened feelings and deep regrets. Deer were not near so plentiful as they had always been before, and it was good fortune, as ran the chase, to get one any day, and it was the common luck to fail. A good native hunter averaged about a deer a week, and I approached the results of my now brief opportunity with more than ordinary interest.

Early in the morning I took my way for the day's hunt to a large woods of hardwood and evergreen lying between the Sunnidale and the Northern Railway, and traversed by little streamlets flowing to the Nottawasago. There was a mere sprinkle of snow in the air and on the ground, but it continued to fall, and increased, with wintry aspect. In this northern clime the weather often has a strange and ominous mildness, even but the day before winter comes with vigorous advent to hold continuous and rigorous reign.

I proceeded over ground heretofore famous for the game, with eyes open and alert, and yet the afternoon came and was well advanced and I had not seen a single track or deer. I had come to a slight run and was standing beneath some cedars and about to cross when I saw, about fifteen or twenty rods in advance, the indistinct movement of something, and directly made out the ears and upper part of a deer's head thrown up, and approached to the trunk of an old and large fallen tree, on its further side, as if looking over in my direction, in a moment turning away, but in such manner that I thought I was not discovered. The deer was in the edge of a tract of large hemlock and pine, strewn with a good many enormous old trunks of anciently overturned pines, where grew numerous small evergreens, and the vision could but indistinctly penetrate here and there the recesses of its dark shadows. I had wondered where all the deer had gone; the snow was gently sifting, the appearance for the time was that of dark, deep yet mild midwinter, and it was now plain they had taken to the covert of the evergreens and fallen timber. In a moment or two I saw two or three separate movements over beyond the prostrate trunk, and knew I had a small flock of deer before me. I watched with rifle ready, but the glimpses I obtained were so brief that I had no chance for a shot. Standing perfectly still, with interest at its greatest tension, I soon discovered, indistinctly and at intervals, a large deer meandering amid the large timber beyond the great trunk, and gradually making toward my left. My rifle came to shoulder more than once, but with all my effort I obtained no chance, when at last the deer stopped, with its form outlined through a maze of little dead branches of cedar and hemlock. A cautious step forward improved my view somewhat, and holding on a little clearer spot over mid-body I fired, when the deer started a little, then turned and quietly walked back, with little apparent concern and yet as if a little warned, and disappeared.

Stepping behind a large tree I loaded and then looked sharply for another opportunity for about five minutes, when I cautiously moved four or five rods across the run behind a giant pine, past the sides of which I kept a sharp lookout, for I felt sure the deer still lingered before me. Suddenly, within the thick shadows of the timber, at some distance, I discovered the back of a deer above a large log, at which I promptly leveled and fired. When the smoke had disappeared so had the deer, and as I saw no movement and heard no noise some unpleasant misgivings crept into my mind. Nowhere during this trip had I seen such a show of deer, and they were evidently in that dull indifferent mood often noticed in them when a storm is passing or impending, affording the hunter a largely increased favorable per cent. of chances. I remained at my post for some minutes, and seeing nothing stood out a little one side and advanced behind a small evergreen, when a deer walked business-like into sight and stopped and looked as if suspicious of danger, with head, neck and shoulders advanced in plain view beyond the abrupt broken end of a large fallen tree. Quietly I brought my rifle on him and with good aim and some feeling of nervousness, fired, and the deer instantly whirled about and disappeared in the direction whence he came. Rapidly loading I cautiously advanced a little and continued slowly to do so, making frequent pauses to observe, and sighted one or two deer, now in more open woods. But presently I was discovered, and with a few jumps they sprang from view and I saw them no more.

After going a little further and finding the deer had left, I turned back to examine the field of action and learn the result. Hunting out the tracks of the deer I had fired at and the places where they stood, behold! the ball had cut the hair off the first one across the back, as was evidenced by the cut hair lying thickly scattered on the snow; in the case of the second one the locality had been thickly tramped and I could not determine certainly, within some rods, its position, but obtained no evidence of hitting at all. Where the third one stood hair freely sprinkled the snow, but a careful search failed to find a trace of blood on the field. Three shots and not a deer in hand! But I still had some hope of a trace of success, and as the next best move pursued on the trail of the deer which had fled. Sometimes, after a fatal shot and where the game can be pursued by discreet pursuit, but the merest trace of blood is lost, which is easily overlooked. But I found nothing except that the deer, of which there appeared to be five, which had left in a body, after feeding along for a little, had separated and each walked in a separate course.

Sunset was near at hand and I turned homeward, chagrined and meditating over my ill-luck, soon striking along a fine ground and large open timber. There are sometimes conditions of atmosphere and weather when what seems the ordinary aim will carry too high, and great care has to be exercised not to overshoot; the aim must be low, and I think I have noticed this deviation most frequently when snow covered the ground. I believed my failure to-day to be due to such cause, and determined to fire at a mark to satisfy myself in the matter. Neither shot, unless the second one, was made over if quite twenty rods, and I was vexed at failing so easily, for I was used to shooting deer, and on the instant, with great certainty, wherever I could see them, if not on the run.

I was now indulging in the careless expectation of not meeting any more deer this evening, for I was returning over grounds where not a track was to be seen in the forenoon. But I did not sufficiently note that the clouds had broken, the air become very mild, that the snow was thawing—one of those brief pleasant periods when game is at once abroad everywhere, when it is very lively and yet approachable and daring of chances. I had reached a gentle knoll and was about to shoot at a mark which I selected on an old stub, when I decided to look for a more satisfactory one, and continued my advance, not half thinking of deer hunting. Presently, stepping upon the well decayed body of a huge old fallen pine, lying in my course, I instinctively scrutinized the expanded view, when a dark object sixteen rods away, deep under the heavy topped hemlocks, attracted my attention, and I quickly made out the broadside of a deer, with his head up and gaze fixed on me. Bringing my rifle up with care and holding on his chest the forward sight looked bright and large, but when I drew fine the form of the deer was so indistinct that I readjusted my aim, and with care, I deemed, when the blue smoke puffed fiercely out and the loud resounding report seemed as if it must startle every deer in his covert. And the deer jumped like lightning and ran with great swiftness for about forty rods, circling as usual toward the last, and bringing up in thicker covert on the banks of a little stream, closely followed by another deer which had started seven or eight rods nearer to me, of the presence of which I had no suspicion before. All this I saw quite plainly in the open timber, and after loading I made careful and circuitous approach toward the locality where they stopped, and from which with careful watch I had not seen them depart. But I failed to sight them, neither did search reveal any dead deer or blood, and it struck me that neither track much denoted a cripple. I went with rapid steps to view the spot where the buck had started from the shot. He jumped so quickly and ran so fiercely that I thought him hit, but I felt a rising apprehension that I had failed again.

When a deer starts from the shot and was not viewing the hunter at the time, in ninety-nine cases out of a hundred it has felt the ball, and when one that is viewing starts quickly to the shot, the chances are many that it is from the same cause. In this case, seeing the puff of smoke and hearing the fierce crack of the rifle in the same direction, was cause for quick alarm. Examination of the spot he started from and the track of his flight revealed no blood nor hair or evidence of my deer being hit, and I went to the log from which I had fired to reassure myself of the locality. I proceeded instantly to test my belief that the atmospheric condition was cheating me in my shooting. The first shadow of evening had fallen, but I could see the sights plainly, and holding upon a mark eight or ten rods distant, fired. Upon going to see the result, behold! the ball was very near two feet above the target!—a greater exaggeration than this cause than I remembered to have met, an example that fixed itself in my memory, and the occasion of my most remarkable chapter of failures was plain.

Impelled by a little forlorn hope I went again to the spot where the lost deer had stopped in their flight and examined further. They appeared to have walked away together, and I found no evidence of wounding. There were several fresh tracks of other deer, but darkness soon stopped my tracing and I turned homeward. The light of the brilliant northern sky gleamed gratefully down amid the branches of the dark evergreens, and the repeated cry of a lynx not far from me awakened my interest and drew more than careless glances over my shoulder. I accounted this the unluckiest day in my somewhat extensive hunting experience, a day of good opportunities and rare ill luck, which days, somehow, now and then come to the best of hunters.

With the morning came my last day in the woods, and I bestirred myself early to resume the hunt where I had left it the evening before, with strong resolve to make the best of opportunity which fortune might throw in my way. A little more winter had stolen on than yet had been; there was ice in the puddles, and the ground in the road was quite frozen. But a bright sunlit day was coming on, which I knew would dissipate the frost and largely the slight snow, which now told of the presence of game, the time and course of its wanderings. As on the preceding morning, I took my route over the finest of grounds for deer and where previous to the present year they had been plenty, but not a track could I see. I took up and followed for a little the track of the deer last fired at the evening before, but it soon became commingled with those of other deer, all taking off in a northerly direction. An extensive bout throughout the locality where I had found my deer the day before, disclosed not a single fresh track. Early in the preceding evening quite a number of deer, the snow told, had loitered about, and then leisurely and quite separately taken off in the same northern direction. Not a track ran counter, and when noon came I had not seen a single track made to-day, and there evidently was not a deer in the locality. They had all tramped away somewhere, and the question was where I could find them. One who hunts deer much observes that upon the near approach of decisive winter deer often take such general temporary tramps. They might return at evening, but for this I could not wait, and decided to continue the hunt in the general direction the deer had taken, and soon came upon the fresh track of a small deer going the opposite way. My course was taking me direct from home, and I soon diverged obliquely, and in an hour, in a beech and maple tract, saw enough tracks made this morning to make me think deer were thick. But not one could I find, and I resumed my former course, and directly entered an extensive pine slashing.

I felt weary and pursued the easier walking along an old wood road I happened to strike. The crisp noisy walking of the morning had been long dispelled by the bright sun and the snow was disappearing. I presently struck an immense and fresh track of a buck going a little to my right, which I followed for a few rods and heard a hard knocking noise a little aside, which I believed made by the antlers of the old monarch himself, who I fancied might be turning in his course. But the ground was too open for safe approach, and I returned to the wood road, intending to presently circle in his direction, and in a few moments struck the recent tracks of five deer which had entered the road and continued along it. The tracks did not seem sufficiently recent to assure me the game was just at hand, yet tracks made in a melting snow are often much nearer a point of time than they appear. Any way, it was evident deer was about me and that I was to meet them ere long.

The flock, after feeding along the road, made across a run to my right, and I approached the sedgy edge to cross also when I noticed, about five rods distant, through the thick dead lower branches of the cedars which grew in the run, a dark spot which might answer for a deer. I could outline no form, but the spot was suspicious, and I determined to make the experiment of a shot. Holding my rifle on, it seemed as if I could hardly get a ball safely through the mass of small crabbed branches, and I carefully moved a step to improve chances when the five deer started from the covert, their white tails all erect, and in a moment were out of sight, affording no opportunity for a shot. The suspicious spot was gone as well as some of my chances for success. I now tried to stalk upon them, advancing a little aside, and started them twice, they running only a short distance but starting before I saw them, when I quit this useless business and reversed my course to take in the big buck, and the locality where I had to-day first seen the numerous fresh tracks. This was on the home stretch, and the sun was well declined.

I had not gone far amid the logs and slashed tree tops, all the debris of former lumbering, when I came upon the tracks of the buck, now turned about, as I had anticipated, and going in my changed direction. It was indeed an enormous

track, larger than one scarce ever sees, and I knew its maker must be a famous member of its race. If I could secure him it would crown my hunting with satisfaction; but such bucks are much more secure in hand than when afoot in the woods. I pursued on his track with animation and a sharp lookout, and the old fellow led me a devious course and long among and over longs and around masses of tree tops, then he dived into the standing timber among the hemlocks, crooked about, returned to the edge of the slashing, his general course luckily taking me in a home direction. He apparently maintained a steady walk and seemed to be looking for company. He could not be far ahead, but I was disgusted with the crooked and villainous course he took me, through difficult places, amid and over obstructions, besides he would shortly pass to thick and continuous forest where my chances with him would be lessened. I desired to turn aside to the locality of the numerous tracks, where I thought lay my best chances for success, and I abandoned his track and all hopes founded on his capture.

And just here let me introduce a word about the rifle with which I was doing my northern hunting—a muzzle-loader, weighing seven and a half pounds, made by that eminent gunsmith the late Wm. Billinghurst, 28-inch barrel by Remington, percussion pill lock, the conical ball, which I generally used, weighing ninety-nine grains, behind which I put fifty-four grains of powder—a very neat gun, which, for accuracy, penetration and effectiveness as a hunting gun, I never have seen surpassed, and with which I have tumbled over more than the half of thirty deer on a single trip.

My final hopes of success were now bounded by a very narrow compass. I turned abruptly toward the beech and hemlock and just off its borders halted to look and listen, as was my habit to do every few rods or steps, when I suddenly discovered a deer ahead with head raised and staring wildly at me. It stood, apparently, close on the further side of a large pine log which lay no great distance away, and all but the head, neck and fore edge of shoulders covered by the butt end of an elevated overturned tree. Never shall I forget the strikingly dark color, gazelle-like attitude and look of this deer, a picture Audubon would have coveted. The view was open, not a branch intervened, and I slowly and cautiously brought up my rifle lest that wild figure should be startled too soon, which I more than half expected it would. But I did not consume unnecessary moments, and when the rifle rang out the deer sprang away, keeping in view for a few rods but making no special sign of being hit. Ball in gun, I hurried forward and over the log to see the track and note the evidence of result. But to my surprise I could not find it, and was puzzled, when I struck off apparently out of all proper bounds and ten rods further on found it, near to twenty-five rods from where I had fired. Very often is the hunter thus deceived in the distance at which he estimates this game at the first glance, which is riveted to the game and fails to take considerately the measure of the intervening space. Barely a trace of blood showed where the deer first started, but after two or three rods his course, on the side upon which he received the ball, was marked by one almost complete blood-stained and clouded sheet of snow nearly ten feet in width. A fierce and continuous torrent had been spirted out for several feet, which, rapidly spreading in the soft snow, had greatly enlarged the display, and this tremendous show of blood continued into the timber, where I found the deer stretched lifeless about a dozen rods from where he was shot. Evidently he had gone down hard, for his last two or three jumps plainly showed that he had hard work to keep on his course, he having plunged about fearfully. Alas! fleet courser, his days in the woods were over.

The shot was a very accurate one, the ball entering the root of the neck obliquely at the edge of the shoulder, cutting the great artery upon that side not far from the heart, and it was this that spouted out the life current so fast and far. I returned over his course to view again the astonishing sight of blood, which I had never seen equalled.

Until I came to the deer lying I thought it a doe, but I now saw that I had a princely buck, three or four years old. On account of the distance and the dark color of his antlers blending with the forest a few rods beyond, I had not seen them. Pulling off my coat and rolling up a sleeve, I quickly had him dressed for hanging from some tree, for safety, until I could send for him. The job was a much neater one than usual, for all the blood had run out of him. It was ever a difficult affair for me to hang up a deer, my strength being inadequate, but I never left the matter half done. A huge overturned hemlock lay a rod away, its roots filled with soil and rising near ten foot high; to one of the little hemlocks growing on it I bent and tied a neighboring tree, dragged the deer up and tied him to it, cut the fastenings, and the tree straightened away to place, bearing the buck high and safe from all four-legged prowlers of the woods. While tugging away on the top of the root with the deer a rifle was fired, seemingly but a very short distance away, in the woods below me, which I regarded with suspicion. From my elevated position I might be being sighted for game and I hailed, but received no response, and, singularly, no after evidence indicating the presence of any one.

It was now near to sunset; I had but one short hour of further opportunity, and I promptly proceeded to improve it. Anyway, I was now secure against that miserable feeling, the sting of failure. Some good ground lay in my direct route homeward, and in that line I set forth at a pretty rapid walk. Presently I was passing through a slightly lower tract of woods where the evergreens were chiefly scattered firs and the traveling a little difficult from frequent overturned old trees, mostly the never decaying evergreens, supported by their stiff and now stubbed branches well up from the ground, and which stuck out at you like spikes of steel in every direction. The track of the big buck had proceeded this way, and I was not unmindful of an eye for him. I had just climbed noiselessly over one of these spiked trees and left it a rod or two behind when a glance on my left startled me with the vision of half the broadside of a deer of such dimensions that I instantly knew it must be the great buck. I could see his body from about the last ribs back to his hips, through a cluster of leafless ash, beyond and beside which he stood, the rest of him being masked by the trees. He was evidently standing on the lookout, his vision obscured to the danger, and within four rods of me. Heavens! said I to myself, if he will but give me a moment. I am occupying time and space in describing, but when I saw that sight my onward moving foot was instantly set down, my rifle quietly but immediately came around, my body cautiously turned to the proper face, and with aim to get the ball as far forward as the trees would allow, my rifle cracked and the buck instantly but heavily, like the movements of all large animals, jumped away. I saw him for a few jumps, when he was lost to view, but I listened attentively to the sound of his running and marked well the direction till it died away, for the scant snow on some grounds and the shadows of evening now at hand, might render his pursuit difficult. I noted that he had an injured look and hugged his tail, the last an unerring symptom of serious injury.

Putting aside my usual caution to instantly load, I went at once to his track and examining his first one or two jumps saw a slight trace or two of blood. The old fellow when I approached was lying beside the cluster of ash, as his bed in the snow plainly told, and hearing my coming had arisen and received the ball before moving further or seeing his pursuer. He had turned aside into this unfrequented spot to rest for an early nocturnal rumble, and I had happened to meet him. Thus accidents, without the power of care to avoid, are ever happening along the course of every life.

My gun loaded, I took up his track, going cautious and looking sharp. I found scarce a half dozen traces of blood, and these the merest trifles, and feared the ball had not gone forward of the intestines, in which case, unless some important vessel was cut, I would probably have to manage well if I got him to-night, or even at all. I knew he had him down, and if not pretty "sick" would be wary of giving me another shot. Circumstances showed that if he was bleeding it must be internal; the longer he laid the stiffer and perhaps weaker he would get and the more disinclined to move; therefore I must be careful and had better not push sharply, and I lingered for a little. I was yet on the road of chance. But the shadows of night were gathering fast, I would soon be unable to pursue, and moved cautiously forward.

I came upon him unexpectedly soon, a little more than forty rods from where he received the shot. He was close by when I first perceived him, lying down naturally in an open space, his head up and turned from me, and expressed, I fancied, a sombre look, and I wondered I did not discover him sooner. I judged he was badly off, and deferred action, standing still and looking at him. Presently his head alternately drooped and raised a little, and I slowly drew near and stood beside him, with gun in readiness to prevent his escape or resist an onset should he attack. He was indeed a noble deer, a giant among the foremost of his race. He bore symmetrical antlers of five prongs, was massive, yet elegant of build, and his hair was fine. The noble monarch of the woods had no pride now; he continued to droop and then feebly hold up his head in the weakness and consciousness of approaching dissolution. He was conscious of my presence, his eye was yet undimmed, but his noble nature manifested no fear nor expression of revenge, even no recognition of the presence of his mortal pursuer. I stood beside him for some time, feeling deeply pity and remorse. But inexorable night was deepening its shadows fast, and, alas! I shot him again to end the scene, dreading and shuddering at the act.

With all the haste I could exert, night had fully settled before I was ready to haug him up, but the sky was cloudless and a bright moonlight fell upon the dark, heavy forest. I had hunted out a tree at the outset, selecting the first good one I could find, which was a dozen rods away, and now proceeded to bend it down for use. While I am relating deer hunting I may as well tell it as it occurred. My tree was a very tall and stiff beech, for this purpose, the upper half of which had sometime been violently bent well down to the earth by the fall of a large tree, and never but partially reacted, but for which I would never have thought of its subjugation. When I had climbed well up, the top bent to the horizontal but would not come down, and I hung from its under side by my hands, dangling in a precarious condition. If I advanced further and the tree did not go down I must lose my hold and drop, with a fair chance for a broken limb, alone and afar in the woods in the freezing night, for I would not have strength in my arms to retrace nor to swing my feet up to assist; but for a moment only I hesitated and then took the venture, as so many times before in the perils of life; and when I reached the extreme top and continued to hang on, the tree reluctantly yielded, slowly, slowly, until I tip-toed on the ground, and made it fast to a small hemlock. By the hardest work, aided by the snow, I drew the deer to the tree, and setting him up with pulley and cord from my pocket, made him fast. When the tree was loosed it sprang up, parting a strand, but I luckily on the instant secured an additional cord, with a pole lifted and placed the top of the beech in the crotch of a convenient tree, added the pole as a prop, and the buck hung high and safe.

I stood and contemplated him, noble game that he was, and then turned to think about getting out of the woods. I had not seen either clearing or highway since morning, and did not know how far it was to the Sunnidale, or if any infernal cedar swamp lay in my route. A single wolf had sent forth his voice from the dark recesses of the woods, but what was more grateful, a distant dog had for some time maintained a watchful barking from some settler's cabin on the Sunnidale, and I thought I would feel obliged if he would continue and guide me until I got out of the woods, which he fortunately did. Taking up my rifle, and examining my compass to be sure of my course, I stood a few moments, and with inexpressible pleasure contemplated and drank in this wild passing scene in Nature's life, and then set forward at a brisk pace. I cast sharp looks into the shadows about me, as I had while at work, for while one might adventure thus for years without mishap from wild animals, yet at any moment danger might come. But a short time before and but a few miles distant, a lumber hand was set upon a few rods from camp by a lynx, which sprang at his throat, and the man, having no weapons, would have been killed but for a companion who came to his assistance. And the single wolf has sometimes attacked with vigor.

When I was well along on my march a sudden view of what appeared to be a black bear of no inconsiderable dimensions, sitting up as if viewing my coming on, brought me to a halt. It might be bear or stump, but with a deliberate scrutiny it looked bear and nothing else; but if either, I was not sorry, although I would have preferred daylight for the interview, and with rifle cocked I slowly approached. But it was a stump, and I presently stepped into the Sunnidale with a light heart and buoyant pace. Lands and forest glittered with the countless jewels of the frost king, the handsome firs with their rich, dark foliage displayed their symmetrical forms against the brilliant heavens, and earth and sky were filled with an ethereal splendor unknown out of a northern clime, as I went to-night from one of the last of my many hunts in this attractive northern land.

AN ELK HUNT IN THE "SPICY ISLE."

"Heigho! What on earth do you mean by rousing me at this unearthly hour, you born idiot, Harry? Don't you know that I'm dead done?"

"Get up! get up! you lazy old scoundrel, the dogs are all ready—Villeau has got Oscar fed, and morning tea is ready—so tumble up! tumble up!"

As Harry emphasized his words by pulling the bed-clothes off and, seizing my legs, forcibly bringing me down with a dump on the floor, I had to get up, but by the time I was awake and wakening thoughts brought to my mind that it was a hunting morn, nothing more was required to drive the cobwebs from my sleepy eyes.

Into the tub, or rather small swimming bath, which is an adjunct of all good Ceylon bungalows, a grand rub down, and then into the dining-room, where tea as jolly planters as ever drunk beer, sounded a loud "toot-toot" on the old horn, "Just one more peg, old chappie," and "Here's to the health of them that's awa' in in the dear old country," sat round the festive board, the kerosene lamp struggling with the light that was slowly beginning to dawn. Eggs, bacon, bread and "hoppers," all the delicacies of a planter's morning tea, were being rapidly consumed, and the clatter of the plates was drowned by the clatter of the tongues, as every one "jawed" about his past, present or future hunts.

"No, you don't! My dear Bill, that day you speak of couldn't hold a candle to the day we were out with the Dikoya men. Finest sport I ever had."

"Oh, you get away; why, they are the worst pack in the island."

"Never mind Dikoya or any other pack," said I, "here's to the beauties we are to follow this morning, and whose music we will soon all dance or rather run to; so finish up, boys, and then to see the darlin's brought out and 'Hey wily waly oh!' to the jungle and pray Diana for a good elk and a strong elk, and may I be up first."

"You! you old aldermanic boing, you could only win a donkey's race and make a good last."

"Never mind, let us be off," said I.

What a glorious sight it was and one calculated to make the blood tingle in your veins, and that feeling to creep over you that the world was too small to hold you and have a sort of longing just to give a bound away into space. The morning was just dawning, and away down in the valleys the morning mist was just beginning to rise; the delicious cool air laden with the perfume of the coffee then in full blossom, and with the hundred and one delicious scents borne from the luxuriant vegetation from below; the voices of the coolies just arising and preparing the morning meal, and the smoke slowly curling up from the lines into the clear air—all made a picture only possible in the tropics. And then came from behind the low whimper of the noble hounds, and you felt indeed that you could answer Mr. Malloch in the affirmative, and that "life was worth living," at any rate for that day at least.

"Bring 'em round; bring 'em round, Velleyan, we're all ready." There they come, scampering and bounding. "Down! Oscar, old boy, down! down! Now Carpi! You good old bitch, don't come pawing me; you'll get the elk all right. I know you, you dear old lady; many the time I've seen you with those soft eyes that look so loving now, for you think I have sugar. Yes, I've seen them light up in anger and the devil flash out of them as those pearly fangs of yours, old lady, fastened in the throat of your quarry, but down just now!" Off we go! Right up through the plantation, a gradient of about one in ten, and arrive panting and blowing at the edge of the jungle, stop for a moment's breath and gaze upon as lovely a scene as ever man's eyes feasted on. Hill and dale, dale and hill, all clothed with the glories of a tropical vegetation as far as the eye could see.

Afar off, where the horizon dipped, we fancied we could see the sea, but it was only fancy.

"Ready, Velleyan! Now then, put 'em in."

In we went into the jungle. It was very dense, so dense was the undergrowth that unless you struck an elephant track or came on open ground, locomotion was almost impossible, but we hit the right track, so kept evenly on our way. It is really marvellous how the elk get through, but through they get, as you very soon find out if you have to follow them.

Presently there is a low tiny "wouf! wouf!" from Carpi, then Oscar darts ahead, his tail well out, and that knowing old nose of his that has tracked many of his foes to their final doom. When the rest of the pack see Oscar at it, they know there is good business on. Oscar is no fool, and every puppy soon learns that when Oscar gives tongue there is something in the wind, and it is their bounden duty to give an extra strong sniff and find out what that something is.

"Forrard away, lads! forrard!" And then breaks on the still morning air that music that has no equal. What organ, what orchestra, makes your blood tingle and all your muscles tighten, and makes your eyes have that eager, hungry look, as you stretch forward, whether you are afoot or on horseback, to see where it comes from, than the first notes of a good pack giving tongue? It may be wrong, but it's true. It's the nature of the beast.

Then there was a rush. It was now a case of the devil take the hindmost, the one all powerful, all pervading thought was to make the most of your knowledge of the lay of the land and if possible be in at the death. "Tootle! tootle!" away you all go. Down on your nose one minute and on your back the next, tripping over creepers and generally coming to grief, but no shin barker is felt, no "dump" is taken any account of, and you are up again and off as hard as you can.

Now an elk, when he is first started, makes straight up hill as hard as he can go. When he is pressed he makes a small circuit, comes down again and makes for water. There he comes to bay. I knew the land pretty well, and so I reasoned that if he was a good strong elk he would make for a certain point I knew of, and then, turning, come down to a stream about a mile to my left; so I determined to make straight for this stream and wait until I heard the music and let that guide me. You see I am a little aldermanic. Arrived at the river, a great "puff, puff" behind, and the rubicund face and beard of "old Jack," our worthy M. E. H., appeared out of the jungle. Dear old Jack, he has gone now to the happy hunting grounds and joined the great majority—captain of Rugby and prince of all good fellows, and one of the noblest sportsmen that ever lived.

He had the same idea of the route as I had, so he had hardly got his wind when just above us we saw a noble elk bound out of the jungle and land in a pool about four feet deep, and presently we heard the "yap, yap" of the beauties in full cry behind. Both Jack and I scrambled up over the

rocks and made for the elk. Jack got there first, and by that right, as well as being master, he claimed the privilege to go in and stick it; which, of course, I granted.

An elk, the readers of the FOREST AND STREAM must know, when at bay, is a most dangerous animal. He can rip a dog or a man open with a stroke of his fore leg. It is madness to attempt to get near him, therefore, until the pack comes up. In every pack there are at least a couple of what are called "scizers." They go for the elk and grip him by the ears and throat and hold him, and then you wade in and stick him just behind the shoulder.

Soon up they come. "In Oscar! Good dogs! Go on, Carpi! Yoicks, seize him, good dog! Seize him!" Nobly did they re pond, and with a bound, a splash, and a struggle they were at his throat. Oh! the excitement. Oh! the yelling, and yapping, and snarling, and baying—and old Jack, baring his sleeve and getting that long, keen hunting knife ready to give the final blow. In he goes, puffing like a grampus, and I stand yelling encouragement to the dogs from the bank. Now came a ludicrous scene. Jack had just got up when, from some cause or other, the seizers let go and the elk, raising his head, was going for Master Jack. He was rather behind it, and, with an agility marvelous for a man of his weight, he made a bound and caught it by the antlers. Now a struggle commenced which made me laugh until the tears rolled down my cheeks. The bottom of the pool was very uneven, with large, round stones, and every time Jack exerted extra strength to get the elk's head down, he would slip and get a regular sousing, come up again still holding on, but spluttering and blowing, and using language the prelates of the church might object to. It was funny. Presently Oscar and Carpi got a hold again, there was a gleam of steel and Jack's knife was buried in the heart of one of the finest elks it had been my lot to see.

Oh, the whoops, and oh, the yells, the congratulations and the "well done old boys" that resounded on all sides as the rest of the hunt came up. We drank his health with a three times three, and then stringing him on a pole he was borne home by the coolies.

We, too, went back to the bungalow and finished up a most enjoyable hunt by a most enjoyable breakfast, where no end of beer was drank and stories told, and where that good fellowship belonging to hungry hunters all over the world prevailed. WANDERER.

CEYLON, 1882.

MY FIRST CHICKEN SHOOT.

MY first experience in shooting was among the hills of Northern New York and along the shores of Lake Ontario. I remember distinctly my first gun. It was a ten-pound muzzle loader, and long before I could hold it at arm's length I bowled over many a poor squirrel and blackbird by "taking a rest" over a convenient log or stone wall. As I grew older I learned to shoot on the wing, and then appreciated the full enjoyment of sporting. With my old setter, Dan (long since gone to the dog paradise) I have tramped mile upon mile over the roughest ground in New York State, and many are the ruffed grouse and duck that poor Dan has brought me.

I had been but a short time in the West when I became very enthusiastic over chicken shooting; and though I had for a number of years given up shooting entirely, I was anxious to try my hand again. The stories told by the local sportsmen were very thrilling, and I threw out a number of hints indicating that I should like very much to be made one of the parties that were daily going out. At last Judge B——, taking pity upon the "tenderfoot" from the East, invited me to go out with him. I always thought that he asked me out of pity more than anything else.

Well, he drove around to the office one August morning, and it is needless to say that I was ready and waiting. His two dogs, Vic and Ned, were stowed away under the seats. To those who have never ridden out into the prairie on a cool and beautiful morning, let me say that such an experience is worth traveling thousands of miles for. The air seems wonderfully invigorating, and even the dogs and horses are possessed of a new life.

It was yet early when we left the road and struck across the prairie toward some cornfields, near the borders of which the Judge said we would find chickens. In the morning they leave the stubble field and seek the shade of the corn. We unhitched the horses, tied them to the rear of the wagon, unpacked our guns, and at the word the dogs were off. It was a beautiful sight to see them as they ranged back and forth; their eyes fairly dancing with joy; and if a dog can laugh Ned and Vic indulged in a quiet grin at least. We walked along, the "tenderfoot" with eyes and ears alert, and I am sorry to say, laboring under the first symptoms of "buck fever." The dogs meanwhile were very busy and nearing the edge of the cornfield. Just then I heard a shot from the other side of the corn, and turning quickly around I saw an old cock coming straight at me. I could not endure the thought of being run over by an old rooster that had boomed on the prairies for eight or nine years, so blazed away—a miss. I turned quickly and sent a charge from the other barrel after him. Not a feather. I saw the Judge grin as he asked me in his sweetest and blandest tones, "Did you get him?"

But what is this! Just look at the dogs. There in the tall weeds that grew just at the edge of the corn stood Ned, and backing him was Vic. Both stood so still that one could imagine them casts of bronze. The Judge spoke to them a few quiet words so as to keep them steady. I would probably have stood admiring them until now, had he not said "Come on if you want a shot." We approached the dogs quietly and slowly. Up got the old hen and was bowled down in fine style by the Judge. At the report not a sound was heard save the fall of the hen. I had expected to see the air full of birds. "I guess you have got the only one." I remembered to remark (for I was in a very humble and quiet mood after my recent exploit). "Not much," was the reply. "There is a whole covey of young birds right under the dogs' noses." I could not see them and took his word for it, now relying entirely upon his superior wisdom. He spoke to Ned and the dog crept on a few feet and then stood again. We flushed four—two at the left and two at the right. The latter fell to my lot and I missed one, bringing down the other with a broken wing. 'Tis needless to say that my pard got both his birds. I now felt quite elated, as I had bagged my first chicken. The Judge gave me some words of advice and told me to keep cool, not to fire until I had covered my bird, and above all not to get discouraged. As we were talking up got the remainder of the covey, some six or eight more. This time I was cool and collected, picked out two birds from the outside of the bunch, and got them both.

The dogs neither of them retrieved—merely pointed the dead birds—and when we had gathered them in I was pleased that the wagon was not far distant. We visited a number of wheat fields and invariably found the chickens in weeds and tall grass near. At noon we stopped shooting and found that we had seventeen birds. That was very good for two guns, so the Judge said; also that we had been very fortunate in finding the birds.

We drive on to the Judge's farm, where, thanks to his forethought, we found a bountiful dinner awaiting. After dinner we gave the dogs a much needed rest and went down to a little lake near by to look for plover. Now if there is anything that I have a weakness for it is for plover. Properly cooked they are, in my estimation, the nicest bird in the United States. We found them in large numbers, and soon had enough to satisfy at least two hungry men.

At 5 o'clock we hitched up and, with a small boy to drive, made another attack on the chickens. We visited field after field, almost always finding birds. The dogs worked even better than in the morning. The Judge shot well, and your correspondent a little better than formerly. Evening came on and found us tired and dirty, but our ardor not in the least dampened. We found on counting that we had twenty-nine chickens, which was more than an average bag for two guns.

My first experience in chicken-shooting was very pleasant, though I do not like it so well as shooting the ruffed grouse of my boyhood. And I sometimes think that were some of our crack shots who can kill chicken after chicken on the treeless prairie, placed in some of the gullies and swamps that are the natural home of our ruffed grouse, they would shoot very poorly.

I hear that chickens are very plenty in Iowa and Nebraska. I should think that ducks also are to be unusually numerous as all the ponds and lakes are full.

If the Eastern sportsman wishes to see a sight and have an experience that he will always remember, let him visit Northern Iowa or Southern Minnesota during the month of October. He will find everyone kind and obliging, and shooting that will satisfy even the most ambitious.

QUILL.

LINCOLN, Nebraska.

HUNTING IN TEXAS.

PALESTINE and its immediate vicinity is not in the game district of the Lone Star State, but, while we have no "deer, bear and turkey at our very door," as a correspondent of a New York weekly graphically asserts, still the quail and deer are by no means exterminated and can be found within two or three miles of this and adjacent towns on the line of the International & Great Northern Railroad. The deer are of the small variety common to this portion of the country, and are very rarely seen in herds of more than six or eight. Their venison is equal to if not superior to the California venison, though the species of deer are identical with that found in San Diego county. The difference in flavor is probably due to the abundance of buds and delicate grasses which abound in some parts of Eastern Texas.

The hunting is done, greatly to the credit of the hunters, in the months of December, January and February. The restriction is really self-imposed, as the "weak laws rotting away in antique sheathes" are practically of no avail.

But the deer run somewhat on the principle that it is best to be either very good or the extreme contrary, for they certainly in their poor season are about as emaciated specimens as one would care to find.

The hunting is done in two ways: still hunting and driving. The latter is the favorite manner of securing venison, and is generally participated in by a number of planters and their help.

The meeting is generally well represented by G A. M., and a leader chosen. Some old veteran at the chase fills this position, and he places the men in various prominent positions on the run where they will be most likely to get a crack at some unfortunate buck.

This position is no sinecure. One man wants a particular stand that another man "has always had and always will have." But the wrangle ends, and at last the dogs are started, big strong fellows of no pedigree or known breed, but "stayers."

The country in Anderson county, of which this town is the county seat, is very hilly. Large divides or ridges and a great number of creek beds, most of which are dry, thus making a very rough bit of ground.

The men scatter to their posts, and, if good luck attends us, the dogs in the course of one hour give tongue and every man begins to feel of himself to see if he is all there. A half hour more and somebody will have a chance.

Who shall it be? Louder and louder sound the yelps of the dogs. Nearer and nearer they come to the stand of some other man. A shot or two and on they go for the next man to pick and kill or drop with a well-aimed 44 conical through one or more of them.

The other method, still hunting, is not as exciting, and then you are quite as likely to blaze away at some stray heifer or pony as at a deer.

This sort of hunting is done by means of a head-lamp (the "Ferguson" or home-made, it matters little which so far as the deer are concerned) and a "coon" or darkey boy who answers the twofold purpose of lamp-bearer and gun rest, although they do sometimes complain "dat de gun goes off mighty loud, massa."

Quail are reported very plenty this season, several sizable bevies having been seen on what is known as the West Point road.

Very little attention has been paid them, though one or two gentlemen of Palestine have experimented with a good pointer to their satisfaction, I believe. Squirrels are very plenty all through this portion of the State. They are principally fox and gray and not generally found very large. What Anderson county lacks, however, in other varieties of game, is in a great manner compensated for by the ease with which we can place ourselves on a variety of hunting that would satisfy any reasonable mortal. For instance, suppose, like myself, some lover of rod and gun should decide to visit the Lone Star State. He might not start from Milwaukee, Wis., but if from the North or East he would probably come over the Chicago & Alton Railroad to St. Louis, from St. Louis to Texarkana, a funny little town so locked and pinched into an obscure corner of the world that three States had to chip in and donate so many letters a piece to even give it a name. It is in Arkansas properly, but some railroad guides give it as being in Texas yet.

From Texarkana to Longview, the junction of the Texas Pacific and the Great International Railroad, is a seven-hour ride. From Longview the wandering sportsman would do well to come to Palestine, eighty-one miles south, from whence he can radiate in any desired direction.

Should he desire deer, any drive of six miles will give him plenty of opportunity to test his nerve. Ducks, geese, snipe in plenty, and some few plover may be had twelve miles south on the Trinity River. For fishing, unless he has a penchant for alligators and buffalo fish, a large, coarse-grained fellow, whose one redeeming quality is that he can give a pretty thorough test to a rod and line. But Galveston is the fisherman's elysium. The letter of "N. A. T.," in the last issue of FOREST AND STREAM, is praise none too warm. Galveston is reached after a resting night-ride of fourteen hours from Palestine over the International & Great Northern, and Galveston, Houston & Henderson Railroads, in one of the peerless Pullman sleepers which run daily over these excellent roads.

Sportsmen are offered every convenience by the gentlemanly officials of these lines. Special cars can be secured, and as much solid comfort derived from a trip in Texas as in the "Davy Crockett" or "Izaak W." of northern enterprise.

Another delightful trip would be over the above road to Austin, the capital city, and thence by stage to San Antonio, the quaint old Spanish town of Alamo notoriety. Here we begin to find the wild turkey, the one game bird that there is any satisfaction in shooting with a rifle, and which may be found in countless numbers throughout Travis county.

Stage routes from Austin lead in various directions, and the traveler can either secure accommodation in one of the "Concords" or obtain private conveyance.

"Too much luggage" need not be quoted as a word of warning to old stagers, but to those who have had little experience I will say, let camp stove and what can be contained therein in the way of culinary utensils, and a pair of blankets, suffice, with a Winchester and double breech-loading shotgun as an armament.

Multum in parvo could scarcely be better applied than as the maxim of a hunting party. Winter is the best time to visit Texas if deer and turkey shooting is desired. The early fall is a better time for quail. Ducks are in season and plenty from the first of December until March, at which time they begin their migration in earnest.

The hunter who visits this State must expect some discomforts in the way of fleas and various other infinitesimal nuisances, but these minute pests dwindle into insignificance before the insurmountable objection of a like nature, which renders Florida camp life intolerable.

The almost total lack of stagnant water here renders mosquitoes less vindictive.

To those who are fearful of trusting life and property in the new "warm hereafter," as Texas has been designated, I will say, that the days of "seven more men murdered in cold blood" are past, and the traveler may squat around his camp fire without the least fear of assassination or robbery. I know of no way to spend a winter's holiday, and there are many whose business only relaxes in the winter season, than in a camping expedition in Central Southern Texas.

I hope to see or hear of more Northern sportsmen, who, after a visit to this State and the enjoyment of its glorious climate, will agree with me in saying that Texas is the sportsman's State. L'ECLAIR.

PALESTINE, Texas.

GOSSIP OF A '49ER.

IT is a great deprivation to all of us who shoot the best gun, etc., that the discussion of different makes is not permissible in FOREST AND STREAM. There would be some humor in the question if the debate were confined to usage of guns only, and some profit to those who wished to buy, but professional acrimony no doubt would be most conspicuous. While shooting for several years one of the lowest priced guns of one of our American makes, the action only being objectionable, I studied catalogue books on choke-bores, examined guns at stores, and finally did not think it easy to get "the very best gun for the money," but settled upon reputation, ordering a 7½-lb. 12-gauge, with a few dozen of 30-inch targets and pads. Upon the receipt and trial of it a friend was so pleased with it that I let him have it, and another was ordered for myself and one for another friend, all satisfactory shooters, but the patterns are not up to records upon accompanying cards. I have the same ungratified desire to see that result that a farmer had near me to see a horse work which he bought from a substantial old Dutchman. the horse being one of a team hitched to a heavily loaded manure wagon. The buyer was satisfied with the price and soundness, and that the horse was working as he appeared, but he casually asked Old Reliable if the horse "would pull." "Pull! Ah, you would shust like to see him pull," was the honest and encouraging reply. So the horse was bought, taken to the buyer's farmyard, put in his manure wagon, and he would indeed "shust like to see that horse pull." So I would "shust like to see" my gun make the record accompanying it. But I must have a pair of low-priced barrels which I can feel satisfied "will keep clean by being left dirty." That is, something which I do not feel compelled to clean after shooting at a crow, a hawk, or any pest, nor hesitate to shoot on account of the necessary cleaning which fine barrels demand.

I do not remember how the crow depredation question was settled, but if any one is curious, now is the season of observation, as near every barnyard in this neighborhood scare-crows are placed to keep the crows from carrying off young chicks, turkeys, and ducks. The crows are considered infinitely worse than hawks. They will drive a chicken or turkey hen from the nest and carry off every egg, as well as smaller bird eggs and young. The crow has a devilish cunning and perseverence almost supernatural. The crow blackbird also pitches eggs and young of smaller birds.

Owners of dogs will do their dogs a great kindness and themselves a favor, possibly, if when they see their dog shaking his head and pawing at his ear, they will carefully examine the ear held lowest, take away the annoying flea, and thereby prevent the dog from tearing the ear with claws, producing apparent canker. The oft repeated inquiries to, and answer of FOREST AND STREAM, nineteen out of twenty cases of sore ears are nothing else, and a very simple treatment is speedy and effective. Upon one occasion a valuable setter was sent to me which was not only in a pitiable condition, but disgusting in appearance, dejected, thin, coat staring, inside of ear and side of face to nose a mass of vicious corrosive fluid, which would dry, scab over, scab would crack open and itch, dog would tear off the scab with paws until the blood would run freely, then the repetition above. I saturated the coat with head-light kerosene, thoroughly washed off with warm water and soap, coarse and fine comb. When dry, Persian insect powder freely, and applied lard once each day to inside of ear and on the sore face to keep the scab soft. In three weeks the dog was

a picture of health and enjoyment of life. Only a few weeks ago a friend wrote to me that he had been treating his dog three months for canker, without benefit. I gave him above advice and last week he wrote me that it was successful. The itching of a drying scab is more annoying to a dog than fleas, the irradicable bane of doggydom. I have had no occasion to doctor my own dogs for years. One or two handfuls of salt to twenty-five pounds corn meal mush—don't forget the salt—with some table-scraps, enable me to take them afield with nose moist, cold and perfect, any of them, day after day. It was different once; puppy and dog died with distemper, I called it, or if they recovered, it was only to be a wreck and aggravation. The best of them were entirely unreliable, noseless if gorged, and sometimes without being so. I have never failed to enjoy the hunt on account of my dogs since I stopped too abundant meat diet. If gorged with mush or pone, evening or morning, an initial run restores them.

Have the valley or the mountain quail of California been tried in the mountain region of Georgia or Tennessee? There can be little doubt of successfully acclimating them. Either of them can survive some snow (the mountain quail especially) which does not lie too long, and both of them will seek lower and bare ground when the snow falls upon the higher. Such I found to be the case in January, 1853, along a California creek, Little Wolf, I think, and the divide, parallel with Auburn road from Grass Valley to Bear River, during a time that snows had fallen heavily on the mountains, and lightly upon the divide. The creek bottom being free from snow was alive with blue birds, and the brown mountaineers were abundant upon the low hills. Twenty miles further towards Sacramento Valley, just below the snow line, the valley quail were in numbers beyond any, except a sportsman's, belief, *i. e.*, provided his belief is equal to his proverbial credibility. It is not just to call sportsmen liars—romancer would be much better, is not the sporting life, and the anticipation or the retrospective, a romance? The views from hill tops which overlook the expanding valleys, where happy, prosperous homes lie embedded in fields of brown and green and purple velvet; the glow of a November sun with its gliuting lights and shadows; those sounds from the valley, with swelling and softening cadence, does it all not call up an ideal enjoyment beyond the realities of life; that sheltered nook and gurgling spring, when hungry and thirsty, he had his solitary picnic lunch? If he has become surcharged with nature's grand effiation and some minor ingredients, let him blow in peace and be thankful. Has he not the spirit of Homer, Virgil, Bryant and Longfellow, Dickens, Cowper, and the hosts of poets and romancers whom the world enjoy, and must the sportsman, who tells his story with garnishment and expansiveness, be branded? On the contrary, the effort to interest and entertain by embellishing plain facts with beauties of fiction, deserves respect, and only comes under Solomon's sweeping assertion on general principles, that "all men are"—romancers. JUNIATA.

THOMPSONTOWN, Pa.

A TYPICAL TOURIST'S TRIP.

MY companion and myself arrived at the pleasant village of Booneville on a bright clear morning in the early part of August, properly equipped and anxious to kill all the deer and catch all the trout before the termination of our trip. On our arrival at the Forge House we were met by our guide, and no words of mine can do him justice—a splendid specimen of physical manhood, standing over six feet high, straight as an arrow, strong-limbed, with a bright, intelligent countenance, and taken altogether, the best hunter and fisherman I have ever had the good fortune to meet.

After supper we wandered out on the porch to enjoy the "smudge," and this led me to notice one peculiarity of the native: the majority of them appear to be tanned to the color of mahogany, which, I presume, is owing to the ham smoking process they have to undergo from the effect of the smudge for several months each year. I experimented once with the insects myself, thinking the remedy was worse than the disease, but soon settled down to the smudge as the least of two evils. After a refreshing sleep we started out bright and early the next morning for our camping ground on Seventh Lake. The scenery and surroundings in this section I do not think can be surpassed. With the guide leisurely rowing the boat and ourselves safely stowed away, we had every opportunity to enjoy the beauties of nature and wonder at our own littleness. These lakes are connected by small streams or carries, surrounded by mountains, and vary in width or length from one to six miles, each with a change of scenery peculiar to itself.

We finally reached the first carry, and the guide quietly informed us that we would have to assist him across with the baggage, otherwise we would not reach the camp until after dark, which would inconvenience us somewhat. I immediately imagined myself to be a disciple of Samson (although my standing weight is only 140 pounds), and insisted upon having the pack basket strapped on my shoulder filled with all our cooking utensils, and in addition to that volunteered to carry the sack of potatoes and my own valise, my companion having shown his superior wisdom by starting off with the gun and fishing-rods during the discussion. How I did wish I had been blessed with his superior wisdom, and how soon I began to realize it after getting fairly under way, with the sun pouring down on my devoted cranium. After I had covered several laps, I began to imagine myself a pack horse, and there was certainly more sense than nonsence in the idea. I stuck bravely to the task, however, and I reached a large fallen tree directly across the trail, and then the baggage and I parted company. It happened in this manner. I succeeded in cleverly mounting the tree, then lost my balance, and pitched head foremost in the soft loam (commonly called mud) on the other side; the string slipped from the bag, the potatoes escaped, and I and they, with the stew pans thrown in, got promiscuously mixed up. Then, to complete my agony, the guide unfortunately witnessed the whole occurrence, and could not be prevented from indulging in a good hearty laugh at my expense, in fact two or three of them, after which he proceeded to lighten my load somewhat and sent me on my way rejoicing. But I profited by the sad lesson, and since then have contented myself with a single valise, the smaller the better, even if we don't reach camp till midnight.

We arrived at our camp about 4 P. M., and then all hands went rapidly to work to put things in order, or, as the guide expressed it, "make it look ship-shape." About sunset we sat down to our first meal under the pines and balsams, consisting of fried pork and boiled potatoes, with bread and coffee. After supper we enjoyed a quiet smoke, and then the guide remarked that the indications were fair for successful floating, and wanted to know which of us had decided to try our luck on the deer. We both shouted, "I," but finally agreed to decide the question by tossing up a cent, I being the fortunate winner, and by this simple method peace and harmony was once more restored. I immediately began to make the necessary preparations, and departed in high glee, in anticipation of the buck I intended to slaughter, and in my mind's eye had already calculated his weight to be at least 500 pounds. Well, we started, the guide and I, he seated comfortably in the stern of the boat, and I perched in the extreme end of the bow, with my legs doubled up, body erect, and the jack stick, with the jack or reflector attached, directly in front of my nose. Presently I was startled by a faint whisper from the guide to look out for deer ahead. That remark completely upset my nervous system. My limbs began to tremble, and my teeth to chatter, and I was forced to conclude that I had been suddenly attacked with the buck fever in its most malignant form. The guide whispered, "What is the matter with the boat? It is shaking from stem to stern." I answered that I was subject to chills, and had been suddenly seized with the old complaint.

The guide again warned me to get ready to shoot. The next moment my vision was greeted with two small jets of flame of a black color, followed immediately by the whole outline and form of the deer up to his knees in the water, and looking me directly in the face. Alas for memory; forgotten were all instructions. I raised the gun and levelled it directly at him, as I thought, pulled both barrels simultaneously, and was kicked clean off my perch. I cried out at once, he is dead and must be riddled all to pieces; the next moment I heard him wildly snorting as if laughing in derision at my vain attempt to bring him down. I insisted at once that it must be another deer we heard, and could not be convinced to the contrary until the guide paddled up to the exact spot and pointed out to my wondering gaze where the buckshot had mowed down the saplings about ten feet above the spot where the deer had stood. I had no further comments to make, the evidence being indisputable. Sadly I requested the guide to about ship and start for camp. I had been constantly harping on my ability to shoot, and the reaction was too great. Even the guide appeared to be relieved when I gave the order to return, satisfied, no doubt, that we should get no venison, even if he paddled me within shooting distance of another dozen. After a refreshing sleep we awoke the next morning to find our guide already busily engaged in setting out buoys for lake trout. He concluded as we had been euchred out of the venison, to make early preparations for lake trout fishing on the following day, in case we were unsuccessful in another trial for deer that evening, in which my companion proposed to be the victim. That afternoon it settled in for a violent storm, and we were forced to seek the shelter of our camp until the following day.

By this time we had got heartily tired of "tried pork," and were anxious to try our hands at the lake trout for our stomachs' sake alone, if for no other reason. Both myself and companion being experienced fishermen, we soon landed several fine fish, averaging in weight from two to six pounds. The guide being a skillful cook, in addition to his other accomplishments, soon furnished us with a splendid repast, of which we all partook with a relish after our enforced fast. That night my companion was fortunate enough to secure a two year old buck—at least he so claims—but I have always had my doubts whether he or the guide did the shooting, especially after having observed the knowing winks passed between them. The next few days we devoted to fly-fishing for speckled trout; and although I had heard wonderful stories of the five and six pound trout to be caught, I will be honest and state that our largest one weighed only a trifle over a pound. Yet we found the smaller ones very plentiful, and had no difficulty whatever in securing all we needed for our own supply. The remainder of our time was alternately passed in fishing, climbing mountains, rowing, bathing, and taking a general survey of the country with all its wonderful beauties of scenery. But our guide could not be prevailed upon to give me another chance at the deer, saying that we had sufficient meat for all wants, and enough, in his estimation, generally decided the argument. At that time I was inclined to disagree with his opinions, but since then I have learned to respect him more for the firm and determined stand he took against the wanton slaughter of game. As our vacation drew to a close we departed from the woods with a sense of lingering regret, and a determination to revisit them again and renew our past pleasures at the earliest opportunity. BILLY.

THE COMING RAIL SEASON.

TEN years ago it was not at all uncommon for New York sportsmen to visit our rail shooting grounds on the Delaware River and indulge in two or three days' amusement during a run of afternoon or evening tides. Lately but few Gothamites are met with, although as far as we can see the shooting has not fallen off and the birds are quite as numerous.

The coming season, beginning September 1, bids fair to be a good one; the crop of seed is large and some birds have bred with us. One flight has already arrived, and a continuance of them may be expected until the middle of September.

Beginning at the Lazaretto, which is reached by the Philadelphia, Wilmington and Baltimore Railroad via Moore's Station, we have three points between which there is hardly a choice. At the Lazaretto good pushers may be always had, and two hotels, where plain but comfortable quarters can be secured. At Chester, Pa., three or four miles below, reached by same railroad, Goff's Hotel is the headquarters for sportsmen, where reliable men may be engaged at any time. Marcus Hook, south of Chester, is not so much frequented, as the same ground in that vicinity can be pushed over by shooters starting from Chester, and hotel accommodations are not so good.

At Port Penn, Del., opposite Reedy Island Light, the best of rail shooting can be had, especially when a continued easterly wind has prevailed for two or three days. Large scores are always made there, and the greatest on record can be found registered in the books of Sim Lord, the proprietor of the hotel at Port Penn. This shooting was done five or six years ago (an account of which you published shortly after the time), beating the scores mentioned in Lewis's "American Sportsman."

New York sportsmen can leave their city in the morning of the day they wish to shoot, providing high water occurs in the afternoon, engage their pusher and enjoy the most capital sport, and return to New York the same night. This, however, would be overdoing time a little too much, and it would be best to remain two or three days, in order to insure "the catching of a good tide." The higher the water the more birds can be secured, as higher grounds can be reached and the more plentiful the rail is jumped. All that is required is a light gun, plenty of shells, charged with not over two drams of powder and one ounce of No. 10 or 11 shot. Thus armed, in two or three days, a surfeit will be obtained of rail shooting, especially if the wind has been easterly for a day or two. A novice at rail shooting need only follow the directions of his pusher, and providing he can shoot on the wing at all, the writer guarantees he can kill the majority of the birds put up before his boat. It is the experience of the writer that more birds are killed after the middle of September, as the tides run higher the nearer the date of autumnal equinox than during the first two weeks of the month. I am sure our sportsmen would be most glad to meet any New York gentlemen wishing to try rail shooting at any of the points mentioned. HOMO.

THE WHITE BUFFALO.

WHITE buffaloes are occasionally met with among the numerous herds that haunt the headwaters of the Missouri and Yellowstone rivers. Last winter a three-year-old white bull was killed about fifty miles from Glendive, Montana, and a spike (yearling) about half white was killed near the same place. There is at this time a monster white buffalo bull in the Great Missouri herd, that the Indians have seen for years past. He is said to be white as snow, and exceedingly large and wild, and terrible to face. His beard sweeps the ground and is of silvery whiteness; his eyes and muzzle are red. He don't mind arrows a bit, and is said by Indians to be bullet proof.

The Indian never kills a white buffalo; he think it "medicine," something he can't account for, as belonging to the Great Spirit. Some say it was created for a special purpose and must not be touched by the red man. Others think he is the guardian angel of the herd, and that it is good luck to see him but bad luck to meet him or kill him.

The white hunters say it is a case of breeding back to the old stock of native cattle that became mixed with the herds in Kansas and Nebraska years ago. A great many cattle have run with the buffalo for the past thirty years. Cattle are killed in the herds every year with brands of the old Texas stripe, and handsome cows without brands. They are wilder than the buffalo, more fierce and harder to get. Horses get lost and run wild with buffalo. It is supposed that cows belonging to emigrants going across the plains years ago strayed away and finally got in with the herd. The final result is occasionally a white buffalo, and quite often a yellow or parti-colored one is killed. Some are found with one side of the face pure white, while the horns of such animals are longer and more slender than the pure buffalo or bison. We often see in a drove of red cattle a pure white calf. The old men of the neighborhood will say the cow bred back to such one's old white bull. So it is with the buffalo; his great-great-grandfather was a white Durham owned in Kansas or Nebraska, Texas or Wyoming, years ago.

It is a shame to hunters to let the magnificent robe of this white monarch of the plains be torn in his old age by wolves—too bad to have those long terrible horns buried in a washout, too bad to have that silver beard wave in the breeze among the "bad lands," after he lays himself out to die of old age, too bad to have the young bulls hook and crowd him out of the herd to become a scabby old bull bachelor, and finally wind up his useful career by being found a heap of bones and dry hide. How much better for all concerned, white man, Indian and tenderfoot, as well as "Old Whity" himself, to have him killed, stuffed, and with glaring eye stand as a shining example of what has been. Who will go and get him? H. S.

GLENDIVE, Montana.

[The hybrid theory entertained by the plainsmen is manifestly erroneous. The phenomenon of a white buffalo is easily explained as a simple case of albinism, such as is known to occur in most species of animals and birds. There is a curious identity between the superstition with which the Indians regard a white buffalo, and the white hunters' belief regarding white deer. See late numbers of this journal.]

A DAY'S SHOOT IN GERMANY.

IN 1879 I was in Bonn, Germany, and while there became acquainted with Herr S., Inspector and Chief Huntsman to the Emperor, of that district, called the Cotton Forest.

Herr S. invited me to join a party of six for a day's shoot, and I gladly accepted the invitation, as I knew game was plentiful and wished very much to kill a wild boar and possibly a deer. Tuesday morning proved clear and cold, having had a slight fall of snow during the night.

We started about six o'clock in the morning, and after a pleasant drive of about ten miles reached our destination. On the way I was teased a great deal about my twelve-bore, as you know the Germans use a fourteen-bore weighing seven pounds. My friends called the gun a cannon, etc. Arrived at the grounds, we prepared for work, taking our stations some twenty yards apart on a slightly curved line. The drivers were sent in and we waited anxiously for the game to appear. The chief (Herr S.) gave us strict orders not to shoot except straight before us or behind and not sideways, as we would hit some other shooter on our right or left.

Presently, a low, rushing sound was heard, and hares, boars and deer went by us pell mell. Crack, crack, went the guns, dropping several hares and one boar. The shouting of the drivers could be heard, lending more excitement to the scene. I shot in good form and killed several hares—drawing head on a deer, was about to pull, when I received a command not to shoot, as it was a female. In the excitement I hadn't noticed that the deer had no horns. The law is very strict, and it would have been an unpardonable offense had I killed a female in the Emperor's woods.

The chief blew his horn, the signal to march up, salute him, and report what we had bagged. Again we returned to our stations and continued shooting. Suddenly out came a boar, making a bee line for me. I let fly both barrels, expecting to see him keel over, when, to my horror, he came right on. I had missed him. Great Scott, wasn't I frightened! Self-preservation being the first law of nature, I turned, and ran like a good one with this beast at my heels, with red tongue hanging out and his two great tusks ready to tear me to pieces I thought. Shouting to Herr S., and cramming a cartridge in my gun, I turned and fired, luckily hitting the boar in the leg and stopping his advance. Herr S., seeing my fright, came up and dispatched him by a shot through the head. Never will I forget those five minutes. I really thought my time had come when that black boar was at my heels. I helped eat the fellow afterwards, and with every bite I took I felt I was having my revenge

Our bag that day amounted to forty hares and the two boars, the tusks of both were given to me as a souvenir of the day. We reached the inn about dusk and enjoyed a hot supper. I know the party were dying to laugh at my display of "Yankee heels" though too polite to do so. I enjoyed several "shoots" after that, but never killed a boar, nor did I see any if my memory is correct. Looking at the tusks the other day put it in my mind to write this little anecdote, as I thought it might prove interesting to some of your readers. BOAR.

IOWA GAME.

THE prospect for quail in this locality is very flattering. Having wintered well last winter they are unusually abundant. An observer can go in any direction through the country and see this noble and beautiful game bird perched on the fence or running along the roadside; while the cheering and (to the sportsman's ear) inspiring notes of "Bob White" can be heard in every field. In every note we hear the promise of the grandest sport next October that often falls to the lot of the devotee of dog and gun.

"Bob White" is a goodly and prolific bird, and if rightly protected need never be extinct. In favorable seasons the average pair of quail will raise two or even three broods, of say, a dozen each, which is doing much for the sportman's pleasure in a very happy and appreciable manner.

Last October I flushed quail scarce a third grown, and only able to fly a few yards, which must have been the third brood.

Prairie chickens are scarce around here at present; for some mysterious reason they seldom put in an appearance in any numbers until late in September or October. I am told by farmers who live near good chicken grounds, that they have not seen one since last winter. It seems that they leave for parts unknown about the time the corn is all gathered, but are sure to come again in fair quantities in the fall.

Can any one throw light on this chicken mystery? Why do they not breed on their winter feeding grounds? Are they partially migratory, and do they hie away in the summer to breed in the as yet unbroken prairies?

Possibly a few do breed here, but they are nothing to the large numbers to be found in October and November.

I want to thank the writer of that article in the last FOREST AND STREAM, entitled "Far from the Madding Crowd," for the extreme pleasure I have taken in reading it. His praise of the "little coffee-pot" is full well deserved. It would be a worthy subject for a poem! That article will go straight to the heart of many a Western sportsman, who has often felt himself "born again" by getting for a few days "far from the madding crowd." J. E. S.

OSCALOOSA, Ia., August, 1882.

LOADING RIFLE SHELLS.—Philippi, W. Va.—*Editor Forest and Stream:* Mr. T. S. Van Dyke contributed a very interesting article in your issue of April 13 on "Rifles and Rifle Bullets," and as I do not all experiments looking to the removal of the difficulty always found in securing good results in loading a rifle shell with a round ball and a small charge of powder, I contribute my experience. I plug the base of the shell with a wood plug, cut to fit the shell with exactness, and of the desired length. The base of the plug must be concaved, so as to concentrate the fire of the primer into the delicate vent which extends the entire length of the plug. The plug must be of just sufficient length to permit the ball's resting on the powder, and in the shell far enough to remain firm and no farther. On the plug I placed the powder, with a thin wad on top. For a patch I used a strong piece of kid glove, cut about three-fourths of an inch wide, and just long enough to exactly line the shell, resting on the wad. Using the loader, the ball was pressed in firmly but very carefully, leaving about one-half the ball exposed. Touch the end of the ball with mucilage, and twist the patch over it. Set up the shell, with bullet down, and leave until the mucilage dries, and it is ready for use. The result of all this attention to details was the following: I doubt if any man can hold a rifle steadily enough to produce an absolute test. I cannot. My rifle was placed between two narrow pine boards, and firmly fastened in a heavy vice. The range was limited, only twenty-two yards. Seven shots were fired, and only one hole was made in the target. It was widened out somewhat by the repeated shots, but a dime would not more than have entered. I don't know whether this plan of loading a shell can be made practicable or not, but of the numerous experiments I have made, this alone seemed to produce perfect work. It appears to me that it is quite impossible to load a rifle shell to produce even good average results, as quickly as the same rifle can be loaded at the muzzle; and as to that matter, I can load a muzzle-loading shotgun in less time than I can load a shell for a breech-loader. If there is anything of advantage in this experiment, I hope some of your readers will perfect the plan, or, at least, communicate the results of their trials. —J. E. H.

TEN VS. TWELVE-BORES.—Cleveland, O.—Speaking of ten vs. twelve-bores, I prefer the ten to anything smaller, and have an idea that nine-gauge, say eleven pounds, would be liked better than either ten or eight. Recently I loaded sixteen-gauge and ten-gauge shells with No. 8 chilled shot, using same powder in both. I shot double the number of shots from the ten-gauge, which wiped out easily, while the sixteen-gauge was leaded so badly that it took over an hour of hard labor to remove it. This, it seems to me, proves the great relative difference in the amount of friction, and consequent effectiveness of the two guns. Again, in cleaning the muzzles of guns at glass-ball and pigeon-shoots, I have noticed that the large bores are freest from deposit in the choke. Formerly I used five drams powder in ten-gauge—now I use four and have less headache and annoyance without any apparent loss in execution. Try it.—M. H. ABLE.

MONTANA GAME.—Butte, Mont., Aug. 9.—Prairie chickens and grouse in this vicinity are very scarce indeed, owing, perhaps, to the many prospectors and woodchoppers who are continually traversing the hills and mountains. In Beaver Head, Deer Lodge, Missoula and Jefferson counties chickens and grouse are said to be abundant, but not so plenty perhaps as last season, on account of late spring and cold, wet weather. In the mountains surrounding us, deer, elk, sheep and all large game is plenty. Bear are plenty and waiting for (don't think, "Major Verity," I am going to start a story, for it would only be the means of ending in a complete failure) some one to eat them up like Brown did up in Vermont. I expect the specie will be extinct soon, as Lord Jameson, from the Old Sod, left here last week with three pack animals and ammunition enough, if properly distributed, to slay the animal kingdom. On his return I expect "bear" stories will come up to the surface in such abundance that former ones of this nature will be put in the shade. What do you think of Ap-pa-kun-ny going pot-hunting up Dry Fork with two guns and a pony and only getting a poor female antelope and a few ducks? (all out of season, too). Let him come over the range, and we will show him pot-hunters who will discount that. (I don't mean myself, of course.)—PISTOL GRIP.

YELLOW-LEGS SHOOTING AT CAPE COD.—While camping out on the Cape in August, my friend and I were surprised to learn that yellow-legs were quite plenty on a marsh in Harwich not very far from where we were stopping. We arose before daybreak and hastily dressed, put a lunch into our pockets, shouldered our guns and decoys and started. It was not yet daylight, and as we passed through the wood we heard the whippoorwill calling to his mate. We issued from the woods, and looking toward the eastern horizon we saw it had begun to grow light. We hastened our steps, and after an hour's steady tramp we arrived at the place where we were to have our sport. Hastily making our stand, we put out the decoys and then were ready. Suddenly the whistling of the yellow-legs was heard, and looking through a small hole in the stand we saw a flock light among the decoys. We took good aim and fired. Four laid dead, and as the rest of the flock started up we fired again, and three more of the handsomest of our waders fell dead. Quickly we changed our shells and gathered the dead and wounded. A large flock came flying over, and again we fired and six more dropped. The flock passed on, but hearing our whistling, whirled round and came flying back. We waited until they alighted in a bunch and five of the six were quickly dispatched. Flock after flock came flying up and alighted, and we fired into them until our gun barrels began to grow hot. The tide going out the yellow-legs began to leave the marsh. We tied up the birds in bunches and threw them across our guns and started for home. We reached home at noon after having had a half day's excellent sport.—J. C. C.

GAME PROTECTOR DODGE.—*Editor Forest and Stream:* It is reported that Wm. P. Dodge, state game protector, is likely to resign that position and seek a more lucrative one elsewhere. This news will be received with regret to those who visit these woods and have seen the deer multiply during his administration. His efforts in enforcing the law are all the more commendable, as it has been a labor of love, to see the game protected, rather than pay, as he informed the writer that he used the greater portion of his salary in traveling expenses. One trip to the woods in making out a case whereby a game violator had to pay $50 for shooting deer, cost Mr. Dodge $40. There could possibly be some improvement on the game laws, but they are good as they are now, as we see, if they were only enforced. A law is not respected till enforced. Mr. Dodge has been a hard worker, and a better man for the place would be hard to find, and it is safe to say that there is not a guide in the whole Adirondack region who does not know Mr. Dodge and the game law he enforces, and respect both. The game law is now well observed, possibly in part through fear of the consequence of its non-observance, and as a result the woodsmen tell us there are more deer in the woods than there has been in twenty-five years. We trust that the State can see they can not afford to lose Mr. Dodge, for should these laws be relaxed after a stringent enforcement of same, the effect would be obvious.—*

MINNESOTA CHICKEN SEASON.—Under date of Aug. 22, the St. Paul *Pioneer Press* says of the praire chicken season: "There seems to be considerable misapprehension all over the State concerning the date of the opening of the prairie chicken season. Many suppose that the intention to change the law last fall at the extra session was fulfilled; but it was not. Why, it is hard to say, and perhaps the only man in Minnesota who can really explain the matter is Mr. Lane K. Stone of Montevideo; to him was assigned, so report says, the duty of seeing the amendment put through, as the legislative assemblies had been thoroughly canvassed by prominent sportsmen of St. Paul and the State at large, and it was not doubted but that the measure would go through. It did not; and the law for all game birds and waterfowl, except quails and woodcocks (the latter only being in season now) is Sept. 1. It is fair however to state that the law is practically a dead letter; that prairie chickens are daily and have been for the past three weeks, shot all over the State and are openly sold in the city of St. Paul. Not 1 per cent. of gun possessors are observing the law and no effort is being made to enforce it."

TENNESSEE NOTES.—A grand hunting and fishing expedition to the "coaling grounds" in Trigg county, Ky., is now being organized by Col. Geo. F. Akers. The intention is to visit that section of country soon after the first frosts of October, and remaining there two or three weeks. Wallonia will be the headquarters, and where the huntsmen and anglers will be most hospitably entertained by Col. Geo. Wharton, and Messrs. Matt. and Joel McKinney. Every comfort will be supplied in abundance, as well as the dogs and horses, so that the guests need only take along their guns, ammunition and fishing tackle. The "coaling grounds," covering a vast extent of territory in that wild region, are noted for their quantities of game of every description to be found there, such as deer, turkeys, foxes, 'possums, 'coons, squirrels and quail. The climate is delightful at that season of the year, and there are no farmers to post lands or in any way mar the sportsman's pleasure. A large number of gentlemen from Louisville will be of the party, and I am indebted to the Colonel for a most cordial invitation to be present.—J. D. H. (Nashville, August 19, 1882.)

MOSQUITO INLET, Florida.—Col. Frank W. Sams, of this place, and H. J. Faulkner, of New York, the former the well-known and jovial guide for sportsmen who visit this locality, and both well known to the sporting world generally, are building a large, fine hotel on Mosquito Lagoon, opposite the "Devil's Elbow," fourteen miles south of New Smyrna, and will have the same completed and in running order on or before Dec. 1 next. Their object, we believe, is to furnish a first-class winter resort for the numerous sportsmen who annually visit this locality in spite of the difficulties and inconveniences heretofore existing. It is located in the heart of the famed hunting and fishing section of the State, and in sight of the ocean from the cupola of the hotel. We may be too late, but suggest that it be called the "Forest and Stream House."—C. H. C.

NEW JERSEY RAIL SHOOTING.—Rail and reed birds will be in season in New Jersey to-morrow, but the shooting will be better later. There are few birds now on the marshes. The seed is late this year and the birds behindhand. The 10th of the month is usually the best time for Jersey rail shooting, and those who then happen to strike an easterly wind on an evening tide will be sure of plenty of sport. A favorite old-time resort for rail shooters is what used to be known as "English Neighborhood," on English Creek, which is a tributary of the Hackensack River. Leonia is the new name of the station on the Northern Railroad of New Jersey. High water on the 1st will be about half-past eleven in the forenoon, and the tides run about three-quarters of an hour later each day subsequently.

MICHIGAN.—Ionia, Aug. 22.—This year, I think, with regard to game along the Grand River, that ruffed grouse will be very scarce, as the excessive rains in spring nearly drowned them out. Quail will be plenty this fall if our gentlemen sportsmen leave them until the time to shoot by law is open. I went with a companion yesterday forenoon to shoot woodcock. I struck a willow swamp with a spring stream running through it. Sent in my cocker Kit, and made seven consecutive shots (and one a double), and got my seven splendid birds to bag, Kit retrieving splendidly every time. My companion has challenged me to shoot grouse on the wing Sept. 1, when I hope to beat him and let you know.—HIBERNICUS.

NEW HAMPSHIRE.—Claremont, Aug. 25.—The game prospects are quite good in this vicinity. Grouse are plenty, as I find in looking over my old hunting grounds. Woodcock hatched well, but the long dry weather drove them to other grounds that we know not of. Am expecting royal sport with the grouse over my blue-blooded cockers. Gray squirrel hunters can have lots of fun, as they are very plenty. The boys, until this year, have shot them in the month of August; but now we we have a close season from January 1 to September 1, which is doing lots of good, not only in the squirrel line but in the grouse line also, as I am sure that the young grouse were killed in large numbers in August.—BEAU.

THICK WADS.—Since our home manufacturers of sporting supplies make all and every description of amunition, etc., and of a quality equal to any, why cannot some reliable firm produce a wad not less than a uniform thickness of one-half inch, at a moderate advance on the price of the present pink-edge, or in other words make and sell a box of powder wads, all of a regulation thickness, about as thick as two of the thickest pink-edge wads now in use? Such an article would find ready sale, save much annoyance, time, etc., in loading; produce better results, and prove a true and appreciated boon to all.—BLACK NED.

IDAHO GAME.—Boise Barracks, Idaho Terr., Aug. 15.—Grouse-shooting is very fair here this season; some good bags made; one party killed sixteen one afternoon. When you can come here by railroad, I think you would greatly enjoy a trip to the Payette Lakes. A wagon road has just been opened to admit tie-cutters, which makes it possible to go by wagon to within two and a half miles of the lower lake. Try to come in August or September. I have seen a cougar and a cinnamon bear within twenty yards of each other. Deer, elk, mountain sheep and goats are all quite plentiful.—Y. E. W.

IOWA NOTES.—Dubuque, Ia., Aug. 21.—The chicken season opened in this State on the 15th inst., but the birds are not found in this section in numbers sufficient to attract the sportsman. Our sportsmen go to the prairies in the western part of the State for their shooting. A party of four that returned from their inaugural hunt of four days last week bagged forty chickens, which is considered very poor. Fishing was never better, and black bass, pickerel and wall-eyed pike are being caught in large numbers. From present indications there will be grand duck shooting this fall.—B. G.

WASHINGTON GUN CLUB.—The annual excursion of the Washington Gun Club, Brooklyn, to Lake Hopatcong, N. J., will take place on Thursday, September 14. A varied programme is promised. Lake Hopatcong is a handsome sheet of water well adapted to fishing and boating. No doubt many members of other clubs, especially of Long Island, will accompany the Washingtons. Tickets, including railroad fares, lunch, etc., can be had for five dollars.

ALBANY, N. Y., Aug. 22, 1882.—*Editor Forest and Stream:*—At a meeting held in this city Aug. 8, 1882, we organized a sportsmen's association called the Albany Sportsmen's Association. It starts out on its mission with good prospects, having ten charter members. The following is a list of officers as elected: R. H. Northrop, President; H. L. Whitbeck, Vice-President; Geo. B. Powers, Secretary; Albert Goff, Treasurer.—G. B. P.

MONTANA GAME SEASONS.—Fort Custer, M. T., Aug. 17, 1882.—There are two errors in your schedule of open seasons for game in Montana, as published in FOREST AND STREAM for July 20, 1882. All species of grouse are protected from March 1 to Aug. 15, not Aug. 1; and wildfowl may be shot until May 15, not May 1. Otherwise your dates are correct. —ARK-BAR-DEA.

ILLINOIS.—Charleston, Ill., Aug. 21.—The game law for pinnated grouse expired here on the 15th inst. On the 16th, from 6 A. M. to 3 P. M., you could see all classes of hunters striking north for the prairie in buggies, on horseback and afoot. The day was very hot, and I didn't hear of any hunter having good luck.—FOX SQUIRREL.

CONNECTICUT.—Thomaston, Aug. 26, 1882.—More quail have been seen in this and neighboring towns this season than before in several years. I have a woodcock that comes every night within twenty feet of my shop almost in the center of town.—E. M. C.

LIVE QUAIL.—Mr. G. A. Vincent, of Cameron, Milam county, Texas, informs us that he can supply live quail for breeding purposes next fall. He may be addressed as above.

At the reception given in Newport by ex-Governor E. D. Morgan to President Arthur, the champagne served was Duminy vintage, 1878!—*Adv.*

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Grayling, *Thymallus tricolor and T. montanus.*
Rainbow trout, *Salmo iridea.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var. *sebago.*
Quinnat salmon, *Oncorhynchus chouycha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca fluviatilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Amblopliles*, two species.
War-mouth, *Chænobryttus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscion regalis.*
"Sea trout," *Cynoscion carolinensis.*
Sheepshead. *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel. *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Lioptomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

PHYS.—I admire the fish, but I cannot admire the art by which it was taken; and I wonder how a man of your active mind and enthusiastic character can enjoy what appears to me a stupid and melancholy occupation.

HAL.—I might as well wonder in my turn, that a man of your discussive imagination and disposition to contemplate should not admire this occupation, and that you should venture to call it either stupid or melancholy.

PHYS.—I have at least the authority of a great moralist, Johnson, for its folly.

HAL.—I will allow no man, however great a philosopher, or moralist, to abuse an occupation he has not tried; and as I well remember, this same illustrious person praised the book and the character of the great Patriarch of Anglers, Izaac Walton.

PHYS.—There is another celebrated man, however, who has abused this your patriarch, Lord Byron, and that in terms not very qualified. He calls him, as well as I can recollect, "a quaint old cruel coxcomb." I must say, a practice of this great fisherman, where he recommends you to pass the hook through the body of a frog with care, as though you loved him, in order to keep him alive longer, cannot but be considered as cruel.

HAL.—I do not justify either the expression or the practice of Walton in this instance; but remember, I fish only with inanimate baits, or imitations of them, and I will not exhume or expose the ashes of the dead, nor vindicate the memory of Walton, at the expense of Byron, who, like Johnson, was no fisherman; but the moral and religious habits of Walton, his simplicity of manners, and his well spent life, exonerate him from the charge of cruelty; and the book of a coxcomb would not have been so great a favorite with most persons of refined taste.—*Sir Humphrey Davy, "Salmonia."*

TROUTING IN MIDDLE PARK.

I HAVE just returned from a hurried business trip to Middle Park, and propose to submit a few brief notes of the trouting season. I had no time to spare, and did not wet a line, but picked my share of fish bones at various tables and on numerous occasions.

In lower Grand River, Troublesome and Williams forks, fishing was said to be exceptionally good and their average size large. In the immediate vicinity of Hot Sulphur Springs it is pretty well exhausted, and will so continue until the fall run of fish down stream. In all streams above, and in Grand Lake, it is good, but in the lake most of the fish are small. This is the consequence of perpetual fishing, summer and winter, spring and autumn, for fifteen years. Yet fair strings are still made, in numbers if not in weight. Formerly all fishing in this lake was with bait, and the fish were taken at from three to ten feet below the surface. Now the fly is most successful, and a new class of fishermen are at the front. Bait fishermen are despondent, although they yet take goodly numbers at certain times. The most successful fly-fishing is in the evening, from six to nine o'clock, and the average catch to a rod is from thirty to fifty fish, or ten to twelve pounds after dressing. In the outlet of the lake, and in the North Fork near by, larger trout are caught, and skillful anglers brought in large strings. Major Hombrook, late of Kentucky, was the most successful while I was there. On successive days he took from eighty to one hundred and twenty fish, running from half a pound to two and a quarter pounds each. He fished generally in the lower three miles of the North Fork.

Chris. Young, a young gentleman with an extravagantly wide-rimmed hat and a partiality for gray hackles and white millers, who supplies the table of his mother's hotel with trout, is quite as successful, but confines his operations to a certain portion of the lake and catches nearly all his fish after dark. There may be a reason for his sticking to the lake and this may be it. Not long ago he permitted his boat to drift down the outlet, intently casting his fly and taking in the "speckled beauties" as he floated along. At length the craft laid up alongside a tree that had fallen and reached well toward the middle of the stream. He fished away, but hearing a shuffling noise behind him he looked over his shoulder to see a large bear coming down the log. Without ceremony or unnecessary delay Chris. climbed out of the other side of his boat and put for the further shore, which must have been reached in good time, since he didn't get his feet wet although the water was away over his boot tops. Bruin ambled down to the boat, placed his fore feet in it and smelled around at the cargo but took nothing. Chris., having gathered his wind, gave a yell, when the bear took a good look at him, turned around, marched up the log and disappeared in the woods. Since then Chris. fishes in the lake.

The District Court was sitting at the lake; the judge, with his family, living in a tent in a grove of pines on its margin. His Honor is an ardent fisherman, and the best ballast in the country. The court stenographer is a more successful angler and an enthusiast in fisheulture. Attorneys, jurors, litigants and an enthusiast in fisheulture. Attorneys, jurors, litigants and witnesses all took a hand, and the consequence was from two to four hours of court each day and fishing the balance of the time.

The day I left, two gentlemen, Messrs. Everett and Wells, of Golden, left the lake for home, intending to fish a day or two en route. Later I saw them on the summit of the range coming out, and learned that they stopped on the south fork of the Grand, about ten miles from the lake, and in the evening and next morning took one hundred and sixty trout, ranging from half a pound to two pounds weight, some of them, in fact, dressed more than the latter weight. They also killed a number of grouse and were taking their fish and game home.

At Cozens', on the Fraser, there were a number of pleasure and health-seekers having abundant sport. They reported the trout late in coming but very plentiful now. The record of a Mr. Walker, penciled on the weather-boards beside the door of this most excellent hostelric, for three years, gives a good illustration of the fishing. Mr. W. first came as an invalid in the summer of '80, and took it easy. His daily figures range from two to twenty odd. The next year it runs some days forty, fifty and sixty. This year the record is about like last, but is yet incomplete. He had gone off temporarily to some other part of the park. Cozens, Jr., the other day took a three and a-quarter pound trout from the Fraser, in his father's pasture. It had been a familiar resident of the same hole for several summers. This is a small stream close up to its head in the snowy range and over twenty miles from its mouth in Grand River. Ranche, Crooked, San Luis, Vasquez, and all the other branches of the Fraser, are full of trout, but they do not average so large as a dozen years ago.

A friend who had spent a month in the park and who came out with me, said he was perfectly satiated with trouting and trout.

Some English sportsmen who were killing deer and elk in Middle Park a month or so ago, were hauled up by a deputy sheriff and singed $50 apiece. They settled and left the State, and others followed their example, and now the citizens are all torn up over the question whether the game law is a fraud or the sheriff a too vigilant officer. The sportsmen claimed they were slaughtering only sufficient for their daily wants, which the law allows, and they left with a supreme disgust for the "blarsted country, you know." Many of the settlers, who gather dollars from such visitors, think there was an abuse of authority, but I havn't heard of any indignation meetings among the elk and deer.

DENVER, Col., Aug. 20, 1882. W. N. B.

TEMPERING WATER IN AQUARIA.

I FIND in your issue of August 24, a brief paper by "M.," of Boston, headed, "Temperature and Trout," on page 70. In describing his experience in endeavoring to keep trout in an aquarium, he says that he placed in it every autumn trout of half pound to two pounds weight, and kept them through the winter, but they died as the weather became warm, "seldom living to the middle of June." He gave them a constant supply of changing water from the city pipes. As a rule they died when the temperature of the water was about 70 deg., some of the stronger ones living until it was 72 deg. to 73 deg.

My purpose is to give instruction how to reduce the temperature of hydrant water without the use of ice, and to give an ample supply for a "house aquarium," of water at 54 deg. to 57 deg., while the water is constantly changing, in which trout will live indefinitely and be fat and healthy if they are judiciously fed.

At a point as nearly perpendicular to the proposed site of the aquarium as practicable, attach a branch pipe to the house supply pipe, and sink a trench for the branch pipe twelve feet in depth below the surface of the ground, and forty feet in length, in any direction that the excavation of the trench will least disturb flower boarders and shrubbery if in a yard or lawn.

In supplying cooled water to a new building before the pavement is laid, the cooling pipe may be laid under the sidewalk. For an aquarium of twenty gallons capacity, the supply branch pipe should be of inch caliber. Eighty linear feet of pipe may be laid in the forty feet trench, by making a return bend and extending the pipe back to a point opposite to the branch, thence the pipe will of course extend up to the site of the aquarium.

That portion of the pipe above the cellar floor should be insulated with woolen felt, to prevent the water from absorbing heat from the atmosphere of the building ere it reaches the aquarium. The cooling potency of a given length of pipe laid in the earth as described, will be augmented by laying the incidence portion of it as remote as practicable from the return portion.

If the pipes lie in juxtaposition in the earth, the heat absorbed from the first section of it will be imparted to the return pipe, and an approximate equilibrium of temperature will obtain. A trench two feet in width, however, will suffice.

The depth below the surface recommended for laying the cooling pipe is sufficient from 38 degrees N. latitude indefinitely northward, but in lower latitudes solar heat affects the earth to a greater depth below the surface; hence the trench in which to lay the cooling pipe must be deeper to attain the degree of temperature mentioned in the flowing water.

The temperature of the water as it flows from the Brooklyn (N. Y.) water-works is to-day, Aug. 24, 73 degrees Fahr., which temperature, according to "M.," is fatal to the strongest trout.

Such an arrangement as a water-cooling pipe will be found economical and luxurious, irrespective of its use for tempering a fish aquarium, as it furnishes cool water for the house for all purposes for which it is desirable. If the water is to be cooled with ice for drinking purposes, the great economy of the cooling pipe will be apparent.

This method of cooling water for house purposes was introduced fifteen years ago.

I laid a cooling pipe in the bottom of a sub-earth air duct, with which I ventilated and tempered the air of a butter dairy in Vermont a year ago, and it delivered a good supply of water at 51 degrees Fahr.; hence no ice or well water was required in the manufacture of the butter.

BROOKLYN, N. Y. J. WILKINSON.

RODULPH FISHING CLUB.—Gravenhurst, Ont., Aug. 24.—The Rodulph Fishing Club, of Pittsburg, Pa., to the number of sixty-one, have been spending their vacation up here on Muskoka Lake, but their pleasure was greatly marred by a sad accident which happened to one of their number. It is the old story. In drawing a gun toward him, it was discharged, and a whole charge of buckshot entered his shoulder, inflicting a terrible wound. It just narrowly missed the main arteries. The poor fellow was taken home by "Dr. 61." When I saw him at the station here he appeared cheerful, and in hopes of having a partial use of his arm.—C.

A TRACK VELOCIPEDE TRIP.

A TRACK velocipede is one of those dangerous machines used by telegraph and railway men in the discharge of certain duties; while in the hands of others than experienced railway men is equally as unsafe as a toy pistol. It is a spider-like looking apparatus with three wheels, about twelve inches in diameter, two of them riding tandem on one rail, connected by light braced rods to the third, running on the opposite rail. It is propelled both by feet and hands, by the operator sitting on a narrow seat, with both feet on a swinging push treadle, and both hands holding a beam about even with his breast, similar to the steering apparatus of a road bicycle. When you push with your feet you pull with your hands, and *vice versa*. The motion in propelling the machine is similar to a rocking-chair.

We take advantage of a steed of the above description, belonging to a gentleman connected with the popular Grand Rapids & Indiana Railway; and the fact that on the day of the week by some called the first and by others the seventh, no trains ran, either freight or passenger, I accept an invitation from my companion, Mr. Holabird (of Hollabird shooting-suit fame), who takes the throttle. I hunch up on what is left of the seat. All being in readiness, my companion turns on steam by a good healthy push and pull, and we glide along as smoothly as can be. When we have run a couple of miles we exchange places, and I take hold. At the end of my two miles I was ready to take the place of a passenger. We alternate thus each mile or two, and enjoy this new experience in traveling, the fresh morning air, green foliage, and the ferns lining our route in great variety, and springs innumerable, of which we sampled. One of the blessings of this country is the abundance of pure water, together with this grand bracing atmosphere, which rejuvenates and exhilarates.

We speed along, keeping a good lookout at each curve for fear an "extra" might be thundering down upon us.

I had accepted an invitation from Mr Holabird for this velocipede trip from Petoskey, Mich., over the track of "The Fishing Line," the Grand Rapids and Indiana, to a little station about eight miles south, where we were to stop and walk over the country two miles to Bear Lake. I learned on this trip how distance is measured by the natives. They take a section map and give the distance a place calls for from point to point, by section or fraction of a section-line, as the case may be; it matters not if the road leading to such place leads one a circuitous route of even twice the distance. Reaching the terminus of our railway travel, we lift the machine from the track, and with lock and chain securely fasten it. Leaving the railway track we strike off through the clearing and then into the dense woods, where we follow the narrow, stumpy road cut through this dense timber, where the foot tread is soft, elastic and cool, while the trees above us form a complete arch, making a cool, shady retreat where the sun never penetrates. We descend a steep hill into a little valley, where the road winds in a serpentine course, and the gathering clouds and distant thunder make the roadway doubly weird, dismal and dark, but grand, warning us that a severe storm is approaching and that we must hurry our steps. After a brisk walk we reach the shore of the lake at a place where it is not more than a couple of hundred yards wide, when a few healthy Comanche yells from Holabird bring a man to his cabin door on the opposite side, who immediately comes after us in a home-made flat-bottom craft, which we gladly accept as a means of ferriage, as the rain is now coming down in torrents, and we take shelter in his cabin until it ceases.

We were shown all the main points of interest about this lake by a man who lives on the shore, and a young man who owned and ran, for a summer pastime, a steam pleasure craft. They were very accommodating and I regret that my losing my notes of last year's trip prevents my giving their names. We were carried in this small steam yawl the entire length of the lake some twelve to fourteen miles, and made several stops to examine objects of interest on the shore.

This lake is a beautiful sheet of water, the shores are well wooded to the water's edge, with occasionally a clearing, where a settler's home looms up, and all with whom we conversed were cheerful, happy, and independent.

On the shore of this lake a settler has taken advantage of one of the largest springs in Northern Michigan, running quite a brook of pure cold water, to make a trout preserve, and I believe enter into the cultivation of the same, certainly no better natural facilities were ever offered. He had a number of trout in the main spring which he had enclosed.

We did not fish, we did not go to fish; we went to look, and we have looked, and are satisfied this is one of the grandest lakes in Northern Michigan, but from what we could learn the fishing is not as fine as in some of the lakes between Petoskey and Cheboygan, and in their vicinity, several of which I have made the subject of an article in your columns. There was no question as to the quantity nor quality of the fish that could be drawn from the watery depths of Bear Lake, but the size was small.

Enough, we retraced our steps to the railway track, unlocked our steed, and in about an hour and a half pulled up at the station in Petoskey with a sense of delight and satisfaction with our novel trip, at the same time a peculiar feeling that one has after alighting from a trip of a few miles on horseback, for the first time in a number of years.

COLUMBUS, Ohio. FRANK N. BEEBE.

FRESH SALMON FOR THE FRENCH MARKETS.—A French steamer, called the Stella Marie, put in here lately for a supply of coal. She and another large steamer are owned by a joint stock company in France, and both are fitted with a refrigerating apparatus of the most perfect kind, and with all the recent improvements. The Stella Marie was dispatched early in the season to Labrador to load with fresh salmon for the markets of France. She proceeded to Natashquan, Chateau Bay, where she secured 200,000 pounds of salmon. She is now on her homeward voyage, and bound first for Marseilles. The price of her salmon, when sold in France, will not fall under 1s. per pound; so that the cargo of the Stella Marie will bring £10,000—possibly much more. This is the third year in which these steamers have visited Labrador, and their returns are said to be highly satisfactory to their owners. They leave France about the first of May, and are not more than three months on the voyage. Of course, during the remainder of the year they can be employed elsewhere. The refrigerating process, which is kept secret, is said to be perfect, and the fish are delivered in France in as good a condition as when taken out of the sea.—*St. John (Newfoundland) Correspondence of the Montreal Gazette, Aug. 9.*

WHITE PERCH IN TENNESSEE.—I have watched in vain for some correspondent to say something about the white perch. I take it for granted then that they are not so well known as other varieties. Allow me to say a few words about the white perch as found in the "scatters" of Reelfoot Lake, the Forked Deer and Obion rivers. As a table fish they are the equal of any fish that swims, are of large size and very game. They weigh from half a pound to three pounds, and take a minnow in preference to any bait. They inhabit deep water only, and prefer to have a tree top or lot of brush in which to play and evade pursuit of the voracious alligator gar and "grindle," or "dogfish," as you Yankees call them. They will not bite in hot weather, but when September comes and Jack Frost is on the ground, go to the Obion or Forked Deer rivers, or to Reelfoot Lake, or any of the basins or large ponds—formed by the earthquakes of 1811—and search for a deep, brushy hole, and there you can have fun at any time from September 1 to January or later, if heavy rains do not interfere. The white perch go in schools and are not afraid of noise or commotion of any kind in or near the water, and you can catch the whole school in an hour. On the 16th of last December the writer and Dr. E. R. Vernon went to the river at this place and found that our favorite place was utilized for the purpose of rolling in saw logs to be floated to a sawmill just below. We thought it unnecessary to cast, but hated to go back empty, so we tried it and took fifteen fine perch in a few minutes, the smallest one weighing half a pound, and up to two and one-quarter pounds, although negroes with ox-whips and log wagons were making a continual racket and rolling large logs in the water within thirty to one hundred feet of us. We also have the speckled perch, yellow bellies, sun perch, black perch, bream, gizzard shad, government shad, black and striped bass, jack, about twenty-five varieties of catfish, grindle, gar, soft-shell and loggerhead turtles, etc. At no season of the year are fish so game or their flavor so acceptable as in the fall. Then gnats, snakes and mosquitoes are unknown, all water is fine for drinking, especially at Reelfoot, and if there is just a little skim of ice on the water it will take minutes to worry a trout down, and besides your hook will be troubled by nothing but the white perch or trout, as gar and grindle lie dormant after frost.—T. L. WELLS.

SHORT SALMON CATCH ON THE PACIFIC COAST.—The San Francisco *Examiner* says: "The season of 1882 has resulted in the poorest salmon catch in this State and in British Columbia for many years. Many of the principal canneries have been compelled to close down and run on half time for want of fish, and prices of fresh fish in the market have ruled higher than at any time during the open seasons of the past ten years. The actual causes for the shortage in the salmon take this season are two in number, and have never yet been publicly commented upon. First, a strike among the men on the Columbia kept them idle several weeks in the best part of the early or spring run of fish, and consequently materially reduced the catch, as similar trouble did in 1879. Secondly, the nefarious practice of the Chinese fishermen all along the coast and in this bay of catching the smallest kind of fish, which they dry for shipment to China, has so reduced the amount of food needed for the sustenance of salmon that thousands and thousands have died of starvation, or have become so weak for lack of food as to fall an easy prey to enormous quantities to their natural enemies, the sea lions, a colony of which will eat as many salmon in a day as a hundred boats will catch in a week. The natural and only food of the Pacific coast salmon is the young of other fish and full-grown fish of small breeds, such as whitebait, small smelts, sardines and tomcod, small fish which never go far away from land and the shelter of rocks and seaweed, where they can escape a few of their many natural enemies. There the salmon resorted in immense numbers until recently, but the constant catching of small fish by the Chinese has swept their favorite feeding grounds as clear of food as though a vast explosion had killed every fish in the ocean. The nets and weirs and pounds used by the Chinese are clearly in defiance of the very excellent fish law of the State, which, however, is never enforced, for want of proper officers."

GRAYLING, TROUT AND BASS.—Manistee, Mich., Aug. 24.—Grayling fishing has been "A 1" this season and large catches by local fishermen, Messrs. Higgins, Lobe and Cox making the largest catch of the season, viz.: one day's sport, 212. Higgins caught the big one; weight, two pounds five ounces. Good trout fishing in the Betsy River, Charles Thomas taking 107, all good ones, in two days' fishing. Our fishermen here take no fingerlings; small ones are returned to the water. A man gets no credit as a count fisherman here. Our rivers, lakes and streams abound in fine fish. Grand old Lake Michigan rolls its surf on our shores, and on pleasant days the piers are thronged at the entrance of the river with fishermen of all ages, sizes and sex. Perch, herring and pike are caught in large numbers. On our inland lakes one may always find fine fishing. The black bass, both the big and small mouthed species, are abundant. Dr. Henshall should have the thanks of every reputable fisherman for the best written work I have ever seen on black bass. They are to-day one of the gamiest fish known to American waters, and as a game fish are less appreciated by fishermen than any other, but are now coming to the front. They have been my favorite fish for years, and I have caught them in many waters and never yet found one that was not game to the end. "Old Knots," one of the Kingfishers, takes kindly to them, while the Scribe is not adverse to them, but kindly tries to convert the elder from sunfishing to the splendid trout fishing of the Cedar. Not satisfied with the spring waters they were always quaffing, he could not rest till he had immersed the elder in the Cedar. It is not often that conversion and immersion occurs at the same time, but strange things happened in the camps of the Kingfishers, and the Scribe has my thanks for the pleasant recollections of the well-written camp sketches.—S. E. B.

LIGHT OR HEAVY RODS.—"What is one man's meat is another man's poison." The several articles that have appeared in the FOREST AND STREAM about the weight of rods have been instructive to a certain extent, as they have called the attention of anglers more particularly to the subject, and would have been more agreeable had some of them been less unkind in spirit. Some years since I bought a fly rod and used it with more or less success until it was supplanted by a split bamboo of eight ounces weight, a rod exactly adapted to my peculiarities, with one exception, and that gave me great satisfaction, and does still, although I have used it for years. I found, however, I lost too many fish—did not hook them—and after thinking the matter over I concluded the tip was too pliable and did not have sufficient spring with the force I naturally use in striking to force the hook through the mouth of the fish. I changed the tip for a shorter and firmer one, and since then do not lose one fish where I formerly lost three. Every fisherman intuitively strikes his fish quickly or with slight hesitancy, with force or moderation, according to his organization, and if he has a strong arm and wrist a more pliable rod is essential, or in too many cases he tears the hook from the fish or breaks the tackle, while in the other case, a person with less strength must have his rod so adapted that by its elasticity it does the work that he naturally will not do. This seems to me to be about the best solution of "Heavy vs. Light." Whether one wants to kill a fish quickly or take more time and more chances is just as a "feller feels."—SYRACUSE.

"THE SCIENTIFIC ANGLER."—A neat little book of 295 pages comes to us with the above title, written by the late David Foster, a well-known English angler, and published by Bemrose & Sons, 23 Old Bailey, and Derby, London. The work was compiled by Mr. Foster's sons and, besides the steel engraving of the author, has many illustrations of tackle, hooks and flies. The author was in his youth apprenticed to a jeweler, but his fondness for angling led him to connect himself with the making of fish hooks, and he entered the large factory of Messrs. Allcock & Co., Redditch, and afterwards devised many improvements in fishing tackle, among them a steel-centered rod which is about to be put on the market. The book is well written and contains chapters on habits and haunts of fish, bottom fishing, pike fishing, spinning for trout, worm fishing for trout, grub fishing for grayling, piscatorial entomology, fly making, fly fishing for trout and grayling, live fly and beetle fishing, notes on the mouths for fly fishing, salmon and sea trout fishing, about hooks, and trout culture. Of course, there are a few minor points on which we do not agree with the author, but as the book seems to be largely original we will not dwell on them. The price is not given.

A CONSIDERATE TROUT.—Boston, Mass., Aug. 24.—Good day for bass fishing last Tuesday, on Massapoag. Two "boys" caught twenty-four, four of which weighed fourteen pounds. Nice lake that—bass there very frisky, too; one big fellow (I 'spect he was a seven-pounder) took hold of unguarded tackle, the boys heard a disturbance in the stern of the boat and looked round just in time to see a $20 rod, reel and line disappear in thirty feet of water. One boy suggested the other should dive and recover it, but the soundings discouraged him, so drying a tear of regret, he said good-bye tackle, and sat down with a stub of a pencil to figure up the cost of the day's sport. Half an hour later, on pulling up anchor, they found the bass had taken the bait off, and having no use for the rod had kindly hooked the whole thing into the anchor rope, and there it was joyfully recovered. Next!—M.

RESTIGOUCHE SALMON.—Montreal, Aug. 21, 1882.—Mr. J. H. Stearnes, the genial proprietor of the Albion Hotel, of this city, with a party of six, has just returned from a short but pleasant trip down to the Restigouche. Their catch numbered twenty-three salmon and a large number of trout. Many of the latter kicked the beam at three and a half pounds, the salmon averaged small, ten to fifteen pounds. Game prospect here in Quebec are good.—STANSTEAD.

BLACK BASS IN GREENWOOD LAKE.—Mr. Olcott must cast again before he can claim the honor of having caught the largest fish of the season at Greenwood Lake, as Mr. A. F. Quinby, on July 11, caught an Oswega (or big-mouth) bass weighing six and one-eighth pounds, which makes him the champion fisherman, as this is the largest fish caught, thus far, this season.—W. F.

ENORMOUS BLACK BASS.—Glens Falls, N. Y., Aug. 25.—Landlord Pardo, of the American, caught the champion black bass on the 24th. It was 23½ inches long, 19 inches girth, and weighed 8¾ pounds. It was of the small-mouth species and was taken in Glen Lake, sometimes called Long Pond, three miles north of this place, with an 8oz. rod and fine tackle.—F. JOYNER.

WHITE BASS AT NIAGARA.—At Niagara, Ont., August 12, J. B. Plumb, Esq., caught 174 white bass, and on August 14 Dan Shurlock took 151, both using the fly.—L. C. KETCHUM.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORD-FISH.

BY G. BROWN GOODE.

[CONTINUED.]

PUGNACITY.

The pugnacity of the sword-fish has become a by-word. Without any special effort on my part, the following instances of their attacks upon vessels have, in the last six years, found their way into the pigeon-hole labled "A, III, 76, sword-fish."

Aelian says (B, xxxii, C. 6) that the sword-fish has a sharp-pointed snout with which it is able to pierce the sides of a ship and send it to the bottom; instances of which have been known near a place in Mauritania, known as Cotte, not far from the river Lixus, on the African side of the Mediterranean. He describes the sword as like the beak of the ship known as the trireme, which was rowed with three banks of oars.

One of the earliest accounts is that given in the second part of vol. i, lib. ii, p. 89, 1615, of Purchas' Pilgrims:

"The sixth Circum-navigation, by William Cornelison Schovten of Horne; who Southwards from the Straights of Magelan in Tierra-del'vego, forsad and discovered a new passage through the great South-sea, and that way sailed rovnd about the World," etc.

Off the coast of Sierra Leone:
